2. Supervision through committees or groups of Commissioners also makes serious demands on the time of Commissioners which could be spent on broader duties. Moreover, it tends to produce uncoordinated action.

In a report to the monopoly subcommittee on small business, House of Representatives, pursuant to H. R. 64, Seventy-ninth Congress, the staff of the committee stated:

"The agency—the Federal Trade Commission—is headed by five Commissioners appointed for staggered terms of 7 years. The chairmanship is rotated every year among the five Commissioners.

"The five Commissioners divide up between them the administrative duties involved in carrying on the work of the Commission and supervising the activities of its five-hundred-odd employees. The Commissioners must also sit as judges in the hearing of cases. A member of the monopoly committee staff was informed verbally that the Commissioners meet every morning in executive session to discuss cases and meet on an average of two afternoons a week to hear cases.

"This would appear to be an extremely heavy load for anyone to carry. It is almost as though the Supreme Court Justices were asked to run War Assets Administration in their spare time. * * *"

There has been a tendency in recent years, as evidenced by the Report of the Attorney General's Committee on Administrative Procedure and by the passage of the Administrative Procedure Act, to encourage a separation of what are considered executive or administrative activities of Commissions from their quasi-judicial or quasi-legislative activities; the latter functions, and related matters, should be handled by joint action of the Commissioners, while executive and administrative matters should be placed under unified supervision, to be exercised within the framework of Commission policy, but not directly provided by the Commissioners themselves.

In order to conserve the time of the Commissioners for their basic duties, it is desirable for them to be assisted by an individual who will be responsible for executive or administrative leadership. This executive director, or administrator, should have adequate authority as follows:

1. The Commission should deal with internal administration only through him, and should not issue orders directly to anyone but him.

2. He should have authority to select and assign subordinates.

The Executive Director, or Administrator, should also have adequate staff assistance. The areas in which he will need such assistance include:

1. Allocation of men, materials, and money toward the fulfillment of Commission goals;
2. Development of efficient and economical organization and procedures;
3. Interpretation of the work of the Commission to the public;
4. Personnel administration;
5. Financial controls and records; and
6. Administrative services.

The Chairman should be designated by the President instead of by our present musical-chair procedure, which prevents the logrolling and spreads the glory but doesn't operate to the benefit of the taxpayer. The opportunity for leadership by the Chairman depends upon his authority. Presidential designation would substantially enhance his effectiveness because of the position he occupies as representative of the Commission in dealings with the executive and legislative branches of the Government. It would bring continuity to the management of the Commission and give stability to the administrative functions which now are wafted from the personality of one Commissioner to another on the first of each year. There is no authentic basis for the present method of rotating the chairmanship annually.

With reference to the compensation of Commissioners, the Federal Trade Commission Act was passed in 1914. Section 2 provided a yearly salary of $10,000 to each Commissioner. In those days $10,000 was $10,000,

with no income taxes. Today the take-home pay is $7,944.

The Consumers' Price Index of the Bureau of Labor Statistics shows that the dollar which the Government paid a Federal Trade Commissioner in 1914 bought exactly 46.6 cents worth of the necessities of life in 1946. A year ago this made the equivalent take-home pay for a Federal Trade Commissioner $3,734.07. The 1947 dollar brings even fewer of the necessities of life to one's doorstep.

Congress determined that the responsibilities and requirements of a Federal Trade Commissioner in 1914 called for a $10,000-a-year man. Then, this country's business economy was gaged at $40,400,000,000. In comparison, our industrial and economic growth today is represented by the figure of $203,700,000,000.

Octane Versus Conservation

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. JOHNSON of Texas. Mr. Speaker, several congressional committees have been studying various phases of our Nation's oil problem. The major question before them has been how we can meet our country's petroleum needs by conserving the present supply available or locating new sources of supply.

The chairman of the Railroad Commission of Texas, Col. Ernest O. Thompson, advances an idea that he believes would save us 75,000,000 barrels of crude oil annually and at the same time allow the automobile operator to put 2 cents back in his pocket every time he buys a gallon of gasoline.

Colonel Thompson's suggestion is that the driving public of America limit itself to the use of what is commonly known as regular gasoline instead of ethyl, octane, no-knock, or any of the other dozens of types of premium gasoline on the market.

Colonel Thompson is convinced that the best conservation program is the one which will give the most miles per barrel of crude. He contends that regular gasoline will take your car just as far as will the premium gas and contains a substantially smaller percentage of crude oil.

According to Colonel Thompson, almost any mechanic can adjust our car motors to give satisfactory performance on 65- to 70-octane gas. In fact, he says it has been established that, provided the engine has been properly adjusted for the fuel, no difference in performance between engines using 65-octane gas and 80-octane gas can be ascertained even by the best-trained technicians.

Colonel Thompson outlined his ideas on this subject most vividly in a paper he delivered before the Natural Gasoline Association of America in April 1947. While I am not a chemist and do not propose to understand the technicalities, Colonel Thompson's proposal could be of such far-reaching importance that I would like to include in my remarks the text of that paper:

OCTANE VERSUS CONSERVATION

(By Col. Ernest O. Thompson, chairman, Texas Railroad Commission)

Conservation of oil and natural gas has come a long way since 1932.

My reference to that date is made only to give the scope of my close study and intimate observation of the advance of the technology and science of getting a barrel of oil out of Mother Earth's storage reservoirs to the surface of the earth and then brought the pipe lines to the refinery and thence through the 400,000 filling stations of the United States, to the hungry motors of the citizen.

Surely gasoline and oil are important to the welfare and happiness and contentment of our people. Proof of this is amply given when it is called to our attention that there are in these United States 10 times as many filling stations as there are post offices.

It is proper also to state that gasoline today is one necessity of modern life that is of far superior quality and still much cheaper than the gasoline of 20 years ago.

In 1920, gasoline was 26 cents a gallon in the midcontinent, and then there was no Federal or State gasoline tax.

Today regular gasoline sells at the pump in Dallas, Tex., at 21 cents a gallon including 6 cents a gallon gasoline taxes. Compare this price with bread, butter, or meat.

Regular gasoline, less tax, is 15 cents a gallon today in Dallas, Tex. In 1920 it was 26 cents a gallon and there was no gasoline tax.

Advertising has made the motorist octane conscious. Yet few motorists know what octane is, and even fewer understand how it affects the operations of their cars.

It's a lot like our insisting on our rice being white. That is what the public has been educated to want. They do not stop to think that the polishing of rice takes a lot of the nutrition from it.

It's the same way with gasoline. A lot of money is spent clearing up the color to please the eye.

Your own technicians, that is to say, the engineers in the motorcar industry and in the petroleum industry, have convinced me of one fact. Namely, that the average motorist gets no honest brass-tacks value in added performance of his motor for the additional octane numbers above say 65 in motorcars up to and including the 1947 models. Provided that the proper adjustments have been made and that the engine has been maintained in good order, octane numbers above this level appear to be relatively unimportant. Almost any mechanic, or so-called mechanic, can read the motorcar manuals and then adjust the spark so that the engine will knock even when using 80 octane. Conversely, it can be adjusted to give very satisfactory performance on 65 to 70 octane. It would take a college graduate with at least 4 years' training as a chemist, an engineer, and a technician, with the aid of specialized testing equipment to ascertain the difference in performance and horsepower of the engine when using 65-octane number, on the one hand, as compared to using the much more expensive 80 octane, on the other—provided that the engine in each case has been properly adjusted for the fuel.

If the motorist truly wants miles for his dollars, he will quit paying extra cents per gallon for those extra octane numbers that do not add anything to his motor's performance.

Conservation is still an issue. Petroleum resources which were counted on to carry us for years in the future have been consumed for war. We are now forced to look halfway around the world for emergency supplies of oil to fuel our Navy. In spite of continued drilling and the use of more scientific methods for finding reserves, our known reserves have been reduced.

During 1946 this country produced 1,733,424,000 barrels of crude oil and 115,153,000 barrels of natural gasoline, cycle products, and liquefied petroleum gases. Proven reserves as of January 1947 total 20,873,560,000 barrels of crude oil and 3,321,027,000 barrels of natural gasoline, cycle products, and liquefied petroleum gases. Of these volumes 55.79 percent of the crude oil, 60.43 percent of the condensate reserves, and 87.46 percent of the reserves of other light hydrocarbons are in Texas.

It is gratifying to consider the remarkable results of the cooperative efforts put forth by State regulatory bodies and the petroleum industry to improve the efficiency of oil and gas production in the interest of conservation. With few exceptions, wastage has been eliminated and petroleum reserves are being produced in an efficient manner.

For some unexplained reason, petroleum conservation has taken on the limited definition which restricts the application of the term to the production of crude hydrocarbons—or, at most, includes the processing of these crude materials into specification products. On the basis of such a limited definition, conservation has been successful, but why should our concern end at the refinery? It is not sufficient that the maximum crude be recovered from the reservoirs, or that the refineries process that crude efficiently. We must remember that our petroleum resources are funds of potential energy and our concept of petroleum conservation must be broadened to include the efficient utilization of that energy. From the standpoint of the motorist, who is primarily interested in conservation as it affects motor-fuel supply, the best conservation program is the one which will give the most miles per barrel or per pound of crude.

With this broader concept of petroleum conservation in mind, we have reviewed the subject of motor fuels and engines as it is related to the problem. Because of its technical nature, such subject matter is confined to the technical journals so that the average motorist, and perhaps the average engineer, never becomes familiar with the problem. With all due regard for past achievements of the motor industry, there is evidenced a decided room for improvement from the standpoint of petroleum economy. It is amazing how many technical articles have been written on fuels and engines by representatives of the refining and motorcar industries during the past 10 years, showing how real improvements can be achieved, and in a few respects it is amazing how little has been done about it. Perhaps the car designers and motorists are too much preoccupied with sleek body jobs to worry much about petroleum economy, but the technical record shows that improved car design and better maintenance would pay important dividends in customer satisfaction and in petroleum economy.

The point of this paper, which I believe is adequately confirmed by the literature references of the bibliography, is that present-day cars do not require fuels having octane numbers higher than—or as high as—those currently available. Any excess octane number quality which is obtained at the expense of yield is poor economy and a wastage of our resources.

There appears to be no disagreement between automotive engineers and refinery motor-fuel experts on the factors which are important to the problems of octane requirement, fuel economy, and engine performance.

It is now well known that neither the A. S. T. M. motor method nor the CFR research method octane numbers adequately express

the road performance of a fuel. In general the former correlates with high speed and the latter with low-speed performance, but no simple combination will correlate with road performance over the full speed range. Recently there has been much emphasis placed on the difference between the research and motor method numbers which is expressed as "sensitivity" or "jump" and which is a measure of the degree to which a fuel has been cracked or reformed. The availability of wartime cracking and reforming capacity in certain refineries and the sales appeal of higher numbers are the most important factors in this emphasis at this time. Certainly there is no evidence to show that higher octane numbers are needed for operating reasons.

What are the factors affecting octane requirements and how can they be improved?

1. Basic ignition timing has received more attention than any other single item. Apparently the automotive engineers strive for an optimum spark setting which will deliver close to maximum power under any operating speed. Such a setting requires that the engine be actually detonating under full acceleration with the fuel used. Almost without exception the service manuals issued by the car manufacturers recommended adjusting the spark advance until a "slight ping" is obtained on full throttle acceleration.

The primary effect of this practice of adjusting the spark advance until detonation is obtained is to make it literally impossible to ever eliminate engine detonation by production and use of higher octane gasoline. As higher octane fuels are made available to eliminate knock complaints the recommended practice for adjusting cars in service will see to it that the improvement is offset and the knocking is retained. This situation has resulted in the amazing observation, pointed out in several octane number surveys, that so-called octane requirements were not so much a direct function of car design or operating conditions as of the octane number of the fuel available in a given territory.

This basic spark setting practice which keeps the knock forever with us might be reasonably condoned if the gain in power or mileage were significant—but such does not appear to be the case. Various road test programs have all come up with substantially the same answers of which the following are typical as reported by Van Hartesveldt and Field in 1940.

(a) Increasing the road octane number from 74 to 77 yielded only 1.8 percent increased power and a further increase to 80 octane number yielded only an additional 1.3 percent increased power.

(b) Increasing road octane number from 74 to 80 gave no increase in mileage at 40 m. p. h. for level-road driving and showed only 2.5-percent increased mileage at 20 m. p. h. with two-thirds throttle.

(c) Increasing road octane number from 74 to 77 gave no difference in acceleration time.

(d) Increasing octane number from 74 to 77 affected knock as follows:

Approximately 40 percent of cars, no difference.

Approximately 40 percent of cars, doubtful difference.

Approximately 20 percent of cars, noticeable reduction with the higher-octane fuel.

Other investigators have reported power losses of the order of only 2 percent and reductions in octane number requirement of 10 to 20 numbers by simply retarding spark from the maximum power setting.

In this connection it is interesting to note the effect of knock on power loss. In 1939 MacCoull reported that on several cars tested, hardly 2 percent in power loss occurred with a "medium" knock and that this small power loss accompanied use of a gasoline of almost 15 octane numbers lower value than required for complete absence of knock.

Another investigator states that "When high octane number gasoline is used in a car that does not knock on the lower-octane material no improvement in performance results; and when a car that knocks is fueled with a high-octane gasoline, the knock is reduced, but no additional power nor gasoline mileage is gained unless the knock was extremely loud. Knock must be so loud for power loss that no motorist with normal hearing, driving such a car, would fail to take the car to a repair shop."

2. Variation in spark timing from cylinder to cylinder in an engine has been shown to be also a serious difficulty. One investigator points out that by actual tests on individual cylinders of a stock car, some cylinders required as much as 35° spark advance over normal advance before audible change in knock intensity occurred, whereas, other cylinders gave appreciable increase in audible detonation with only an advance of ½° above normal. From one limited survey, octane requirement between cars of the same make and model has been reported to vary as much as 23 octane numbers. Variations such as these are traceable largely to variation in engine-distributor cam angle which can be corrected by reducing manufacturing tolerance. In the absence of corrective measures it is obvious that the cylinder having the greatest spark advance or the car requiring the highest octane number will in large measure determine the general level of octane number of the motor fuel marketed.

3. Mixture distribution is an important factor in determining octane requirement. With the complicated manifolding of present-day cars it is extremely difficult to obtain uniform air-fuel ratios to all cylinders. Maldistribution results in segregation of T. E. L. content or of high octane fractions to certain favored cylinders with the other cylinders penalized and the octane requirement of the engine increased. With perfectly synchronized spark advance to all cylinders, it is reported that the effect of varying mixture strength to individual cylinders may cause a variation in octane requirement of 15 numbers between individual cylinders. Maldistribution is worse for gasolines of higher boiling range, and this difficulty can be materially reduced by using more volatile gasolines.

4. Manifold heat, used to vaporize gasolines of low volatility, increases the octane requirement. Increased volatility of motor fuels reduces the necessity for high manifold temperatures but poor mixture distribution prevents the elimination of manifold heating.

5. Engine speed has an important effect on octane number requirement. A recent paper has shown that increasing speed from 1,000 to 2,500 revolutions per minute (20 to 50 miles per hour approximately) reduces the octane requirement by 10 or more numbers. New type transmissions, which will prevent low-speed loading, will permit use of lower octane fuels. Incidentally, such improvement will favor paraffinic or saturated type gasolines instead of cracked, olefinic type products.

6. Engine maintenance is strictly the responsibility of the motorist and therefore may not be as susceptible to improvement as are changes in the design and basic adjustment of the engine. Too few car owners have any appreciation of the improvement in performance which can be obtained by periodic checkups, and they are therefore prone to postpone servicing as long as possible. Removal of combustion chamber deposits alone has been observed to reduce octane requirement as much as 15 numbers, with 8 or 10 numbers being an average improvement which may be expected for deposit removal after 15,000 miles of driving.

Now let us look at some of the factors which affect fuel economy. In a paper presented before the SAE in November 1943. Mr. A. T. Colwell listed the major methods for improvement of economy in order of importance as follows:

1. Transmissions and rear-axle ratio.
2. Rolling resistance, wind resistance, and car weights.
3. Engine size—number of cylinders.
4. Compression ratio.

This listing may be surprising in that the major emphasis is not on increased compression ratio requiring more highly refined, and expensive, high-octane fuels.

By decreasing rear-axle ratio from 4.3 to 3.6, which would decrease performance slightly in the low-speed range, an additional 3 miles per gallon can be realized.

Reducing car weight from 3,500 to 3,000 pounds could improve economy by 3 to 5 miles per gallon without loss in performance if rear-axle ratio was simultaneously reduced.

As car weight is reduced, engine size can be reduced and load factor increased to improve economy.

Increase in compression ratios above the current 6.5/1 will improve thermal efficiency and give more miles per gallon. However, since an increase in compression ratio will require a simultaneous increase in fuel octane number, this gain in economy may be a delusion.

Loss in yield from crude to produce higher octane fuel may change this gain to an actual loss in fuel economy when considered on the basis of ton miles per gallon of crude instead of per gallon of gasoline. Such a figure is exceedingly difficult to arrive at, but the viewpoint is nonetheless important.

Additional benefits in economy are obtainable through proper design of fuel systems to use the maximum quantities of light hydrocarbons directly as fuel instead of requiring that they be processed with loss in yield merely for devolatilization. Butanes and pentanes are important contributors to octane number and good performance.

Operation of engines on leaner fuel mixtures may offer economy benefits. Increased spark gap width and spark energy may be necessary to promote firing and earlier timing to promote complete burning of the fuel. If successful, there would be less loss due to unburned fuel going out the exhaust pipe. The same investigator who reports improvement in mileage effected by the use of wider than normal spark gaps also shows even greater improvements in gasoline economy through the use of a special exhaust manifold which minimizes resonance effects and thus improves scavenging.

All of the foregoing points bearing on octane number requirement and fuel economy have been obtained from technical literature cited in the bibliography. Most of the suggestions have been found to be repeated by several authorities. While the whole subject is not nearly as simple as has been presented, the salient factors have been covered. It is regretted that time does not permit more detailed quotations but published presentations of this paper will include detailed excerpts from supporting literature.

Our primary interest is conservation of petroleum resources and it is our purpose here to remind everyone that conservation is not a practice limited to the old field but rather that the same efficiency of conservation practice should continue until the motor-fuel product is finally consumed. With this admonition to the automotive people we are willing to leave the problem of better car design up to them. They have shown the means of improvement and we are confident that more economical designs will follow.

One astonishing fact, however, stands out as an inexcusable situation. Both automotive and refinery engineers are apparently well agreed that, for one reason or another, the current high level of octane numbers is unnecessary—and certainly we don't need higher octane numbers at this time. Simple little improvements in the design of distributors and in factory and maintenance adjustment of spark timing would permit reduction in current octane levels by 5- or 10- or 15-octane numbers with no noticeable reduction in mileage or performance. Most cars on the road today could well get along with less than 74-octane fuel and yet there is every indication that the octane-number level is again increasing. One expert has referred to the octane number as the "refiner's will-o'-the-wisp" because current practices render any improvement short-lived.

In a paper published by Van Hartesveldt and Field in 1940, the authors estimated that the money cost of increasing octane number was approximately 5 cents per barrel octane number and that therefore an increase in average octane level from 74 to 80 for the 500,000,000 barrels produced per year in this country at the time of their estimate would cost somebody $150,000,000. Is there any doubt as to who will finally pay this bill for unnecessary improvement?

Aside from the money cost for octane number improvement, there are important penalties in the more rapid depletion of our petroleum reserves, both crude oil and naturally occurring light hydrocarbons. Consider first crude oil. I recall that when cracking processes first began to be used in the refining industry they rightly were considered to be a means of increasing the total yield of gasoline from the crude. How different the situation is now as refiners under the control of a "magnificent obsession" for greater octane numbers now process perfectly good naphthas at a yield of 20 to 30 percent in order to get a few more octane numbers in their over-all refinery output of motor fuel. It is, of course, impossible to give an exact figure of the total yield penalties because of the many different types of crudes and processes used. However, from examination of yield data for various processes, it appears that from 1.5 to 2.5 percent of motor fuel might be sacrificed for each increase of one octane number. Thus, raising the octane number of the current annual production of 750,000,000 barrels by one unit only would decrease the yield by perhaps 15,000,000 barrels, and this can only be made up by increased drafts on our total hydrocarbons reserves. An increase of five octane numbers, which is now considered quite possible by some, would mean an increase annual requirement of 75,000,000 barrels to offset these processing losses.

Many of the processes which the refiner has used in the race to obtain high octanes result in the production of additional light fractions such as butanes and pentanes duplicating and competing with supplies of these materials necessarily produced as an incident to the recovery of crude oil and natural gas. As a result there has been a total oversupply of these light fractions with very weak markets as was painfully obvious in the years preceding the recent war and again as recently as February and March 1946. Weak markets for these naturally available light fractions have surely been conducive to waste, a waste which we conservation authorities have been fighting with every legal means at our disposal. There is no way of knowing the magnitude of this waste but its reality has been clearly apparent to many of you who have seen casinghead gas of 2- to 3-gallon content burning with rich, smoky flame in field flares—burning because the market price of the useful fractions it contained was so low that no sensible businessman would undertake the expenditure to recover them. I tell you that this condition has been caused by the attitude and policy of the industry in not recognizing that petroleum supply and demand should be based on an over-all hydrocarbon balance. If refiners wish to make a real contribution to the conservation of our hydrocarbon reserves, they can do so by programing their operations to use naturally available volatiles and discontinuing the trend toward excessive cracking and thermal processing which now in contrast to the early days results in less gasoline from a barrel of crude oil rather than more. At a time when all are concerned about our Nation's reserves of liquid hydrocarbons, the possible saving of 75,000,000 barrels of crude oil annually and an additional indefinite but certainly worthwhile volume of natural light fractions is of sufficient magnitude to justify serious thought and reflection for every petroleum refiner and marketer.

I know it gives us regulatory authorities real concern. We believe the fruits of oil and gas conservation in waste prevention incident to production of oil and gas—the light hydrocarbons—natural distillates and condensates should be given first consideration in filling refiners requirements. We will have to, perhaps, consider these first, then supplement them with the balance from crude as needed in our allowable production orders.

Restriction of Liquor Advertising

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, February 20 (legislative day of Monday, February 2), 1948

Mr. CAPPER. Mr. President, I have received a copy of an editorial published in a recent issue of the Cottonwood County Citizen, of Windom, Minn., in regard to efforts of that paper to restrict the activities of liquor manufacturers. It is such an able editorial that I send it to the desk, and ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CURBING LIQUOR ADVERTISING

There is a bill in Congress known as the Capper bill which would restrict the activities of liquor manufacturers and distributors in their modes of advertising. It would forbid them to make claims that alcoholic beverages are beneficial to health, will increase social or business prestige, or is traditional in American family life and should be part of the atmosphere of the American home. Another bill would forbid suggesting liquor as part of the celebration of any religious holiday.

Aside from the fact that this would trample upon the freedom of the press, we still admit a shame in our profession that such legislation should be necessary. We never could see why any self-respecting newspaper or magazine should want to run advertising of the sort above named. In fact, it is so misleading that it is enough to shake the faith of the reading public in all advertising. We are happy that this newspaper has never accepted such advertising, though it has meant thousands of dollars in loss of revenue.

Senator Capehart's Proposal

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, February 20 (legislative day of Monday, February 2), 1948

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Senator CAPEHART's Proposal," published in the Marion (Ind.) Chronicle of February 10, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR CAPEHART'S PROPOSAL

Too little attention has been given to the proposal of Senator HOMER E. CAPEHART for a joint European recovery program. The speech advocating this program was made in Peoria, Ill., February 7. In brief, Senator CAPEHART advocates the formation of a world reconstruction finance corporation in which the United States would furnish 50 percent of the money and credit, and each European nation participating would furnish money by which to buy a reasonable percentage of the remaining stock. In short- and long-term investments and bank balances in the United States alone the 16 European nations designed to be covered by the Marshall plan have $13,000,000,000 in good credit dollars. Added to these very liquid dollars which these nations possess in the United States are other vast holdings in South and Central America and Switzerland.

Senator CAPEHART concedes that there is real merit for an outright gift to European nations to meet the needs of hungry and cold people, but he says: "That is a separate phase of European relief and should be dealt with separately even though the Marshall plan as proposed fails to do this.

"For 30 years the United States has experienced nothing but failures which have grown out of hasty, ill-advised action based on emergencies which found this Nation lacking in qualified leadership. We fought World War I to save democracy. Then came the Versailles Treaty and Disarmament Conference. The Kellogg-Briand Treaty was like the others; it never accomplished what it was designed to accomplish. * * * Then came the depression and the destructive philosophy of scarcity, which still is with us today.

"War again threatened us, and we had the Neutrality Act, Cash-and-Carry Act, and, finally, lead-lease; we only were fooling ourselves. Then we gave 50 destroyers to England with the silly belief they would keep us out of war. Business as usual was being carried on with Japan while our diplomats were edging closer to war with that nation."

Then the Senator traced the various actions taken during the war, including the Atlantic Charter we signed for the "four freedoms" which were to be the terms of an Allied victory for the world. We followed with the Bretton Woods monetary conference and the Export-Import Bank. These were proclaimed to be the harbingers of permanent international prosperity. But the Senator continued: "Four freedoms, United Nations, Bretton Woods, Export-Import Bank were mere scraps of paper as we began getting the returns from Tehran, Yalta, and Potsdam.

"The Morgenthau plan and the division of Germany boomed into the faces of those

hoping for a quick return to the peaceful ways of the world.

"Russia began grabbing. We began fearing. Then came the Greek-Turkish loan to stop Russia's march to the Mediterranean oil pool.

"Now the Marshall plan."

The Marshall plan, Senator CAPEHART contends, continues the fallacy that American dollars given freely and without stint will restore European stability. Then, he says, there is an equal fallacy in the government-to-government plan proposed by Secretary Marshall. This plan provides that the United States Government will give goods or dollars to certain European nations who in turn will sell these goods or lend the dollars to their peoples needing them. This is the authorization plan of the superstate and can lead only to socialism or to statism, not only in the nation where the plan is employed but also in all probability in the United States. Pointing out that we already have given since the war, net aid amounting to more than $9,500,000,000, without producing an iota of even simulated stability in the nations where the money and goods have been channeled, Senator CAPEHART contends that additional grants will not produce stability unless the nations benefited by such credits will themselves assume responsibility according to their needs and resources.

"Let those nations where confidence prevails step forward with funds to help themselves; then Americans will step forward with an equal number of dollars to aid in the industrial recovery of that nation. With these dollars will be formed a vast pool of dollar credit which can be loaned for the purpose of restoring the production of that country.

"Money can be poured into private enterprise in the foreign nation through a credit allowance against the RFC in that nation. This will entitle applicants to an equal credit against the American RFC.

"Armed with his purchasing credit, the businessman moves into the world market to procure the materials he needs to restore production so badly needed in his country.

"This," the Senator contends, "is the American way. By this plan Americans call upon the Europeans to share in the risk of saving their country in a cooperative manner. It inspires the confidence needed to sufficiently preserve freedom and independence. This plan is the answer of the free-enterprise system to the ideology of government by dictators. It preserves our principle, it preserves our pledge to protect our Americans and our American resources. If we are right in our system in America, then our system is the greatest force with which to oppose communism."

It's Time To Do Something About Germany

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, February 20 (legislative day of Monday, February 2), 1948

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "It's Time To Do Something About Germany," written by O. K. Armstrong and published in the current issue of the Reader's Digest. Mr. Armstrong is a distinguished Missouri journalist.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT'S TIME TO DO SOMETHING ABOUT GERMANY

(By O. K. Armstrong, writer, publicist; former member Council of State Governments; former member Missouri Legislature)

The German people face a task as great as ever confronted any people on earth: to rebuild their country, economically, politically, and spiritually. We American people and our Government have assumed a major responsibility for the future of this defeated land. To date, our occupation policies have failed even to start Germany back toward democracy and economic self-sufficiency.

For many weeks last fall I talked with officials, clergymen, clerks, laborers, farmers, veterans, and housewives in all four of the occupied zones. There can be no doubt that the Germans know who lost the war. Almost every large city is still in ruins. Many of the small cities are from one-fourth to one-half destroyed. Some 2,750,000 troops and 450,000 civilians lost their lives. A large part of all German industry was bombed away or has been dismantled since the war.

Gaunt hunger stalks the land. Four million evacuees from bombed-out homes find shelter as best they can. About 25 percent of Germany—the best food-producing region—has been given to Russia and Poland. Nearly 13,000,000 displaced persons have been jammed into the remaining area of human misery.

There are now four Germanys. The Russians, holding the eastern third, flatly refuse to permit economic unity. The British and French are progressively shifting their occupation burdens to American shoulders. So we Americans must choose: Either we withdraw, leaving the heart of Europe in a chaotic state and a further prey to rampant totalitarianism, or we give leadership for creating a peaceful and democratic Germany. To succeed in the latter task, we must chart new policies so just and constructive that generations ahead will approve them.

Immediately, we should do four things:

1. ABANDON VENGEANCE AND ESTABLISH JUSTICE

Millions of Germans said, when American troops entered their defeated homeland: "The Americans are a just people. They will free us from Nazi rule and bring us democracy." Very quickly they learned their mistake. Our policy has been one of harsh and vindictive punishment for all the people.

It is understandable that Americans should think all Germans guilty of the crimes against humanity committed by their Nazi leaders. During the fighting this was the theme of effective propaganda in the United States. It is easy to say: "Mass punishment serves them right. They brought it on themselves." But this concept of mass guilt and this policy of mass vengeance are the very opposite of the basic principles of American justice.

These principles are implicit in our Bill of Rights: No ex post facto law shall be passed. Guilt for a crime is individual, there is no such thing as "collective guilt." One is presumed innocent until proved guilty. If cleared by one trial, one cannot be tried again for the same offense. Punishment must be humanely administered, having for its purpose rehabilitation rather than suffering and degradation. Every one of these ideals has been violated during our occupation of Germany.

Max Rheinstein, of the University of Chicago Law School, who served for 18 months in military government, has declared: "Our denazification methods retard economic rehabilitation and are driving into sterile hatred and resentful opposition millions of people who might otherwise have been sincere democrats."

Chief device for mass punishment is the denazification program. Certainly Germans expected that those guilty of crimes, military or civilian, would be punished. But denazification set up classifications of guilt for the entire population, with "automatic arrest" for all within certain categories. Proof of innocence, instead of guilt, has to be established. Meanwhile, accused persons are forbidden any occupation that might "influence the community" except manual labor.

Studying scores of denazification cases, I found such cases as these common: A manufacturer was forced to pay dues to the party or lose his business; now his business is confiscated, his property taken, and he is no longer allowed to work as an executive. Many German Red Cross units were incorporated as party auxiliaries, without consent of the members; now nurses of these units cannot engage in their profession. A pastor was gathered up with hundreds of accused and kept in a concentration camp for 7 months before trial; it proved to be mistaken identity.

Local denazification courts are conducted by Germans selected by occupation authorities. Even if men are ruled innocent by these courts, in the American zone a special branch can declare the judgment void. Thus thousands are tried again and again while held in confinement on starvation diets. A young Austrian who joined military government training while in a United States college in 1943, shortly after becoming an American citizen, is now high in the denazification program. He admitted to me that he had never studied law, but explained that in bringing about mass punishment of the Germans it is best to discard American legal procedures.

Bitterness fills the hearts of the German people over this application of American justice. Millions who never supported Hitler's policies of racial hatred and aggression recall that statesmen of the now victor nations once spoke warm endorsements for their dictator, that their governments recognized his regime.

Germany's physical stagnation and moral decay are stark proof that a policy of vengeance can produce nothing except more hate; that it is a fertile breeding ground of new conflicts; it cannot build the foundations for lasting peace. It is time to replace this policy with one of cooperation based upon justice.

2. REVIVE PEACEFUL GERMAN INDUSTRY

"Give us the right to work again," is the plea most frequently heard in Germany. Occupation rules prevent normal productive labor. Automatic elimination of persons accused of Nazi influence has completely stagnated industry. With most leaders of business, transportation, manufacturing, education, and so on, forced to haul rubble or grub the fields, production has no chance.

The policy of deindustrialization, added to the devastation of war, has left Germany a vast slum. This policy was incorporated, somewhat vaguely in a statement issued by allied leaders at Quebec in 1943, and implemented by the Potsdam agreement of August 1945. Details were never clear, but in actual practice the plan is geared to destroy Germany's principal industries and reduce the country to a pastoral, or farming, area. Reasons given are to eliminate Germany's future war potential and, less openly, to eliminate Germany as an industrial competitor of the victor nations.

A published statement of British and American technical experts in Germany in August 1945 branded the pastoral plan for this most highly industrialized nation in

Europe an absurdity, declaring: "World opinion will demand a fresh approach, after several years' experimentation. Germany can't feed itself, regardless of the diversity of German agriculture. The change in policy will occur in '48 or '49, after public opinion has changed."

To break the power of the German Army, railroads and other means of transportation were heavily bombed. Since the end of hostilities, industries that supplied material and repairs for railways, barge lines, and communications have not been permitted to function. With repair shops closed down, 75 percent of the locomotives rust idly in the yards and only a few trains move at all.

German coal mines fed about half the indutries of continental Europe, and warmed the homes and working places of millions. Now so little coal is allotted the western zones that heavy industries could not function even if permitted, and countless people suffer from cold.

All types of industrial production are in this dreary picture of forbidden activities except for a few small items of manufacture. Bureaucratic control renders futile most attempts to revive allowable industries. Formulation of policies and enforcement of the countless supplementing edicts are in the hands of State and War departmental employees, most of whom are inexperienced in problems of production and distribution, and who, while eager for power, are loath to assume responsibility for decisions.

Most ghastly of all is the dismantling program, calling for continued destruction of German industrial plants. Some are dismantled as reparations, with a large share marked for Soviet Russia even after her leaders announced the formation of the Cominform dedicated to sabotaging our European-aid plan On last October 16 British and American authorities announced that 682 industrial plants were still to be dismantled. A directive not made public but given to Senate committee members by an American officer, who could no longer stomach the destruction, listed schools, barracks, and hospitals yet to be blown up because they were used by troops during the war. This in the face of desperate need to house millions of Germany's homeless and sick.

The results of this policy of sterility and destruction are obvious: Thousands of idle men and youths wander about the western zones of Germany, staring into space, looking for scraps of food, or plotting some mischief to make up for productive labor. Such idleness is not permitted in the Soviet zone.

Starvation is taking its deadly toll. In normal times Germany exchanged industrial goods for about 40 percent of her food. Today the western zones need to import 65 percent of their food. From the mere subsistence level of the 1,550 calories per day allowed in 1945, food rations have steadily dropped until in many cities they average not more than 800 calories.

Conquering nations and their armies have no political or moral right to destroy a vanquished people's means of livelihood. It would be better to allow German laborers to produce goods at home for reparations than t take from them the very means of restitution. To try to eliminate the competition of German production is a misguided policy. The prosperity of one area strengthens that of all other areas of the world. As for war potential, it is clear that this can mean anything. In modern war, every plant, every institution of learning, every plot of ground, contributes to the war effort.

Peaceful German production is vital to the life of Europe. Her trade has long sustained the economies of her neighbor nations. With Germany industrially impotent, European standards of living must fall lower and lower and her neighbors must be permanently impoverished along with her own people. Today, the United States must sustain Germany and those neighbors with billions of aid. The alternative to reviving German industry is to continue this drain upon American taxpayers. Surely it is better to let the Germans resume work and support themselves.

3. MAKE JUST DISPOSAL OF DISPLACED PERSONS

There are two groups which intensify every social and economic problem in Germany. First, about 700,000 citizens of other countries, now under Russian seizure, such as Estonia, Latvia, and Lithuania, or under Russian domination, such as Poland, who refuse to return because of certainty of Soviet persecution.

Second, more than 12,000,000 "expellees," victims of the greatest mass uprooting of populations in history. They were driven from their homes in accordance with the Potsdam Agreement. This unbelievably tragic document reads, "The three Governments (United States, Britain, and Soviet Russia) * * * recognize that the transfer to Germany of German populations * * * will have to be undertaken." State Department officials explain that the Soviet Government promised that only 1,500,000 people would be affected; nearly nine times that many have been transferred. By the agreement, President Truman, speaking for the American people, gave approval to a mad stroke of racial vengeance. By this act, our Nation accepted the race theory against which the bitter war was fought.

In Poland, Czechoslovakia, Hungary, Silesia, Pomerania, East Prussia, Yugoslavia, and other areas these Volksdeutche were expelled from homes and farmlands that had been theirs for sometimes as long as 500 years. I talked to scores of them, from every area affected. Their stories are alike: The sudden appearance of armed men, the command to pack a few clothes and food, the forcible ejections with death to many who resisted; the loading into trucks and trains, the arrival in the American zone and forced implanting into homes of the local population.

These unfortunates are billeted mostly in small towns and rural areas. Often as many as a dozen men, women, and children are crowded into one room. The fears, tensions, and social problems thus created are immeasurable.

There can be no final settlement of Germany's vast problems until the displaced persons have been assisted to new homes and work in Germany, or resettled in other lands. Here is a task that demands the immediate attention of Congress.

4. HELP SAVE THE NEW GENERATION

Unless the new generation in Germany is salvaged, any program to create a peaceful nation will fail. The task cannot be accomplished by the inadequate welfare activities now administered through American military government. It must be a part of the broad plan of permanent rehabilitation.

Immensity of the problem can be seen in figures from a recent study of children in Berlin. Of 41 boys, aged 12 to 14, in one school class, 9 have lost both parents, and 22 others have lost father or mother. All but 2 mothers of the boys go out to work every day; 23 boys spend the whole day without any grown-ups looking after them. Only 4 have a bed of their own; 35 share their beds with 2 or more persons; 22 have no blankets. Only 5 have 2 warm meals a day. All are underweight. And saddest of all, 32 of these 41 boys admit they have stolen. Report on a class of 34 girls shows similar conditions, with the notation that 14 of the girls admit immorality to obtain food.

These are the children of Germany today. We Americans share responsibility for their future so long as we have a hand in Europe's destiny. If they continue in hunger and neglect, the inevitable delinquency, crime, and despair will take root and store up trouble for the future. Interesting and productive activities, foster homes and, above all, firm, friendly guidance must be supplied.

As a demonstration project, Dr. A. Freudenberg, Lutheran minister, has gathered up about 200 homeless youths who were arrested for black marketing and other delinquencies. In a work camp of their own construction the boys are finding new lives in profitable employment. "Unless this is done all over Germany, the land will be filled with dangerous nobodies," Dr. Freudenberg told me.

We must help Germany rebuild her educational system, along truly democratic lines. Tools and machinery should be supplied for reconstruction of schools and libraries, with the necessary dormitories and equipment. There must be new methods and programs.

Through nearly 3 years since VE-day, our governmental leaders have failed to find a constructive plan for Germany. We the American people need to tell members of Congress, our policy-making branch, to assume their responsibility in this critical matter. In cooperation with our friendly allies, we should assure the German people they will be given support in their long task of creating a law-abiding and self-sufficient nation. Then they will bring to the solution of their problems the determination of those who know what it means to lose wars and how important it is in the future to live in peace.

Mahatma Gandhi

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Friday, February 20 (legislative day of Monday, February 2), 1948

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "An Indian Saint," from the February 19 issue of the Christian Advocate, official organ of the Methodist Church.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN INDIAN SAINT

At the moment that these lines are being prepared for publication it is impossible to anticipate the far-reaching effects of the senseless murder of Mahatma Gandhi at the hands of a fanatic. The Indian Government seems to be proceeding with dispatch and impartiality, even in the face of suspicions that run into the upper levels of the nation. It is impossible, however, to overestimate the seriousness of the tragedy which has overtaken the infant state in this, the most critical moment in Indian history during 1,000 years.

Greater variance of opinion has not gathered about any other individual of the century. By some he has been esteemed only a little less than a god; by others he has been the spirit of evil incarnate. But by the world in general he has been accepted as an idealist of transparent sincerity and absolute fidelity.

Because he has exhibited conspicuous Christian virtues there are those who have hailed him as a Christian, in spite of his denials of the title. Because he refused to declare his belief in certain Christian creeds he has been labeled by others as almost an anti-Christ. For long years, as the leader of the independence movement for India, he was accounted by many Americans as the greatest patriot in the world. Because of his loyalty to his philosophy of nonviolence during the war, he was counted by millions of

those same Americans as a fifth columnist, a Nazi sympathizer, an appeaser, or something even worse.

Inside India he was the victim of the same extravagant distortions of opinion, as his tragic death testifies. And for an explanation of this divergence we must look at the contradictions within his own life. As an idealist in certain controversial social fields, he was one of the purest souls the world has ever known, and there is great danger that his assassin may have paved a route by which he will be elevated to the rank of divinity by great masses of Indians. But his blind spots were almost as notable as his virtues, and just as it is unwise to judge him by his weaknesses, so also it is unrealistic to think of him only in terms of his amazing qualities.

Regardless of religious, racial, political, or personal opinions, the whole world stood at his bier and mourned. His going left a great darkness over the entire earth. In paying its tribute to the Indian saint, the Christian Advocate employs the lines of W. Russell Shull:

"That scrawny Hindu saint with body poor
Is full-grown giant in his height of soul,
And power of mind, and master skill to roll
On soul of empire weight of evil sore—
Until her lords and people did deplore,
And conscience keen bestirred to lift the dole
Of justice, and began to grant the goal
Of freedom which this seer did long implore.

He's master politician of the soul;
He won by will to suffer far, far more
Than all the nations' armies e'er have won;
And by his poised resistance reached the goal,
And brought the race to threshold of the door
Of ways to build our striving world as one."

Control of Margins on Commodity Exchanges

EXTENSION OF REMARKS
OF
HON. W. LEE O'DANIEL
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, February 20 (legislative day of Monday, February 2), 1948

Mr. O'DANIEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a telegram which was sent to me by Robert M. Harriss, of New York and Texas, the telegram coming from New Orleans, La., and being dated February 18. The original of the telegram was addressed to the Senator from Kansas [Mr. CAPPER], chairman of the Senate Committee on Agriculture and Forestry, and Representative CLIFFORD HOPE, chairman of the House Committee on Agriculture.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

NEW ORLEANS, *February 18, 1948.*

Senator ARTHUR CAPPER,
Chairman, Senate Agricultural Committee,
Washington, D. C.,
Congressman CLIFFORD HOPE,
Chairman, House Agricultural Committee,
Washington, D. C.:

As one interested in farming in Texas, Oklahoma, and as a member of cotton and commodity exchanges, I urge you do not give control of margins on commodity exchanges to any governmental department or bureau because this, in effect, would give them a club for price control and destroy our free American marketing system which is the greatest in the world. Such governmental or bureaucratic control would naturally drive out of markets the speculator, trader, and investor who are as vital to our marketing system as the underwriters are to life, fire, and other forms of insurance. Thus our marketing system would be destroyed and the buying and selling of commodities be thrown into Government or bureaucratic hands and control. The commodity markets operate under Government or State charter regulation and supervision. They are an integral part of our national economy and the Government itself has often traded, bought, and sold in these markets. Business and the ventures of life itself are a gamble or speculation. May I bring the following to your attention, first, although agriculture is our greatest and basic industry it received less than 15 percent of the national income in 1947. Second, that Federal, State, county and city taxes took more than 35 percent of the national income in 1947 or more than two and one-half times as much as the total farmers and agricultural income and more than one dollar out of every three dollars the Nation produced. Third, that on the average the cost of the raw commodity is less than 12 percent of the cost of the manufactured goods to consumer. Fourth, that based on present cost of production cotton at 35 cents per pound is the equivalent of only 35 cents per hour for the farmers' labor, and during 1947 many commodities were sold below cost of production. Fifth, if farming is as profitable as some claim, why do not people return to the farm and increase production. Sixth, that if the farmers who are producing commodities and fiber to feed and clothe the Nation had given their commodities away for nothing in 1947 it would not have affected the cost of living 10 percent. Seventh, why not be honest with ourselves and acknowledge that high cost of living is due to the war debts and governmental taxes that are taking more than one dollar out of every three dollars of the people's income and have thus brought about the necessity of higher labor, manufacturing costs, transportation, merchandising, and cost of living. These excessive if not punitive taxes destroy incentive for industrial and agricultural production and make it impossible for the veteran and younger generation to have the same opportunities to succeed in business and other activities of life as their fathers had. Eighth, the recent decline in commodity and security markets has been due to the contraction of credit by the Federal Reserve policy and frightening speculators, traders, and investors out of the market. Ninth, as agriculture is our greatest and basic industry, our country was never prosperous and cannot be prosperous unless the farmer and agriculturer are receiving a fair and equitable share of the national income. Tenth, with the existing governmental debt and taxes, low commodity and agricultural prices will lead to the most serious depression in our history and the unemployment, loss of homes, farms, business and bank failures, etc., will be far worse than the depression and disaster of 1929–32 era. Eleventh, to maintain a sound economy our national income must not be less than $250,000,000,000. To accomplish this it is essential we have fair and equitable agricultural income coupled with the proper handling of money and credit and lower taxes and economy in Government. Congratulations on the good work your committee is doing for American agriculture and our country. May I ask this telegram be made part of your committee's record.

ROBERT M. HARRISS.

Allocation of Oil Quotas

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. HESELTON. Mr. Speaker, under leave heretofore granted to me, I include in this extension the press release of last night from the Office of International Trade of the Department of Commerce as to the third revision made in the quotas since January 16—25 days. As you will all recall, each has been accompanied with a statement that it is the absolute, irreducible minimum. I have examined the minutes of the meeting of the review committee preceding the reduction announced February 10. I have been promised the minutes of the meeting this week, as well as of the one prior to January 16. I think it would be more useful to Members to have them available together and plan to submit them Monday, if possible.

In the meantime, on this point, let me quote parts of the minutes:

The Chairman (Mr. John D. Garrett) raised the question as to the possibility of reducing military shipments in view of the sharp increase in this movement in recent months. Mr. Fentress (Interior) * * * expressed the opinion that little further saving could be obtained from this source. (After the meeting, the representative of National Military Establishment, Comdr. Royal Firman, stated by telephone that military shipments of gas oil and distillates in the first quarter for use in the civilian economy of Japan and Ryukyus would be reduced to 100,000 barrels as against the 1,600,000 barrels called for in the established quota. The remainder will be procured in and shipped from the Persian Gulf.

Mr. Myer (OIT) stated that export licenses for the shipment of these petroleum products were going to a handful of exporters consisting of about 10 to 15 major producer-exporters shipping chiefly to their subsidiaries abroad.

The Chairman asked about the feasibility of having foreign missions or United States Embassies estimate the adequacy of existing stocks in foreign countries. * * * Mr. Trisko (ODC) referred to a study his office had attempted to make of foreign petroleum stocks. He regretted to report that reliable information of this kind was not available.

There was general agreement that some cuts could be made in residual fuel oil, kerosene, and gas distillate fuel oil provided these cuts would not establish a precedent for future quotas. * * * It was also generally agreed that the quotas as established already represented only the minimum essential needs of foreign countries for supplies from the United States.

The Interior Department felt that the cut in residual fuel oil should be larger.

The representative of the Agriculture Department supported the position taken by Interior.

Mr. Speaker, since the National Military Establishment took a substantial cut in its requirements it seems obvious that the one representative from the State Department and the four representatives from the Commerce Department carried the day against the proposal of further reductions.

The bulletin of February 19 follows:

A furuther reduction of 599,000 barrels of petroleum products in the first quarter export allocation was announced today by the Department of Commerce through its Office of International Trade.

The revised allocation, which includes a reduction announced on January 30, represents a total reduction of about 24 percent of the allocation of 11,850,000 barrels of these products announced on January 2, 1948.

This last reduction was made by OIT after consultation with the foreign governments concerned.

The revised country export quotas for the first quarter (January 1 to March 31, 1948) and the types of petroleum with their Census Schedule B numbers follow:

[In barrels]

	Aviation motor fue. (5016.00)	Other motor fuel (5017.00)	Kerosene (5027.00)	Gas oil and distillate fuel oil (5030.00)	Residual fuel oil (5031.00)
Argentina		220, 000			
Australia	20, 000	100, 000		95, 000	
Belgium		175, 000	8, 000	175, 000	70, 000
Brazil		80, 000			
British Honduras	2, 000	5, 000	2, 000	2, 500	
China	60, 000	350, 000	85, 000	100, 000	
Costa Rica	2, 400	30, 000	3, 500	10, 000	20, 000
Cuba	25, 000	200, 000			200, 000
Denmark		70, 000		120, 000	60, 000
El Salvador		12, 500	1, 500	3, 500	40, 000
Eire	15, 000				
France	120, 000			300, 000	
Guatemala	5, 000	8, 000	2, 000		55, 000
Honduras		1, 000			
Italy	30, 000				
Mexico	70, 000	350, 000		75, 000	250, 000
New Zealand	10, 000	140, 000	20, 000	35, 000	
Norway		10, 000	7, 000		
Panama, Republic of	100	40, 000	7, 000		25, 000
Paraguay	1, 500				
Philippines	20, 000	280, 000	60, 000	135, 000	
Portugal	20, 000	50, 000	30, 000	10, 000	19, 000
Sweden		225, 000	25, 000	250, 000	60, 000
United Kingdom	120, 000	1, 175, 000	55, 000	1, 000, 000	
Netherlands				60, 000	
Iceland	35, 000	27, 000			
British West Africa	5, 000	70, 000	25, 000	20, 000	10, 000
Switzerland		20, 000	6, 000	50, 000	
French West Africa	10, 000	60, 000	10, 000		15, 000
Subtotal	571, 000	3, 698, 500	347, 000	2, 441, 000	824, 000
Unallocated reserve	119, 000	399, 000	147, 000	353, 500	151, 000
Total	690, 000	4, 097, 500	494, 000	2, 794, 500	975, 000

Exports of petroleum products to Canada are not included in these figures. Export licenses are not required for shipments to Canada.

Separate quotas of petroleum products for Greece and for Japan and the Ryukyus, as announced on February 10, have not been changed.

The amounts unallocated and listed as reserves have not been reduced below the totals announced on February 10. OIT officials explained that the unallocated amounts had already been reduced to the minimum necessary to take care of emergency needs and for exports to certain small countries not included in the allocations by country. It is hoped that it will not be necessary to use all the unallocated amounts. The amounts not used will represent a further saving, it was explained.

Mr. Speaker, I shall analyze this against the February 10 revision to determine the amounts of reductions against the amounts those countries reported they would accept. It seems as though we have some two dozen new 100-percent embargos. This is a very peculiar argument against the fear of disrupting foreign economies.

Sam Woods, Valuable Foreign Service Officer

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1948

Mr. STEFAN. Mr. Speaker, during hearings of the committee which makes appropriations for the Department of State, it was developed that a large number of our Foreign Service officers contributed unusual and valuable services to the war effort. Many of them have been decorated for this outstanding service. Among those who were so decorated was Sam E. Woods, now our consul general at Munich, Germany.

As chairman of the subcommittee for State Department appropriations, it was my pleasure to include in the hearings on the appropriations for the fiscal year 1948 a brief résumé of what Mr. Woods had accomplished in giving the State Department information about German plans and in aiding American aviators in Europe.

The Washington Evening Star, in its issue of Wednesday, February 18, 1948, printed an excerpt from the memoirs of former Secretary of State Hull, telling how Mr. Woods, then United States commercial attaché in Berlin, procured Hitler's plan to attack Russia.

By leave granted me, I include in these remarks the portion of Mr. Hull's memoirs that will acquaint the Congress with the valuable service rendered to our Government by this outstanding Foreign Service officer:

THE MEMOIRS OF CORDELL HULL—DETAILS OF HITLER'S PLAN FOR SOVIET INVASION OBTAINED BY UNITED STATES COMMERCIAL ATTACHÉ IN BERLIN

(Ch. XXI)

I was ill at home when word of Hitler's invasion of Russia on June 22, 1941, reached me. Immediately I telephoned the President and Under Secretary Welles. To each I said, in effect:

"We must give Russia all aid to the hilt. We have repeatedly said we will give all the help we can to any nation resisting the Axis. There can be no doubt for a moment that Russia comes within that category."

I knew that some military experts, both here and abroad, were predicting that Hitler would eliminate Russia from the war in a matter of a few weeks. But I could not believe it any more than I had believed the statements of so many that with the fall of France that collapse of Britain would be a matter of a few weeks.

I had felt that in rushing vast quantities of weapons to Britain in the summer of 1940 we were taking no real risk that they would fall into German hands. And similarly I believed we could send Russia all weapons and supplies possible without real risk that the Germans would overrun and capture them.

If the President and I had doubted Russia's ability to resist Germany it would have been foolhardy to have sent her arms that would only have fallen into Hitler's hands.

INVASION NO SURPRISE

For half a year we had had excellent reason to believe Hitler would attack Russia, hence the event of June 22 did not surprise us. In January 1941 there came to me a confidential report from Sam E. Woods, our commercial attaché in Berlin.

Woods had a German friend who, though an enemy of the Nazis, was closely connected with the Reich's ministries, the Reichsbank, and high party members. As early as August 1940, this friend informed Woods that conferences were then taking place at Hitler's headquarters concerning preparations for war against Russia. This information became more concrete after some weeks, when Hitler reportedly said he intended to have "only my soldiers from Vladivostok to Gibraltar."

Woods used to meet this friend in a Berlin motion-picture house. By buying reserved seats from an agency and sending two tickets to Woods, the friend managed to sit alongside him and in the semidarkness slipped notes into Woods' coat pocket.

The information from Woods was in marked contrast to the considerable evidence that Hitler was planning an invasion of Britain, but the contacts of Woods' friend said that the air raids against England served as a blind for Hitler's real and well-calculated plans and preparations for a sudden, devastating attack on Russia.

Later Woods' friend informed him that an organization of the Wehrmacht for the old 21 Russian Czarist regional governments had been formed, and that the economic staffs for these territories had been appointed. Bales of bank notes in rubles had been printed.

LEARNED CHIEF POINTS OF PLAN

Finally, through a contact this friend had on the German General Staff, Woods learned the chief points of Hitler's strategic plan—the three wedges, those of the north and the south and the decisive third one in the center, direct against Moscow. All preparations had to be completed in the spring of 1941.

When Woods' report, embracing all this information, came to me it was so circumstantial that, at first, I believed it a German plant. I turned it over to J. Edgar Hoover, Chief of the Federal Bureau of Investigation, for his comment. Hoover thought it authentic.

Woods having told us of a method of confirming the standing and contacts of the source by checking with a prominent German exile in the United States, I asked Assistant Secretary of State Breckinridge Long to see him and obtain this confirmation, which he did. I also talked over the report with the President.

I then decided that the contents of the report should be communicated to Soviet Ambassador Oumansky. Such a step, I believed, was in keeping with the proper attitude this country should take toward Russia.

I requested Welles, who at my suggestion had been holding a series of conversations with Oumansky to straighten out the differences between our two countries, to call this information to the Ambassador's attention. This Welles did.

When further information from the same source came to me, I again turned it over to Welles, requesting him to communicate it to Oumansky. This he did on March 20.

EFFECT ON SOVIET UNKNOWN

Oumansky no doubt forwarded this information to his government, as he said he would. It is difficult to say what precise effect it had on Soviet policy. Only 3 weeks later, however, Stalin suddenly concluded a nonaggression treaty with Japanese Foreign Minister Matsuoka, at a moment when Matsuoka believed such a treaty impossible.

There is no doubt that Stalin made the treaty to protect himself in the Far East in the belief that Hitler intended attacking him in Europe. Furthermore, Russia was adopting a stronger policy toward the Balkan countries than might have been expected in the face of Hitler's plans to absorb them into the Axis.

Russia, after having stimulated Hitler in August 1939 to embark on the European war, and after having assisted him by invading Poland when the Poles were desperately resisting the German Army, had interfered with and obstructed Hitler's purpose in many ways since June 1940.

The information we had that Hitler was planning an invasion of Russia was particularly useful to me in my conversations with the Japanese. It ruled out any likelihood of an alliance between Russia and Japan, and it enabled us to adopt a firmer attitude toward Japan than would otherwise have been the case.

Jefferson-Jackson Day Address by Hon. Dennis Chavez, of New Mexico

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, February 23 (legislative day of Monday, February 2), 1948

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered by me at the Jefferson-Jackson Day dinner at Fort Wayne, Ind., on February 19, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

At the outset let me state that the only group I enjoy addressing more than a Democratic audience is a Democratic audience that is fighting mad. From the way I appraise the situation the Democrats all over the country should be fighting mad. We lost the election in 1946 on a fluke and what better occasion to be fighting mad than a Jefferson-Jackson day dinner on the eve of a Presidential election campaign.

I am pleased to be in Indiana speaking to the assembled members of our party on the historic occasion of the one hundredth anniversary of the Democratic National Committee as well as to do honor to the memory of those great American and Democrats to whose principles we so firmly adhere—Thomas Jefferson and Andrew Jackson, one the philosopher, the other the practitioner of democratic principles.

Indiana is dear to me because so many of your citizens have played a leading part in the building of New Mexico. One of our counties is named after Grant's Vice President, Schuyler Colfax, a Congressman and Speaker of the House from Indiana. Lew Wallace was Territorial Governor of New Mexico in the stirring era of Billy the Kid, during which he wrote the famous novel, Ben Hur.

I have a further reason for being glad to be addressing a Democratic audience in Indiana. In your State the two parties are fairly evenly divided. Democrats have to fight like everything for what they get in Indiana. When I was growing up in New Mexico my relatives and everyone I knew were Republicans, but I became a Democrat before I could vote because I disapproved of the inequalities condoned by the Republican Party. In those days we fought hard but we didn't get anywhere. Times have changed and though we still have to fight for everything we get we've kept the Republicans well on the run for 18 years. The recent municipal elections in Indiana show the way the wind is blowing and point to a victory for you this fall. Keep up the good work.

What kind of a situation is the Democratic Party in today? The party is like the natural-born slugger who catches an unlucky clip on his jaw the first round, takes a count of nine and coasts; he has been coasting the second round and is now back on his feet. If his handler is good, he'll tell the boy to get out and start slugging—to try for a knock-out.

We caught an unlucky clip in 1946. That election was decided not on the record, not on principles, not on candidates, but rather because the American people were tired of the war, tired of controls, and too tired to appreciate the real issues of the campaign.

The second round was last year; it brought us the Republican-controlled Eightieth Congress. The best we could do was hang on, but the third round is coming up. Our party is back on its feet, our head is clear, we still have our punch, and it's time for us to start slugging.

It may sound trite to recall the political philosophy of Jefferson and how Jackson transformed these principles into action. There is no better way of describing the difference between Democratic and Republican philosophy. Jefferson founded our party on the doctrine that the purpose of government is to improve the lot of the masses and not to serve the interests of special groups. Jackson put these principles in effect. The Republican Party has traditionally served the special interests.

Oh, it is true that there have been liberal and progressive Republicans, but tell me how much assistance the Norrises, La Follettes, Cuttings, and Shipsteads received from the administrations of Harding, Coolidge, and Hoover. About as much as TOBEY, AIKEN, BALDWIN, and MORSE can expect from a party controlled by reactionary conservative Republicans who do not see eye to eye with them on the necessity of improving the lot of the common man.

There are doubtless some conservative Democrats, but the party as a whole, its leaders, principal spokesmen, and the great mass of its followers are not satisfied with conditions as they now exist in the United States. Democrats do not agree with Voltaire's Dr. Pangloss that this is the best of all possible worlds, but we would like to make it the best.

We realize that our technology and science have opened up for us the innermost secrets of nature and that our industrial machine is producing at a rate unprecedented in the history of the world, and that our national income has never been so great. But we also know the answer to the questions: Does the common man share in this prosperity and is there democratic distribution of the comfort and riches which our technology is producing?

Must we not admit that there are millions of our people ill-clothed, ill-housed, badly nourished, uneducated and unhealthy?

Democrats know that so long as these conditions exist our Government is not fulfilling its mission as outlined by the great founder of our party, Thomas Jefferson.

Tonight I propose to contrast the position and record of our party and that of the Republican Party with respect to these points. This record will show beyond doubt that the Republican Party is hopelessly controlled by reactionary elements and that only the Democratic Party is capable of promoting and securing the welfare and happiness of the American people.

The coming election, in my opinion, will be fought along the following lines—control of inflation and deflation, public housing, civil liberties, broadening of social security and peace.

The Republican Party has made a wonderful record on most of these points. In fact, it is so wonderful a record that just as soon as it is brought home to the American public the result of the third round will be a cinch.

Ask the American housewife if she thinks there is anything wrong with prices and if Congress ought to do something. Oh, I know that the commodity market took a beating and that prices of groceries have gone down, but how many American families are still doing without butter, beef, bacon, and eggs because the prices are beyond the reach of their pocketbook?

The administration has advocated a concrete program for the control of prices. Most of the points outlined in the control program were accepted by the Republican Joint Committee, yet a complacent Republican Congress allowed prices to run away to unprecedented heights and sits back unconcerned when the break came in the commodity market. Most economists predict that prices will not go back to 1947 levels. They'll be less complacent when an angry public votes this November.

Ask the veteran living with his in-laws, or in a trailer, or sharing a flat with another family if the Government has been square with him on the housing proposition. Has the Republican Congress helped him secure adequate housing? The Taft-Wagner-Ellender bill has been bottled up in Congress since it was introduced. A powerful real estate lobby and Republican committee members say no to the veteran and refuse Congress a vote on the measure. The administration has consistently recommended low-cost public housing as the only solution to this problem—but what is the use? The Republican Party won't give it a chance.

What is the record of the Republican Party on education? Is it not disgraceful that the richest country on earth can afford to have millions of its children without adequate schooling? Five hundred thousand young men were rejected for service in the last war because they had no education. Five million youngsters between the ages of 6 and 17 are not going to school. The 1940 census revealed that 10,000,000 adults had failed to complete the fourth grade. Does this sound like everything is all right? Is the Republican Congress justified in refusing a vote on Federal Aid to Education?

We take pride in the health of our people. Americans are healthier than other people. How is it then that some fifty percent of the young men who appeared before Selective Service Boards were rejected because they were not physically fit to defend their country? It is a matter of record that these physical disabilities could have been eliminated if corrective medical attention had been given when these men were young. Do you know why they failed to receive necessary medical attention? Because these facilities were beyond the means of millions of American families. One-third of our 3,000 counties in the United States are without the services of so much as a county health officer. Our health is a matter of national concern. The Democratic Party supports national health insurance. We insist that the lack of medical attention by the underprivileged is the

concern of all—we propose to do something about it if the Republican controlled Congress will let us.

Since time immemorial the Republican Party has paid lip service to the cause of civil liberty. They point with pride, and justly so, to Lincoln and the removal of the blot of slavery from our country. This fall campaign halls will ring with praises of Lincoln and the Republican Party and what it has done for the Negro.

The Fair Employment Practices Commission bill was introduced early last session, yet the friends of the Negro do nothing about it. It will not become law for many prominent Republicans are opposed to it. The administration, on the contrary, has come out four square behind a program designed to protect the civil rights of all of our citizens. It includes FEPC. This program has constantly been insisted upon by our Democratic administration. The program is advocated in face of threatened revolts. Are you not proud of Harry Truman? I say we are true to the principles of Jefferson and that we are acting in accordance with the fighting traditions of Jackson when we endorse, champion, and fight for his civil-rights program.

Let us see how much help we get from the Republican Members of Congress. If it amounts to what they did in the first session of the Eightieth Congress civil liberties and the defenseless minorities will get lip service and nothing more.

The record of this Congress is not yet completed, but sufficient record has been made to enable us to discern a clear pattern of conservatism and reaction.

The Taft-Hartley bill is nothing more than a concrete manifestation of Republican subservience to the special interests' desire to throttle labor.

The advances which the Democratic Party made in behalf of the national welfare in matters such as soil conservation, flood control, reclamation, and rural electrification were ruthlessly sabotaged by the unwise economy of the blundering and inexperienced legislators who saw nothing but evil in these progressive measures. They dared not attack frontally because they knew the people were for them, but they accomplished their aims just the same by cutting appropriations and limiting the effectiveness of their administration.

The Republicans won't tell you that rural electrification is evil and serves no good purpose. Oh, no! they know that 150,000 farm units in Indiana have been electrified by the REA and that 25,000 units remain to be electrified; but they'll cut the appropriation.

When Republican Congressmen cut the funds for soil conservation they do not tell you that 100 years ago seven-eighths of Indiana was covered by forests and that today 100,000 acres in southern Indiana are in serious stages of erosion, and that precious topsoil from your farmlands has been borne away never to be returned, and that your lands are constantly threatened by floods as a result of this erosion and lack of adequate flood-control measures. Not one word about that, but in 1946 they promised a flat wholesale reduction in the budget, and they are out to get it at any cost. The cost this time is the welfare and safety of the American people.

We have every right to be proud of the record the Democratic Party has made on these issues. This record must be placed before the public. When the American people realize what they can expect from a Republican administration they will unquestionably vote the Democratic ticket.

We should be equally proud of the record of our Democratic administration on the subject of peace. Maintaining peace is the most important issue before the American people today.

The welfare of our people and the preservation of our American way of life depends on our remaining at peace. Certainly the last two blood baths should convince us of this point.

The hundreds of thousands of American boys who lost their lives, the tons of irreplaceable material expended, the billions of dollars we spent—all these should convince us that war does not pay and that we must work and pray and, if necessary, fight for the preservation of peace.

One need not be an expert on foreign affairs to realize that the peace of the world is threatened today. One has merely to glance over the threatened spots of the world—Greece, Korea, Trieste, China, and Palestine. Any one of these contain the elements of an explosion sufficient to start another world conflagration.

Why deceive ourselves about Russia? We have no quarrel with the Russian people, but one has to be mighty stupid not to be aware of the intentions of the totalitarian rulers of Soviet Russia. Their aim is world revolution; they plan the overthrow of all noncommunistic governments of the world. This is their avowed objective. From the first writings of Marx and Lenin to the present-day jingoistic utterings of Molotov and Stalin, the Russion rulers have been bent on world conquest and we might as well face the fact.

What then should we do in the face of this threat? How are we to maintain peace? How are we best to preserve our American way of life? There is only one road to peace. That path is straight and clear. It is beset by countless dangers but if we follow it resolutely there will be no war in our generation. This is the course we must follow:

First, we must organize and work for international cooperation. To this end we must devote all the energy and all the resources that we would utilize in waging war. The cause is equally important. This means strengthening and supporting the United Nations. This includes tightening our bonds with Latin America utilizing the pattern established within the framework of the United Nations Charter in the Inter-American Defense Pact, as well as by assisting our sister republics of this hemisphere to industrialize and elevate their standards of living.

Secondly, we must support wholeheartedly and with adequate resources the economic recovery of western Europe. These countries are our natural and traditional friends and allies. We must pledge them our assistance until the job is completed, provided, of course, that they help themselves to recover, and that they resolve their economic and political differences and combine and integrate their military defense.

At the same time we should without malice, but with firmness, and in a spirit of friendship for all peoples serve notice on Russia and the satellite nations that we are committed to peace but we are equally and unequivocally committed to the preservation of western civilization, and that we will resort to arms, if necessary, to defend it.

On the domestic front much has to be done. We need an air force second to none; it must be in constant readiness, first to defend our country against attack, and second, prepared to strike the enemy wherever he may be at the outbreak of hostilities.

Next, we need a reservoir of trained military reserves capable of instant mobilization, not within a year after the outbreak of hostilities, but the moment war is declared. The next time we may not have allies to hold off the enemy until we can train our manpower.

I do not subscribe to the theory that the day of the infantry is over, by any means, but in all branches of the service the technical personnel needed to man and to service the complicated instruments of war cannot be trained overnight. We need a standing and always ready reserve.

We also need an intelligence system, well trained and experienced, with services in all parts of the world. We were caught napping in the last war, next time we may not be able to afford it.

We need an industry organized and geared for war as well as peace which is ready at all times to change from the peacetime to wartime production.

Lastly, we need a civilian population organized, trained, and prepared for total war.

One might ask, what this has to do with the election? It has this to do with the election. How to preserve peace is the most important issue facing the American people today and I believe that the administration and the Democratic Party have a solution.

General Eisenhower, in his final accounting as Army Chief of Staff, said that the number one job of the United States is "to convince any European aggressor that he can press war only at the risk of his own destruction."

It is my humble opinion that the only road to peace is to champion and preach peace, but be prepared to fight for peace, if necessary.

How do the parties line up on the subject? As far as I can see, every Republican candidate for President is for peace.

They remind me of the candidate for Congress in Arkansas some years ago who ran on the platform of the Bible, the American flag, and mother. No one campaigned against him.

The important point is, however, what the Republican candidates and the Republican Congress are doing about peace besides advocating it.

In regard to the Marshall plan, the Republicans are hopelessly divided. One candidate in a recent Lincoln Day address said essentially, "Give them all the dough they need, but let's chuck their entire foreign policy out the window."

Another candidate, with his tongue in his cheek, said the same day, "Don't give them all they ask for. The plan may not work, and we'll lose less money."

If the situation were not so serious we might laugh at their antics, but we are not playing for peanuts. This is the most serious poker game we've ever gotten in. This game is for keeps. The lives of our sons, our own lives, the safety of our cities, the preservation of our institutions, and western civilization are at stake. Perhaps the Marshall plan may not work, but God help us if it doesn't.

Contrast this with the statesmanlike position of our President and his great Secretary of State. We are fortunate in having the knowledge, the genius, and the leadership which directed our armies and those of our allies in the last holocaust to guide us now in our fight for peace. There is here no division of opinion. They frankly and courageously recognize the danger of war, but they offer the American people a specific program devised to avoid it. The Democratic Party leads the way to peace.

In regard to national defense the Republicans are equally at a loss. They are either sniffing at the ethereal "one world" fragrance which has the wonder boy from Minnesota dizzy, or they are hiding their heads in the sand like an ostrich when it comes to national defense facts of life.

Take universal military training, for example. If conditions are as perilous as they seem, should we not accept the opinion of an experienced, competent, nonpolitical spokesman such as Eisenhower. He is for universal military training. Many good, sincere people are opposed to universal military training. But, nevertheless, if our fate is at stake, is it not criminal on the part of the Republican Party to refuse to allow this measure to reach the floor because it is too controversial and this is an election year? We should be given an opportunity to vote on universal military training.

I am quite sure that President Truman realizes how important to him the loss may be of the votes of thousands of people who sincerely oppose this measure. However, he also realizes and appreciates that our national security depends very definitely on a trained and ready reserve and that this can

only be secured by universal military training.

Then we have the matter of a great air force. A great air force is just like the weather. Everybody talks about it and nobody does anything about it. By nobody I mean the Republicans.

In conformity with the recommendations of the President's Air Policy Committee, the President has sponsored a specific program that will give us an air force second to none. There is no question how the American people feel on this score. However, an air force costs money. I fail to see how the Republican budget committee is going to reconcile an air force second to none with their estimated budget cuts of billions of dollars.

I see now that the Republican candidates also want a superintelligence system. But why, I ask, were these voices silent when the penny-pinchers were cutting the funds for Central Intelligence and the State Department propaganda broadcasts? Who cut these appropriations? We were aware of the danger a year ago. The Democrats knew that what we were doing then and what we are doing now may well have a bearing on what happens 5 years from today. Of course, we need a highly organized intelligence system. It is vital for our national defense, but apparently it takes a Democratic administration to prove the point to the Republicans.

On every count the Republican Party and its representatives in Congress have failed the people. The record is there for all to examine. It establishes beyond doubt that the Republican Party is incapable of producing a program designed to resolve the problems of today.

Review in your own minds the failure of the Republican Congress to do anything about controlling inflation, housing for veterans, protecting the civil liberties of our minorities, educating our children, protecting the health of our citizens, maintaining national defense, or promoting peace.

The Republicans either fail to understand our problems or they are reluctant or incapable of solving them. In any case they should not be trusted with the destiny of our Nation in times so critical as these.

The third round is coming up. Our boy is rested. Personally, I think that our party will take the Republicans this fall. It will require only one punch. But that punch will pack plenty of steam, because behind it will be the weight of the American people. The Democratic Party will win by a knockout.

So tonight the past arises like a dream. We can see Thomas Jefferson opposing the Hamiltonian ideas of the power of might. We can see Andrew Jackson fighting the private bankers of his day in an effort to protect the common man. We can see the patient Lincoln, trying to secure dignity for the individual, and we can also see in our present-day life that humble and patient man in the White House, President Truman, whom the American public recognizes as the living counterpart of Jefferson and Jackson.

Lincoln Day Address by Hon. William F. Knowland, of California

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, February 23 (legislative day of Monday, February 2), 1948

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered by the junior Senator from California [Mr. KNOWLAND] at a dinner in Louisville, Ky., on February 12.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished guests, ladies, and gentlemen, it is a great pleasure to be in Kentucky, the birthplace of Abraham Lincoln. Tonight we not only commemorate that event which took place in a Kentucky cabin 139 years ago and was to have such a far-reaching effect upon our Nation's history but we are also here to rededicate ourselves to the task of leading his party and ours to victory in the 1948 election.

It has been my privilege to serve on the county committee, and the State central committee in addition to my service on the Republican National Committee. Political campaigns cannot be won by last-minute efforts. To the contrary, it requires work throughout the year. Organizations such as yours have played, and will continue to play, an important part in mobilizing for the job confronting us.

I am firmly convinced that if we face up to our responsibilities the ticket we nominate at Philadelphia in June, will be elected in November.

From the Republicans of California I bring a symbolic "hands-across-the-continent" greeting. It is, I believe, indicative of the type of transcontinental unity that will spell success next year.

This is no time for Republicans to consider that they have the election "in the bag." Any such misconceptions, would in my opinion, be a serious mistake in judgment. While I recognize that the Wallace candidacy will be beneficial to our cause in a number of key States, I wish to point out that this alone, or in conjunction with some democratic discontent in the South, is no guarantee of Republican success in November. It is certainly no substitute for a strong ticket and an active campaign on our part.

We have many able Republican candidates this year. I would urge that we spend our time in building them all up and tearing none of them down.

No person today can predict with certainty who the nominee of the convention will be. Whoever that nominee is all of us will have an obligation to put our shoulders to the wheel and cooperate to the fullest extent in making his election certain.

I am not one of those who believe that all the virtues are to be found in our party or all the faults in the opposition. If we will only take a realistic look at conditions at home and abroad, we must acknowledge that there are a number of problems that must have American rather than partisan solutions.

The United States has grown from a colony of 3,000,000 people to a Nation of 140,000,000 in the short space of 172 years. During this time our two-party system has played its part in the development of our national well-being and the carrying out of national policies.

This, in spite of the fact that at no place in the Constitution or in the Declaration of Independence does one find any mention of political parties. Yet the very necessities of the situation and the actual functioning of Government developed the need for our two-party system.

Political parties come and go but our constitutional government continues. The Federalist and Whig Parties played their part and passed from the political scene. But their demise did not leave for long a void. Other more vigorous groups took their places. Political parties must justify their existence or make way for others that will.

The national interest must in all cases override any partisan advantage. It was in this spirt that the framers of the Constitution drafted that document.

It was not we the Federalists or the Republicans, it was not we the employees or the employers, it was not we the merchants or the farmers, it was not we the landlords or the tenants, but it was: "We the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare and secure the blessings of liberty for ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

Lincoln was elected to the House of Representatives from Illinois as a Whig in 1846 for one term. One hundred years ago in 1848, he was completing his last full year as a Member of the House.

In that same year of 1848 the Mexican War came to a close giving to the United States a large section of western territory. A part of it became the State of California, the thirty-first State to be admitted to the Union. In that same year gold was discovered in my State. Since that time most of what our miners have dug during the last century has been buried in Kentucky.

In 1848 President James K. Polk sat in the White House. In his fourth annual message that year he pointed out that the receipts of the Federal Government would amount to $57,048,969.90, the expenditures to $54,195,-275.06, and the public debt stood at $65,778,-450.41.

Much water passed under the bridge in the 13 years which followed Lincoln's retirement from the House of Representatives. In 1855 he was voted for by the Whig minority in the Illinois Legislature for the United States Senate. As soon as the Republican Party was fully organized throughout the country Lincoln became its leader in Illinois.

In 1858 he was selected by his party to oppose Stephen A. Douglas for the Senate. While the legislature chosen was favorable to Mr. Douglas, Lincoln had gained a national reputation as a result of the well-known series of debates. In May 1860, when the Republican convention met in Chicago, Abraham Lincoln was nominated for the Presidency on the third ballot and was elected on November 6 of that same year. His inauguration on March 4, 1861 was followed by the firing on Fort Sumter and the whole chain of events which followed.

In December 1861 Lincoln delivered his first annual message to Congress. He pointed out that revenues from all sources for the fiscal year ending June 30, 1861, amounted to $86,835,900.27 and the expenditures for the same period were $84,578,834.47.

How far we have come. After fighting World War II, our public debt is now $254,-000,000,000. One modern battleship costs $80,000,000, which is greater than the entire public debt in President Polk's time. A large aircraft carrier of the *Midway* class costs $100,000,000—or more than Lincoln's 1861 fiscal-year governmental revenues.

We of this generation live in an accelerated age. In the 1,948 years since the birth of Christ, the annihilation of space has been largely concentrated in the last 48 years. The radio, airplane, and television are inventions of this century. There must be added the mass production of the automobile, which, while invented earlier, did not reach maturity until after the 1800's passed into oblivion.

Not yet to the half-way mark of the 1900's, we have already entered, for better or for worse, the atomic age. Within our hands we have the power to destroy civilization as we know it or to contribute to the opening of a new golden age.

To meet the problems of the atomic age, we need to streamline our governmental and economic facilities, yet, in so doing, we must not cast off from the solid truths that neither time nor space can change. The multiplication table has not changed by the

transition from the horse-and-buggy generation of our grandfathers to our jet-propelled era. Two and two still make four, in spite of the utopian theories and squirrel-cage thinking that has sometimes prevailed in high places. So, too, freedom is better than slavery behind the iron curtain.

Nor is security a good substitute for freedom. The most secure man is the inmate of the State penitentiary who has his food, clothing, and lodging guaranteed for life.

It is my firm belief that the functioning of our representative Republic is largely dependent upon having a fully informed electorate at home. Our people should recognize both the problems involved and the necessary steps that must be taken for their solution.

The long panorama of history clearly shows that freedom is not something that once achieved can be thereafter taken for granted. Not continual adolescent dreams of easy solutions but rather hard work and sacrifice are required if we are to preserve our institutions and fulfill our destiny.

There is no doubt that the great economic and political problems that confront us can be solved, in one way or another. The challenge we face is to solve them under our constitutional form of government and within the framework of the American system of personal liberty and free enterprise.

On all the great questions of the day there are bound to be honest differences of opinion among the members of both parties. Unless there is to be an irreconcilable split, somewhere along the way a common meeting ground must be found. As a general rule, but not always, the Republican Party seems better able to compose its difference than is our opposition.

The American system of profitable business and well-paid labor go hand in hand. Destroy one and you destroy both. We can, I firmly believe, do more under our American system for our people than the new socialism of Britain or the communism of Russia can do for their respective peoples. We don't need their methods but we can use some of their crusading zeal.

In American industry it is highly desirable that employees who are helping to build such industries or businesses have ever-increasing opportunities to improve their economic position through their contributions to increased productivity. In maintaining the profit system it is vital that an ever-increasing number of our people have a personal interest in its continued existence.

Labor or management must not be shackled. Business must be able to operate with profit and efficiency. There is no constructive future for workers or investors in closed factories or bankrupt firms.

The world needs peace in the international field and America needs domestic tranquillity if full production is to continue to raise our standards of living and permit us to help other nations to help themselves.

That we have a serious economic situation confronting the Nation is clear. Our responsibility as Republicans is to be sure that the cure is not worse than the disease. What are some of these contributory factors to present economic conditions?

As of February 5, 1948, we had a public debt amounting to $254,694,133,001.57 which compares with a pre-World War I debt (as of March 31, 1917) of $1,282,044,346. Our pre-Pearl Harbor debt was $61,363,867,932 as of November 30, 1941.

Certainly this huge public debt unparalleled in the history of the world is a contributing factor to the dangers confronting us. Until substantially reduced it will be a constant threat to the solvency of the Federal Government. A consistent program of debt reduction over the years has the unqualified support of the Republican Party. Not less than $2,500,000,000 should be provided for debt reduction in each fiscal year.

Another contributing factor is the total dollar supply (currency, commercial, and savings-bank accounts). In 1929, which was considered a boom year, it amounted to slightly over $54,000,000,000. In 1948 it amounts to more than $160,000,000,000. While it is true that production and services have also increased during that period of time, the increase is less than 75 percent. No one can deny that Government spending has contributed to the increase of the money supply. The pressure against the limited supplies of goods during the past several years played an important part in the inflationary price spiral.

The cost of the Federal Government has increased by leaps and bounds. In 1913 it amounted to $692,000,000. And by 1932 the cost had increased to $4,502,000,000. In 1941 it amounted to $18,988,000,000. The President of the United States on January 12 presented his budget calling for expenditures of approximately $40,000,000,000.

Interest on the public debt alone will amount to over $5,000,000,000; which is greater than the total peacetime expenditures of any year prior to 1933.

There is certainly room for a skilled congressional operation on the budget presented by the President. The job should be done with a surgeon's skill and not with a meat ax.

Frankly, I do not agree with the views of some of our opponents who follow the tortured reasoning that money spent by the Federal Government is not inflationary, while that spent by individual American citizens is in that category.

Despite the need for European recovery funds and adequate national defense appropriations, together with a debt-reduction program, it is still possible to have a moderate tax-reduction bill this year. After the Republican administration takes office in January of 1949 and the full cooperation of the executive branches of the Government is secured in cutting out the fat from the Federal budget, there will be excellent prospects for additional tax-relief legislation next year.

At times I find it most difficult to comprehend the inconsistent policies this administration pursues both at home and abroad. The President seeks power to reestablish a controlled economy in the United States. While the stated purpose was to check the inflationary pressures we find that Government agencies were following commodity-purchasing policies that encouraged high prices in grains at a time when they were far above parity support levels.

Our shipment of oil and industrial equipment to Russia has the same bad odor as the shipment of scrap iron and oil did to Japan during the 3 years preceding Pearl Harbor.

For the first 11 months of 1947 we exported $143,600,000 worth of goods, a large part of which was machinery and vehicles. We imported $71,900,000 worth, of which more than 50 percent constituted furs.

A major contribution that can be made to meeting the inflationary problem is to increase and assure the continued productivity of this Nation. In traveling through Europe last year I had the opportunity of getting behind the "iron curtain." Neither in Poland nor in any other country outside of the "iron curtain" did I see anything that encouraged me to believe that controls during peacetime would increase our productivity. To the contrary I came back with the strong belief that such peacetime controls would stifle it.

You cannot, in my judgment, go part way down the road to a controlled economy with regard to manufactured goods or agricultural products. If you control prices you must be prepared to control wages, profits, the allocation of raw materials, and ultimately (as in Britain) the allocation of labor. If we permit this Nation to undergo that type of rigid control in peacetime, I have grave doubts whether we can come out from under them in the foreseeable future. Speaking as one Member of the Senate I shall oppose their reimposition.

One of the great troubles with this administration is that associated with it are those who have worked with controls so long they have apparently lost confidence in the free-enterprise system. While they give it lip service they have no confidence in its ability to do the job.

Businessmen throughout the Nation instinctively know this. They also know that today the power of Government is vast and its actions have a far-reaching effect upon economic affairs, not only of this Nation but of the world. As a result, under present conditions, many do not believe they can plan with any degree of accuracy or feel confident in making long-term investments for the expansion of productive enterprise.

I cannot help but believe that in the years immediately ahead of us a strong America is essential to the peace of the world. Any display of weakness in an economic or military sense may be taken as a green light for those who desire to expand without too great a risk.

Twice in the past quarter of a century world wars were fought. One reason they came was that the aggressors thought that our Nation could not or would not fight. In their own minds they pictured us as a decadent democracy. Are such miscalculations again being made? I believe they are.

Certainly up to now the United Nations as an organization has not the force to preserve international law and order. As long as the veto exists, a potential aggressor nation could block effective action even if the United Nations was prepared to act. It should be apparent by now that some future Hitler, Tojo, or Mussolini, will not be stopped by debating society tactics.

We must face up to the question as to whether or not we believe it is in the best interest of world peace and our own national security to have a rehabilitated western Europe. I have no doubt in my own mind that this is not only desirable but is essential.

A necessary corollary is that we must provide this Nation with an adequate national defense on the sea, on land, and in the air and I lay special emphasis upon our air program. This will require an effective constantly modern striking air force in being and not on blueprints.

While we shall continue to work and pray for peace, like the pioneers who went westward from Kentucky, we shall keep our powder dry.

The peace today cannot be saved by appeasement of international blackmailers anymore than it could be at Munich. The sacrifice of Austria, Czechoslovakia, Ethiopia, and Manchuria did not buy peace but rather made certain that power hungry aggressors would be encouraged to raise the ante.

Let us make it crystal clear that the politburo in Moscow can gain no satisfaction from the Republican victory on November 2.

Our Nation has assumed obligations under the United Nations Charter. The Republican victory will not weaken but should strengthen the system of collective security.

I firmly believe this for two reasons. First, because a sound national economy and a solvent Federal Government is a prerequisite to a strong America and only under those conditions can we help to rehabilitate the war torn free world. Secondly, a Republican victory will mean a more consistent foreign policy.

It just does not make sense to ask the American people for billions of much needed help to save western Europe from going behind the "iron curtain" while we permit large shipments from our resources to the one nation that is a threat to human freedom.

It certainly is not consistent to make mighty efforts to prevent 200,000,000 Europeans from being enslaved by the Communist terror while complacency is shown about communistic activity which seeks to engulf 400,000,000 of our traditional friends, the Chinese.

It most emphatically does not make sense to send numerous "strong notes" on the Petkov case and then to have our Government give full recognition to the Soviet satellite government of Bulgaria 10 days after they have murdered the leader of the democratic opposition.

As a Nation we can no more return to isolation than an adult can return to childhood. We cannot, we dare not, turn our back on the rest of the world. If we do, the light of human freedom will go out and some day, in the not too distant future, from out of the ensuing darkness would come the knife thrust or the sword to strike us down. We must constantly keep in mind that we live in the age of the airplane and the atom.

The world must recognize the fact that only in an adequate system of international control can the world be safeguarded from the devastating effects of this new instrument of destruction. I have seen a considerable amount of war damage in Europe and Asia. Two years ago I had the opportunity of seeing Nagasaki where the second atomic bomb was dropped. The community looked as though it had been put through a coffee grinder and the remains scattered out over the landscape.

Every constructive proposal that has been made for the international control of atomic energy has been blocked by the Soviet Government. As long as an unlimited veto exists in the Security Council there cannot, in my opinion, be a satisfactory international control of atomic power. How is mankind to be protected if the potential aggressor nation itself can veto collective security action by the law-abiding nations of the world?

No man can say with certainty how long it will be until other nations are able to manufacture the atomic bomb. Some time in the not too distant future they will do so. Any nation which has in mind a full-scale "Pearl Harbor" attack upon the industrial and communications centers of America must be made to understand that no such blow will prevent this Nation from launching a swift, sure, and inevitable retaliation on a far greater scale.

This is not a happy prospect, but it is a realistic one. To do less than be fully prepared in these uncertain times would be worse than folly. It would be treason.

The Government would not be dealing with candor if it did not make clear that the policies we follow in Greece and Turkey involve risks. If Greece, Turkey, or Iran should succumb to overt outside pressure and lose their independence or have their territorial integrity violated without swift action to support them by all the law-abiding nations of the world, then the whole fabric of collective security will disintegrate and the United Nations would join the League of Nations in oblivion.

I feel certain that our people have a growing realization based on the experience of two world wars that peace, in this day and age, is indivisible.

The United States should take the lead in making the United Nations an effective agency for international law and order. If Russia persists in her obstructionist tactics, then the law-abiding nations will have to set up a collective security system outside of Russia and her satellites.

Lincoln, in his day, clearly understood that human freedom is also indivisible. In his second annual message to Congress he said: "Fellow citizens, we cannot escape history. * * * The fiery trial through which we pass will light us down in honor or dishonor to the latest generation. * * * We, even we here, have the power and bear the responsibility. * * * In giving freedom to the slave, we assure freedom to the free. * * * We shall nobly save or we shall meanly lose the last best hope of earth."

If our citizens will give as much time and effort to upholding our form of government and our free enterprise system as the subversive groups are giving to their destruction, I feel certain that this generation of Americans will not lose this last best hope of earth.

Lincoln Day Address by Hon. Raymond E. Baldwin, of Connecticut

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 23 (legislative day of Monday, February 2), 1948

Mr. MARTIN. Mr. President, the junior Senator from Connecticut delivered a very outstanding speech in Pittsburgh last Friday night. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

You have done me a great honor in asking me to come here and talk with you tonight. Connecticut has always had a great interest in Pennsylvania. As a matter of fact, our charter granted by King Charles II in 1662 bounded our colony on the west by the ocean. At that time no one was sure where the ocean was, but our people took advantage of the fact in a later day, by virtue of that generous grant, to extend the southerly and northerly boundaries westward in parallel lines so that they included a part of Pennsylvania and Ohio. We went to law about it, but were unable to sustain our claim, and so Pennsylvania got away from us. We are sure, however, that you have done better by this beautiful country than we ever could have done.

I am happy to be in the State represented in the Senate by ED MARTIN. I have known him as Governor and Senator, and it has been a great privilege to be associated with him these several years. I have the highest regard for his unusual ability, his sturdy character, and his broad capacities as a public officer. His colleagues in the United States Senate hold him in highest esteem. I am happy and proud to claim his friendship.

We hear many fine things about your good Gov. James Duff, who comes from this county. It is well that this great State should have as its chief executive such an able and competent citizen.

And I want to pay my respects to your Representatives in the Congress. My Connecticut colleagues have the highest regard for them. It has been my personal privilege to be associated with Congressman FULTON on the Board of Visitors to the United States Naval Academy. Your great State is most ably represented in the Congress.

After I went to Washington last January I understood how Lincoln felt when a friend said that it would be good for him to get down to Washington. "I know it will," Lincoln answered. "I only wish I could have got there to lock the door before the horse was stolen, but when I get to the spot I can find the tracks."

Perhaps the tracks were clearer in Washington in those days, but when we Republicans went to Washington last year we found them well covered by the stampede of bureaucracy—and we found not too much remained of the principles of Lincoln that our party has followed.

These principles have become a part of our heritage and are close to the hearts of all Americans. Every American knows and loves from childhood the story of Abraham Lincoln—not because he was a military conquerer or a great inventor, or a political spellbinder, but because he was the heart of the people.

Lincoln loved democracy, but not the kind of democracy we sometimes hear extolled today, in which individuality and independence do not exist. Lincoln loved the democracy that is in the true freedom he described this way: "As I would not be a slave, so I would not be a master. This expresses my idea of democracy. Whatever differs from this—to the extent of the difference is no democracy."

We were not elected in 1946 as the Republican representatives of our people because any majority had belatedly decided that it was better after all to return to some good old days. We were elected in the hope that we would develop a progressive, positive program which would lead us out of the welter of confusion into which the country had dropped. To maintain our majority position as the chosen representatives of our people, will require the best intelligence, the hardest work, and the soundest thinking and the deepest understanding from all of us.

We came to Washington last year to face pressing problems created by others. We found that tremendous financial obligations had been contracted. We found that the planned inflation of the thirties had finally arrived in full bloom and was reflected in high prices. We found that our foreign policy was shot through with the same old WPA dole system thinking that had characterized our national policies a few years before. We found in Washington an administration befuddled by difficulties and willing and anxious to turn over to us the problems that it had created.

To add to our difficulties it soon turned out that the administration's pious promises of cooperation were nothing more than sighs of relief.

It isn't easy to recover from a $260,000,000,000 debt. It isn't easy to find the tracks of runaway spending, and it isn't easy to pull down the balloon of inflation into which hot air has been pumped for so many years. Lincoln in his day had our same problem and experienced our view in saying "* * * as an individual who undertakes to live by borrowing soon finds his original means devoured by interest and next no one left to borrow from, so must it be with the Government."

An example of our difficulty is the problem of the budget. Early in January, we received the President's budget which this year contained 1,353 closely printed pages. It is almost exactly the size of your Pittsburgh telephone directory, and almost exactly as thick. Before February 15, we are required by law to present, on the basis of this, our legislative budget. It is little wonder that there is some disagreement as to the amount that it can be reduced. But the real problem lies in the question of where we are going to reduce the spending. We must make reductions with care, wisdom, and foresight. The present budget calls for about $39,500,000,000. Of that sum $33,500,000,000 are commitments that have already been made or are for the armed forces. Unless we want to sharply reduce our expenditures for defense, we are left with a total of about $6,000,000,000 on which we can wield the ax of economy.

I might give another example of fiscal difficulties we face. Our people demand, and well deserve, relief from burdensome taxes that have grown steadily larger ever

since this ever-increasing rate of spending began. The President is calling for increased production and the expansion of industry and at the same time asking for an increase in the taxes on the very industries he expects to expand. We are acutely aware that we must allow the retention of profits sufficient for the expansion of industry. We must relieve the tax load on our people already hard pressed by dangerously high prices. On the other hand, as any businessman knows, when the dollar is cheap, that is the time to pay off debts and avoid the incurrence of new ones. Unless we do that, we will continue to pay a tremendous interest on our debt (now running at the rate of more than $5,000,000,000 a year) and have to continue to pay that interest at a later date when we can probably less well afford it. More than that, the release of any huge sums as a result of sharp tax reduction, can only give impetus to the inflation we are seeking to check. In the interests of our Nation's economy, we must be aware of those last two dangers. But in the interest of our people and in the interests of production, we must provide a tax reduction.

Since last the Republican Party was in a majority position, times have indeed changed and as Lincoln said, "The dogmas of the past are inadequate to the stormy present, the occasion is piled high with difficulties and we must rise with the occasion. As our case is new, so we must think anew and act anew."

We are not going to win one vote or advance the cause of our Republic one inch by any tiresome damning of the New Deal. The past is a dead memory.

There is no point in considering what might have been. Our problems today are the problems of the future. Ours can be a progressive, positive understanding of the problems before us that will bring success to our party and peace and prosperity to our people.

What are these issues we have before us?

First, and probably more important than any other, is the question of the maintenance of peace. We have already made long strides in the formulation of a positive policy. When history is written it will show that it was the leadership of Republicans that transformed a weak policy of appeasement and an expensive policy of doles into a realistic plan for the reconstruction of sound economies and political freedoms in the world. History will show that it was the Vandenbergs, the Stassens, the Lodges, and the Deweys, the Smiths, the Herters, the Dullesses, the Austins, and others who have built what is probably the most far-reaching unselfish concept for peace the world has ever known.

With all due credit to Secretary Marshall, is there any like number of equal influences who have produced a workable program on the Democratic side? I take no pride in interjecting here a partisan comparison into what should be an American issue. But I do take pride in the fact that it is members of our party who have finally—even though they were of a party not charged with the conduct of foreign affairs—showed the way that is the best for us now. I hold no particular brief for the Marshall plan. I do not know that it will work. But I do know, and I think we all know deep in our own souls, that isolationism or appeasement, or a repetition of any other errors of the past will surely bring us war. The Marshall plan is only the beginning of what we, as a party, can contribute in an effort to preserve the peace through international good will and cooperation.

The world has come a long way since the day of Abraham Lincoln. His problem was to reunite the several States of this Union. We have a similar problem on even a larger scale—that is to unite the nations of the world to prevent a war of aggression. We, as a party, have an opportunity to make clear that we will give more than lip service to the United Nations, in which our people place such trust. If we are to make that United Nations work in the pursuit of peace we must see that it never becomes a factory for idle resolutions. If it is to act in the interests of peace its decisions must carry strength and weight. It is our obligation, as the most powerful nation in the world, to insist that its decisions do carry that strength and weight. If any nation or combination of nations chooses to obstruct the path toward peace, or chooses to maliciously use its selfish desires to block the wishes of mankind, we will have to proceed without the help of that, or those, nations. But we must never close the door to open, fair, just dealings with any nation in the interests of peace.

The year 1948 has come to stay. We cannot turn back the clock of progress. We live, today, in a small world in which the oceans (that were once wide barriers between nations) are now only minor inconveniences. We live, today, in a big and rich house in a community of poor neighbors. It is ours to choose whether we will teach those nations the way to political freedom and economic prosperity and so live with them in the harmony of a peaceful neighborhood, or whether we will withdraw and so invite them to join together in an envious attack on our wealth. We live in a dangerous, explosive world—a world in which war could always be only a few hours away. There is an urgency in our racing time that demands we recognize the immediacy of these problems. If we do not plan and prepare for the future now, we will find one day that we have delayed too long.

We are troubled today with a problem of getting on peacefully in the world with the Soviet Union. It is unfortunate that Soviet leaders cannot find themselves able to cooperate in any common understanding of rights and principles of others in the building of peace.

A number of approaches to a better relationship with the Soviet Union have been proposed. There are those who, believing that war is inevitable, claim we should instigate a war now while we are still the stronger. Of them, I would ask only one question. Would they take upon their conscience the responsibility for having voted us into what still may be an unnecessary war, knowing, as we all know, that the next war will bring a destruction and a toll of death from which this world may never recover?

There are those who say that we can afford to desert the still free nations of Europe to political aggression so characteristic of Soviet policy, assuming that they will in good time come to see the error of their ways and return to a democratic fold. To them we can only say that in all our experience there has never been a way back from totalitarianism. Once the freedom and the spirit and the lives of the people are taken over by the armed might of a police state, there is no opportunity short of war for them to return to free living. Communism cannot be accepted on a trial basis and freely voted in or out, by a free people. Unfortunately there is no money-back guarantee that comes with dictatorship. Its followers are not allowed to see the cruel bayonets of regimentation that hide behind the false and glittering promises of communism until they have been pulled behind the dark curtain of political slavery.

Then there are those who propose to try again the theory of appeasement. We have already, in the past 3 years, seen another example of the failure of that often tried—and always failing—theory. We sought, in this war, to establish the principle of political and religious freedom in all nations. Yet the guns had not ceased firing before political and religious freedoms were snuffed out from the Baltic to the Balkans. Is there any reason to suppose that the appetite of any aggressor, whether his methods be military or political, will ever be satisfied so long as there remains 1 acre of free soil. Is there any reason to suppose that the dark wave of Soviet aggression would not roll on relentlessly across western Europe? Is there any reason, then, to suppose that this Nation would not one day face the combined forces of evil, directing a military machine of slaves recruited from the nations of all the world?

The only alternative left to us is the continued development of a firm, watchful policy. The dark forces of communism fear the light of knowledge and the light of freedom more than they fear any military might. If we can maintain adequate defenses at home, while recreating the possibility of political freedom and economic prosperity abroad, we have a good chance of surrounding ourselves with nations peaceful in their freedom. Unless we follow such a course I say—and I say with deep reverence—God help humanity in this atomic age.

At home we face the threat of a dangerous inflation which, unchecked, could wreck our plans for peace. An economic collapse here would leave little hope for building peace in the world.

We, as a party, did not create inflation. That was the studied plan of many years. Nevertheless, for us to only blame others would be to shirk our duty as a party and shirk our duty as Americans. We, as a party, do not believe in a controlled, regimented economy. And yet, having inherited this problem, we will either have to objectively and unselfishly take sterner means to combat inflation or we will force upon ourselves the very controls and regimentations we deplore.

Those who believe in the principles of our party—principles that need in no way be affected by changed conditions; those who believe in the Lincoln philosophies of freedom and integrity and opportunity for the individual have, indeed, a promising program to offer.

We need not hesitate or procrastinate because of any clefts in our own party thinking. We cannot all agree on any detail, but there are certain self-evident truths in which we all deeply believe. We do not have to keep the uneasy peace, as does the Democratic Party, between the ultra-conservatives of the deep South and the far left-wing of the North. We do not have to explain why traders in commodity markets are called gamblers in human misery and yet hold high office; we do not have to explain why we advocate price controls and still call them the methods of a police state; we do not have to explain why we were publicly appalled 15 years ago that there was a housing shortage and now have to admit that it still exists; we do not have to explain why we take credit for the high purchasing power of inflation and don't want to take the blame for the high prices that go with it; we do not have to explain we spent $17,000,000,000 on unplanned European relief before we recognized the need for an overall plan of reconstruction; we do not have to explain why we hunt Communists under one bed and hide them under another; we do not have to explain these things because we are not a divided party.

I've said that we Republicans must be builders and that the Democratic Party has been a party of empty promises. In political gatherings, that's an easy thing to say. So let's see how it has worked out.

Last month as I sat listening to the President read his State of the Union paper, I realized that I agreed with many of the things he was saying. He came out boldly for peace and prosperity. He said he favored more housing, higher wages, higher profits for the farmer, lower prices, economy in Government, better health, better education, better use of our resources, greater production, security in old age, and democracy.

As I sat listening, those fine ideals began to sound familiar. So later I looked over the section on housing and found that,

according to the President, we have a "drastic housing shortage," and "need a long-range housing program." Now I happen to agree with that, but I remember that the late President said much the same thing in different words long ago. More than a decade ago, he said that one-third of the Nation was ill-housed. So I began asking myself what the Democrats had been doing about this condition that they had discovered so long ago, and why the shortage seemed to be worse today than when they first fastened on the issue—even though we had paid millions in taxes to develop these so-called housing programs. Perhaps this is the answer: According to the United States Government Manual for 1947, we still have 34 Federal agencies helping us out with the housing situation. Dealing with this serious matter for us we have agencies, authorities, administrations, expediters, corporations, departments, divisions, and coordinators—all of which sounds to me suspiciously like a lot of different ways of spelling a simple word "failure."

One in particular interested me. It is listed as "Housing—Greenbelt communities." According to the explanation, there are three of these. They have been developed by the Farm Security Administration, but are administered by the Federal Public Housing Authority which is one of the three constituent units of the National Housing Agency, which is administering the contracts of the United States Housing Authority which was created by the United States Housing Act to lend financial aid for slum clearance.

For many, many years, we have heard the oft-repeated warning that we must have higher wages, lower prices, more housing, better health, and all the other fine things that make life pleasant and easy. I repeat that I agree with those objectives. The thing that is so curious to me is why, after 15 years of Democratic administration, we need them worse than we did 15 years ago.

I do not propose to criticize the Democratic Party for much of what it has promised but rather for what it failed to accomplish. Even failure has been purchased at a staggering cost. Perhaps the executive department in determining its duties of administration found the wrong definition of that word. There is one dictionary definition that says an administration deals with the distribution of an estate. The present administration is admirably fitted for that work.

It is all of these promises that have caused some people to label the Democratic Party as liberal. If by liberal it is meant that the Democratic Party has been liberal with our money, I agree. But if by the term "liberal" it is suggested that the Democratic Party has been deeply concerned with the problems of the common man, the record will show that the concern has seldom gone beyond the stage of promise.

The world moves too fast today for such blundering, theoretical muddlers. The world, today, requires builders—builders of peace, builders of jobs, builders of security—and yes, builders of houses. That is the role the Republican Party can fill. We may not be able to make such sweeping promises, but knowing better the capacity of our Nation and the wants of our people, we can provide for them instead of promising them.

We represent the millions of Americans who do not choose to support the radical philosophies of either the right or the left, but choose to live honestly, simply, and independently in a free world of peace.

We have allowed our party to grow old during our years of disappointment. A new generation has grown up since we were last a majority. That new generation includes millions of young people without a political home. It was their support that elected us in 1946. It is their support that will be required to elect us in 1948.

It is up to each of us who is interested in the Republican Party and a good government and the future it stands for, to make our party the party of youth. We can only make it a party of youth by standing for the principles and beliefs of young men and women and by allowing them to help guide the destinies of our party. It is not that we do not appreciate the loyalty of those who have remained Republicans through these lean years, but it is a practical political fact that we are ourselves (as is the Democratic Party by itself) an insufficient number to be successful without the help of those who have no political home.

As workers in the party, we can impress upon them that in a party guided by the principles of Abraham Lincoln there can be every opportunity to voice and carry out the programs we need their energies to develop.

A winning party is one that has in it believers in (and energetic salesmen of) its principles. We need the help, the suggestions, and the support of each of you. Our victory will come from your good work.

We cannot be derelict in the exercise of democracy within our own party. We will not allow ourselves to be guided by the thinking that has brought us defeat in the past.

The last company in a parade may be dissatisfied with the road the parade is taking, but unless it can forge to the front and lead the way itself there is only the choice of marching—disconsolate and unnoticed—at the rear, or dropping out of the parade altogether. Abraham Lincoln led our people in troubled times with no precedents or political traditions to hinder him. We need not look sadly toward inevitable war or toward inevitable economic collapse here. We need not look toward a sad old age for our party, we, rather, look forward with eager anticipation to the development of new, progressive programs for the future; programs that can bring to America better education, better health, better living standards, security, and wealth under a Government that respects the freedoms and the rights of all. We can look forward to a world kept free and kept peaceful by a combination of nations working together toward the goal of all mankind. We as Americans can look forward to that peace and that prosperity if we cease to look at the past and regard 1948 as a challenge for the rebirth of a new, revitalized, young Republican Party, determined that "This Nation under God shall have a new birth of freedom, and that government of the people, by the people, for the people shall not perish from the earth."

Questions to South

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 5, 1948

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include a copy of an editorial of recent date from the Monroe Morning World, of Monroe, La., as follows:

QUESTIONS TO SOUTH

At the present time the 13 solid South States and three border States, Kentucky, Oklahoma, and Tennessee, all definitely Democratic, provide more than half of the Democratic Party representation in Congress—53 percent in the Senate and 62 percent in the House.

Just why should 62 percent of the House Democrats be politically subservient to 38 percent? Just why should 53 percent of the Senate Democrats be politically subservient to 47 percent? Just why should either or both groups be politically subservient to an unelected President because he wears a party label, or to a New Deal bureaucracy set up in contradiction to both Democratic Party and southern principles and traditions?

Fiftieth Anniversary of the Sinking of the "Maine"

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, February 23 (legislative day of Monday, February 2), 1948

Mr. CHAVEZ. Mr. President, pursuant to Senate resolution, I went to Habana, Cuba, and there, on February 15, I delivered an address on the occasion of the commemoration of the fiftieth anniversary of the sinking of the battleship *Maine*. I ask unanimous consent that my speech may be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

Mr. President, Mr. Ambassador, distinguished guests, and citizens of Cuba, when I was notified by the President of the Senate of the United States that I was to represent the Congress of my country, along with these my colleagues, Senator MILTON R. YOUNG, of North Dakota, Congressmen CHARLES R. ROBERTSON, of North Dakota, and ROBERT E. JONES, JR., of Alabama, together with a couple of the boys who, with a million others from the United States, volunteered their services and followed the example of Col. Theodore Roosevelt, later President of the United States, in remembering the *Maine* and fighting for your country's freedom, Commander Horace Havener of the Spanish-American War Veterans, and Hon. Lloyd Thurston, of Iowa, in sharing with the Government of Cuba the honor of commemorating the fiftieth anniversary of the sinking of the *Maine*, I considered it a signal honor for many reasons.

Fifty years ago the U. S. battleship *Maine* was sunk in the magnificent harbor of Habana, as the result of which 266 innocent men perished and gave their lives while in the service of their country. Many others were wounded. You know what followed, so today we gather here with veneration and reverence to pay our respect and show our gratitude to those who made the supreme sacrifice at that time. It is a solemn anniversary. The world shall always remember the *Maine*.

In the first place the State which I represent in the Congress is by heritage similar to that of your great country. The Spanish conquerors who left this beautiful island to conquer Mexico pushed on only 20 years after the conquest to explore not only my home State of New Mexico, but as far as the far-off States of Kansas and Nebraska in what is now the Middle West of North America.

We speak Spanish in New Mexico. Our State constitution provides that in our courts and our legislature the official language shall be English and Spanish. One half of the

population bear names such as those found here in your island.

In fact, the first Europeans to visit my State departed from Cuba in 1527 with Panfilo de Narvaez, to explore Florida, and having been wrecked on the coast of the Gulf of Mexico, started out on one of the most heroic and epic treks in history—from east Texas to Culiacan, a Spanish settlement on the west coast of Mexico, with tidings of the civilization which existed in the remote north, the land of Gran Quivira and the Seven Cities of Cibola.

I welcome also the opportunity of speaking to you in the language of my fathers—Spanish.

In this connection, I regret exceedingly that the Havana conference, i. e., Conferencia Mundial de Comercio y Empleo has failed to adopt Spanish along with French and English as an official language of the United Nations.

I say this with studied appreciation of the occasion of this visit, and I agree wholeheartedly with the arguments of the Government of Argentina and Peru that the aspirations of 20 voting nations in the great assembly of United Nations whose native and official tongue is Spanish, should be recognized. These nations have every right to demand that their tongue, Spanish, be considered in advance of one which only by tradition is the language of diplomacy, as well as English, the language of neighboring states, no matter how great their population might be, or how powerful their position is amongst nations.

I welcome the opportunity of speaking here because I feel that my country owes Cuba and her patriots a debt historically which should long ago have been paid.

I search in vain in the history books of my country for proper appreciation and recognition for the role which Cuban patriots played in the liberation of your country. It would seem that the Spanish-American War was fought solely by American soldiers. Not that I would in any way depreciate the patriotic service which my countrymen lent your country in 1898. Many of my fellow countrymen came to help you. From New Mexico came Lunas, Durans, Padillas, Cienfuegos, and Armijos. They left far-off New Mexico to fight for the freedom of this country and in defense of their ideals and their fatherland. To them every credit is due, and a grateful country and freedom-loving people everywhere will honor and praise them. However, I wish to take this occasion to assure you that patriots throughout the world appreciate the valor and unselfishness of the valiant Cuban patriots who long before their American brothers arrived here and fought, bled, and died for the liberation of their country.

I am now thinking of your supreme military commander, Maximo Gomez, who trained in guerrilla fighting in the wars for freedom in Santo Domingo, came to Cuba and rose to unsurpassed heights of military genius and leadership.

There was Antonio Maceo, a military leader whose genius, bravery, and patriotism is unexcelled in the annals of any nation. Freedom has never had a more gallant defender or more valiant champion, and there was, you recall, Calixto Garcia, to complete the triumvirate of freedom.

Cuba's liberation followed that of all other American Republics, but the delay was not for lack of patriots, nor for lack of men of determination and resolution. The proclamation of Yara of 1868 reverberates through history with all the beauty and grandeur of Concord or Dolores, and all praise is due the Mambises who so generously forsook their families and their homes to give their all for freedom.

There is hope for the world so long as there are men such as these willing to fight and die for the ideals of liberty and freedom; the great nations of the world would do well to reflect on the lesson of Cuba's struggle for freedom. Mankind was not born to be enslaved and I warn the arrogant and mighty leaders who heed not this lesson that the fate which overtook Hitler is the inevitable destiny of tyrants.

It seems sacrilegious to mention Cuba's great apostle so soon after mentioning the despicable name just uttered, but who can overlook doing honor to your great champion of brotherhood and Christianity—Marti, the apostle of liberty; Marti, the universal; Marti, Cuba's gift to a world which loves freedom and liberty and respects the dignity of the individual.

Jose Marti belongs to all ages. He is worthy of the company of the Grachi, of Jefferson, Bolivar, Lincoln, Juarez, and Gandhi. Marti belongs only with the great.

As a North American I am proud that my country received him in warmth and kindness during his many years of exile. The cause of your freedom, which he so ably championed throughout the length and breadth of my country was supported by words and deeds. My countrymen responded generously to his appeals.

Would that Marti were alive today. Marti would have rejoiced to see the decline of the colonial empires of the imperialistic nations which the world is witnessing. Were he alive his mighty pen and voice would be hurling diatribes of profoundness and wisdom in behalf of the oppressed people of this world.

Can you not see him hovering over the shoulders of Churchill and Roosevelt when they drafted their famous Atlantic Charter; and can you not see his spirit writhing because its principles were shamefully forgotten and disdained at Tehran and Yalta?

Oh, that Marti were alive today to praise and encourage President Truman to press hard and steadfastly in behalf of his program for protecting the civil rights of all American citizens, to assure the citizens of my country that the rights guaranteed by our Constitution, of suffrage, of opportunity to work, of freedom of expression, and of safety of person shall be denied to none because of color, race, or religious belief.

Were Marti alive today during the conference of world states taking place here in Habana, he would have expressed agreement with Torres Bodet and your own Foreign Minister Dr. Rafael P. Gonzales Munoz, when they championed the aspirations of the small nations of this world for economic, social, and industrial progress and for a standard of living equal to that of the great powers. These are more important and should be recognized before the desire of the great and wealthy nations to maintain conditions as they now exist.

I wish that I had more time to discuss at length the role which our countries played in your war of liberation, but time does not afford me that opportunity. However, in behalf of my colleagues, in behalf of the congress of my country, I wish to express the appreciation and admiration which we feel for the role which you played in the fight for freedom and how proud we are that we were given an opportunity to assist you with our arms in that campaign and we rejoice with you that freedom and liberty triumphed over oppression, tyranny, and enslavement.

Mr. President, my colleagues join me in congratulating you on the fight which you led in behalf of Cuba and for the liberation and freedom of its people. The great honor which your countrymen bestowed upon you was undoubtedly in recognition of the fact that you were carrying on the past traditions of the veterans of 50 years ago.

I wish to say a few words in praise of the able statesman who represents your country in Washington, His Excellency Don Guillermo Belt. Undaunted in the diplomatic halls or chanceries of great nations, he is always among the first to defend the rights and interests of the smaller countries. He is carrying on the cause for which Marti laid down his life at Dos Rios.

I would also like to say a few words concerning the ambassador to your country, His Excellency R. Henry Norweb. Representing the best traditions of the Foreign Service of our country, and schooled in the noble precepts of the good-neighbor policy, it is in the hands of such envoys as he which will do much to promote friendship amongst the American states.

In closing, may I say that my colleagues and I are happy to be here with you. We consider it a great honor and we thank you from the bottom of our hearts for the warm welcome and generous hospitality which you have extended us. We love your wonderful country. Expressing the sentiments of freemen, Para Siempre, Cuba Libre.

Conditions in Germany

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, February 23 (legislative day of Monday, February 2), 1948

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which a friend of mine received from a friend overseas, concerning the conditions which exist in Germany. I think it contains an account which ought to be read by Members of the Senate.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JANUARY 16, 1948.

OUR DEAREST FRIEND: Many thanks for your last letter, and I must apologize for having not written before, but I have been very busy on Christmas time, and I have so much to tell you that I could not start writing unless I get a little spare time. Now I think I'll better write twice, and to begin with I think I must tell you about the propaganda question that seems to interest you. First, it is perfectly true, as your Congressmen who traveled in Europe said, that your propaganda system was not efficient and Russia's was so much powerful. Of course, if the Communist ideology is spreading so much, it must be fed on something, and if so many people, most common people, go to the big party, they have some reasons to do it, and also some profits, and one must agree that the Russians have been very successful working in the same ways, exactly as the Germans, who had also good results with the collaborators in all occupied countries. First, the Voice of America simply disappeared and is very poorly managed, not at all interesting. I hear it once a day, but it is just wasting time. You should listen to the British broadcasting, which is also not so good as it used to be in wartimes, but still so much better than the Voice of America. But there are two impeding facts. First, they have reduced their broadcasting power. I mean it is much easily fading, and you can't hear it properly, especially when the weather is stormy, or if there is any electrical noise, etc. Besides, the Communists tried and succeeded choking the BBC. (I also must write to them.) For instance, when you get exactly the wave length you hear the voice very feebly and at the same time a big noise. You then turn a little on the left, the noise disappears; also the same on the right; but, of course, you do not hear the voice just the same. And those noises (we know them very much) are exactly the same as were those

the Germans used to impede us to hear the BBC during the occupation. Are those noises (we then used to call them "Bouilleurs") worked by French local Communists, or I should rather think, as we are very near Germany, by Russians in occupied Germany? Anyhow, the popular broadcasts in the evening are worse and much worse than they used to be during the war. Another obstacle is that you can't hear on short waves (the few ones where you don't get that special noise). The BBC voice that is simply choked by Russian voice that you hear everywhere in the evening. They broadcast in French, German, and more of all in English. They are talking to the English people a lot, and I wonder why they are not discouraged, because they have no chance at all with the English. But on the same time we get fed up listening, or rather trying to listen, and hearing Italian, Germans, and more of all Russians, from Russia and a lot of German places in occupied Russian Germany. My husband suggests that you should hire Radio Luxemburg. They have a very powerful broadcasting system, and they are in the heart of western Europe. The English use it a lot and no doubt you could do just the same. But in any case you must do something in your radio propaganda, and I am afraid everything has to be done in that way.

Now, you should also start magazines or reviews with plenty of pictures about American life, American ways of doing everything, just showing how successful a capitalist democracy can be. Those magazines should be specially of pictures for people who can't read English, or very little, and they are just the crowd as you know. They would be so much interested being able to know and understand a little about America, and those magazines should be very cheap, so that the young people and the poor could easily get them. (The Germans used to do it, and got a lot of collaborators that way.)

Now, you should also try to start some clubs or associations of French friends of the United States of America. Also a German and successful idea. For instance, if I feel very miserable about our national ways and politic system and lacking of everything, and if I go simply to the Maison du peuple, the Communist house or club, as you like to call it, as did our friend, Michelot, many people are there to greet me, offering me this and this—American foodstuffs, by the way, supplied very generously by the UNRRA—why do not you hang the man who started this folly? They ask me what are my troubles, say and will help me in every way unless I have just to sign that I have become a Communist. Now, they will help me, give me moral and material assistance, but I must give them my name, attend their meetings, and they will use my name if I like it or not. On the other way I want to go to the Americans, how could I get in touch with them? Simply listen to the Voice of America, which is not a treat, and I shall hear about the American teams of basketball or some philosophical review or cinema or scientific research or the next campaign for the Presidential elections or to know what they are doing in ladies' clubs for the animals or the children, etc.—very meager to cheer up, as you see. But I should not buy an American magazine, could not get in touch with any American people or French pro-American, so you simply give it up and you go to the Maison du peuple and find the Russians so much generous and so understanding for you American food and stuffs (that is what you would be told about the important stock of canned food and soap and everything that so foolishly you give in 45V and 46 to the central Europe and Russia and that as so efficiently fed Communist propaganda). I am always speaking of the criminal stupidity that has been the UNRRA, and although I never had anything of that, I shall never swallow it.

If you had given all this to western Europe, there would hardly be 18 Communists in the French Assembly, and the Prest to England should have been more generous, and there also it would not have been such a waste of money. Perhaps there would not have needs of the plan Marshall as the European recovery would be now a reality instead of a hope, and perhaps just a dream. The peoples of France and England (western Europe) would not be so bitter, and on the other way central Europe could not be worse, neither Russian—for how grateful are they to you?—Yugoslavs, Bulgarians, Rumanians, and white Russians, etc. But now we are in the soup with 184 Communists in the assembly and the big party is still spreading among middle-class people.

You perhaps know that they have (I mean our Socialist government which is not any better than the Communists) put so many taxes on middle-class people that we will soon be overwhelmed under the burden. And many people who are selling their properties and thinking of giving up their trades or factories or charge do not worry much on the plan Marshall who is perhaps going to help our Government but not the people, and most of them get fed up and think of either leaving the country or going to the Communist Party.

I told you that this Socialist government is spending money on what we call social improvements (they share that hobby with the Communists) as they are very near each other except on foreign policy; you hardly see the differences. And those improvements are so expensive that it would ruin even the United States of America. Think that, as we told you, we give a lot of money for the children so that a man with five or six children get twice as much money for the children as he gets for his work. Besides, when two people give birth to a child they get a gift of twenty thousand as reward for the birth, so that a man who has six or seven children do not go to work but just stay at home and looks after his family. We have now very numerous families and I wonder what they are going to do with those children later on.

I must conclude and will soon write again about our worries toward the plan Marshall which is our last hope but that we should like to a success. I must excuse me for writing such a long letter in my bad English but I told you that we had a lot to tell you.

Good-by until very soon and many thanks again for not forgetting us.

With our best regards and very sincerely.

Haverhill Lincoln Day Speech

EXTENSION OF REMARKS

OF

HON. GEORGE J. BATES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. BATES of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by me before the Lincoln Republican Club, of Haverhill, Mass., on February 11, 1948:

This week Americans, young and old, revere the memory of a great leader, Abraham Lincoln, and may I add that it is fitting indeed that the Lincoln Republican Club, of Haverhill, should sponsor this gathering tonight in tribute to one whose words and works, have, and continue to be, an inspiration to our Nation.

Facing as we do, one of the most crucial periods of our history, following the maladjustments of the costliest and most destructive war the world has known, we need to turn to the principles, the wise counsel and sound resolution of that great President.

Momentous decisions confront our country, affecting the peace and security and welfare of all, and as in Lincoln's day, they demand the same real unity of purpose and action. The preservation of the Union was Lincoln's grave problem. The preservation of peace inextricably interwoven in a world striving to feed its peoples and seeking the reestablishment of economic health and vigor in the free countries of Europe is our problem.

Europe today, is still submerged in a state of disruption. The war smashed the vast and delicate mechanism by which European countries made their living; it destroyed coal mines and deprived the workshop of sufficient mechanical energy; it wiped out steel mills and thus cut down the workshop's material for fabrication; it wrecked transportation lines and equipment making it impossible to move goods and people; it eliminated to a great extent livestock herds; made fertilizers unobtainable and reduced soil fertility.

It was the war that destroyed merchant fleets and thus cut off accustomed income from carrying the world's goods; that caused the loss of so much of the foreign investments and the income which it has produced; which bled inventories and working capital out of existence; which shattered business relationship and markets and the sources of raw materials.

I was privileged to be among those who wished to see for themselves, the real picture abroad, and during this study, as a member of the House Committee on Armed Services, I had an opportunity to see and talk with the people who seek our help today. While primarily on a military mission, we found ample opportunities to view the political as well as the economic side of the general problem.

The 16 western European countries that have asked our aid, under the so-called Marshall plan, with a present population of 270,000,000 with western Germany almost twice our own, constitute an interdependent area containing some of the most highly industrialized nations of the world. As a group, they are one of the two major workshops of the world, and depend in large part on the processing of raw materials, largely imported from abroad, into finished goods and the furnishing of services to other areas. These goods and the proceeds therefrom paid for the necessary imports.

Germany was a striking example of this situation. Some 14 countries were visited during our tour of inspection, and in nearly every one of these we found these nations depending in one way or another upon German coal, steel, and finished goods, and also as a nation to which they would export their own goods.

For devastation, desolation, and dislocated persons and industries, as well as economy, none of the countries visited could compare with Germany. The constant and concentrated air attacks by the allies have scarred Germany completely, leaving great cities and towns a mass of ruin and rubble.

Yet, this is the country which our Armed Services Committee called the economic heart of Europe, and added, "There can be no general economic recovery in Europe until Germany is revitalized." As an indication of the interdependence of the 16 countries, an example may be given as in the case of Germany. Fifty-three percent of Germany's exports are consumed in the 16 countries set up under the Marshall plan. Thirty-five percent of Germany's imports came from these same countries of western Europe.

DROUGHTS AND WINTERS

Droughts and severe winters have added to the trials and tribulations of peoples and governments. Hit by a series of droughts, European farmers had poor crops in both

1945 and 1946. Then came the winter of 1946–47, the worst in recent history. Winter crops were ruined by the severe freeze and the spring floods that followed. Coal could be neither mined nor moved in adequate amounts. Factories had to close down because people could not get to work or do much work if they got there.

Still suffering from those conditions, Europe received a further set-back in the form of a summer drought last year. Traveling by auto in many parts of Germany and Austria in September enabled us to get a true picture of the gravity of this situation.

To make matters worse, the food which came from Europe's bread basket before the war, namely, Poland, Hungary, Yugoslavia, Rumania, and Bulgaria, was going almost wholly to the Soviet Union. Adding to the misery were the delaying tactics of the Russians seeking to prevent Europe from regaining its economic strength quickly and thus hoping to reap a Communist harvest in that area.

These are some of the monumental problems and obstacles that now face our occupation forces, headed by Gen. Lucius Clay, in Germany, as they seek to restore a semblance of economic recovery despite Russian lack of cooperation.

From General Clay in Berlin came emphatic evidence of the need of strengthening the dikes of western Europe against the tide of communism. Here we found out why the Russians want to keep eastern Germany. First, to milk the eastern zone of all that it possesses; second, to attempt to fit the eastern zone into the economy of the Balkans and, third, that an economic recession in the United States will cause the withdrawal of the Americans in Germany and thus permit the Russians to take over completely.

MILITARY THREAT

These same people look fearfully to the east where large Russian and satellite armies are ready to march whenever Moscow decides to give the signal. These men and women ask what help America could send in case of invasion. They know that the American, British, and French armed forces in Europe are not strong enough to resist any substantial movement on the part of the Soviets in this respect.

We must be bluntly frank about the military situation. The Russians today would have little difficulty in overrunning western Europe to the channel ports as fast as they can drive there in their tanks and trucks. The probable reason the Soviets don't move in this respect is because they fear it would be the beginning of another world conflict, a long war for which they are not prepared. On the other hand, they may be quite satisfied with the progress they are now making in what is known as peaceful penetration and the setting up of satellite governments which now embrace 11 countries of Europe, all of which are in the so-called sphere of Soviet influence. The total population of these countries, together with Russia, is approximately 310,000,000. The peoples of Europe are worried about food, but they are also terrified at the prospects of a Russian march.

NATIONS MEET

In answer to Secretary Marshall's appeal for European initiative in planning for their own recovery with American help, the representatives of 16 nations of eastern Europe, all outside the ring of the so-called iron curtain, convened in Paris on July 12, 1947, for the purpose of discussing what joint action they could take for the restoration, or, more accurately, the continuance, of their civilization. The basic problems of each country are the same.

The participating nations organized themselves into a Committee of European Economic Cooperation and laid out a 4-year program of economic recovery. The fact that only 16 and not all of the European nations are involved in this great constructive endeavor is the responsibility of the Soviet Government, who opposed any action on the part of the satellite governments within the Soviet sphere of influence from participating in this movement. I am convinced that despite the Russian threat and Russian opposition to our aid, that the American people strongly desire to be of every possible help in aiding the people of Europe who are fighting to preserve their freedom. The efforts that these countries are making in earnestly attempting to find a secure foundation for such common action is convincing testimony of good faith and their sincerity of purpose.

In self-help and mutual cooperation among themselves, these nations described their intentions in three phases:

First, they will expand their production of major commodities during the next 4 years in accordance with specified annual targets.

Second, they will strengthen their internal financial stability in order to provide a sound foundation for maximum progress in recovery.

Third, they will cooperate more fully among themselves to increase trade and boost production through mutually helpful action. The plan is a large one and it calls for an unprecedented peacetime effort of work by the whole population of the participating countries.

The section on mutual assistance among these nations is perhaps the most important part of the Paris report, for European countries are not individually self-sufficient. They depend for livelihood on a large amount of trade among themselves and with other parts of the world.

EUROPEAN RECOVERY PROGRAM

As a result of the Paris conference of the 16 nations, the President on December 19, 1947, placed before the Congress and the American people a proposal for United States assistance to a European economic recovery plan for those countries.

Americans have always shown a generous tendency in helping others, but a nation in which the voice of the people directs the conduct of its affairs cannot embark on an undertaking of such magnitude and significance for purely sentimental reasons. As representatives of the people, the Congress wants to know why Europe needs this help; how much is needed and how should the help be given.

The aid which will be required from us, according to the President, for the first 15 months—from April 1, 1948, to June 30, 1949—is estimated at six and eight-tenths billions.

The funds we are asked to make available will enable them to import grain for current consumption and fertilizer and agricultural machinery to increase their food production. They will import fuel for current use and mining machinery to increase their coal output. In addition, they will obtain raw materials, such as cotton, for current production, and some manufacturing and transportation equipment to speed up their productive capacity.

The industrial goods we supply will be primarily to relieve critical shortages at a few strategic points which are now curtailing the great productive powers of Europe's industrial system.

A CONTINUING CHECK

In the light of the magnitude of the program of European assistance and its cost to the American taxpayers, we must assure Americans that the plan is not being used to aid any governments whose economic theories and practices do not conform to the American ideal of free enterprise.

We must also insist on a continuing check on the European nations being helped to make certain that the recipient country is meeting its production targets and its pledge of self-help, monetary reform, budget balancing, and of cooperation in the collective European recovery program.

Important also is the determination to see to it that funds are not corruptly or improperly used, that goods do not flow into the black market, and that the most efficient and businesslike methods of operation be pursued by those governments.

We must insist that any aid given to Europe under the suggested proposal should be administered by an independent agency of the Government and composed of top-grade businessmen, the best that can be found available for the job. Every safeguard must be thrown around the use of these funds to make sure that American substance is not being used for things which are not absolutely essential to the recovery program.

In assisting Europe, we must remember to keep our own financial house in order. We must ask ourselves, What will be the effect of this far-reaching measure on the internal economy of the United States, having in mind that the resources of our own country are not inexhaustible?

We have been told by the Krug, Nourse, and Harriman groups that made extensive studies and reports on this plan, that participation in this European recovery plan can be undertaken by this country without undue strain upon our internal economy or damaging depletion of our natural resources, but those conclusions will be subjected also to the closest scrutiny by the Congress.

The cost of the European recovery plan to us for the first 15 months is not clear at the present time. The first estimates called for $6,800,000,000. It is felt that this amount can be considerably reduced for the 15-month period to a sum substantially less than that amount, without impairing the ultimate objectives of the plan.

Congressional committees are now giving their closest study to those estimates and it is expected that a report will be made to Congress within a few weeks. The amount authorized, however, should be adequate so that a permanent foundation may be laid for the early recovery of the economy of Europe. To reduce the plan to a timid and narrow proportion would be the greatest possible waste and lead to the gravest consequences.

The United States has already spent billions to fight totalitarianism. The European recovery plan demands more sacrifices, but they are necessary to insure the recovery of friendly, democratic nations and in the interest of our own economy and security.

In my opinion, the decision behind the plan is whether the United States is prepared to help western Europe attain an economic health which will enable it to assist communistic pressure and violence, or whether to leave these nations to division and conquest.

If the United States fails to help make possible the return of western Europe to self-support, then the free peoples of western Europe may be forced to turn in large part to the east for survival. The price of such dependence, in the judgment of those nearest the facts, would mean the ultimate incorporation of all Europe in the economic and political system of totalitarian Russia.

The European recovery plan is our most effective step in preventing the fall of Europe under communistic domination. If western Europe should be swept by hunger, poverty, desperation, and chaos, communism will certainly follow in their wake. Such an event would surely affect the future security and stability of our democracy in the United States.

It is my belief that it is to our interest in this crisis to participate in this program in order to win the high stakes of our own security and the welfare and peace of the world.

American Communists Are Traitors

EXTENSION OF REMARKS
OF

HON. WILLIAM C. COLE
OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1948

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks, I include therewith Jack Beall's recent broadcast on Communism. Mr. Beall is conducting a series of 15-minute broadcasts on this subject and can be heard weekly from 6:45 to 7 p. m., eastern standard time, over the American Broadcasting Co.'s network. His broadcast of January 17 is as follows:

Good evening. I wish to address myself to the matter of American Communists as potential traitors to their own country in time of war. It directly concerns the matter of loyalty.

You may be surprised to know that the Communist international teaches and advocates treason, by the people of other nations, in favor of the Soviet Union. That is not so surprising, considering the fact that they openly advocate armed rebellion and overthrow by violence of all capitalist governments. But that they teach and advocate treason, as openly as they do is a little surprising.

As is so often the case, the root teaching is to be found in the Communist manifesto, which Marx and Engels wrote out just 100 years ago this month. They wrote that "modern industrial labor, modern subjection to capital * * * has stripped the proletarian of every trace of national character. * * * Proletarians have nothing of their own to secure and to fortify; their mission is to destroy all previous securities for, and insurances of, individual property." Again they say:

"The Communists are * * * reproached with desiring to abolish countries and nationalities. The workingmen have no country. We cannot take from them what they have not got."

There is a fine example of a Marxian sophistry, right there. Another one of the theoretical writers and practical leaders of communism, Otto Kuusinen, wrote in the magazine, the Communist, published in February 1934, this further indication that the workers of the world owe loyalty—not to their own country—but to the Soviet Union.

Says Kuusinen: "The Bolsheviks were not afraid to come out for the defeat of their own government in the First World War. The main enemy is within one's own country. Such is the correct principle for action by a revolutionary worker's party. Turning the imperialist war into a civil war—such is the correct slogan.

And that last slogan derives from Lenin. He must have said and written these words "Turn the imperialist war into civil war," literally hundreds of times. If you want to look up just once instance, it can be found on page 232 of a collection of his speeches and writings, titled "The Imperialist War."

Well, what does this expression mean? It means very plainly and flatly this: Under the leadership of Communists the workers shall arise and use the arms which have been given them for use against the enemy, against their own officers and their own governments. This tactic is to be pursued even when the infiltrated country is not making war on the Soviet Union. The idea is that the so-called imperialist war is a good strategic time for armed rebellion, particularly if the country in question is being defeated by the enemy in the field. The soldiers have arms. The idea is to turn those arms against their own officers and their own country and take over power—and then affiliate with the Soviet Union, of course.

I have been able to get hold of a rare pamphlet—it is in only a few libraries. It contains the resolutions of the Sixth World Congress of the Communist International in 1928, and as such it contains the official party line.

All Communist Parties which adhere to the Communist International consider these resolutions as the "law and the prophets." William Z. Foster, the president of the Communist Party in the United States, when these principles were laid down, had to adhere to them, even if he hadn't wanted to, on pain of being tossed into the outer limbo of nothingness, by excommunication from the party. It is the same Foster who is presently the head of the Communist Party here. Although the Communist International has not yet been officially resurrected in the United States, it actually never has been dissolved, except on paper. Undoubtedly the same views, the same disciplines exist as before the fake dissolution. I have yet to hear any Communist get up and say that any of the resolutions of the Communist International are null and void as to him, or the rest of the party.

And what does the little pamphlet say—this little pamphlet titled "The Struggle Against Imperialist War and the Tasks of the Communists"? Let's just browse through some of the pages. First, it says, "War is inseparable from capitalism." It follows this up by saying the "abolition of war is possible only through the abolition of capitalism." Then it says, "But the overthrow of capitalism is impossible without force, without armed uprising and proletarian wars against the bourgeoisie." (Maybe I ought to explain this "gobbledegook" again. The "proletarians" are the workers and the "bourgeoisie" are the employing class.)

But to get back to the pamphlet: "The proletariat has no country," it says, "until it has captured political power and has taken the means of production from the exploiters. The term 'national defense' is nothing but a catchword, and mostly a petty-bourgeois catchword, to justify war. In wars staged by the proletariat itself—or by a proletarian state against imperialism, the proletariat defends its Socialist country."

In other words, in case of war between the United States and the Soviet Union this resolution of the Communist International says that the proletarians—meaning the Communists and the workers generally, will defend their Socialist country—meaning the Soviet Union. It makes no difference if they are American citizens—they have got to defend the Soviet Union, fight against their own country, with every force available to them. This condition has been accepted without a blink by William Z. Foster, the president of the Communist Party—then and now.

The pamphlet envisages several sets of conditions of warfare. The first is where two capitalist, or as they call them usually, two imperialist countries, are fighting each other. Note that the Soviet Union is out of it entirely. But this is what they advise their Communist Parties in these other countries to do before the war breaks out. "Communists," they say, "wage a persistent fight against imperialist war and strive to prevent imperialist war by proletarian revolution. They strive to rally the masses around their standard in this struggle and, if unable to prevent the outbreak of war, they strive to transform it into civil war for the overthrow of the bourgoisie."

The first duty is to "tear down the screen" behind wnich the capitalists conceal their preparations for war, and to do this they make a fight "against pacifism." I am not in a position to prove it, but it looks very much as if when they fight pacifism in two capitalist countries which are on the verge of going to war—they are really doing all they can to urge them on to fight. But, in the sinuous twistings of verbiage, it comes out that they are merely out to "tear the veil" from the "hypocrisy of the bosses." Then, they get a little closer to home when they advise the Communist Parties in their various countries to expose the catch-word "national defense." This is another bit of humbuggery, they say—there being no fatherland for the worker, save the Soviet Union, it follows as the night the day that, if the worker lives in some other country, he cannot have a national home, therefore he can't be interested in "national defense." This prepares the wage earner for the idea he mustn't fight for his own country.

The Communist International then goes on with its instructions, Communists must infiltrate war industries—get ready for sabotage and strikes there. They must work with the farmers and youth. They must combat military training but only where volunteer enlistments are the rule. Apparently, too many Fascist-minded people rush to join the colors, under the volunteer system, and there is no use in putting arms into their hands. But in the case of compulsory military training, that is a different thing. The workers generally are in on that, and the rule is laid down that Communists should enter the army. Once inside the army they are to conduct "anti-militarist activity," that is, stir up as much discontent as possible and encourage disrespect for those in authority and other things which will be brought out later. All of this will hasten the great day, after war actually breaks out, when they can go ahead and turn the imperialist war into civil war.

Those who do not enter the army are supposed to prepare for war by getting ready to go underground, because when war comes, party work can only be conducted illegally, they admit. They must also link up all the possible dissatisfactions of the worker—his pay, his hours, his inconveniences, with the "imperialist war policies" of the Government.

Then, after war breaks out between two capitalist countries, each true-blue Communist is instructed by the International to work for the defeat of his own country. I don't think that can be glossed over. If that isn't preparing whole segments of the population in the very essence of treason, right there, I would like to know what it is.

The Constitution of the United States defines treason as levying war against the United States, or "adhering to their enemies, giving them aid and comfort." The dictionary that I have defines treason as "betrayal, treachery, or breach of allegiance, or of obedience, toward the sovereign, or government."

I give you the very words in which the Sixth Congress of the Communist International gives the detailed instruction: "The main points of this program may be summarized as follows: (b) Defeatism, i. e., to work for the defeat of the home imperialist government in this war. (c) Revolutionary defeatist work to be carried on by the proletariat in all the belligerent countries, for the overthrow of their home bourgeoisie. (d) To transfer the war between the imperialist states into proletarian civil war against the bourgeoisie, for the purpose of establishing the dictatorship of the proletariat and socialism—this transformation to be achieved by means of revolutionary mass action and fraternization at the front."

Right there I would like to say something about this "revolutionary mass action and fraternization at the front."

The Sixth Congress of the Communist International resolves as follows about that: "(A) In connection with the economic demands and complaints of the soldiers, collective refusal or sabotage of service and certain forms of soldiers' and sailors' strikes should be applied. (B) The most important slogan of action at the front is the slogan

of fraternization. The purpose of fraternization is to unite the worker and peasant soldiers, in the opposite lines of trenches, against their officers. Experience, in the last world war, has shown that mass-fraternization inevitably leads to class differentiation in the armies and to armed conflicts between soldiers and officers. The Communists in the army must organize mass fraternization and give it a clear, political color, particularly in regard to the question of peace and the organization of the revolutionary forces in the army."

It is emphasized that it won't do any good for a few to get together in the Army and say they won't bear arms or won't shoot at the enemy. What must be stirred up is "revolutionary mass action." The Communists must tell other soldiers in the ranks that the only way to stop war is by all working together to bring about the armed overthrow of the officers and the Government.

Again I say to you, if that not be treason, too much cannot be made of it.

Back on the home front the busy little Communists are instructed by the International in Moscow to conduct themselves in the following manner—and remember always that this is just a private fight, supposedly between two capitalist states; they are not even in it. The workers on the home front are told to engage in general strikes. Tying up the making of munitions, transportation, communications, everything—because this is a very important stage in the transformation of imperialist war into civil war. In order to pull these strikes they must "champion the economic demands of the workers and link up these demands with antiwar propaganda, organize revolutionary factory councils, capture the subordinate trade-union organizations, and then organize, lead, and extend partial strikes."

All this makes a pretty picture of what we can expect from the Communists—particularly if the next war turns out to be one with the Soviet Union. They have their very specific plans for that, too.

These same resolutions say about that: "In the event of an attack upon the Soviet Union, the Communists in oppressed nations, as well as those in imperialist countries, must exert all their efforts to rouse rebellion or wars of national liberation among the national minorities in Europe and in the colonial and semicolonial countries against the imperialist enemies of the Soviet state. * * * The proletariat (meaning the workers and the members of the Communist Party) in the imperialist countries must not only fight for the defeat of their own governments in this war but must actively strive to secure victory for the Soviet Union. * * * The Red Army is not an 'enemy' army but the army of the international proletariat. In the event of war against the Soviet Union, the workers in capitalist countries must not allow themselves to be scared from supporting the Red Army and from expressing their support by fighting against their own bourgeoisie, by the charges of treason that the bourgeoisie may hurl against them."

The Sixth Congress also resolved that "work must be immediately commenced to explain to the workers why they must stand for the defeat of their own imperialist countries in the coming war. The slogan: 'Transform imperialist war into civil war' must already become the leading idea in our propaganda before imperialist war breaks out."

Again it says: "The conditions favorable for transforming a war against the Soviet Union into a civil war will be much more speedily created * * * than in an ordinary imperialist war." They speak here of the chances for pulling general strikes and crippling the war effort by means of mass demonstrations, leading to clashes with the police and damaging home-front morale.

At the front, Communists in the army can help secure defeat of their own country, the resolutions point out, by collective refusal of service by soldiers and sailors—in other words, a soldiers and sailors strike. And still another method is to go over and fraternize with the enemy at the front—this to directly bring on defeat and demoralization of the Army.

Communists remember back to the period, at the end of the First World War, when military defeat, at the front, worked for revolutions against governments in many countries. They realize that, so long as an army is successful it is comparatively immune against Communist propaganda. But when it can be brought to suffer defeats the situation is ripe for them. Communists are urged to go out and call mass meetings of defeated, demoralized soldiers, take advantage of the time of despair and confusion to get them to turn their guns on their own officers and their own governments and thus overthrow them.

One of the small but enlightening bits of advice which Communists get from their Moscow headquarters is for Communist women to write their menfolk in the army and tell them all their troubles, complaining of the lack of food; demand that they come home from the front; ask what they are fighting for, anyway.

Of course, all these tactics are to be used by Communists in the armies of capitalist countries, like the United States, England, and France. Naturally, it does not apply to the armies of Soviet Russia. No defeatism is to be permitted there. Here is the Soviet Russian instructions to its agents, all over the world, on this point: "Although the proletariat in capitalist countries is not bound by the duty of national defense, in the land of the proletariat dictatorship, however, national defense is an unfailing revolutionary duty. Here the defenders are the armed proletariat supported by the poor peasantry. Defense of the Soviet Union is a matter of class interest for the international proletariat, as well as a doubt of honor."

Ah, yes—that seldom-used word "honor," is here trotted out in a Soviet document. The Bolsheviks who snort and laugh at ideas of morality and honor in others—calling it "bourgeois stupidity"—here invoke the sacred word "honor" in order to persuade others to become traitors to their own countries, in support of the Soviet Union; to bring about the defeat of their own nations so that the Soviet Union may triumph. If it wasn't very serious, it would be almost funny. The serious side is that they actually persuaded millions of people, all over the world to subscribe to these resolutions. These very resolutions that I have read you were passed and subscribed to by the representatives of nearly 60 countries—among them—Communist party representatives from the United States. Not a word of protest was ever raised against them in the councils of the American Communist Party. Certainly, who were Communists, back in 1928, and who are still Communists—have these things in their minds and their hearts when they cry the slogan of "Defend the Soviet Union." When you next hear that cry raised, I hope you will remember that it means a great deal more than just defending the Soviet Union with words. Communists are direct-actionists and they regard their first loyalty as being to the flag of Russia.

It isn't so often that one has the opportunity of quoting the head of the Communist Party of this Nation when he admits that his loyalty is to the flag of another country. They are not frequently so frank. Maybe in this case it was an unguarded moment. Anyway, I'm going to read to you the testimony of William Z. Foster, before the so-called Fish committee. I remind you that Mr. Foster was the head of the Communist Party, back in 1928, when he subscribed to the sixth world congress resolutions. He was the candidate for President of the United States on the Communist ticket in that year. And he is now the head of the Communist Party, United States of America. I don't suppose his views have changed vastly in the meantime. Here is the colloquy which took place:

"The CHAIRMAN. Now if I understand you, the workers in this country look upon the Soviet Union as their country. Is that right?

"Mr. FOSTER. The more advanced workers do.

"The CHAIRMAN. They look upon the Soviet flag as their flag?

"Mr. FOSTER. The workers of this country and the workers of every country have only one flag and that is the red flag. That is the flag of the proletarian revolution; it was also, incidentally, the flag of the American revolution, in its earlier stages. The red flag has been the flag of revolution for many years before the Russian revolution.

"The CHAIRMAN. Do you owe allegiance to the American flag; does the Communist Party owe allegiance to the American flag?

"Mr. FOSTER. The workers—the revolutionary workers—in all the capitalist countries are an oppressed class, who are held in subjection by their respective capitalist governments, and their attitude toward these governments is the abolition of these governments and the establishment of Soviet governments.

"The CHAIRMAN. Well, they do not claim any allegiance, then, to the American flag in this country?

"Mr. FOSTER. That is, you mean the support of capitalism in America? No.

"The CHAIRMAN. I mean if they had to choose between the Red flag and the American flag, I take it from you that you would choose the Red flag. Is that correct?

"Mr. FOSTER. I have stated my answer.

"The CHAIRMAN. I do not want to force you to answer if it embarrasses you, Mr. Foster.

"Mr. FOSTER. It does not embarrass me at all. I stated very clearly that the Red flag is the flag of the revolutionary class and we are part of the revolutionary class * * * and all capitalist flags are flags of the capitalist class and we owe no allegiance to any of them."

If that is not clear and explicit language, saying that Communists do not owe any allegiance to the American flag, but to the Red flag which is also the flag of the Soviet Union, then I don't know the meaning of language.

I want to drive this point home about the fundamental loyalties of Communists, living outside the Soviet Union, to some other country than their own native or adopted lands. I wish to call another witness. This time it is Benjamin Gitlow, one of the original organizers of the Communist Party in this country. He was general secretary of the party and a candidate for Vice President of the United States on the Communist ticket. He was finally kicked out of the party for a deviation from the Moscow line. In September of 1939, he testified before the House Un-American Activities Committee. One of the questions directed at him was this one by Congressman Casey: "I'm very much interested in your statement that Russia is the fatherland of all Communists. Does that mean that Communists in America owe a higher allegiance to Russia than they do to this country?"

And Banjamin Gitlow, one of the founders of the party here and its general secretary for a number of years, answered in two words: "Of course."

Later he said: "A Communist has only one loyalty and that is to the party and that applies to every service in which he is engaged."

And here is another witness, Louis Budenz, a former party member and so high in the councils of that party that he was editor of the Daily Worker.

Chairman THOMAS asked this question: "If there should be a war today, or at some time in the future, between the United States and Russia, the Communist leaders in this country would have their loyalty with Russia. Is not that true?"

"Mr. BUDENZ. Most decidedly. That is their only loyalty and, as I say, the proof of it is * * * their own change of line, in accordance with the wish of Russia; their praise of the Soviet leadership, even after the dissolution of the Communist International; their judgment of leaders in America on the basis of their friendship or subservience to Soviet Government desires. I cannot take up all the time confirming this, but it can be found, by examination of every Communist resolution, every Communist public meeting, and every Communist publication. * * * Have you ever seen a Communist publication that found even one fault in Josef Stalin? He cannot make any mistakes. Yet the American leaders are shuttled back and forth in the Communist press, browbeaten, even called abusive terms. The Communists slander, lie, and are abusive to these Americans because these men expressed some criticism of Soviet objectives. But can Stalin be attacked in that press? They cannot even find one small fault to speak of, or discuss any weakness of his in the course of his long career. He is without any defect, says the Communist press, in effect."

I think I've given you enough testimony to document the idea that the Communists in this country consider they do not owe loyalty to this country, but that their only loyalty is to the Soviet Union. The resolutions of the Comintern demand this loyalty even to the point of demanding that Communists be traitors, in time of war, to their own country.

I don't suppose I have to argue the point that one owes loyalty to one's own country. If that isn't a basic proposition, I don't know any more basic. And yet there are many who enjoy all the advantages of life in this country, who have such a twist in their mental and emotional make-ups that they readily adhere to some other country—they scorn the toast of Stephen Decatur: "My country—right or wrong." They call that national chauvinism. Maybe it is, but it is a much better toast, I submit, than the toast: "The Soviet Union—always right—my own country, always wrong," and that is the way the American Communists feel about it.

The Rent-Control Problem

EXTENSION OF REMARKS
OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, February 23 (legislative day of Monday, February 2), 1948

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I have received from a very good friend of mine, Mr. Robert W. Prescott, who, I judge, disagrees with me on the question of rent control, together with an enclosure setting forth the position of the Eugene (Oreg.) Real Estate Board in regard to rent control, and a copy of my telegram in reply. As I say to Mr. Prescott in my telegram, it is such reasoned documents which are helpful to one in my position attempting to judge the merits of such an issue. I appreciate such documents as this, although, in connection with this subject, I may not reach the same conclusions as those reached by the Eugene Real Estate Board.

There being no objection, the letter, together with the enclosure and the telegram in reply, were ordered to be printed in the RECORD, as follows:

EUGENE, OREG., *February 14, 1948.*

Senator WAYNE L. MORSE.

DEAR WAYNE: Yesterday there was forwarded to you, from our local Realtor's Association, an analysis of the rent control problem, under my signature as the chairman of the housing committee; and I did not get to convey to you and to Mrs. Morse and your little daughters the personal esteem and best wishes of the Prescott family, always held for you and yours.

You have a most trying job, and I do not envy you. There is always the question of appeasing this group or that. Unless a legislator finds the truth concerning a particular subject of legislation, it would seem to me that he must move from one untenable position to another. Our economy is now so complicated, the divisions of it are so numerous and wide and interrelated that the very legislative minds, surely, can only find themselves scratching the surface of that knowledge necessary for wise and just and salutary laws. Without the help of the man who has been there, the man who knows, the best of legislators, in an era where society tries to handle all problems with another law and another bureau, cannot help but make serious blunders, most costly to the free and lighted world. In this particular age, our Congress, it does seem to me, under the great Constitution which Americans enjoy, almost if not quite, holds in its hands the destinies of the children of men.

With kindest personal regards, I am

Sincerely yours,

ROBERT W. PRESCOTT.

At: Eugene, Oreg.
Date: Lincoln's Birthday, 1948.
By: The Eugene Real Estate Board.
To: The Honorable WAYNE L. MORSE, Senator from Oregon, United States Senate Chamber, Washington, D. C.

DEAR SENATOR MORSE: Congress will shortly be called upon to modify, to extend, or to terminate the Federal Rent Control Act.

Many Congressmen, with their ears to the ground, will be sorely tempted to make a political decision in the matter, a decision of pure expediency because they fear to alienate the vote of tenant constituency. Other Congressmen will earnestly seek to make a socially scientific decision, a decision in line with constitutional rights, with equity and justice and perpetuative of the free world.

The hope for a scientific and just decision rests largely with Senators and Representatives from agricultural and from less industrialized communities. Such representatives are much less apt to be seduced from statesmanship by mob action and the pressures for expediency.

It is with this thought in mind that you are now approached by an occupational group whose daily labor and life work puts the group very close to the particular problem and qualifies it probably better than any other group for observation and reporting on just how the Rent Control Act is working. This group is the realtor group.

The realtor group is a politically nonpartisan group, most of the individual members being old and new Republicans and Democrats. The realtor association is a national association made up of hundreds of locals and of individuals pledged to a very high code of service and of ethics. A realty broker or salesman has to earn his right to the name "Realtor." It is a proud name and deservedly so.

The realtor believes in home ownership. A very heavy proportion of brokers and salesmen do own their own homes. They all have the purpose to achieve that end. They, therefore, do not belong to the tenant group.

On the other hand, few realtors belong to the landlord class. Until all citizens shall own their own homes, landlords are a necessity and will be a vital section of the national economy. But realtors, being close to the facts of tenantry and landlordism, are too smart to fly in the face of their own experience, which has taught them that landlords, as a group, no matter how fair and worthy they may be, nevertheless, are the subjects of envy, of suspicion, and hatred; and since the advent of rent controls, for 30 years in Europe and for a much shorter period in the United States, realtors see also that the very vital segment of the economy, rental housing, has been singled out by the Congress and by the administration for discriminatory and harassing and punitive treatment.

Again the attitude of realtors toward rental-control problems is not affected, one way or the other, by the amount of money to be made or lost either with or without rent control. With or without controls, a realtor would starve to death from commissions made on renting houses and apartments alone. Service in this branch of the industry is largely a courtesy and good-will service.

As a matter of fact, if the realtor's opinion of the Rent Control Act were determined by his financial interest in the subject matter, then he would be as highly prejudiced for the continuation of rent controls as is the tenant group itself. For the realtor has made infinitely more money than ever before from the sales of what normally, and without rent controls, would be and would remain purely rental property. A very large proportion of normal rental units has been removed from that category through the sale of the property at the request of despairing owners.

Thus the realtor, qualified by contacts and profession, and interested unselfishly, and often to his detriment, in the termination of rent controls, is in such a position that his voice should be officially and clearly lifted that the great free community of which he is a part may be guided to a wise decision.

The Federal Rent Control Act has been tried and has been found wanting everywhere; North, East, South, and West. To state the indictment of the Rent Act by the realtor group in a nutshell would be to brand the act as un-American because it is discriminatory and unjust, confiscatory, a theft, demagogy; an act which is dispossessing the whole tenant group; an act which is a spreader of slums; an act which if not terminated soon can only result in rents which either hit the sky or puts the Government into the housing business up to its ears, and finally, an act which is the entering wedge for the police state.

Let us look at the counts separately.

1. The Rent Control Act is a flagrant act of discrimination since, out of a free economy—which is an organically whole and indivisible thing—one branch of that economy alone is singled out for arbitrary and punitive treatment. These regulations are administered, in the final analysis, by distant political mercenaries and their stenographers, anxious to hold and to perpetuate their jobs and to maintain their particular power boss in office. But, irrespective of the wisdom or the motive of administrators, the fact remains that the property of a single economic group is taken and distributed arbitrarily amongst another social group, rich and poor alike, irrespective of affluence or of need.

2. The Rent Control Act is bitterly unjust because it does take the savings, chiefly of old-age groups who have been provident and have built up a social security of their own, and in the highest tradition of self-government and of the free world. The Rent

Control Act does take those savings, including provisions against the misfortunes attendant upon age, and it does distribute those savings indiscriminately hither and yon, cynically, ruthlessly, and designedly in the hope of political support.

3. The Rent Control Act is an act of confiscation and of theft. The act purports to manage. But housing units alone in the economy are compelled to try to operate with taxes doubled and with materials, supplies, and labor costs doubled and sometimes tripled. When Government is the perpetrator the act is euphoniously called confiscation. When an individual perpetrates a wrong then the Government prosecutes the tort under its proper classification.

4. The Rent Control Act takes its place by the side of the infamous shake-downs in vice-ridden communities by criminal gangs. As a price for not being "taken for a ride," the gang levies a weekly or monthly tribute. Under rent control the Government makes the shake-down, distributing the proceeds amongst those who, it expects, will bolster and support the perpetrators of the act.

Let us remember that the Rent Control Act is not a tax; the proceeds do not go into the Public Treasury to be paid out in an orderly and legal way for the maintenance of government.

To compel arbitrary contributions from a solitary branch of the economy in support of a social group, either because government is afraid and seeks to appease voters or because government is venal and cares not about its degradation, is not less infamous because the act is perpetuated under the aegis of government. Here is arbitrary power in the raw.

5. The Rent Control Act is an excuse for and breeder of demagogy, both the evidence and the source of a universal moral breakdown, and, if not terminated, the certain road to political degeneracy and chaos.

The Rent Control Act is alien to the spirit and to the governmental machinery of the free world, which is an indivisible thing. Freedom of speech, freedom of the press, freedom of the right to assemble and petition against grievance, the right to vote, and the right of free industry, agriculture, commerce, and the right to work, anywhere, all are part and parcel of the free world as distinguished from the slave world. The right to earn, to save, to be secure from private and public gangs, and to live and die without arbitrary molestations is, inherently, a part of that same free world. The free world is the moral world. The Rent Control Act is a part of the slave and the immoral world. The act sets neighbor against neighbor; it breeds envy, suspicion, fear, and distrust. It sets group against group and hastens the cleavage between classes. In time of peace, when all other branches of the economy are returned to freedoms, it can only create an atmosphere wherein political racketeers in government will flourish and thrive.

6. The act is slowly and surely driving the tenant group into the street. Owners of rental housing see their property taken without compensation. It is a natural defense that they should put rental property upon the market for outright sale. A great number of normally rental units have been sold. The process of disposal is not abated by the sops thrown out by Congress to remove ceilings from new construction.

Any rental-control act, in a free economy, is not only a gun aimed at the heads of landlords and would-be landlords, but also the act aims at the tenant group itself; for the supply of rental units is steadily diminishing.

How can a vital branch of the national economy thrive and the supply be increased when the Government has proclaimed an open season on those from whom it must get and perpetuate the supply? But the question itself reveals the stupidity of the Rent Control Act.

7. The Rent Control Act, unless terminated speedily and convincingly, is bound to make a Nation of nomads and slum dwellers. The notable and convincing instance of what happens under prolonged rent controls is found in France, where rent controls have operated for 30 years. In France the housing industry has long since been dead. Property instincts are all but dead. Tenants own the property but pay no taxes nor will they keep the properties in repair. The mob is content to live in squalor, and government is frightened of the mob. How soon by temporizing will our Congress hasten and bring that condition to our America? Or will it now terminate the threat?

Mr. Senator, in view of these truths, which so far as we know, are here for the first time assembled and set down for your consideration, by Republicans and Democrats, men and women, young and old, whose occupation makes them scientific experts in this particular branch of the national economy, how—in the face of these truths—can you, or any of your colleagues, temporize further with an act and a policy so foreign, so alien, so hostile, so destructive of the American way as is the Rent Control Act?

Now, Senator, sir, you and all Senators were never so challenged to show your colors.

This challenge is not a challenge by your detractors; nor by your constituents; nor by your supporters. It is a challenge by the truth, and it is made to your common sense and to the spirit that moves you and to your hope to perpetuate for your own children and to the children of your friends and neighbors in this great expanding community that heritage which has been and still is the hope and the blessing of free and enlightened men and women.

Respectfully yours,

EUGENE REAL ESTATE BOARD,
By COMMITTEE ON HOUSING,
ROBERT W. PRESCOTT, *Chairman.*

FEBRUARY 18, 1948.

ROBERT W. PRESCOTT,
Realtor, Eugene, Oreg.:

Deeply appreciative your February 14 letter. It is such material as you have sent me which is most helpful to anyone sincerely trying to think through rent-control problem as I am. I'm not only going to call attention of Cain committee to your analysis of rent-control problem, but also going to insert it in CONGRESSIONAL RECORD so all Members of Senate will have chance to read it. My present thinking on subject is that some form of rent control is needed for a while longer. Certainly legality of such control was well buttressed by unanimous decision of United States Supreme Court the other day. However, I believe most people are thinking entirely in terms of tenants' economic interests without any, or at least with little, thought being given to economic rights of property owners to fair return. Regards.

WAYNE MORSE,
United States Senator.

Congress and the Republican Party

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 23 (legislative day of Monday, February 2), 1948

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Congress and the Republican Party, delivered by the Senator from Connecticut [Mr. BALDWIN] before the Hennepin County Republican Committee at Minneapolis, Minn., February 11 last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A few days ago as I was looking forward to coming back among old friends in Minnesota I began to think of some of the men in whom we have recently placed your high public trust. Governor Youngdahl, Senator THYE, Governor Stassen, Senator BALL—all men big in body, big in mind, big in a strength and courage of conviction. Other States have great national figures, but perhaps none has in high office, or aspiring to high office, four young men who better represent in their high attainments, the traditions and the hopes and the beliefs and the fine open-heartedness we picture when we think of Americans.

Tonight, we again honor Abraham Lincoln, a great man, a great Republican—a great American. We can apply to Abraham Lincoln the very words he himself applied to Washington when he said, "* * * Washington is the mightiest name of earth—long since mightiest in the cause of civil liberty, still mightiest in moral reformation. On that name no eulogy is expected. It cannot be. To add brightness to the sun or glory to the name of Washington is alike impossible. Let none attempt it. In solemn awe pronounce the name, and in its naked deathless splendor leave it shining on." He has been known down through the years as a man of the people. In a deeper sense, we revere his memory because he was the people.

There is not one among us tonight who does not know the life of Lincoln. May this country always hold its heritage in such high regard that there will never be one among our children who will not be inspired by the life of Abraham Lincoln.

We, as Republicans, might, rather than review the sometimes sad, sometimes amusing, sometimes dramatic tales of Lincoln, consider instead whether our pattern of living and our pattern of party principles is such that it still reflects the thoughts and the hopes and the dreams that have made the name of Lincoln a synonym for freedom.

Abraham Lincoln was not restricted by party dogmas. He was not bound by party traditions. Lincoln shaped the principles and established the traditions of his party. It is well for us to remember, as Republicans, that we, too, must build and progress and advance.

In any Lincoln Day observance it is customary to quote at length from the wise words of Lincoln. To some degree that has brought an overemphasis on the words of Lincoln. He was more than a man of words. He was a man of far-seeing vision and a man of vigorous action. He was not a man who chose to watch the Union fail so long as he had the strength to save it.

The Republican Party today stands at the doorway of a bright and hopeful future. We can make that future great, for we can apply the vigor of Lincoln's principles to our own problems.

The future is too challenging in this age to waste time or tears on the past. There may be some among us who, embittered by party failures of years gone by, say "No" to all proposals not their own—and then lack their own. Those who fall into such a position of negativist thinking are allowing their thoughts to be controlled by the political opposition.

The function of the political party in this Republic is to compete for the favor of a majority by advancing plans of hope and then providing proof of the soundness of the

plans. Your great Minnesota football teams never won a game in which they didn't carry the ball.

There is no point in denying certain facts of our political life. For one reason or another, and probably to some large degree because of the accident of the times, we were defeated as a majority party 16 years ago. During those 16 years a new generation has grown up. New ideas, new circumstances have developed. During that time a heavy majority of the people voted for the other party largely because they thought it offered a better life and a better hope. We had become tired. Our thinking was out of tune with the majority. By 1946 the other party was weary and confused and old. That was our opportunity to provide a new party with constructive ideas and new faces and a bright future. That was the time to divorce ourselves from the past and provide a political home for the youth and the independent voters of the Nation.

We must be a party of youth. To deserve the support of youth we must be a party led by the ideas of youth—a new party challenging the future, not dreaming of the past. To believe that one day an adoring multitude will fall on its knees to give thanks for our platform of 1932 is to delude ourselves into oblivion.

We cannot allow ourselves to be held down by counsel that brings defeat. The youthful, the vigorous, the positive, progressive thinking Republicans have won the right to replace stubborn methods doomed to defeat; for we have an understanding program—a program of the people—which has in it the seed of victory.

The responsibility of a majority position further obligates us to think less of who is to blame for what, and more, of where we are going from here. When threatening problems hover over us, no timid hiding, no loud denials of their existence will make them any less real. Nor will shirking or false prophesies deserve any full confidence in our ability to conquer those threats.

We are facing, today, two great problems. It is the extent of our efforts to solve those problems that will bring to our new Republican Party success next year, or return an old party to the dreary depths of minority from which it has so recently come. The issues before us, today, sound simple because they concern simple, commonplace ideas—high prices and reconstruction. But they are not simple. In one is involved all the complexities of our national economic structure. In the other is involved the future of peace in this world. Each is dependent on the other. Their solutions are thus interdependent.

To both problems, we can well apply those words of Lincoln: "The dogmas of the past are inadequate to the stormy present. The occasion is piled high with difficulty and we must rise to the occasion. As our case is new, we must think anew and act anew."

No one in Lincoln's day would have dared to guess that within a century the United States of America would rise to a position in the world so commanding that our efforts alone might make or break the peace. No man would have guessed then, or perhaps would have guessed at any time in history, that democracy among free men banded together in a peaceful republic would be so successful as to reach a pinnacle of world success never attained by the force of all the aggressive military rulers in history. We find ourselves, today, in that position almost without knowing how we got there, without consciously caring to be there. Nevertheless, whether by design or accident, when a high position is achieved, it brings with it, as part of its price, a responsibility. The responsibility is not a Democratic one or a Republican one, it is an American responsibility.

National unity, in a bipartisan effort for a common good, does not call for the sacrifice of party affiliation or the loss of party integrity. It rather unites us to improve our chance of achieving the goal of security which is the self-evident hope of all Americans. We must, and we shall, bring ourselves to the positive position of setting before our people our own plans, our own programs, to which others may say "No" if they wish. Surely there are yet today some hopes, some ideals, and some beliefs that are above a party discipline. That does not mean that we can accept without question, or that we should regiment our thinking. It means, rather, that we should urge ourselves to propose and create and to select wisely between the good and the bad. In such matters which are too vast for mischief, let us not be blinded or diverted by the positions of others. Let us, rather, seek honestly and openly and thoughtfully to choose the way we shall go.

We must not exhibit a passive acceptance of the principles advanced by others, nor offer only dark warnings of failure. We must take a leadership in providing workable machinery for peace.

In the conduct of our relations with other nations, we have before us three broad paths, the safety of none of which we know now. We have the path labeled "isolation" which leads us toward a vast, costly, well-manned fort within which we might hope to guard our wealth from the inevitable onslaughts led by greed, poverty, and envy.

We have another choice labeled "appeasement," which leads us by a "round about" route toward the same fort of defense.

We have still another path labeled "international cooperation."

Even before technological advances made up a next-door neighbor in a small community of nations, isolationism had failed. Isolationism proved unworkable while this young nation was still in its teens. It is possible that we could develop within our own borders defenses so strong and walls so high that we might smugly think our land safe from the inevitable war of aggression, but in resigning ourselves to that conclusion, we are admitting that war will surely come, and are exchanging a few years of uneasy prosperity and frenzied preparation for a war which would be fought with horrible destruction in our own streets.

The appeasement path is well worn. The early British kings walked that path. Our own forefathers walked that path. Each time it brought them inevitably into conflict on a less desirable field of battle than that upon which they stood before they set out. Surely we cannot again believe that the appetite of a greedy aggressor is satisfied before he is stopped by force.

The third path is a new one overgrown by a jungle of difficulties. Whether that path leads toward peace and security, we cannot fully see. We do know that the other ways are costly and will surely bring war one day to our own homes. So however difficult—however long—that path may seem, so long as there is some hope, some chance that it avoids the horrible pitfalls of war, it is the path we should and we must follow.

We will not achieve peace, nor will we accomplish world cooperation, over night. The history of conflict, national jealousies, and human greed is too long; but we must, for the sake of humanity, try again to reach peace, this time by a new path.

We hear some criticism of the Republican position on foreign affairs (or at least the position of the Republican leadership on foreign affairs, as exemplified by ARTHUR VANDENBERG in the Senate, and Harold Stassen in the public forum) to the effect that it is a "me too" position. It is far from that.

When the history of this era is written and the documents of this age, and the lives of the men who shaped and wrote them, have been studied, and critically analyzed, it will be demonstrated beyond any doubt, that Republicans have made the greatest contribution to the evolvement of a sound foreign policy. The Democratic leadership have had nothing more to offer than the pattern of the years of depression and the application of that pattern to the reconstruction of a war-torn economy in Europe. That pattern was a continuation of doles—a pouring out of money. That pattern was pursued for more than 2 years after VE-day. That pattern is very much the pattern which has been applied to Greece. Something more was needed than money. Something more is being evolved today in a committee on foreign policy in both the Senate and the House under Republican leadership and with a Republican majority. I don't want to detract one bit from the great efforts made by General Marshall, nor from the contributions made by Democrats. But I do assert, again, that when this is all added up, examined, and studied in the laboratories of the historians of the future, it will be found that the Republicans rescued the Administration's foreign policy from failure and inaptitude, and have built in its place a constructive, forward-looking, hopeful program. If we have had a bipartisan foreign policy in any sense of the word, it has been because Republicans insisted upon it.

When has a party out of power made such contributions to the evolvement of any policy, foreign or domestic, as has been made by Harold Stassen and Arthur Vandenberg, and John Foster Dulles, Warren Austin, Alex Smith and Cabot Lodge, and Charles Eaton and Christian Herter, Tom Dewey, and others? Can you name men in the party now in power who are equal in influence and ability and number to those that I have just mentioned and who have made an equal contribution? Would the destiny of this Nation in the field of foreign affairs be safe in the hands of this kind of leadership? There can be no question about it.

There is another phase of this thing which I would ask you to look at very carefully. The Administration in Washington would have the country believe that the Marshall plan is the solution to peace. The Marshall plan is a step—and a very important, yes, an indispensable step—in the direction of peace, but it is not a plan for the establishment of peace. No, we have got a long way further to go than that.

Great Republican leaders in our party helped build the United Nations. As a Republican Party, we must now work to make that United Nations effective, and one of the vital steps in the direction of peace is the strengthening of the United Nations Charter. There has been too much tendency on the part of the administration, in its development of a foreign policy, to bypass the United Nations. The Democrats themselves were divided in the Senate last spring when the President deliberately bypassed the United Nations with the so-called Truman doctrine with reference to Greece. That policy has not turned out too well, so you don't hear so much about the Truman doctrine now. It was the Republicans who supported the Vandenberg amendment to the bill, providing aid for Greece and Turkey, that saved the administration a defeat by recognizing the interest and authority of the United Nations. That gesture made by the United States Congress, which was an offer to withdraw our aid at the request of a simple majority in the assembly of the United Nations—that gesture was the finest gesture of confidence in the United Nations that has yet been made.

Therefore, consistent with our policy, it must be part of our program to strengthen the United Nations as the instrument to effectuate world peace. In order that we might outlaw wars of aggression in this world, the United Nations must become a federation instead of a confederation, an organization in which so far as aggression is concerned, the veto power has no effect. If

Russia and her satellite nations do not wish to become part of an organization that has this as its policy, then let them stay out. We can extend an invitation and we can keep that invitation always open. But we cannot afford to be stalemated in our program for peace by the obstinacy or obstructionist tactics or the selfish purpose of one nation alone. Then, too, as a Republican Party, we can continue to press for those measures which prevent armament for aggression, and for the establishment of an international force of some kind in which all of the nations in the federation to prevent war are joined.

These are steps that go along with—yes, go beyond the Marshall plan—in building our program for world security. The great Republican Party leaders in the past were early in this field in which we now, as Republicans, must earnestly and intelligently labor. By doing so, we will be doing no more than keeping faith with our Republican traditions and Republican policies in foreign affairs that have been handed down to us from the past.

There is one further point of extreme urgency that the Administration has either overlooked or seems loath to consider at all. That extreme urgency is in taking the leadership in backing up, in every way possible, the decisions that have already been made in the United Nations. The United Nations Charter sets up no executive. It makes no provision for the enforcement of its decisions. Obviously, it was the intention of those who drafted it and those who became signatory to it, in all good faith, that the member nations would take care of the execution of its decisions. We must be prepared—as a Nation—to accept fully our share of that responsibility.

The League of Nations was criticized, and properly so, as being a mere debating society. We cannot let the United Nations repeat that mistake and thus become another factor for turning idle resolutions. The times call for something more than for puny policies and puny politicians. They call for positive action and high statesmanship.

Perhaps the European recovery plan was put forward by someone else, but when one considers the changes in our policy and the tremendous contributions made by Governor Stassen, Senator VANDENBERG, and other Republicans, there is little doubt that a blood test of the plan would soon prove its parentage.

So far as the cost is concerned, it is indeed expensive. But the cost of defenses that would have to be built as a result of our abandonment of Europe or the cost of even a few days of a modern destructive war, would make the billions spent on this program seem insignificant indeed, by comparison. The nations of Europe may be quarrelsome and may not properly appreciate our efforts, but it should be our purpose to take away a part of the reason for quarrel, and it should be our purpose to demonstrate to them that there is a way to peace and prosperity through the establishment of free institutions in free governments.

This is no wasteful, extravagant, purposeless effort. It should, and must, be a carefully calculated and efficiently carried out plan of self-protection. The very fact that we have succeeded in getting 16 European nations to agree among themselves to lower the barriers existing for so long between them and agree among themselves to share the resources and the wealth of their own nations, is in itself a long step toward international understanding.

I would say, again, that the cost and the effort that must be put into this plan is not attractive to any American. There is no guaranty of success. But in the absence of any alternative offered by those who criticize it most, I see no other way.

At home, too, we are faced with difficult circumstances. Our people are harassed and worried by a threatening inflation. Prices of consumer necessities have reached a point where it is most difficult for millions of our people to adequately feed and clothe their families. There are those who would choose to deal with this threatening problem by ignoring it.

We are, today, in the midst of a dangerous economic spiral. The cost of food is in itself taking from our family budgets such a large share that our people's capacity to buy other commodities is falling off rapidly. If demand for other commodities is reduced, production must soon be reduced. Unemployment and less demand, and more unemployment, will rapidly spin us to the bottom of a depression.

Again, we cannot exhibit a negative thinking that does not contribute to a solution. We cannot piously hope that the "sun will melt" this inflation. We offered, in the Congress, even before the President did, certain constructive and far-reaching proposals—which would, I believe, with a little sacrifice on the part of all, stop the dangerous trend. It is only a fair warning that if we do not take more active, more concrete, and more effective steps in the direction of solving an inflationary trend, those of us who dislike rationing, price controls, wage controls most, may force these harsh controls on ourselves. The Congress cannot wave any magic legislative wand that will suddenly bring about 1933 prices. Lower prices will come only if the public, the administration, and the Congress see the danger clearly enough to join in bringing prices down. There are many other fields in which there is much to be accomplished.

After 15 years, and after the applied efforts of 34 Government agencies, we still have, in this country, a most severe housing shortage. It should be a challenge to the Republican Party to develop a sound and coordinated program designed to end the shortage which all the agencies and all the dollars of the New Deal could not alleviate.

We still have inadequate education and health programs in many parts of this country. It should be a challenge to the Republican Party to propose and carry out programs that would bring improved health and improved education to the children of America.

We still have, in this country, vast resources which through the development of reclamation and antierosion projects, could add tremendously to our productive capacity. It should be a challenge to the Republican Party to develop a program to harness and save more of the potential wealth of our land.

We have, in America, a vast industrial machine, the wheels of which are frequently stopped by friction between labor and management. While we approach other problems in production with modern, intricate, scientific tools, we still approach this problem of the human factor with a stone hammer. It should be a challenge to the Republican Party not to return to the days of 1930, or the days of 1900, but to develop a modern, progressive, sound, labor-management program that would deal with conditions as they are today, granting true rights and freedoms and prosperity to laboring men working under a profitable system of free enterprise.

We have, today, in America, threats to our civil liberties, and threats to the rights of minorities.

When all about us, men are using the guaranties of liberty which we cherish in attempts to bring upon us a system that has in it no regard for liberty, we must act carefully and wisely so that we do not destroy our own liberties by denying the expression of views to others only because they are not our own. Despotism by whatever name it is called, is the same the world over. Whether the loss of individual rights and political freedom come from the tyranny of kings, dictators, a ruling class, or a political machine, the selfish purpose is the same and the result is identical. It should be a challenge to Republicans to make sure that we have no despotism here.

For more than a decade we have borrowed on the future to pay for the reckless spending of the present. It should be a challenge to the Republican Party to prove we can serve the interests of our people and yet put their business back on its feet.

We have seen taxes mount higher each year. It should be a challenge to Republicans to be able to announce, "This year, for the first time you can now recall your tax bill is less than last year. You are now only paying for the service you bought."

It should be a challenge to the Republican Party to meet and defeat the stifling spread of the "weed" bureaucracy.

Perhaps we can't meet the ever-extending fine promises of the tired, confused administration; but a progressive, active, Republican administration can build houses instead of housing agencies; offer more service instead of more servants; and create sound, consistent Government instead of promising "all this and heaven too" to all people.

To one who supports the present administration, it must indeed be confusing to know whether he should believe in price relief through price control or believe that is the method of a police state; whether he should follow the southern or the northern line on antipoll tax and antilynching legislation; whether he should be opposed to tax reduction every year or only in nonelection years; whether he should castigate all speculators on grain markets or be one of them; whether he should hunt for Communists under the bed or hide them there; and which of the last two Vice Presidents he should believe on the subject of Russia. Perhaps we can't, as Republicans, bring that many divergent viewpoints together in a common cause of keeping command of the public trough, but neither do we suppose that even some of the American people will be fooled all of the time.

There are, in America, today, millions of young people who have grown up in depression and matured in war. They are not the radicals of a third party, nor are they the ultra conservatives clinging to the dogmas of the past. They are the young men and the young women who truly believe that Lincoln was, as he said, "a living witness that any one of your children may look to come to the White House, as my father's child has. It is in order that each one of you may have, through this free Government which we have enjoyed, an open field and a fair chance that the struggle should be maintained that we may not lose our birthright."

It is to these millions of Americans who love liberty and freedom and an equal chance for all men that the Republican Party offers an exciting and profitable future in taking upon itself the ideas of today—new progressive plans and programs—new faces and new goals visualized by the progressive leaders we have in our ranks.

The Republican Party cannot represent, or be thought to represent, any special interests save the interests of the whole people. We cannot have poverty here and defeat poverty abroad. We cannot see freedom lost in the world and keep our freedom here. If we are to hand to our children the heritage that Lincoln helped build for us, we must in some things be above petty disagreements of party politics, and, in others, provide, through our party, the strong, bold, and progressive leadership that can deal successfully with the new problems and the new conditions that a changing world has brought us. Above all else we must be the builders of peace, the builders of prosperity, the builders of one free world.

You have here in the rich rolling lands of Minnesota the spirit of progress, the broad

vision, and the youthful, challenging ideas that will help to bring the Republican Party to a new and deserved victory in 1948. Abraham Lincoln came from obscurity to prove our belief in the rights and the dignity of man. He brought with him a hope for unifying the energies and the ideas that had split this still new Nation. The Republican Party will bring a hope for bridging the rifts that now separate the peoples of the world and threaten the peace. The Republican Party will advance the hopes of all peoples that "government of the people, by the people, and for the people shall not perish from the earth."

The Man Who Got Rich

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23 1948

Mr. KNUTSON. Mr. Speaker, older Members of the House recall former Representative Samuel B. Pettengill, of Indiana, with keen pleasure. Mr. Pettengill's service in this body was characterized by unusual industry and integrity. While a Democrat in politics, he at all times placed his country first so whenever he had anything to say he was always listened to with attention.

Mr. Pettengill voluntarily retired from Congress and now devotes himself entirely to spreading the doctrine of Americanism. Under the title "The Gentleman From Indiana" he issues press releases from time to time that are real nuggets of gold. Particularly good was his release of November 18 last, and now that the Marshall plan is before Congress what he then said is most timely. Under the title "The Man Who Got Rich" Mr. Pettengill's release follows:

THE MAN WHO GOT RICH

This is the story of a man who got rich giving his money away. Of course, you will want to know how he did it.

He was a kind-hearted, soft-headed, old chap who ran a little grocery store down by the Harry Hopkins High School in Nuttown. Sometimes he did pretty good, and then, again, not so good. So he got to thinking and thinking. Morning and night the boys and gals tramped by his store on their way to school. But they didn't buy anything much. So he asked them, how come? and they said "We suffer from a dollar shortage."

Well, right then the big idea was born. Uncle Sam (for that was what we called him) went to the People's Bank of Nuttown and borrowed a hundred bucks, in $1 bills, all crisp and crinkly-like. He gave a dollar to each of the first hundred school kids who went by. But he made them solemly promise that they'd spend the dollars in his store. They all promised.

Well, sales boomed all day. Uncle Sam never had so much business and was pleased as all get-out. Come night, he showed his wife his cash box jammed full of those dollar bills and bragged about his brains no end. He sure was tickeld with himself. He said he planned to do it that way every day. And so he did. Of course he ran up some big bills with his wholesalers because the school kids kept getting his money, and not them. Howsomever, he settled up with them by signing a flock of I O U's.

Well, Uncle Sam passed his grocery store plan on to President Truman, and Harry was pleased as punch with it. Harry had run a store once himself and hadn't done so well. But back there, he hadn't known how to do it—how to get rich by giving his dollars away.

So Harry called in his advisers, Marshall and Krug and Harriman, and told them how Uncle Sam had filled his store with customers. They all said, "Wonderful!" and bounced right back with a plan. It got to be known as the Marshall plan, but betwixt you and me, it was the grocery-store plan, but on a world scale. It was going to make all poor people rich by never letting them suffer from a "dollar shortage," and it was going to make us rich, perpetual-like, by having no end of customers with dollars to buy at our store.

Congress asked a lot of fool questions, so they had to start the Marshall "grocery store" plan on a small scale—with only $19,000,000,000. But we made our foreign friends promise to buy at our store. They promised.

So the ships left New York loaded with 19,000,000,000 dollar bills. And when they got to Southampton and Cherbourg, they turned plumb around and brought the dollars right back, same as the school kids, with orders for iron ore and coal and petroleum and boxcars and lumber and meat and butter and everything. And boy, how the plan did work.

We felt so good that we expanded the plan 10 times over for the Chinese and East Indians and Hottentots—one billion folks, in all—who were so much worse off than the Europeans that they could help us get rich by just no end, buying at our store.

And that is how we went on the biggest binge in history. It was just like Thanksgiving the year round. Everybody got so much turkey and I O U's that they almost choked.

Address by Robert P. Boylan

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. AUCHINCLOSS. Mr. Speaker, in accordance with the permission granted me, I am very pleased to include in my remarks a speech made recently by Mr. Robert P. Boylan, chairman of the New York Stock Exchange, before a joint meeting of the Atlanta Chamber of Commerce and the Association of Stock Exchange Firms on February 13, 1948.

Mr. Boylan in his remarks points out the necessity for a free and open market in commodities, as well as securities, and I commend his remarks to my colleagues for their consideration. He speaks with authority and, as I myself have been active in security markets for a great many years during my life, I know he speaks accurately and very much to the point. I am glad to see the progressive and sound management under which the New York Stock Exchange is operating as represented by men like Mr. Boylan.

The address follows:

It is a very happy experience for me to be here in your great Capital City which is surrounded with so many fine American traditions. I am pleased for many reasons. One of them is that, in this community, you have such a high devotion to our free institutions. I would not go so far as to say that this makes you greatly different from other important communities in our country, except in the sense that you have typified, for a long time, our respect for the kind of enterprises about which I am going to talk.

You will, I believe, have a special interest in the subject which I shall discuss with you. I am referring to one of the great free institutions in which you, because of your tremendous capital investments, have a vital interest— our free markets. Your continued progress, as well as that of other industrial centers, requires a full recognition of the fact that our institutions have to be maintained constructively if the process of creating wealth and culture is to go on.

It is not generally appreciated that our capital markets are threatened by an insidious encroachment upon them. Now, I believe that our people would become angrily excited if they thought that our other free institutions were in danger. But freedom of expression, freedom of worship, equality of justice, and all of the other great privileges granted under our Constitution and Bill of Rights are no less important than the liberty to bargain and to do business honorably within the limits, of course, that necessarily guard good conduct. Without recognizing the fact, we have permitted, in this country, an unnatural development which endangers our free markets. This danger is serious and it must be removed. It can be removed only by an aroused public opinion.

It is necessary that the campaign which certain elements have set in motion to discredit our free markets be stopped. Unfortunately, the essential necessity of these markets is not sufficiently understood. Uninformed people in our national community have constantly attempted and are still attempting to make scape-goats of these markets. I am not, for a moment, defending the occasional evils which occur under our free market system. Human beings, fallible as they always are, sometimes misuse the facilities of our markets, whether they be commodity markets or security markets.

Where the public has access to our free markets, as the public should have, there are episodes at times which do serious damage. In spite of our utmost effort to see that these activities do not occur, they do occur. Our responsibility is to continue our efforts to prevent abuses. We must be continuingly vigilant in this direction.

We must not allow the conduct of a few irresponsible individuals to destroy what is vital and valuable to our society in the system of free markets.

We either believe in free markets, or we do not believe in them. The attention of the American people needs to be focused upon the necessity of these markets as fundamental American institutions. It is our personal responsibility to see to it that thoughtless and hostile individuals do not reduce the efficiency of these markets. There is, I assure you, no thought in what I am saying of reflecting upon the excellent agency which regulates our particular market. My purpose, rather, is to awaken our people to the fact that free markets go to the very heart of our American system and that, without them, this system will decay.

I shall discuss, for a moment, the operations of these markets. I have been a member of the Chicago Board of Trade and of the New York Stock Exchange for many years. I had the honor of serving as president of the board of trade and I now have the honor of being chairman of the board of governors of the New York Stock Exchange. I say this not immodestly but for the purpose of illustrating the fact that I think I can speak with a considerable breadth of experience. I do not appear as an apologist for these markets. No apology is necessary. Markets are conducted for the service and benefit of our people and they have no other justification for their existence. They may seem

complex, but, as a matter of fact, their operation is very simple.

There is an impression, which is entirely understandable, that markets are made among buyers and sellers on a spontaneous basis. This would be, I dare say, the ideal concept of free markets. It so happens, however, that the orders of buyers and sellers do not come together as evenly as we would like to have them do. The professional, or as I prefer to call him, the risk bearer, steps in when there is an insufficient concentration of orders.

It is fortunate that the necessary services of the risk bearer are not fully recognized. When I speak of risk bearers I include particularly traders and dealer specialists, whose great contribution is in the making of close markets. These professionals supply not only their own capital but intelligence in taking care of the missing links in markets. They do it with great proficiency and at great financial risks, and their rewards, if any, are not large. They have no advantages over the public in their activities.

If you will bear with me, I should like to discuss another highly important factor in our economic life. There has been, particularly over the last 15 years, a deliberate effort to discredit the whole process of speculation. The people who attempt to undermine the business of speculation are either uninformed or they are purposeful enemies of our American way of life. As you all know, it was speculation which made this Nation what it is today. It will be speculation which will make it what it is to be in the future. I stress this fact because it is vital. We shall, of course, need to keep in effect measures to prevent abuses. In preventing abuses we must not go so far in the way of restrictions as to impair the essential usefulness of our markets. I frankly believe that we have already gone too far in some respects.

We cannot live as a free Nation without speculation. That point is overlooked by a great many of our political figures.

Speculation enters into all of our activities in this country. You cannot look out from your offices without seeing speculation going on all around you. It is the essence of our American way of life. Every element of your business operations here in Atlanta depends upon speculation.

One of our greatest and most useful speculators is the American farmer, although we seldom think of him as such. He sows his crop in the fall with the expectation that it will not winter-kill; that the following spring and summer will bring the proper balance of sunshine and rain to produce a crop that can be sold at a profit.

In defending speculation and the speculator, I want to make it clear that I am justifying risk bearing and risk takers, and not the manipulator and manipulation. There is no defense for manipulators. As you know, manipulation is outlawed by acts of Congress and is prohibited by rules of the exchange. Not only are the Securities and Exchange Commission and the exchange vigilant with respect to these laws, but we have the active cooperation of the various State securities commissioners whose duty it is to administer the blue-sky laws.

We cannot lose sight of the fact that it was the expansion, through the use of venture capital, that gave us those enterprises without which we could not have won the war. General Motors, the A. O. Smith Corp., Douglas Aircraft, the Glenn Martin Co., and many other companies developed with the money of risk bearers. It is commonplace information that these companies, including General Electric, Westinghouse Electric, United States Steel, Bethlehem Steel, and others, became large and productive because of the use of the funds of people who were willing to take risks. We cannot permit a trend to set in that will retard the growth and development of valuable and job-providing enterprises in this country. Instead of apologizing for speculation, we should be out proudly encouraging it as a necessary force in the further development of this country. Let us do that with our great resources and powers of expression.

I defend speculation as our fundamental means of improving our standard of living and of creating wealth. Without speculation, we shall inevitably stagnate. We need in this country, above everything else, a dynamic economy. Under no other system can we make progress. A dynamic economy can operate only in a friendly atmosphere. Unfortunately, we do not have today such an atmosphere. I refer to the political climate which will make it possible for business to perform profitably, in terms of the creation of wealth and of the advancement of our cultural life. The impulses that bring about the favorable atmosphere of which I speak must originate with the people. The impact of their opinions will bring corrections.

The basic need today is the removal of incompetent hands from all streams of decent business. This is one of the paramount problems facing us.

We have been tremendously handicapped by unwise tax policies. It is gratifying to observe that measures are being taken to correct this tax situation. I am encouraged to believe that the constructive forces in our National Legislature will carry out a strong program of tax revision. This should not be long delayed.

I hold the sincerest conviction that a reconstruction of our tax structure is urgently necessary if the country is to have further prosperity. I cannot overlook the fact that you have in this State of Georgia a man with great statesmanlike qualities, who not only understands the problems of our free institutions, but who has the courage to express his convictions. I have reference, of course, to your esteemed Senator, WALTER F. GEORGE.

All of us see everywhere evidence of the fact that busy and productive industry is the product of venture capital. We see it particularly here in Atlanta where you have developed so many great enterprises, such as the Coca-Cola Co. I do not know of a better example of the effective use of venture capital than in this particular company. Originated by Mr. Candler, it grew out of speculation. You have many other companies here which developed out of the same incentives. I cannot urge upon you too strongly the necessity for action, tax-wise, which will invigorate our enterprises and make our economy operate successfully and prosperously.

Federal Aid to States

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Michigan Survey for February 23, 1948:

FEDERAL AID TO STATES—HOW MUCH DOES IT COST, AND HOW MUCH OF IT DO WE WANT?

Would you like to hire a good man to boss a few jobs around your home?

You know—things like cleaning and decorating, taking care of the yard and garden, watching the children's diet, and seeing that they take their baths?

It happens that the man who wants the job lives several hundred miles away—but what of it?

He knows what needs doing, and just how it ought to be done. He has plenty of experts to help him. And he'll send an inspector around once in a while to see that things are going according to plan.

Just mail him a check every 3 months. He'll pay the bills—minus a commission, of course. Experts and clerical help cost money.

But think of the fun you and your wife will have—not worrying about junior's vitamins, or dirt around the baseboards, or whether the bugs eat up your prize roses.

Federal aid to States works out something like that. At least a major part of it does.

Uncle Sam gets an idea for a project he thinks will be good for the 48 States. Congress votes an appropriation for it. Uncle Sam collects the money in taxes, then allots it to the States to be spent.

The Government makes the rules, and enforces them. It turns the actual bossing over to a commission, or a bureau or a department—and, naturally, the cost of these is paid out of tax money.

UNCLE SAM IS MIDDLEMAN

This whole subject of State aid is worrying a lot of people in a lot of States right now. They are asking pointed questions:

How much is "Federal aid" costing us? Can we afford it? Are all the projects sound, and nationally important? Can the Federal Government handle them better than the States? Are we getting back our fair share of the tax money we pay in to support them?

Let's look at a few facts and figures.

Federal grants-in-aid to the States are not new. They started in 1862, but their total for the first 60 years was only pin money, judged by later standards.

Federal "giving" is really a depression baby and a war baby. It didn't get to be big business until the 1930's. How much fat the baby has put on in the intervening years is shown in a recent study by the National Association of Manufacturers.

According to this study, Federal grant-in-aid expenditures from 1934 through 1946 totaled over $35,000,000,000. Depression emergency programs accounted for about 73 percent of that total—$25,700,000,000. And incidentally, that latter sum is larger than the entire national debt at the end of World War I.

The balance of the $35,000,000,000 grand total includes $2,800,000,000 for State-aid programs started before 1933, $4,200,000,000 for new continuing programs, and $2,300,000,000 for war-emergency programs.

FIGURE IT OUT

While all this was going on, what was happening to Federal taxes and national debt? And how were the States and cities of the country running their own affairs, in terms of debt and taxes?

A comparison between the period 1924–30 (boom years) and the period 1934–40 (prewar years) is interesting. The figures are from the NAM survey.

From fiscal 1924 to fiscal 1930, the Federal debt was reduced by $6,100,000,000. From 1934 to 1940, it increased $25,900,000,000, in spite of the fact that Federal taxes were nearly $17,000,000,000 higher in the second period than in the first.

By comparison, public debts of the 48 States increased $1,000,000,000 between 1924 and 1930, and increased only $460,000,000 from 1934 to 1940.

In the same first period, local (city) debts throughout the country increased $6,400,000,000, and from 1934 to 1940 decreased $1,000,000,000.

In short, while Federal Government was spending, States and cities were saving (on

paper) but their people were paying heavily, in taxes, for the benefits they received.

Department of Commerce figures give another interesting angle on this Federal-local picture:

They show that Federal taxes, in 1929, were just under 4 percent of the net national product; and in 1947 were nearly 20 percent. In 1929, State and local taxes were 6.8 percent of the national product; in 1947, they dropped to 5.4 percent.

Again, we spend nationally while we save locally.

Federal aid to States hit its peak in 1939, with expenditures totaling slightly over $4,000,000,000 (not including social security payments).

In that same year, be it noted, the Federal Government came out with a deficit of over $3,300,000,000. And in that same year, too, Federal aid to States amounted to more than 24 percent of the cost of all government—national, State, and local.

PATERNALISM VERSUS LOCAL GOVERNMENT

What has been spent is over the dam—except that the bills still have to be paid. What is being spent and what will be spent is of prime interest to the Michigan Survey and the taxpayers for whom it speaks.

Federal expenditures for aid to States have tapered off from their $4,400,000,000 high in 1939 to $1,300,000,000 in 1946—but in that total was $845,000,000 in nonemergency continuing programs.

Budget requests for fiscal 1949 include hundreds of millions for medical insurance, education, housing, urban redevelopment, and other similar programs.

The issue is not Federal spending for projects of national scope and importance, which the States are unable to accomplish without Federal aid.

The issue is between subsidies, paternalism, and absentee supervision on the one hand and State handling of State problems on the other.

States, for example, have neither asked nor received Federal financial support for their public school systems. New York State has a full-fledged public housing program of its own. New Jersey has a State subsidy plan for veterans' housing.

FEDERAL AID COSTS MONEY

History shows, moreover, that a dollar paid in Federal taxes for State aid does not come back as a dollar's worth of benefits. The $35,000,000,000 spent on the States from 1934 to 1946 does not include the cost of maintaining the various bureaus and agencies that ran the programs.

Further, the study indicates that 16 States got nearly $6,000,000,000 less in Federal grants from 1934 to 1945 than they paid in taxes earmarked for State aid.

Michigan was one of the 16. Its "loss," according to the study, was about $343,000,000. Michigan could use any part of that right now.

How do the States themselves feel about this question of Federal aid and its future expansion? Many of their representatives are speaking strongly on the subject.

After a recent conference, 30 Members of Congress and governors issued this statement: "Our States must cease relying on the Federal Government to do things for them and their citizens which they can do as well as or better than the Federal Government."

In a speech before the House 4 years ago, Congressman Lanham, of Texas, had this to say:

"The Federal Government has nothing to give to the people except what it takes from the people. * * * In the matter of these so-called grants other than those under constitutional authority, from each dollar that the Federal Government takes from the States, it retains and divides a part of that sum for the establishment or enlargement of some administrative agency, and then returns the remaining part to the States themselves, provided they will spend it in such a way as Federal agents in Washington direct."

INDIANA SPEAKS OUT

In a resolution adopted 3 years ago, the general assembly of Indiana spoke, in part, as follows:

"We know that there is no wealth to tax that is not already within the boundaries of the 48 States.

"So we propose henceforward to tax ourselves and take care of ourselves. We are fed up with subsidies, doles, and paternalism. We are no one's stepchild. We serve notice that we will resist Washington, D. C.'s adopting us."

Resolutions of similar tone have been since adopted by the legislatures of Michigan and New Jersey. Key paragraph of the Michigan resolution is this:

"We respectfully petition and urge Michigan Senators and Congressmen in Congress to exert all their efforts in attempting to stop or at least reduce the offering of Federal aid to the several States and Territories."

WHAT CAN BE DONE

The Michigan survey urges the taxpayers of the State, and its governmental representatives, to raise their voices wherever possible in favor of a close, nonpartisan scrutiny of all proposals for Federal aid to States.

Let every grant-in-aid be judged by the answers to three questions:

Is it necessary?

Can we afford it?

Is it a matter of national welfare and interest, or one that the States can and should handle?

Postal Employees Deserve Pay Raise

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include an article which appeared in the New York World-Telegram January 27. This article appears to be very timely, since hearings are scheduled to commence Wednesday before the House Committee on Post Office and Civil Service on bills to increase salaries of postal employees.

It is my hope that Members of Congress will express to the committee their support of legislation to increase postal employees' pay. I feel confident that Members of Congress, as well as their constituents, are duly appreciative of the efficient service rendered by the postal employees, and recognize the need for increased compensation to meet the demands of the present cost of living.

The article referred to follows:

MAIL PAY LOW, UNITED STATES FIGURES SHOW

(By Fred W. Perkins)

CLEVELAND, January 27.—The typical post-office clerk is just about the typical white-collar worker with a fixed income.

So says Chan Harbour, vice president of the National Federation of Post Office Clerks. He has worked out some authentic household budgetary figures, according to a witness he produced for an interview. The witness was Clarence Carter, who works in the main Cleveland post office.

The main point proved by his figures, Mr. Harbour said with the backing of Mr. Carter, is that when the United States Bureau of Labor Statistics announced its recent finding on what the head of a four-person city family should make for a modest but adequate scale of living it did not consider what is actually paid by another branch of the Government—the Post Office Department.

COVERED MIDDLE WEST

Mr. Harbour said he did his figuring throughout the Middle West, not in the post offices of Cleveland alone. The average pay of all post office employees is $2,816 a year. But Mr. Carter's basic salary is $2,700. He was chosen because his family includes a wife and two children.

In Cleveland, according to the Bureau, such a family needs $3,296 a year.

Mr. Carter's basic pay is subject to annual tax deductions of $84 and a contribution of $135 to the Federal employees retirement fund. This would be classified later as savings, but it helps reduce his monthly take-home to $206.75. The budgetary figures show he should have household expenses of $282.90—but this would produce amonthly deficit of $76.15.

CUTS ALL CORNERS

How then, did Mr. Carter make out?

"By cutting all the corners," he said. "No telephone, no luxuries of any sort, trading Sunday newspapers and magazines with my neighbors, medical expenses only in cases of real necessity, buying nothing we don't have to buy."

This family's monthly budget is about as follows:

Food, $125, including groceries, $108; milk, $7; and eggs, $10

Rent, $46; plus winter fuel, $6; electricity, $5; gas, $4.40; house supplies, $6.

Clothing, $40; transportation, $9; medical expenses, $9; dental care, $5 hospitalization, $4; benevolences, $2; union dues, $1; furnishings, $5; gifts, $3, recreation, $5; newspapers and magazines, $2.50; life insurance, $5.

Mr. Harbour pointed out that this budget had no mention of educational and vacation expenses, State sales taxes, cleaning of clothes, automobile expenses, and barbershop expenditures for four persons.

Cost of Living

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. MILLER of California. Mr. Speaker, food prices are still up. The flurry in the commodity market that some people claim was the beginning of reduction in the prices of things that we eat and wear has not materialized.

The man who works for a living, the school teacher, disabled veterans living on compensation, GI's attending school, and old-age pensioners know the hard way that prices have not come down.

Under date of February 18, 1948, the Oakland (Calif.) Tribune published a story the heading of which was "Food still up in bay region."

I would like permission to read this news article because it hits the nail right on the head:

Despite last week's break in commodity markets, which many had believed would cause price reductions on foodstuffs at the

retail level, bay-area housewives are finding grocery bills as high as ever.

Housewives blamed retailers for the lack of price cuts, and they, in turn, blamed wholesalers and producers.

Wholesalers explained they are middlemen, bound to get the highest prices possible for their clients. If price reductions were not passed on to the ultimate consumer, it was not their fault, they added.

Producers laid the blame on high labor and production costs.

PHONY PRICE WAR

Recent retail price cuts were termed a phony price war by local merchants. One grocer, selling butter for 85 cents a pound, while chain stores charged 94 to 96 cents, declared:

"Sure, I'll take a loss on a few things to get customers into my store. Prices have dropped on items that people buy maybe once a week, but the bulk of food on the shelves is still far out of line."

Most retail grocers looked for no drop in canned goods, bread, vegetables, and fruits.

LENTEN DECLINE

A decline in demand at meat markets was reported by butchers, who consider it due to Lent. One said, "A lot of people are still paying off Christmas bills and can't afford much meat."

Prices of ham, bacon, fresh pork, and lamb chops were reduced 2 to 5 cents a pound in one major chain yesterday. The opposite trend was shown in eggs, which were boosted 2 cents a dozen.

There you have the history of a phony price war. It is a fine commentary on American life that merchants, in order to drag customers into their stores, drop prices on one or two commodities, take a loss on them, and then to have the people who should be doing something about price control use the reduction brought about by a phony price war to delude the American people into believing that commodity prices are really down.

Oregon Territorial Centennial Year

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following proclamation of the Governor of the State of Oregon:

PROCLAMATION

Whereas the year 1948 is the centennial of the creation of Oregon Territory, which marked the first extension of civil government under the flag of the United States to the Pacific coast; and

Whereas the act of Congress of August 14, 1848, creating Oregon Territory was an event of vital importance to the Pacific Northwest, insuring free American Government to a vast region and bringing to a successful conclusion the efforts of American settlers in Oregon; and

Whereas the creation of Oregon Territory secured for the United States an area of 283,730 square miles, embracing all of the present States of Oregon, Washington, and Idaho and western Wyoming and Montana, which with one exception among lands on this continent added to the jurisdiction of the original United States, was obtained without the necessity of conquest or of purchase; and

Whereas under the beneficent Government of the United States and of the States over 3,000,000 people now reside in the area of the original Oregon Territory, enjoying abundant prosperity, personal liberty, security, and opportunity.

Now, therefore, I, John H. Hall, Governor of the State of Oregon, do proclaim that the year 1948 shall be designated Oregon Territorial Centennial Year, and urge that the creation of Oregon Territory a century ago be appropriately celebrated during the year by citizens and organizations to the end that people of this and other States and countries may know more of the history and geography, the development, and the future possibilities of the old Oregon country; and as Governor of the first State to be carved out of the old territory, I invite the other States with lands once forming part of this territory to join in recognizing the centennial anniversary of the creation of Oregon Territory.

In testimony whereof I have hereunto subscribed my name and caused to be affixed the great seal of the State of Oregon. Done at Salem, the capital, this 16th day of February A. D. 1948.

[SEAL] JOHN H. HALL,
Governor.

Attest:

EARL T. NEWBERRY,
Secretary of State.

The Palestine Problem

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. DAVIS of Georgia. Mr. Speaker, under leave previously granted I insert herewith a resolution adopted on February 16, 1948, by Post No. 112, Jewish War Veterans of the United States, Atlanta, Ga.:

Whereas the Jewish War Veterans of the United States, an organization which for the past 53 years, has stood as a symbol of the pride with which Americans of the Jewish faith have served their country's every military and peacetime effort to advance human rights and the security of political and individual freedom; and

Whereas we observe with profound dismay the admission of the British Government to a free flow of arms and munitions from that country in support of Arab aggression in Palestine; and

Whereas this action of a nation with which we allied ourselves in war and with whom we share membership in the United Nations is appalling; and

Whereas we deem it all the more reprehensive since the Jewish people of Palestine, in sharp contrast to the Arab nations who have avowed their intention to flout by force of arms a decision of the United Nations, were prompt to give their youth and labor when British forces in the Middle East reeled under the onslaught of the Nazi armies in World War II; and

Whereas the record of the Arab countries and the Grand Mufti in that hour of democracy's peril, was one of aid and comfort to those who had sworn to ravage and subjugate our own country and the British Isles as well; and

Whereas we cannot conceive that our country, the outstanding champion of a peaceful and democratic solution to the Palestinian question, will see fit to view with indifference the ready collaboration of a sister nation of the United States in a military offensive against a small defenseless people; and

Whereas the peace of the world rests with the upholding of decisions of the United Nations: Now, therefore, be it

Resolved, That the Jewish War Veterans of the United States, Atlanta, Ga., Post 112, do hereby in meeting assembled, call upon our Government to do everything in its power to implement the decision of the United Nations so that the decision of the United Nations shall be enforced and world peace be insured, since should the Arabs be permitted to flout the decision of the United Nations, it will mean the end of world peace through the destruction of the mandates of the United Nations; and be it further

Resolved, That our Government press for such speedy and appropriate action by the Security Council of the United Nations that would serve to enforce peace in the Holy Land; and be it further

Resolved, That our Government lift its embargo on the shipment of arms and material to the legitimate defense forces of the Jewish Agency in Palestine and permit these defense forces to obtain access to the arms and equipment necessary for the defense of their lives and freedom; and be it further

Resolved, That our Government demand in the Security Council of the United Nations that Great Britain be immediately urged to effectively maintain security in Palestine until the Mandate ends, and that she further conscientiously comply, as an avowed member of the United Nations, with the resolution of November 29, 1947; and be it further

Resolved, That our Government demand in the Security Council of the United Nations that the Council inform the Arab states that it will not tolerate their revolt against the authority of the United Nations and that the Council immediately request all members of the United Nations to place an embargo on arms shipments to the Arab League states; be it further

Resolved, That our Government demand in the Security Council of the United Nations that the Council immediately recognize Haganah as the militia of the Jewish people of Palestine, duly authorized by the United Nations, and that the Council immediately and affirmatively arrange for the equipment of Haganah for defense purposes by member nations of the United Nations. Further, that the Council itself establish with all possible speed an international police force for Palestine, made up of contingents supplied by the smaller powers to maintain internal order but backed by an assurance of big-power support in the event of external aggression; and be it further

Resolved, That a copy of these resolutions be duly forwarded to the President of the United States, to the Secretary of State, to the Senators from Georgia and to the Congressman from the Fifth Congressional District of Georgia.

Greatest Grand Jury

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by

Frank C. Waldrop, from the Washington Times-Herald of February 20, 1948:

GREATEST GRAND JURY

(By Frank C. Waldrop)

The most important and most useful committee in Congress is the House Committee on Un-American Activities. When the history of our times is finally written that committee will undoubtedly be described as the key to survival of the American Republic.

Why? Because in days when it was dangerous and unpopular to describe the conspiracy of the Communists for what it is and always has been, that committee of the House stuck to the job.

Nowadays, the band wagon is so crowded that some of the old-time fellow travelers against the Kremlin are astonished to find themselves in such company. Never, it might be said, have so many tried to ease in among so few.

The House Committee on Un-American Activities began its work on May 26, 1938, as a special committee of temporary authority. Vice President John Nance Garner was the central inspiration for it.

Mr. Garner was a loyal Democrat and strict party man, all right, but more than that he was a loyal American and he didn't like the things going on within the Government of the United States.

So he gave an unobstrusive little nudge under the table to some friends and the House committee came into being with Martin Dies, Representative from Texas, as chairman.

Few people, except the Communists, knew the potentialities of the assignment. Dies, himself, said more than once afterward that he had no idea what a job he had undertaken.

All things considered, he was probably the best man who could have been found at the time, though he had obvious deficiencies.

For one thing, he had only a smattering of real knowledge about the Communists. For another, he was a man of considerable innocence. It took him a long time to believe a lot of things.

But he also had some magnificent virtues. For one, he was all-American from head to foot. He was physically rugged, he had a fast wit and by his own definition he was a demagogue. And he was scared of nobody.

Dies asked for $100,000 with which to begin his investigation. He got $25,000, which was as much as telling him that the New Deal didn't want any part of him. And, of course, it didn't. For the Communists inside the New Deal knew how dangerous the Dies committee could be to their conspiracy if it ever got started.

Well, Dies had a secretary by the name of Robert Stripling, another Texan as ignorant as he was concerning communism, but even tougher and more stubborn and more fearless.

Stripling volunteered to become secretary to the House Committee on Un-American Activities, "for nothin'" on the side above and beyond his regular line of duty.

Stripling set up a filing cabinet in the corner of Dies' outer office in the House Office Building. Then they hired J. B. Matthews, one-time professor of theology and, for awhile, a fellow traveler with the Communists, who had discovered where his fellow traveling was leading him. Matthews taught them what communism was all about, and gave the committee its first lessons in how to spot Reds. And so that is how history began to be made.

The casualties among individual committee members were high in those first years. The New Deal hated the committee and grew also to fear it. Roosevelt made the mistake of trying to scare Dies. Then he made the second mistake of trying to ridicule him.

Dies sassed him back, not only on the floor of the House but on Nation-wide hook-ups. He swapped insult for insult. More than that, he stood alone against all comers and never once lost a debate.

Finally, in 1944, he reached the limit of physical endurance and retired to Texas to rebuild his health and his income.

The second great moment in the career of the committee came when Representative JOHN RANKIN, Democrat, of Mississippi, moved at the moment when Congress was organizing in January 1945 that the House Committee on Un-American Activities be made a permanent branch of the House.

RANKIN justified his career as an American citizen right there.

Dies was gone. Matthews was gone. Stripling was headed for the Army. The Communists and their fellow travelers were panting to get their hooks on the committee's files that had by then grown to enormous size. Once those files were transferred out of Stripling's hands, they felt, the whole war would be won.

But they figured without RANKIN, and he outsmarted them all to save an invaluable storehouse.

The committee began to set up for permanent action, which really began after the end of the war and the reorganization of the House in response to the voters' mandate of 1946.

The present chairman of the committee is that same J. PARNELL THOMAS, Republican, of New Jersey, who started out at the bottom of the list in 1938 as junior member of the committee and now is the sole survivor of the original group.

He is a master of committee management and procedure and drives the Reds wild by outsmarting them on parliamentary law.

Stripling is now at least as well-informed on Communists and Communist activity in the world as any man not a member of the Politburo in Moscow.

The committee has more than 600 filing cases filled with material; not a day goes by but that some executive agency of the Government calls on it for information, and not a Red in America but is mortally afraid of it.

Such great, blood-sweating New Deal characters as Morris Ernst and Adolf Berle are jumping at the chance to get their licks in and what they have just testified to about the clear and present danger of communism and how to combat it, outstrips Dies at his most violent. Times do change.

Just the same, it is time to remember. On May 26, 1948, the House committee will be 10 years old. That day should be set aside in Congress for the eulogy of some patriots who stood guard while others slept or were afraid to stay awake.

Dies, Thomas, Stripling, and old Doc Matthews who taught them the details of Communist dogma, deserve a day of praise.

How about the American Legion, Vets of Foreign Wars, et al., getting busy on this? The country owes these men something.

Oregon Ranks Third in Over-All Educational Performance

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Oregon Voter:

OREGON RANKS THIRD IN OVER-ALL EDUCATIONAL PERFORMANCE

In a new volume, Education—America's Magic, issued by the Iowa College Press, Oregon is given third place among all the 48 States for its over-all educational performance. The author of the study is Raymond M. Hughes, professor of vocational education at Iowa State College. Here is the way he lists the States:

HIGHEST

1. Utah.
2. Kansas.
3. Oregon.
4. Nebraska.
5. Iowa.
6. Washington.
7. California.
8. Idaho.
9. New Hampshire.
10. Colorado.

HIGH

11. North Dakota.
12. Nevada.
13. Oklahoma.
14. South Dakota.
15. Massachusetts.
16. Montana.
17. New York.
18. Wisconsin.
19. Vermont.
20. Indiana.

MEDIUM

21. Minnesota.
22. Wyoming.
23. Ohio.
24. Maine.
25. Texas.
26. Illinois.
27. Michigan.
28. North Carolina.
29. Connecticut.
30. Missouri.

LOW

31. Arizona.
32. Pennsylvania.
33. Tennessee.
34. New Mexico.
35. South Carolina.
36. Louisiana.
37. West Virginia.
38. Mississippi.
39. Kentucky.

LOWEST

40. New Jersey.
41. Alabama.
42. Virginia.
43. Arkansas.
44. Rhode Island.
45. Florida.
46. Delaware.
47. Maryland.
48. Georgia.

Now, the bases of the author's ranking formula are interesting and that we may know on what basis we get this high place among the 10 highest States here are the 6 criteria he used:

1. Its educational accomplishment, as determined by its average achievement of five arbitrarily chosen, yet apparently attainable, educational goals.

2. Its ability to support education as indicated by its income per child.

3. The degree in which its accomplishment is commensurate with its ability, as determined by comparison of its actual accomplishment with that which normally would be expected in view of its known ability.

4. Its educational effort, as indicated by the percentage of its income devoted to the support of education.

5. Its efficiency in the expenditure of school funds, as found by comparing its accomplishment with that which normally would result

from its actual expenditures per child for education.

6. The educational level of the adult population, as determined by the average number of years of school completed by all persons 25 years of age or older.

There were a good many loose statements made about Oregon's educational performance during recent elections in which educational funds were sought in one way or another. Since the rating comes from an educator and not from an office holder or watchdog of the people's treasury his rating might be kept for handy reference by our own legislators. Our educational nest has been fouled too frequently for political purpose, it seems, and morally we doubt that the end justified the means.—Oregon City Enterprise.

Death Walks on Four Feet

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Farm Journal·

DEATH WALKS ON FOUR FEET—FOOT-AND-MOUTH FAILURE

(By Paul Friggens, associate editor, Farm Journal)

We have lost the fight to wipe out foot-and-mouth disease in Mexico.

Eight months after the United States launched its ambitious $35,000,000 campaign, our eradication program is stopped dead, with no immediate prospect of resumption.

American livestock men, therefore, must be prepared to operate with the disease next door, and a constant threat for a long time to come—how long, nobody knows.

"Aftosa," as they call foot-and-mouth in Mexico, may jump our borders at any time. It's a miracle, in fact, that it hasn't already. If it does, the United States stands ready to stamp it out by slaughter, as it did before.

But even a single outbreak will mean serious loss, such as State quarantined against State, and the halting of all shipments of livestock and dangerous animal products. A general outbreak could threaten the whole $8,000,000,000 American livestock industry.

WE ARE BEING OUTFLANKED

Because Mexico forced us to stop slaughter—the only known way to eradicate foot-and-mouth disease—the United States is falling back to a quarantine line 750 miles across central Mexico. But, like the vaunted Maginot Line, it can and is being outflanked.

Meanwhile, the United States has agreed to vaccination, but vaccine never has been known to eradicate the disease in any country.

The Mexicans want the Americans to build two five-wire fences across malarial jungle and desert and mountains. But disease heeds no fence.

The inescapable truth is that we are worse off today than when we started. When we went into Mexico, we had only the disease to deal with—and a fighting chance to lick it. Today we have more disease, plus the animosity of the Mexican people, and the opposition of the politicians.

These are the blunt facts I found, myself, in Mexico—amidst the conflict and confusion of the Aftosa Commission offices. I talked to dozens of persons throughout the infected area, where Uncle Sam is pulling out altogether in order to try to hold the disease where it was February 1—only 300 miles from United States borders.

This is one time that Uncle Sam apparently bit off more than he could chew, at least in the way he went at it. In fairness, it must be said that aftosa has not yet broken out in the United States. Our $35,000,000 has forestalled that, so far. Another factor in our favor is that the natural movement of Mexican trade is not northward, but toward Mexico City.

A MOTLEY ARMY—AND CONFUSION

Eradicating aftosa in Mexico probably is the toughest job that veterinary science ever tackled. We relied on a corps of laboratory research men and professional veterinarians, plus a hastily recruited crew of Americans and Mexicans from all walks of life to do the job.

Few of the Americans understood Mexico or Mexicans, or even spoke the language. The doctors were all right—among the world's best—but it's been suggested that they could have used an Eisenhower in command.

The Aftosa Commission and the United States Department of Agriculture kept telling Americans at home that final success was just around the corner.

The facts were that American personnel feared for their own lives in Mexico, and had no doubt at all that the program was doomed.

Aftosa was first reported in December 1946. The United States soon closed the border, but 6 months were consumed in endless negotiations before we as much as landed a single blow. When we did get going, the disease had spread to 16 Mexican states.

Our method was to throw a ring around the infected area and to squeeze the disease out by slaughter of all infected and exposed animals—cattle, hogs, sheep, and goats. Instead, the disease squeezed out the veterinarians.

The United States, in its worst outbreak of foot-and-mouth, slaughtered only 172,000 animals. The campaign in Mexico called for killing 50,000 cattle a week and a like number of smaller animals—400,000 a month. There are roughly 7,000,000 cattle still in the infected zone today.

But Aftosa's wildfire spread was only the beginning of our problem. We were compelled to fight against overwhelming obstacles of Mexican custom, superstition, language, rumor, and political manipulation.

A PICTURE OF THE BATTLEGROUND

Most of the people live in communal villages, from which they drive their animals to a common pasture and back home at night. They have done this for centuries.

Everywhere I went I saw the Mexican and his burro. Apparently they travel at all times of the day and night, and unwittingly man and burro helped spread aftosa in Mexico. Next to the terrain, the second greatest obstacle to our program in Mexico was the Mexican himself.

Consider the problem, Mexico has 24,000,000 population. But great numbers in the rural areas are Indian. Many do not even speak Spanish. When Dr. Francis Mulhern went into Oaxaca State to locate a southern quarantine line, he found Indians who couldn't understand each other, let alone understand what aftosa was all about.

To be sure, not all of rural Mexico is as wild as Mulhern found it. Mexico also has broad, fertile valleys, and some of the richest land on earth. You may even see an occasional tractor. But everywhere the Americans found distrust, rumor, and political opposition.

Mexico has not forgotten two American invasions within a century, nor does the sight of 10-gallon hats, cowboy boots and Texas license plates advertising the Alamo help to soothe inter-American relations.

In this soil the first seeds of our defeat were sown. On the night that I arrived at San Luis Potosi traveling along the northern quarantine line, the mercury dipped to a new low for Mexico, and it was bitter cold. There had been snow at Christmas, the first snow in 35 years. The story was that Americans, probably monkeying with dry ice, were responsible for Mexico's unseasonable weather. The naturally superstitious average Mexican in the rural areas believed it.

He believed other rumors more vicious: that airplanes from the United States had deliberately spread aftosa, that Uncle Sam wanted to kill Mexico's cattle to destroy its meat industry, that even the soda-ash disinfectant American veterinarians used was a mysterious powder that carried aftosa and all manner of other fatal diseases.

YOU HAVE TO SEE THE "PRESIDENTE"

The United States' program started with one of the most cumbersome pieces of administrative machinery ever devised.

For every American official, for every American doctor, for every American appraiser, paymaster, technician, and general handyman, there was a Mexican counterpart. Then the governor and each little town's presidente, and often the padre, had to be consulted. On top of all this were superimposed the United States Bureau of Animal Industry, the United States Department of Agriculture, the State Department, and the Mexican Government. A doctor at one of the quarantine outposts said: "It got so that whether you wanted a bulldozer or a broom you had to go into negotiation."

And while the United States and Mexico negotiated, aftosa swept across Mexico northward toward the United States, and southward toward Guatemala.

Despite all this, however, the Americans began to make headway and eventually struck hard against the disease. Remembering that we started 6 months late, it was a splendid effort. By fall we had 1,500 pieces of heavy equipment on the ground—boats, bulldozers, mobile machine shops, weapon carriers, jeeps, and cranes. Two thousand men were on the pay roll, and we had started the slaughter of 1,000,000 head of animals.

At the start, the United States agreed to pay for all cattle slaughtered while the Mexicans were to pay for all hogs, sheep, and goats. The first thing American officials knew, the Mexican campesino was refusing to bring in his cattle because he said he had not yet been paid for the smaller animals killed.

The other extreme was the Mexican official who presented claims for "1,000 purebred Poland China hogs" he said were slaughtered, worth 1,000 pesos each about $200. When the Government opened the trenches, they found less than 50 pigs and pretty poor ones at that.

CATTLE HIDDEN IN THE MOUNTAINS

In view of all this, it was not long before the Mexicans were driving their animals far back into the mountains, not only defeating the slaughter program but spreading the disease further.

In October, the United States took over the payment of all animals—an average of $50 for cattle and $5 for small animals. The campesino led in his cattle, including his treasured oxen, the animals were shot the campesino signed with thumb print and was paid off (and joined his companions).

With every shot, the tension heightened. Women and children crawled on their hands and knees to cry over the dead oxen. If 200 owners were involved, many hundreds of campesinos might turn up to see the killing. Some would walk 40 miles to see "Aftosa," and, of course, carry the disease back home.

Under guard of Mexican troops, Americans shot the animals, then slashed the hides to prevent salvage and speed decomposition.

Afterward, the Americans sometimes found their jeep tires slashed.

One thing had been overlooked: No money on earth could repay the small Mexican farmer for his yoke of oxen. He loved his animals. Oxen worked his land, fed his children, provided his clothes. They were, as one Mexican told me, a part of the family.

THE GRINGOS SHOT MY CATTLE

To see them kicking and squirming in a slaughter pit, shot by "Gringos," was more than he could stand. He went home in hate, and this hate, fanned by local propagandists and anti-American elements, boiled up to help lick the United States in Mexico.

"First, you come and kill our cattle. Next, you will come and kill my wife and children," the campesinos told American veterinarians.

Another obstacle was that while aftosa cripples and seriously injures an animal, the mortality is low—3 to 5 percent. "I get sick lots of times and nobody kills me," says the Mexican Indian. "Why kill my cow?"

But for every farmer who cooperated, there were 10 to 100 or maybe 1,000 campesinos with their treasured oxen who did not—and may never—understand the necessity of slaughter and modern quarantine.

THIS WAS THE BEGINNING OF THE END

At Senguio village in Michoacan on September 1, Uncle Sam's foot-and-mouth eradication program definitely went on the rocks.

On September 1 Dr. Augusto Juarez Medina, a Mexican veterinarian, and seven soldiers were pulled from their jeep and hacked to pieces. Eight Mexicans gave their lives that day because an infuriated, propagandized mob had been told that the United States was not paying a just price for cattle. We are lucky that no Americans have been killed in Mexico. Some have been shot at.

The story of Senguio swept through Mexico's back country even faster than the aftosa. Hundreds of miles away in widely separated communities veterinarians suddenly sensed a fresh hostility. On one day, a doctor told me, an entire village had agreed to bring in its infected cattle for slaughter. The next day, after the Senguio killing, the campesinos would have nothing to do with the Americans.

THE GOVERNMENT GIVES UP

In Mexico City the American section moved swiftly to withdraw its forces from the infected area until things quieted down. Simultaneously, the Mexican Government pressed for a complete stop of slaughter on the grounds that Mexico could not stand the economic impact.

We had killed nearly 1,000,000 animals, almost half of which were cattle. On November 26 the United States agreed to the Mexican demand and slaughter stopped.

So we were licked. Barring a miracle of science, foot-and-mouth disease is saddled on Mexico indefinitely.

Where do we go from here?

Let's look at the alternative. First take quarantine.

The United States has fallen back to a quarantine line which runs from Tampico in the jungle region of the Gulf coast westward across central Mexico to San Luis Potosi, Zacatecas, thence through Jalisco and Nayarit states to Puerto Vallarta on the Pacific coast.

Some say we should have tackled the disease from this point in the first place, pushing our drive southward. But the quarantine line runs through impenetrable jungle, across vast stretches of arid, rocky lands, over 10,000-foot mountains, down a canyon which some say is greater than the Grand Canyon of the Colorado, and to the sea.

For hundreds of miles you can travel this line by motor road in the more accessible areas. I traveled from Valles to San Luis Potosi and saw Mexican soldiers on an average of once every 40 miles.

Cattle wandered back and forth across the road that marked the quarantine line. I was told that the Mexican Army had decided to drop a new and shorter south line, which explained the few soldiers I had seen.

QUARANTINE IS A FARCE

At best a Mexican soldier must have little heart for his task. He gets less than a dollar a day on which he must feed himself. I saw soldiers with their families, mind you, living in crude huts by the roadside, in lonely villages, in the jungles. Some complained to me they had had no pay for some time. And this is the military force that backs up our northern quarantine line.

At one point, I asked a Mexican civilian employee of the Aftosa Commission how many cattle passed the quarantine line the previous night. "About 100," he told me blithely. If you have the right permit in Mexico, you can go anywhere.

A few days before I left Mexico the Aleman government dispatched a propaganda truck to the quarantine zone to explain the need for possible slaughter. Mexicans stoned the truck. Others have even refused to have their cattle inspected. In some sections Mexican cattlemen with bigger herds and who fear the spread of aftosa are cooperating splendidly. But there is always the campesino with his oxen and the "Gringo" hater in the hills.

Moreover, north-bound truck traffic is a constant hazard.

FENCES? VACCINES? WHAT?

The fence question goes along with quarantine. The Mexicans want the United States to build two 750-mile five-wire fences from the Gulf to the Pacific. But I came away with the feeling that a lot of fence might be a bad thing. Two fences might serve to weaken our vigilance and destroy that of the Mexicans altogether.

That leaves vaccine which the United States had always refused to consider. Vaccine never has been known to lick foot-and-mouth disease. It has been widely used in South America and Europe, but it has not stamped out the disease. In South America stockmen vaccinate and are resigned to at least a 20-percent annual loss from foot-and-mouth disease.

The United States could never tolerate that loss. Imagine what a sudden outbreak might do to the Iowa cattle feeder or the Colorado cattlemen ready to ship, and on short grass.

But we are going ahead with vaccines because Mexico has forced our hand.

Dr. M. S. Shahan, codirector of the fight in Mexico, is an outstanding authority on vaccine. "The truth is," he says, "that there is no immediate prospect of a better vaccine than those now available."

The amazing thing is that after previous outbreaks of foot-and-mouth disease in the United States—one covering 22 States—we are caught flat-footed without a better solution than slaughter. Now, our Bureau of Animal Industry is working with world authorities on the problem and is laying out both short-term and long-term research programs. It will be up to Congress to decide what to do about them.

This much Congress should know: Mexico is saddled with foot-and-mouth disease indefinitely.

We are not even sure we can control it. Available vaccines don't eradicate. American agriculture and American science, therefore, are challenged as never before to think up something better. The United States cannot afford to harbor foot-and-mouth disease next door forever.

Dr. Shahan and his coworkers of the Department of Agriculture think that an all-out research program is the answer. Research, though, means untold millions of dollars for years to come. And what about aftosa meantime?

OUR BORDER LEFT UNGUARDED

Right now, the 1,200 miles of critical international boundary between Brownsville and El Paso, Tex., are guarded only 14 hours a day. Until recently, it was only 7.

On the other hand, many argue that the best thing to do is to hold the line in Mexico where we are right now—at any cost—until research does come up with a better solution than slaughter—say, a lifetime-immunity vaccine. It would be cheaper in any event than letting the disease get into the United States.

Other plans have been offered. One of the most thoughtful is the proposal of Robert J. Kleberg, Jr., president of the famous King Ranch in southern Texas.

"Aftosa," says Kleberg, "is as close to Americans right now as their dinner plates." He would clear out a clean zone along the northern quarantine line, move the infected stock to the south or salvage by slaughter and replace them, after 60 days, with vaccinated animals from the clean ranching areas of the north. Kleberg would then repeat the process moving to the south as fast as feasible. It might take 10 years to do this. It would be worth it, Kleberg believes.

One argument against his plan is that the replacement alone might involve 20,000,000 animals, and the same conditions that defeated the original program might work against this one. In a single village I found that 220 head of cattle were owned by 168 farmers who use a common watering place. That's the measure of our problem.

One of the world's greatest crops of veterinarians, that never lost a battle up to now, seems licked. Yet they take a philosophic view. I asked one what he thought about it all. He said:

"Just this: Whatever we do, we have to keep doing the job that best serves both the Mexican and American people."

That's our job—but it is later than we think.

National Brotherhood Week

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. BEALL. Mr. Speaker, this is National Brotherhood Week, so proclaimed by the President of the United States, Governors of many of the States and Territories, and the Commissioners of of the District of Columbia. It has been observed ever since it was suggested by a Catholic priest, Msgr. Hugh McMennamin, of Denver, Colo., in 1934. In furtherance of this noble custom, I submit, for insertion in the CONGRESSIONAL RECORD, a poem which, in my judgment, expresses the sentiments of our citizens everywhere. It is entitled "Law and Peace," was written by James Patrick McGovern, a captain in the American Expeditionary Forces during the First World War and a member of the Bethesda-Chevy Chase Post No. 105, Department of Maryland, of the American Legion, and the words have been set to music by Professor Franz C. Bornschein,

of the Conservatory of Music of the Peabody Institute of the city of Baltimore. The verses read as follows:

LAW AND PEACE

(By James Patrick McGovern)

What is the brotherhood of him who knows no brother?
What is the faith of him whose creed respects no other?
What is the kin of him who wrongs dust, all men's mother?
What is the peace of him who sets it for another?
Solon made laws for Greece, Aurelius for Rome;
Moses wrote rules for Hebrews, Christ taught all Christendom;
Hammurabi's code graced a Babylonian dome;
All Europe has justice stored in many an ancient tome.
The law is always dead in parchment, marble, stone,
Unless each generation relives it as its own;
"A scrap of paper" adorned with names, tempts power on its throne
As fuel for world-wide flames by all the four winds blown.
When the spirit transcends the law, men see beyond the letter,
When justice frames the law, revenge has no abettor,
When mercy guides the law, virtue holds vice its debtor,
When hearts enshrine the law, peace stands free from fetter.

Rent Controls

EXTENSION OF REMARKS
OF
HON. CHARLES K. FLETCHER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. FLETCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Los Angeles Times of February 18, 1948:

A POLICY OF RENT CONTROL

The Supreme Court has smothered the attack on Federal rent control through the courts and the Banking Committee of the House of Representatives has recommended a 1-month extension of the rent-control law after its date of expiration, February 29, presumably to give Congress time to fix on a rent-control policy.

This is a political year and it is almost certain that Congress will vote an additional extension of rent control, perhaps for a year, with a good many Representatives and some Senators squarely facing the fact that there are many more tenants than landlords.

There is another inescapable fact, that a sudden release of rent control now would produce an economic earthquake. The inherent evil of Government control was never better illustrated than in the case of rents. Once rent control is accepted, even temporarily, the pains attending its revocation threaten to be so severe that the decision is always put off to another day, and the procrastination tends to become perpetual. Temporary rent control has hung on in France since 1914, in Great Britain since 1915, and in other World War I countries since 1916.

Senator MCCARTHY, of Wisconsin, said the other day that it might be advisable to continue rent control in some areas for 3 years more. He is not the only one who fears a creeping disease less than a sharp cure.

Sudden release of rent controls now, as we said, would be too much of a shock in a country that already is feeling some mild tremors of readjustment. But Congress ought to establish a policy that will end the controls at a determined time, perhaps by a tapering-off process. For as long as there is no assurance that controls will end, there will be a housing shortage. The present law puts no rent ceilings on new construction, but investors in rental housing will be reluctant until they know that control is on its way out without threat of reconsideration of any of its phases.

Senator MCCARTHY, a war veteran himself, has a natural interest in housing for his fellow veterans. Yet he apparently has fallen into the error of believing that rent control helps veterans. The fact is that it has contributed to the veterans' housing shortage.

When servicemen who had had no homes of their own before the war came back to establish homes, they found all of the available housing occupied by nonveterans paying cheap rent. The Cleveland Plain Dealer said last week: "The people who stayed home during the war are the real rent profiteers. The Government said to them: 'You can continue living in the same quarters you have occupied and pay the same rent you formerly paid, in spite of the fact that prices of everything else have gone up and wages have increased'."

There was nothing for the veteran to do but buy or build a house at inflated prices. Desperate veterans who have taken this course find themselves saddled with monthly payments in lieu of rent which are much higher than landlords are allowed on housing subject to control and which are fixed through all kinds of economic weather for periods up to 20 years.

The long experience of free economy established reasonable rent as about one-fourth of income—1 week's pay in a month. Most household budget makers used to be advised to make their calculations on that basis. Rent control has enabled the average wage earner to pay his monthly rent with 3 days' pay instead of 5 days' pay, while the averages of all his living costs, except rent, are 61 percent higher than they were in 1935–39. His wages, incidentally, are more than 100 percent over the 1935–39 average.

This imbalance can't continue forever, or even for very much longer, without serious consequences to the whole economy. Even those citizens who are enjoying the low rents cannot take full satisfaction in the bargain rate; they must feel that the fruits of rent control are all of a piece with our meretricious prosperity, which cannot make anyone wholly happy.

Everybody fears the bust. Uncertainty is the plague of the time. That is one of the reasons that a declared policy on the decontrol of all rents is desirable. Congress can't and won't let the rent law go by default, but it should set an early date and legislate the procedure whereby all controls will be terminated.

Income-Tax Legislation

EXTENSION OF REMARKS
OF
HON. CHARLES B. DEANE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. DEANE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include therein the statement of Mr. James E. Webb, Director of the Bureau of the Budget, presented to Ways and Means Committee on January 19, 1948.

It is my belief, Mr. Speaker, that the Members will find this statement by the Budget Director most informative; likewise, reference should be made to the committee hearings beginning on page 193, which reveal that the cross-examination by committee members indicates that Mr. Webb is not only fully informed on the financial affairs of this country but is rendering a great service to the Nation as Director of the Budget.

STATEMENT OF JAMES E. WEBB, DIRECTOR, BUREAU OF THE BUDGET, WASHINGTON, D. C.

Mr. WEBB. Mr. Chairman and members of the committee, your request that I appear here today stated that you wished me to discuss the 1948 and the 1949 budgets. Since the President's budget message already has been received by the Congress I shall make this statement brief and limit it to a summary of the factors of major significance.

The items listed by your chairman for consideration today are as follows:

"(a) The size of the prospective surpluses;

"(b) The differences between the 1948 budget as it stands today and as presented to the Congress in January 1947;

"(c) The supplementary appropriations, if any, which the President regards as essential during the remainder of the fiscal year 1948;

"(d) The decrease in appropriations, if any, which the President regards as possible during the remainder of the fiscal year 1948;

"(e) The elements in the 1949 budget which represent legislation proposed by the President; and

"(f) The programs for which the 1949 budget provides amounts substantially above or below the current level of the 1948 budget."

In addition to these items, I shall refer generally to another paragraph in the chairman's letter of January 10, which reads as follows:

"In his recent message on the state of the Union, the President outlined a broad legislative program. At many points this program appeared to call for substantial increases in expenditures. The committee would appreciate your estimate of the total additional cost of these programs, and the portion of this cost which would be reflected in the budgets of the next few years."

Budget totals and surpluses: The President's budget recommendations for the fiscal year 1949 call for total expenditures of $39,700,000,000. The functions of the Federal Government which will be financed with these dollars have changed drastically in comparison with prewar years. The budgets for both the fiscal years 1948 and 1949 are dominated by five big functions—national defense, international affairs, veterans' affairs, interest, and tax refunds. These categories account for 79 percent of the 1949 budget. All other programs take up the remaining 21 percent. Interestingly, this represents almost an arithmetical reversal of the prewar ratio. In 1939 those five programs accounted for 29 percent of the budget, while the others accounted for 71 percent.

A total of $34,000,000,000 in the next year's proposed budget will be expended under existing laws. A total expenditure of $5,700,000,000 will be needed to put into effect new legislation recommended by the President. Here again, under this recommended new legislation, expenditures for national defense and international affairs dominate, and account for $5,100,000,000. European recovery and other foreign assistance and universal training are the largest items. Important domestic measures account for the remaining $600,000,000,000, and include such items as education, housing, and social welfare.

Both your committee and the Committee on Appropriations have been interested to know within what limits the Federal Government is firmly committed to expenditures in the next fiscal year. Expenditures for discretionary items in the budget are relatively a small proportion of the total. Excluding national defense functions of about $11,000,000,000 and international programs of $7,000,000,000, the remaining $21,600,000,000 include heavy fixed charges. About $9,300,000,000 of these fixed charges are accounted for by interest on the public debt, tax refunds, and veterans' pensions. Grants to States under long-term programs will amount to $2,300,000,000. Veterans' programs, apart from pensions, will amount to $4,000,000,000. Included within the remaining $6,000,000,000 are numerous other continuing programs which it would be difficult to change on short notice. For example, the natural-resources program, including atomic energy, flood control, and reclamation, amounting to $1,600,000,000, is not susceptible to rapid contraction without serious economic loss.

All of the expenditures estimates for 1949 are based upon the assumption that prices and employment will remain at about their present levels. If prices should rise further the cost of most of the things that the Government buys will rise with them. On the other hand, a general decrease in prices or an increase in unemployment would mean that budget expenditures for price support, public assistance, and veterans' unemployment compensation would rise.

The general policy of the President in transmitting his instructions for the preparation of appropriation estimates for 1949 was to hold the 1949 programs at or below the 1948 level. The first responsibility rested with the agencies. Then there followed several months of review of agency requests, both by the Bureau of the Budget and the President himself, with particular emphasis on review of requests for items in excess of 1948 appropriations which the agencies felt should be presented in this budget. The final results showed that departmental requests had been reduced by approximately $7,000,000,000.

Present estimates of Federal revenues indicate surpluses in both the fiscal years 1948 and 1949. For the current fiscal year 1948 receipts are estimated at $45,200,000,000, as against estimates of expenditures of 37.7, leaving an estimated surplus of $7,500,000,000.

For 1949 receipts are estimated under existing tax laws at $44,500,000,000, and expenditures at $39,700,000,000 leaving a surplus estimated at $4,800,000,000.

These surpluses, if realized, will be the largest in the Nation's history. However, to be properly considered they should be related to the national debt and the national income. Taking these 2 years together, the average surplus of $6,150,000,000 amount to 2½ percent of the present national debt and 3 percent of the present national income. These relationships are important in considering the effectiveness of fiscal policy in preventing further inflation and in paying off the public debt.

The 1948 budget: The committee has requested a comparison between the present estimates for 1948 and those contained in the budget submitted a year ago.

The present total of $37,700,000,000 compares with the previous total of $37,500,000,000. However, there have been substantial changes in estimated expenditures for individual functions. International programs now call for expenditures of $2,000,000,000 more than was estimated last January. Expenditures for other programs, including national defense, veterans, housing, and agriculture are expected to be below the estimate of a year ago. These reductions result from a combination of factors, such as high agricultural prices, shortages in materials, low levels of unemployment, and reductions made by the Congress.

While the total expenditure estimate for 1948 is almost unchanged there has been a marked increase in the estimate of receipts because of the rapid and continued rise in both personal incomes and corporation profits. Corporation profits for the calendar year 1947 were about $7,000,000,000 above 1946, and totaled $28,000,000,000. Personal incomes have risen by $20,000,000,000 to an annual rate of about $200,000,000,000 during the last half of 1947. These sharp increases in income and profits, above all expectations, are the basic explanation of the increased estimates of Federal revenues in the fiscal year 1948. More rapid sales of surplus property than originally anticipated have meant a large and nonrecurring increase in estimated miscellaneous receipts.

Two tables showing changes in the estimates of both expenditures and receipts for 1946 have been prepared for the committee and distributed to each member as an attachment to this statement. See tables I and II.

Supplemental appropriations for the fiscal year 1948: The committee has requested information about the supplemental appropriations for 1948 as recommended in the Budget. These will amount to $8,700,000,000, of which $7,300,000,000 will be for international purposes, including the first 15 months of the European recovery program. The total also includes $800,000,000 for refunds.

The $8,700,000,000 of supplemental appropriations will be used to finance $1,900,000,000 of expenditures in the fiscal year 1948 and $4,500,000,000 in the fiscal year 1949. Almost all of the remaining $2,300,000,000 will be obligated under the European recovery program in these years, but will not be paid out until after the close of the fiscal year 1949.

A special tabulation has been submitted to the committee to show the relationship of supplemental appropriations to expenditures in the fiscal years 1948 and 1949. See table III.

Unused appropriations in the fiscal year 1948: The committee also has requested information on any decreases in appropriations which may be possible during the balance of this fiscal year.

Immediately after the war the President recommended a number of major rescissions of existing appropriations which totaled more than $60,000,000,000. The program of rescinding wartime appropriations by specific legislative enactment was completed during the last session of Congress. It is estimated that at the end of this year the total unobligated balance from 1948 appropriations will amount to $183,000,000, almost all of which have been placed in reserve. Consequently, no expenditures have been included in the current budget from such balances. For detail, see table IV.

There are also small unobligated balances from other than 1948 appropriations which will not be spent. These are set forth in table V.

Changes in expenditures between fiscal years 1948 and 1949: Changes in expenditures between fiscal years 1948 and 1949 are discussed in some detail in the President's budget message. The largest increase will be for programs of international aid which are estimated to increase by a net amount of $1,500,000,000. While expenditures for new international programs are estimated at $4,500,000,000 in fiscal year 1949, they will be largely offset by decreases in existing programs.

Other major increases will be for universal training, Federal aid to education, flood control, and new plants and facilities for the atomic energy program. The largest decrease will occur in expenditures for veterans' unemployment benefits and educational and training allowances.

The major changes in estimates and brief explanations of them are contained in table VI.

Proposed legislation provided for in 1949 budget: The committee has also asked for information on the proposed legislation included in the budget. This is set forth in the table on pages 56 and 57 of the budget message. That table shows the estimated expenditures under the President's proposal for the fiscal year 1949 and the appropriations required, either as supplementals for 1948 or as 1949 appropriations.

Legislation proposed in the State of the Union message: For the convenience of the committee, I shall discuss the President's proposals in the State of the Union message under two headings—those which are taken into account in the budget, and those which point out broad objectives but make no specific recommendations. I shall not attempt to discuss those which require no sizable budget expenditures.

As to those which are taken into account in the budget, the 1949 estimates include the first year costs of the proposed programs on the assumption that they will be enacted during the present session of the Congress.

Some of the programs will increase in subsequent years. Universal training is estimated to cost $400,000,000 in the first year, but as stated in the budget message its eventual annual cost may reach $2,000,000,000.

The European recovery program will probably reach its peak in the fiscal year 1950, with an expenditure of over $5,000,000,000 in that year. After that, expenditures should decline and should cease after 1952—apart from liquidation expenses.

Other aid programs are still under consideration. Estimates, therefore, have been made for only 1 year.

The long-range housing program which is estimated to cost $40,000,000 the first year may increase to a total of about $150,000,000 in 1952.

The national health program as proposed is mainly self-financing but a Federal budget expenditure will be required to provide medical care for those unable to make the regular contributions. When the program gets fully under way this Federal support may amount to as much as $250,000,000 a year.

The President's recommendation for aid to elementary and secondary education are estimated to cost approximately $300,000,000 a year. Although proposals for Federal aid to higher education are under consideration, no definite recommendations have so far been formulated.

The proposals for increased benefits and extended coverage under the present social-security system will be financed for a number of years from the trust accounts.

The remaining specific recommendations in the State of the Union message include provision for the anti-inflation program at about $100,000,000 a year. Expenditures under these programs will cease after the danger of inflation is over.

The new proposals for agricultural support contained in the President's message represent modernization of existing programs. While they will be more effective than the present programs, they should require no greater expenditures.

If we turn now to the broad objectives stated by the President in his State of the Union message, we find that they relate mainly to the public-works field. The best estimates possible at this time indicate that the cost of the new proposals of the President will be largely offset by completion of public works already under way. Total Federal expenditures for civil public works, including grants to the States, will amount to

$2,800,000,000 in the fiscal year 1949. They are expected to increase to about $3,000,000,000 in 1950 and will probably continue at about that level.

Conclusion: I hope I have made it clear that several proposed programs and the present public-works program will expand in the future. A continuation of our present level of military strength will also mean higher expenditures in future years as the inventories carried over from the war are exhausted and as new procurement contracts are carried out.

It is my earnest hope that a large increase in the present national-defense expenditures can be avoided. However, we cannot escape the close relationship between the level of defense expenditures and the success of our efforts to promote world peace and economic recovery.

As the President said in his budget message:

"The plain fact is that our budget must remain high until we have met our international responsibilities and can see the way clear to a peaceful and prosperous world. Prudence demands that we plan our national finances in full recognition of this fact."

Let's Get Together on Rental Housing

EXTENSION OF REMARKS

OF

HON. CHARLES K. FLETCHER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. FLETCHER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following open letter published by the Apartment Association of Los Angeles County, Inc., Los Angeles, Calif.:

DEAR MR. AND MRS. TENANT AND YOU WHO WANT TO RENT—LET'S GET TOGETHER ON RENTAL HOUSING

AN OPEN LETTER TO AMERICANS

The rental housing business is our business. We have put our money and our time and our energies into it. We have given extensive study to the matter of providing living quarters for millions of Americans who wish to rent homes instead of buying or building.

Good tenants are our good customers. We want to serve you better. We want to provide rental housing to the standards you desire. We want to maintain our properties in good condition. We want to repair and redecorate them. We want to give better services of all kinds. We want to build new buildings to replace those which are obsolete or which are rapidly becoming obsolete. But we cannot do that now. We want you to know why. We invite you to do something about it for your own interest and welfare as American citizens.

We believe that the most efficient way—the only way—the American way—is to be allowed to come to mutual agreements with our tenants and prospective tenants on a free-market basis—you free to ask us for just what you want—we free to provide it—at rentals which are entirely satisfactory to both of us and on which we voluntarily agree.

That is the way America's present rental housing was built. That is the way America's living and housing standards became the world's highest. That is the way America can again go forward.

So much confusion has been disseminated on the subject of rent control that many of us forget how America's present rental housing came into being. We forget that the vast bulk of it was built when there were no rent controls. Americans were able to rent homes in any community—in any rent range—with or without any particular services—to better their own living and housing standards—and to move freely from one community to another as often as they desired. That is no longer true. Most of us are frozen where we now live, whether it is convenient or desirable or not.

America's housing is wearing out

Today's rental housing is becoming shabby and run-down. It is wearing out, and it will not last forever. Someday it will no longer be habitable. What then—for America's tenants?

Under restrictive rent control we, the owners of much of America's rental property, cannot maintain our properties as we would like to maintain them. We cannot know what types of buildings to erect or what facilities to include within them, or how many are needed, or how large, or what kind of renovating and remodeling is needed on existing buildings, until we have the right to bargain freely with tenants and build or remodel to the specifications for which they are able and freely willing to pay.

Those who seek to perpetuate rent controls have fanned the fears of tenants to fantastic extremes with dire threats of what would happen with the termination of controls. The fear of wholesale evictions has been played up out of all proportion. There would be no wave of evictions without rent control; there were no waves of evictions before we had rent control. Owners must have tenants in order to remain in business.

There is no form of coercion an owner can use to compel a tenant to pay more rental than he wishes to pay. Unless Americans are freely willing and able to pay higher rentals, owners will not be able to collect them. No new rental rate becomes an actual rental until some tenant voluntarily pays it. The termination of rent control would—of course—mean that some rentals would rise—but only to the point the tenant agrees. Rentals for many families would not be affected—for others they would be reduced. There would simply be an adjustment of rate, space, or services that would reflect comparative values as tenants view them today—not as they were several years ago under completely different conditions.

Controls have not stopped inflation

Rent control has not prevented inflation. Simple proof is that in the years we have had rent control we have had our greatest inflation. Rent control has kept the cost of housing down for some families but only at the expense of others. It has forced millions to buy or build at prices far higher than if rent control had not been in effect—and the cost of such purchased homes must be included in the cost of America's housing and America's living.

Rent control has been most costly to the tenant it has presumed to protect. That cost is the cost of services and comforts he cannot get—of deterioration of the unit in which he lives—the cost in the lack of constant improvements and higher living standards which newer and finer buildings might have provided if they could have been built. The most important effects of rent control have been to encourage inefficient use of existing rental space—to drive hundreds of thousands of rental units out of the rental market—and to prevent greater production of more rental housing. Tenants have been denied those newer and better housing standards.

More and more tenants are realizing that their rent dollars do not buy the same services and comforts that they bought before rent control. More and more tenants realize that it is only out of the property owner's rental income that he can provide those missing services and standards. More and more tenants realize that if they had been allowed to pay a more equitable rent in the last few years while their own incomes were rising, their rented homes would have been more satisfactorily maintained and modernized—thereby reducing pressure for new housing.

Amount of rent not most important thing

The tenant is not concerned primarily with the amount of rent he pays—but with what he gets for his money. One of the unfortunate results of rent control is that the amount of rent he pays has been fixed for him and placed first in importance—to the detriment of his right of occupancy—his serenity of occupancy and his comforts and services.

We believe that the original reason for rent control has now ceased to exist. The war-time emergency is over. There are no mass movements of workers pouring into communities to produce the weapons of war. There are no longer any mushrooming Army or Navy training centers—or ports of embarkation where wives and families of servicemen tend to congregate. The violent upheavals of the rental market which led in part to rent control are no longer present. We believe that it is essential for America to think now in terms of rental housing based on the new, postwar peacetime pattern—that emergency treatments merely prolong the seeming emergency.

You are told that a housing emergency still exists. Admittedly, many of us do not have the kind of housing we would like to have. Admittedly, most of us are dissatisfied with our present run-down and depreciated living quarters. Admittedly, many of us cannot locate the newer or better rental housing units we seek. Admittedly, we are frozen to our present quarters—whether they are satisfactory or convenient or not.

Shortage is in housing for rent

But census figures show that—by our own prewar standards of 1940—we have more housing now—and more per person—than ever before in the history of this or any other nation. There is no actual shortage of housing. There is merely a desperate shortage of housing which is for rent. One reason is that rentals have been held below their natural levels and countless people have occupied more space than they had before the war. That is why—between 1940 and 1946—almost 3,000,000 living units became occupied by only one or two persons instead of by larger families. This trend has continued—according to latest Census Bureau estimates. The housing is still there—but is not being used efficiently—and the would-be renter who is frozen on the outside is the loser.

I know it is hard to realize that our present-day widely accepted shortages are not shortages of housing space, but shortages of units available for rent. Let me call your attention to another comparison in the housing reports of the Bureau of Census:

In every one of the 34 metropolitan districts of the United States that were covered by a special study in 1947, the percentage of dwelling units that were rented declined from 1940 figures. These were not mild declines. Let me emphasize this point:

In Akron, 47½ percent of its dwellings were rented in 1940—in 1947, only 31 percent were rented. In Atlanta, 67 percent were rented in 1940—in 1947 it was 50 percent. In Dallas, it was 61 percent in 1940—40 percent in 1947. In San Antonio, it dropped from 58 percent to 38 percent.

Don't these comparisons show what is happening to the rental business in America under rent control? Don't they show why the renter is in an increasingly desperate plight in every area under rent control in the United States?

Why rentals are hard to find

In Philadelphia there were 432,680 rented homes in 1940, 380,046 in 1947. More than 50,000 fewer rented homes after rent control than before. In Pittsburgh there were 305,520 in 1940, 272,210 in 1947, a loss of more than 30,000. Chicago had 863,020 rented homes in 1940, 818,125 in 1947. All of these cities had increases in population. Is it any wonder that newcomers have a hard time finding rental housing? The housing is still there, but it is not for rent. These figures tell the story of rent control and what it is doing to the tenants of America.

The housing situation is called desperate in the New York area. It is desperate. Let us look at what makes it desperate. Residents are more dependent on rental housing there than in any other area in the nation. In 1940, 76 percent of the homes in that metropolitan district were rented. In 1947, after 5 years of rent control—the percentage had dropped to 67. In the Scranton-Wilkes-Barre area there has been a population decline of 15 percent—but there still is a desperate shortage of rental vacancies. Why? In 1940, 57 percent of its homes were rented. In 1947, 49 percent. Is it not clear that rent control has driven enormous numbers of rental units out of the rental market? What possible reason is there for rent control in an area where there has been a 15-percent loss in population—and where the result has been to create a critical shortage of rental vacancies where there was none before? Is that an "emergency defense rental area" which demands emergency Federal attention?

Those sharp declines do not show that fewer persons want to rent—or that rental units are going begging for lack of tenants. They show simply that as much as one-third of the dwellings which were on the rental market in 1940 were not on the rental market in 1947. Can any factor, other than rent control, be named which could have driven so many homes out of the rental market in so short a time?

Housing desires versus housing requirements

We recognize a tenant's desire for more spacious living quarters. It was out of such desires for better living standards that the American way of living was established and the rental housing industry was made possible. Today housing desires and housing requirements are all out of balance. The picture is so distorted that it is impossible for the investor to measure the amount of housing desired or required—and at what rental levels. It is only on a free market that we can learn how many rental units actually are needed to house our rental population in the way it wishes to be housed.

Every nation in Europe affords us an object lesson in the deterioration and stagnation of the building industry which inevitably follows in the wake of rent control. In spite of the desperate need and the war damage—there is little home construction—because the only ones who are able to provide it have no incentive to do so. We are following the same pattern here.

Before World War II we saw countless examples of those who preferred automobiles or fine clothing—or entertainment—to better housing. We were able to provide housing to the extent people preferred it to other items which were bidding for their money. Today, with rents alone controlled—we cannot measure the relative demand for housing that way because tenants are not allowed to express their desires. Those of us who are in the business of rental housing must either guess and gamble what the future true demand for housing will be—or refrain from providing any rental housing at all. Many of us have been forced to adopt the latter course—to the detriment of the persons who would express their desires for housing if only they were permitted to do so in a fair and competitive and free-market manner.

We seek the right to serve

We ask only the right to serve you to the best of our ability—in the way that you as tenants want us to serve you. We urge you to ask your Congressmen for the right to rent the kind of housing you want at the price you are able and freely willing to pay. You do not have that right now. Let us go back to the American way of bargaining freely among ourselves—arriving at our own agreements—buying or selling or producing what we wish to buy or sell or produce so long as it serves a constructive purpose. Let us throw off the choking restrictions and build our America—in the only way our America can be built.

One of the cruelest inequities of rent control has been the freezing in of the stay-at-home families who moved in while veterans were in service. It has frozen out the returning servicemen. Truly, the returning veteran and his family have been the greatest victims of rent control. We believe the best way in which a veteran can be helped to find a home to rent is to provide a reasonable selection of rental vacancies—in all rent ranges and in all communities. Those vacancies can be provided only by the redistribution of existing housing space not efficiently used—or by new rental construction. Rent control has acted as a barrier to either course. Redistribution of existing space can most quickly and most fairly be accomplished by the immediate termination of rent control. New construction will be tremendously speeded as soon as the rental market is clarified so that the owner of new construction can know on what basis he will have to compete with existing structures.

Let your Congressman know

Congress is considering now what steps to take. Write or wire your own Congressman and Senator. Tell him the stringent rental housing shortage must be eased, at once. Tell him it can be done only by removing the barriers of rent control which now prevent us—the owners of rental property in America—from providing you with the kind of living accommodations and services you desire and demand.

There is no time to lose. Wire or write today. Enclose this page with your letter.

A 7-year story

PERCENTAGE OF DWELLINGS RENTED TO TENANTS

Metropolitan district	1940	1947
Akron	47.5	30.8
Allentown-Beth-Easton	56.1	41.4
Atlanta	67.4	50.4
Baltimore	56.6	47.7
Birmingham	67.1	49.7

JOHN E. OWEN,
President, National Apartment Owners Association, Washington, D. C.

Address by R. W. Frazier, Professor of Government and History, Southeastern State College, Durant, Okla.

EXTENSION OF REMARKS
OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to reprint the address given by Mr. R. W. Frazier, professor of government and history at Southeastern State Teachers' College, Durant, Okla. This address was given over radio station KSEO, Durant, Okla., on January 29, the occasion being the visit to that section of the Freedom Train:

A CHALLENGE TO OUR HERITAGE

DOCUMENTAL EVIDENCE OF OUR HERITAGE BORNE BY THE FREEDOM TRAIN

(By R. W. Frazier, professor of government and history, Southeastern State College, Durant, Okla.)

(As the Freedom Train—the first of its kind in the history of the Nation, was in Denison, Tex., only 21 miles south of Durant, the city of Southeastern State College, the college committee, for its weekly broadcast, selected a speaker in response and in appreciation of the Freedom Train movement, designed to better inform the American people of our sacred heritage to have and to hold.)

Thanks to the wisdom and and patriotic concept that emanated from the heart and mind of our illustrious statesman, Tom Clark, United States Attorney General, from our neighboring State of Texas, he, together with President Harry S. Truman, went into a conference at the White House on May 22, 1947, at which time the conceptions of the movement of the Freedom Train were crystallized into concrete form. Again we wish to thank our Congressman, CARL ALBERT, together with the Oklahoma congressional delegation, the Congress of the United States, and the 200 representatives of American businessmen who so generously responded to this first move, with their means and conveyances, in bringing the national mobile library to the general public, containing the most priceless documents ever scrolled by the pen of man. The documental records of the life of Christ, with all of His miraculous performances, as recorded by the inspired writers, stand out as the greatest of them all.

Where the old world ended following the crucifixion and the new world of faith and hope began with the resurrection, thus, the epochal documentary events, in shaping and guiding the destiny of man in a formal legal aspect, may be summarized in chronological order, as follows: The Magna Carta granted at Runnymede, June 15, 1215, the Petition of Rights in 1628, the English Bill of Rights in 1689, the Declaration of American Independence in 1776, the Articles of Confederation in 1778, the American Constitutional Convention in 1787, ratification of the Constitution in 1789, American Bill of Rights in 1791, the League of Nations in 1919, and the United Nations Charter in 1945.

These documentary milestones, covering a period of more than seven centuries, are reflections of well spent lives of service and statesmanship. They are reflections of unselfish service and devotion to the general welfare of the commonwealth which come within the purview and orbits of governmental regime.

It was wholly befitting that the Freedom Train began its 33,000 mile journey at Philadelphia, the City of Brotherly Love, the hallowed spot where our Constitution was conceived in the hearts and minds of our illustrious forefathers. The Convention assembled there about the middle of May 1787; of 74 colonial delegates summoned, 55 attended and only 39 signed this, the greatest national document of all time, on September 17 of the same year. Since September 17 is the birthday of our Constitution, and Philadelphia is the place of its origin; the time and place of this enlightened adventure to have its beginning on September 17, 1947, was very appropriate.

The most challenging of all our documents, with the exception of the declarations of war, was the Declaration of Independence declaring our freedom and independence from the iron hand of tyranny and oppression of our mother country, England. Had we failed in this daring and bold declaration, all the signers of this document would have been beheaded for this very act. Yes, we had to win and by the divine providence and unlimited courage, we cost England her most potent and valuable colonial possession and raised a new torchlight of civilization incorporated in the American Bill of Rights.

Our first adoption of a fundamental law governing the colonies, was known as the Articles of Confederation. This document was wholly void of an executive department. It had the power to levy a tax, but did not have power to force collection of same. It had power to declare war, but did not have sufficient power to conscript men to fight in the prosecuting of the war. This omission was not an oversight on the part of the framers of the articles, but they feared the repetition of tyrannical rule from royal governors and the British Parliament. After our present Constitution was ratified there was still a little fear that there might have been more power incorporated into the new department than was intended, therefore, the next move was to select some one for President in whom the whole country could place implicit trust, and would not abuse with surplus power the subjects within the realm of the "new law." For he who hath power and fails to temper justice with mercy is sure to fall. The man chosen for the Presidency of the United States was Gen. George Washington, who led his brave men in the Revolution to wrest from the tyrant hands of oppression those fundamental ideals that we hold so dearly in our beloved Government.

Thus, the throttle of the New Ship of State was intrusted to the hands of the man who suffered along with his comrades in the crucial winter at Valley Forge in 1777–78. Yes, the same hands that received the sword of surrender from Cornwallis at Yorktown in 1781. A new pilot on the intrepid seas of time, beneath whose lashing and angry waves have sunk the budding hopes of many rising statesmen. A new freedom ship of experimentation laden with the general welfare of human tolerance and liberties of mankind.

In 1492 the great discoverer of America stood on the deck of his shattered bark, leaning forward his harassed frame with anxious and eager eyes, to catch a vision of the sight of the unknown world. This successful adventure set a vast chain of events in motion known as the period of discovery which lasted for a period of 115 years. From 1607 down to 1732 was the period of colonization which lasted for 125 years, and from 1732 down to 1775, the first battle of the Revolution, only 43 years. This period was one of intolerance and oppression. These were times that tried and tested men's souls. Challenge after challenge issued forth by grim and merciless rulers, until the ideals of human rights and justice were conceived in the potent and flexible minds of our leaders which brought forth the issue in the battles of Lexington and Concord. It was "here to April's breeze unfurled, the embattled farmers stood and fired the shot heard around the world."

Yes, we were fortunate to be wafted upon the waves of divine providence. We were fortunate in having outstanding leaders of the age. What country could match our brain or brawn? What country could boast of a well-balanced leader greater than a George Washington? First in war, first in peace, first in the hearts of his countrymen. What country could match the wits of the aged counselor diplomat, and statesman, Benjamin Franklin? What country could boast of a greater writer and statesman than a Thomas Jefferson, author of the Declaration of Independence and the founder of the University of Virginia. What country could produce a financial genius equal to the brain of Alexander Hamilton? What country could produce a scholar of the fundamental law equal to that of James Madison, who may well be called the Father of our Constitution and the author of the Bill of Rights. Or what country had the equals of the fearless Patrick Henry or the pleadings of James Otis? These, along with many others, served their country with patriotic fervor and devotion, leading to a common cause—liberty and independence. Yes, it was Jefferson's statement that "Liberty is the price of eternal vigilance."

My countrymen, I wish to pause at this time to state that all that we hold dear to our hearts today within the sheltering folds of this liberal Government, the complacency of a high and refined society, the pursuits of life, liberty, and happiness, was bought and paid for by a most laudable and worthy group of courageous patriots who chose to sacrifice their lives in lieu of human bondage. Again we defended these principles in the War of 1812, again in 1848 and 1898.

We sent the flower of our young manhood across the seas in World War I to fight the war to end all wars and to save the world for all humanity. Again within a quarter of a century, we sent a greater array of our young manhood and young womanhood across the seas to fight in a greater war to bridle and subdue the dictators who sought to conquer, to exploit, to enslave, and to destroy the priceless heritage of all documentary torchlights of civilization which had been mothering humanity along the turbulent pathways of time.

I wish to ask you these questions: What is wrong? Why hasn't peace yet been confirmed? Why is the world, 2 years after the cessation of hostilities, still uneasy? When and where will be the peaceful complacency of us all? God himself only knows. What is the solution? How shall we best go about solving a correct solution? There is a challenge for us all.

First, there is a challenge to learn more about our own Government, its functions, its honor, to serve where we are best equipped to render service, its honor to obey and support with patriotic devotion. With this enlightened information, become active for the betterment of our country within our own boundaries.

The second challenge is a challenge to our noble heritage by the organized forces of communism—a way of life owing allegiance to those who seek to destroy our way of life, American democratic ideals. The Trojan horses are now within our walls. What does the propagandist for communism have to offer? Oh, my friends, nothing but utopian dreams which would ultimately end in servitude and slavery. The uninformed, the negligent, the carefree, and those with a self-complex, I warn you: "Beware; lest we forget, lest we forget."

To delay a crusade of American opposition to the Red wave of destruction which threatens to inundate us will spell disaster to all hard-earned victories of the glorious past. We must not permit these noble human achievements which have glorified and enriched the traditions of America, the world's greatest asylum for those who are impoverished and oppressed, to be cast aside by the dastard hands of traitors.

Not a single battle of the last two world wars was fought in your community; yet your sons, your fathers, your husbands, your brothers, your sisters and sweethearts fought and died in that holocaust of hell and hate that was set aflame by the pernicious philosophy of these Red devils who are now grafting upon the stem of our traditional freedom.

Do you think that the number of Communists in this country is too small to constitute a grave danger to American institutions? It does not require great numbers to light the flame of revolution. The 200,000,000 people of Russia have been reduced to social and economic status of medieval serfs by 5,000,000 members of the Third International. On October 7, 1917, when Lenin sparked the Proletariat Revolution there were only 30,000 Communists in that vast nation as against 180,000,000 of other people. With this handful of peasants, augmented by the inmates of criminal institutions and other elements of desperate and dangerous participants, they enacted a blood purge which culminated in the most brutal butchery of the world's many massacres. Millions of people perished from the dagger, sword, gun, and other deadly instruments in the hands of the disciples of Karl Marx.

Do you know how the 5,000,000 members of the Third International stifle the courage and break the spirit of 195,000,000 people in Russia? Here is the answer: The concentration camps of the barren and bitter Arctic regions; the firing squad; the mines of Siberia; the Soviet collectivist farms on which the intimidated peasants are driven to their slave labor by the lifted lash of criminal bosses. These make up the difference between a vast demoralized population and a small faction of well-equipped and vicious assassins.

Mr. Uninformed and Dissatisfied American, clothed with all the protection of the American Bill of Rights, do you subscribe to this communistic way of life?

My friends, there are more active Communists in many of the States of this Union than were in Bulgaria, Yugoslavia, Rumania, or even Russia, before the Communists seized the power under which they have reduced the weak democratic states of the Balkans to a condition of impotent vassalage.

At this time in the United States there is one Communist to every thousand of our voters; a number which represents a ratio of Communists which existed in Russia when the Soviet regime was ushered in.

The objectives of the American agents of the Third International are identical with the objectives of the Communist assassins who filled the sewers of Moscow and other cities of Russia with the blood of defenseless victims on October 7, 1917.

This Red American movement is more than an economic or political program. It is a conspiracy. This statement is verified by the recent interception of "secret papers" and "agreements" between Hitler and Stalin which had been stored in the German archives, later brought to light by the occupation or patrol troops now in the occupied territory of a conquered Germany.

My countrymen, this program is a conspiracy against all free people, against freedom of thought, of worship, of the press, of the right of assembly, of the right of petition of redress of public grievances—a conspiracy against every privilege that promotes the happiness of the individual—a conspiracy to enslave the body, blight the soul, stifle ambition, destroy the virtues and equal justice of mankind. The vital and supreme issue that challenges every American is: Shall the

American way of life be preserved among the liberty-loving people of the earth, or shall we permit freedom to be wiped from the face of the earth?

Strange to say, but they held responsible, good-paying positions of trust within our own Government until President Harry S. Truman gave orders to purge the pay rolls and to stop feeding the hands that are fighting you and your heritage. They bed down in labor unions. They are shrewd parliamentarians thoroughly versed in economics and the inner workings of our Government. They soothe their victims with the soft voice of Jacob, and stab them with the hairy hand of Esau. Shall we blight the genius of our people in the poisonous fumes of atheism and anarchy? Are we ready to exchange our rich inheritance for the Utopian theory of Marxist pottage brewed in the cauldron of tyrants who connive to reduce us to a condition of menial servitude more hideous than the bondage that shattered the bodies and souls of the slaves chained to the galleys of their brutal Roman masters?

Communism and democratic capitalism cannot survive side by side. They can find no common soil in which to cultivate the seeds of their opposite purposes and ideologies. One of these systems must go. If we dedicate our lives and fortunes to the maintenance of the cardinal principles of liberty, equality, and justice, the stench of Marxism that is now befouling the free air of America will be smothered for all time to come.

A contrast between the two systems of the way of life is as follows:

What we must preserve

We sponsor government by consent.

We want liberty as we know and love it.

We demand equality of our people before the law.

We advocate government based on law and authority.

We are committed to the love of truth.

We worship an omnipotent and Divine God.

We advocate right.

We are dedicated to the principles of humanity.

What they would demand of us

They seek dictatorship.

They would replace such liberty with servile adherence to a Marxist state.

They would extend license and arbitrary privilege to an autocratic clique.

They would replace such government with a one-man brutal authority.

They resort to lying propaganda.

They would force all mankind to worship a centralized state, a ruler, a race, or party leader.

They would rule with the iron rod of might.

They resort to cruel and ruthless conquest.

Within the last three decades our dauntless manhood has suffered and died on the foreign battlefields of two World Wars in order to destroy the roots of insatiable ambitions of fiendish tyrants who sought to enslave humanity. Shall we permit the supreme sacrifices made by these immortal heroes to be all in vain? Shall we frown upon or shrink from these adventurous derelicts while they weave crowns of thorns for our brow, more cruel than those woven for us by the heartless assassins who directed the missiles of death that left thousands of our hero dead in unknown graves of distant climes? God forbid that we should let them spin the wheel of fortune which determines the future destiny of this glorious Republic.

The word "America" has become a world-wide synonym for truth, honor, charity, and justice. Wherever disaster has struck American benefactors have been the first to answer the call of distress. America has never blemished her escutcheon with cowardice. Her sons have fallen on every battlefield where the inherent rights of free people have been challenged since the birth of this Nation. What a travesty of a glorious past and a hopeful future to exchange a government possessing such honors for a system that would imperil her masses upon the vanishing sands of time.

The tide of freedom rises and falls in the constant cycles of human history. Greece, with her coterie of wise men, grew and blossomed into fruition of scholastic attainment which reached its highest stage of development and civilization under the wise guidance of Pericles. Her literature and art stands as a bulwark in the cultured realms of human achievements among the nations of the world, but she fell before the marching hordes of the Roman soldiers, and her torchlight of civilization went down in the dying embers of desolation and ruin.

The mighty Roman Empire spread its imperialistic wings over three continents and subdued the lesser powers of resistance and gave to the world her philosophy of legal justice and the scientific construction of roads and aqueducts, which reached its pinnacle of achievements under the great Augustus Caesar. But alas, she too fell, the somnambulist of a shattered dream. We propose to maintain our standard of freedom, and make it one which men cannot plunder or destroy, for such freedom once fixed in the hearts of our people, will become an everlasting source of universal kinship.

Our beloved country was not conceived by cowards and weaklings, but by men of destiny; strong, and fearless men; men who refused to live in bondage.

By an act of Congress of these United States of America, in the year 1918, this pledge has become a criterion of all citizens, laden with a moral obligation never to falter: "I believe in the United States of America as a government of the people, by the people, for the people; a democracy in a republic; a sovereign nation of many sovereign States; a perfect union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity, for which American patriots have sacrificed their lives and fortunes. I, therefore, believe it is my duty to love it, to support its Constitution, to obey its laws, to respect its flag, and to defend it against all enemies." This pledge should be framed and hung on the walls of every schoolroom, carved in the archway over the doors of every temple of justice, read in every pulpit, taught to children in the classrooms throughout the land.

Our homes within this fair land are the sacred precincts across whose threshold kings, tyrants, and the demons of destruction should fear to tread.

For the throbbing pulse of this relentless world has never been pillowed in peaceful sleep. Across its snow-capped mountains and its rolling oceans, its waving forests, and trackless deserts, this white winged messenger of universal peace has never flown. Amid periods of turmoil and strife, the old world has pressed her way down through the ages.

One revolution after another has stirred her mighty heart; amidst the roar of battle has her history been written; by the lurid light of the campfire it has been read. Wrapped in the sable shrouds of desolation and death, the grim god of war has marched down through the centuries to the muffled drum beat of fallen nations and empires overthrown.

Looking backward into the past, I see a stormy day in December in the year 1606. A tiny fleet of three small vessels is forging its way against the lashing sea and biting wind, into the mouth of the historic James River. Few ships as small as these now cross the ocean, but they represented the fleet of North America, the white would-be inhabitants of this great continent. The passengers on these ships are lean, haggard, hungry, and seaworn, and on the little pinnace *Discovery* there stands Capt. John Smith with a purpose in his heart, determination plainly written on his face, and high hope swelling in his bosom; a hope to lead his suffering people from the land of tyranny and oppression into a country of moral and religious freedom where the sunlight of heaven shines over all with the same compassion of love, equality, and justice.

No vigor of youth, no maturity of manhood should ever lead a nation to forget the spot where its infancy was cradled and defended.

"Breathes there a man with soul so dead,
Who never to himself hath said,
'This is my own, my native land.
'Land where our fathers died,
'Land of the Pilgrims' pride,
'From every mountain side
'Let freedom ring.'"

Margarine and the Consumer

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. DAVIS of Wisconsin. Mr. Speaker, I wish at this time to present excerpts of an article in regard to margarine and butter. This article appeared on page 11 of the November-December issue of the Labor Relations Bulletin of Milwaukee, Wis. It was written by Mr. Milo K. Swanton, executive secretary, Wisconsin Council of Agricultural Cooperative, and is as follows:

MARGARINE AND THE CONSUMER

(By Milo K. Swanton, executive secretary, Wisconsin Council of Agriculture Cooperative, for Labor-Public Relations Service Magazine)

The oleomargarine issue, as well as the product itself, has evolved through many stages during more than one-half a century of time. In this process of change has come change in consumer interest. With this have come conflicting viewpoints. Ethical, agricultural, and nutritional problems are at stake.

The issue today is largely whether two fats of vastly different origin and of somewhat different dietary standards are competing fairly or unfairly for consumer demands. Consumers and producers both have deep interest in the oleomargarine question.

Are producers of dairy products justified in their position that oleomargarine made and sold in the imitation of butter amounts to a trick on consumers and constitutes an unfair trade practice against dairymen? Are manufacturers and distributors of oleomargarine justified in trying to convince consumers that excise taxes on their products constitute an unfair trade barrier? Does the controversy involve misunderstanding between branches of agriculture and clash between sections of the country?

FARMER NETS LITTLE FROM SALE OF VEGETABLE OILS

To repeal or reduce excise taxes and licenses, to liberalize or tighten the extent to which oleomargarine may imitate butter—these questions do not involve conflict between branches of American agriculture. It is not an issue between cotton and soybean farmers on one side and dairy farmers on the other. According to prewar figures,

about one-half of 1 percent of the cotton growers' income was derived from the sale of oil used in oleomargarine. The use of soybean oil in oleomargarine accounted for only 5.3 percent of the grain soybean growers' income in 1940.

It is not a conflict between the North and the South. Oleomargarine is made largely in the North. Domestic fats and oils used in oleomargarine came as much from the North as from the South. The oil industry is growing in the North. The dairy industry is growing in the South.

If there is a clash of financial interest it is between the millions of dairy farmers who derive two-thirds or more of their income from the production of butterfat marketed in butter, and the handful of corporations and individuals who process vegetable oils into oleomargarine made in the imitation of butter. In the sale of butter the dairyman gets about 62.8 of the consumer's dollar. In the three principal butter-producing States, Minnesota, Iowa, and Wisconsin, where 41 percent of the Nation's butter originates, 80 percent of the butter is made in cooperative creameries controlled entirely by dairy farmers living on and working family-sized farms. On the other hand, a few corporations control the bulk of oleomargarine made in America.

FARMER GETS MAJOR SHARE OF BUTTER INCOME

I think it is well for consumers to know something about comparable margins in the manufacturing of these two products. The price paid to the farmer for butterfat invariably exceeds the price per pound at which the butter is sold. As consumers you have the right to ask how this is possible.

The cost of manufacturing and distributing butter is taken out of overrun. What is "overrun"? Butter contains about 82 percent fat, about 15 percent water, 2 percent salt, and 1 percent curd. This 18 percent of a pound of butter made up of water, salt, and curd is known as overrun. It costs very little, while butterfat is the critical and difficult ingredient to produce. Because of the overrun which pays the cost of manufacturing and distributing, butter is generally solds for less than the price paid the dairy farmer for the butterfat.

On the contrary in the oleomargarine industry the farmer receives far less for the oil than the consumer pays for the finished product. Yet overrun is also an important factor in the making of oleomargarine. Oleomargarine is about 83 percent vegetable fat, 14 percent water, 3 percent salt and curd, and a preservative. Apparently this 17 percent overrun is absorbed in oleomargarine manufacturing profits.

VEGETABLE OILS IN OLEO VARY WITH AVAILABILITY

Vegetable oils, much cheaper in cost than butterfat, constitute the body of oleomargarine. The oleomargarine industry has great flexibility in that it can quickly change its source of fat supply, using whatever form of oil may be cheapest or most readily available. Oleomargarine uses cheap mechanical oil extraction processes. The butter industry depends upon the living biological processes of the cow that convert grains and grasses into milk proteins and butterfat.

Yet, in spite of these cost advantages, the price of oleomargarine fluctuates in relationship to the price of butter instead of being governed entirely by its own cost of production. In view of this oleomargarine price picture, have consumers any assurance that the oleomargarine interests will reduce consumer price to the extent that Federal or State excise taxes might be eliminated or reduced?

Consumers ask the question, "why a tax on oleomargarine?" Obviously the Federal tax of ¼ cent per pound on uncolored oleomargarine is not a burden nor does it restrict the use of this product. The 10 cents per pound Federal tax is applicable only when oleomargarine is colored butter-yellow. From the standpoint of food availability and digestibility, oleomargarine, not colored in imitation of butter, is just as nutritious and just as digestible as it is when colored butter-yellow. Hence, Federal taxes do not necessarily curtail the manufacture and distribution of oleomargarine.

DAIRYMEN RESENT ATTEMPTS TO IMITATE BUTTER

I think consumers should understand why dairymen feel that it's an unfair infringement for oleomargarine to be made in imitation of yellow butter. The farmer feels that butter has come down through the ages a basic food in the diet of civilized man. For thousands of years the natural yellow color of butter and its typical flavor have been universally recognized and accepted among all caucasian people.

The producer and the consumer know that butter is both a food and a flavor. To them color and flavor are the evidence of its identity. They believe that the consumer is entitled to buy either oleomargarine or butter with the feeling of assurance that there will be no confusion, no uncertainty, no parading in false colors.

LABELING PACKAGE DOES NOT IDENTIFY OLEO ON THE TABLE

Labeling the package is not the answer. Oleomargarine colored butter-yellow loses its identity when taken from the labeled package to be served on the table, in the hotel, in the restaurant, or dining car. It is for this reason that many States, including Wisconsin, prohibit the sale of oleomargarine colored butter-yellow.

There have long been recognized ethical standards restricting imitations. For example Brookshire cheese is too close to Swift & Co.'s Brookfield trade-mark to be permitted. Will Rogers found out that Illiterary Digest was too similar to Literary Digest. An automobile manufacturer was prevented from using a certain shape of radiator because it too closely resembled the Packard radiator design.

Why of all the colors in the spectrum do the oleomargarine people select the yellow color of butter? Why have the manufacturers of oleomargarine made every effort to duplicate the body and texture and melting point of butter? They have added 9,000 units of vitamin A per pound in an effort to approximate the vitamin A content of butter. The flavor of butter may also be added legally to oleomargarine so as to make identification almost impossible. A noteworthy deviation in legalizing these standards of imitation is the fact that the use of a preservative is permitted in oleomargarine but not in butter.

WHY NOT USE ANOTHER COLOR FOR OLEO?

With all this imitation permitted, there remains the feeling that consumers should be protected by a color identification so it would not be necessary to call on technical laboratory tests to determine whether it is butter or oleomargarine. If the product will sell in its own image, identified separately for what it is, there will be no basis for controversy. The dairy industry will guarantee never to imitate the color or characteristics of oleomargarine. Dairymen feel that asking the oleomargarine industry not to imitate the color of butter is only fair.

Peanut butter sells under its own characteristic brown color and its own typical flavor. Even though peanut butter uses the term "butter," still there is no controversy because there is no consumer deception.

And the question is asked "should it make any difference to the consumers which fat he is getting if in taste or color he can't detect the difference anyway?" Yes, for the same reason that consumers have a right to know whether or not the meat they are eating comes from a horse or a cow. Regardless of the fact that horse meat and beef are both nutritious and digestible, and when smothered with seasoning may taste the same, the consumer has a moral and legal right to know the difference.

IMITATION AND DECEPTION SHOULD BE PREVENTED

Most consumers will agree that deception is a fact to be discouraged in the world of food. Even if there existed nutritive equivalency, the element of imitation and deception should be discouraged and prevented. We are in for trouble if the time comes when we accept the principle that approximate nutritive equivalency of an imitation food shall be the criterion of legitimacy.

For example, there is the possibility of opening the door for filled milk which means the substitution of vegetable oils for butterfat mixed with condensed skim milk. This product is a positive threat to the health and life of babies raised on a formula, because, unlike butterfat, vegetable oil lacks the growth factor. There is also the threat of filled cheese and filled ice cream.

In this connection let me point out that in Germany, according to an article by Mr. A. Imhausen, published in Kolloid Zeitschrift in May 1943, a method had been developed for the manufacture of fatty acids and edible fats from petroleum products using a byproduct of synthetic gasoline plants. As early as 1937 the production of synthetic butter was reported. Later than this, experiments in the production of synthetic fatty acids from coal were reported.

If we legalize consumer deception between butterfat and mechanically processed vegetable oils, then the next move may be the substitution of vegetable oils by synthetic fats made from coal and petroleum. In this connection here is what Mr. Imhausen of Germany says of these synthetic fats (translation):

"The Public Health Bureau of the Reich has, by thousands of experiments under the leadership of Dr. Flossner, demonstrated the high value of synthetic fats and has released it as the first synthetic food material of the world for human nourishment."

IS THERE MUCH NUTRITIVE EQUIVALENCY?

Consumers should know that as between oleomargarine and butter, there is a question of nutritive equivalency. I quote from the American Medical Association Journal:

"Since the nutritional factors have not all been identified, and since butter contains numerous additional fatty acids of unknown nutritional value, the consuming public has a right to demand that the practice of identifying oleomargarine and butter, so that anyone can differentiate between them, should be continued."

The use of a preservative in oleomargarine which is not used in butter should be remembered when considering nutritional equivalency.

BUTTERFAT MAKES BUTTER QUALITIES UNIVERSALLY DEPENDABLE

Butterfat is more consistent in origin than the imitation product. This adds to the question of nutritional equivalency. Butter is created in the living mammary glands of the cow from grains and grasses she has consumed. However, in a short span of years the fat sources of oleomargarine have shifted many times. In 1925 oleomargarine made in this country consisted of:

	Percent
1. Animal fats	40.2
2. American vegetable oils (principally cottonseed oil)	14.4
3. Imported vegetable fats (principally coconut oil)	45.4

By 1933, the use of animal fats and American vegetable fats declined, while the use of imported vegetable fats had increased as follows:

	Percent
1. Animal fats	14.0
2. American vegetable fats	10.5
3. Imported vegetable fats (Almost exclusively coconut oil)	75.5

In 1940, the percentages were as follows:

	Percent
1. Animal fats	9.4
2. American vegetable fats	79.7
3. Imported vegetable fats	10.9

Butterfat alone as compared with oleomargarine has superior dietary qualities. Consumer protection when oleomargarine is used lies in the hope that an adequate general mixed diet will be guaranteed and in the hope that oleomargarine will be adequately fortified with vitamin A.

BUTTER CONTAINS VERY ESSENTIAL VITAMIN E

The high nutritional value of butter is shown by recent experiment. Butterfat is found to be a very reliable source of vitamin E. Clinical reports now indicate that vitamin E is important in human reproduction; also, the most recent research work suggests interrelation of vitamin E and inositol in the prevention of muscular dyostrophy in human beings, and a high degree of success has been reported for clinical use of vitamin E in the treatment of lumbago. According to the National Dairy Council, results of recent experimentation indicate that this interrelationship plays a possible role in the prevention of certain kidney ailments and heart disorders.

According to Dr. E. B. Hart, of the University of Wisconsin department of biochemistry:

"The fat of milk is of most complex composition."

He points to a difference in the chemical constitution of butterfat and vegetable oils. Dr. Hart further states:

"It is probably the difference in the constitution of the fatty acids of the saponifiable fraction, although it may be due to some unrecognized essential nutrient carried by butterfat but not carried by the vegetable oils. The mammary gland has synthesized something special for which there is at present no known substitute."

Since nutritional equivalency between oleomargarine and butter is not an established fact, it is vital that each product be readily and clearly identified for the consumer. Therefore, maintaining characteristic color difference is sound policy.

EXCISE TAXES PREVENT FRAUD AND DECEPTION

An important reason for Federal and State excise taxes is to police against fraud and deception. Racketeers have pawned butter-yellow oleomargarine onto the public as being butter. Reputable manufacturers are not doing this. It is to their interest as well as to the interest of consumers to suppress fraud in the sale of oleomargarine.

For example, in 1931 a man with much sales ability got in with a reputable oleomargarine manufacturer as a New York-New England distributor. His objective was to pawn a cheaper product onto the 20,000,000 people living in that eastern metropolitan area. He picked the responsible-sounding name of Haddad Trading Co. He lined up two Boston citizens, Vincent Bruzzese, who was an operator of a small cheese plant, and a trucker by the name of DeMauro, whose name was well-known in Boston police files. Haddad would provide the oleomargarine. These men would color and sell it as butter. Margins were wide and profits were great. Haddad would report sales at 20 or more Boston bakeries. Instead the product would go to Bruzzese and DeMauro. As the illicit profits accumulated he would pay the Illinois manufacturer and credit the "accounts" of the bakers who were not getting a pound of the product. He had some legitimate customers, but it was the fraudulent product that paid off. He did fool the manufacturer and the consumer for a while, but he was soon tripped up by the internal-revenue people. This is but one of many similar cases prosecuted during the past 45 years out of funds provided by the Federal 10-cent tax on yellow oleomargarine.

WOULD DAMAGE SOIL

Complete loss of identity between oleomargarine and butter would tend to reduce the demand for and the production of butter. Normally in the United States 45 to 59 percent of our milk which is processed is made into butter. If butter production is drastically reduced, it would mean a decrease in total milk production. This would mean a decrease in the production of milk solids as well as milk fats. The over-all loss to general health would outrank the alleged benefits claimed by the handful of oleomargarine manufacturers.

Any discouragement to the dairy industry would tend to cause a shift from a livestock to a field crop type of agriculture. With this shift will come loss in soil fertility, more soil mining, and more soil erosion. All of this is of vital concern to consumers as well as to producers.

Hence it is seen that the oleomargarine question involves not only ethics in business—not only the question of trade barriers or unfair trade practices—but also it involves food policies basic to consumer health and welfare and changes fundamental to the permanency of American agriculture.

Statement of Irish Race Convention Before Senate Foreign Relations Committee Urging Freedom of North Ireland in Considering Marshall Plan Submitted by Joseph Scott

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of the Irish race convention before the Senate Foreign Relations Committee as follows:

(The statement prepared on behalf of the Irish race convention is as follows:)

In behalf of those for whom I have the honor to speak, I desire to thank your committee, Mr. Chairman, for this opportunity to be heard.

And, for the record, permit me to make it plain who it is for whom I speak.

It is for very proud American citizens, Mr. Chairman, hundreds of thousands of whom have signed their names and set their addresses to a monster petition now on its way to the President and to the Congress at Washington—but more of that in a moment.

I also speak at the direction of a very remarkable Irish race convention which was held in the city of New York on the 22d and 23d days of November 1947. I carry to you the unanimously expressed wishes and views of that great convention.

The sons and daughters of our American Irish were represented at that convention, Mr. Chairman, by their delegates from 38 States of the United States of America. All of the great Irish-American organizations sent their unqualified endorsements, and were, for the most part, represented in person by their national officers. I mean such organizations as the Ancient Order of Hibernians, the Clan-na-Gael, the united Irish county organizations, the Gaelic League, the American-Irish Historical Society, the Sean Oglaigh nah Eireann, the League for Irish Freedom of San Francisco, the Anti-Partition League of Philadelphia, the Irish Fellowship Club of Chicago, the Irish Cultural Society, and countless others.

I suppose, therefore, that without exaggeration I might say that I speak for millions of our citizens of Irish blood, and I want to tell you why it is that all of them are speaking with a single united voice—a voice which cannot be denied—it is, Mr. Chairman, because they have a very deep sense of grievance.

Let me, as quickly as I can, paint the situation for you in simple and direct words. I quote:

"That countless thousands of American citizens of Irish birth or blood are smarting under the indignity of the forcible partition of Ireland by England."

Those words, Mr. Chairman, are taken verbatim from the monster petition to which I have before referred.

And to prevent your minds, worthy Senators, from formulating the question: "What has that to do with this committee, and with these hearings?" permit me to quote a further line from the preamble of the petition:

"That England, by subsidy and otherwise, has maintained this partition against the voice of the overwhelming majority of the people of Ireland."

You quickly catch and note that word, subsidy, gentlemen. You quickly catch and note, too, those words "* * * against the * * * overwhelming majority * * *."

Meanwhile, the President of the United States of America has transmitted to the Congress of the United States his message on the European recovery program. The official outline of European recovery program shows that Ireland was one of the 16 countries invited to the Paris Conference.

The President has predicated his message upon the spirit of democracy as he sees it. In a later press release he refers to the plan for western Europe as both economic and spiritual. The President has also sent to the Congress proposed legislation which this committee is now considering for report to the Senate. That legislation calls for American money, vast amounts of it. And out of those very moneys England proposes to continue to support her invasion of Ireland, contrary to the democratically expressed wishes of the people of Ireland.

So, beyond peradventure of doubt, Mr. Chairman, this is the time and this is the place for our citizens of Irish birth or blood to be heard carefully and with grave consideration before further irreparable damage may be done.

Mistake it not, when these sons and daughters of Ireland say in their petition from which I have quoted that they are "* * * smarting under * * * indignity," they have indeed a grievance. Let us examine that grievance, and see what it is.

I asked a grandfather the other day, a simple man, a maker of things all his life, how we could best express it. He said:

"My sons were in the service. They were unable to answer the questions of their buddies, 'Where did your folks come from?' My sons couldn't say 'From Ireland,' because there is no Ireland. She is split into 6 counties and 26 counties.

"You heard of the man without a country. Well, England has made my sons men without a land of heritage.

"But worse than that, my sons, thank God, have come back safe. Now they are raising me a crop of grandchildren. How, in heaven's name, are those grandchildren going to explain where their ancestral stock came from? You'd have to feed them political history with their milk."

There you have it.

Take it another way. Sit you down at a business conference or sit you down at a luncheon. Gather at your place of worship or assemble at your club or at your lodge. Americans all. That typifies the strength of our America. As you look around at your fellow American citizens you tabulate them. Sure, that fellow over there is a Swiss; and that husky giant is a Norwegian; there's a Dane in the corner seat; and that chap over there is English. Each has his country of ancestral heritage. But we come to the stock that John Boyle O'Reilly wrote of, and what can we say of them? Think of the shame of it. If one of them so much as peeps up "My father was Irish," or "My mother's folks came from Ireland," immediately the questions start: "Which Ireland?" "Where?" "You mean from the English part of it or from the other part?"

Senators, they had a short name for the Pacific Ocean in this last war. They called it the Irish sea.

Can we seriously imagine that the Kellys and Burkes and Sheas, or the Sullivans, who went down there to their last long sleep, or that the Murphys, the O'Briens, and the McCarthys, who were fortunate enough to come back from there, would want the United States of America to subsidize by our money the partition of Ireland, so that in very fact there is no Ireland but only two divided sections of counties of which the spokesman for the leading political party in Ireland has said, "If partition be not undone, then all that has been gained for Ireland in the last hundred years may be lost."

All that has been gained in the last hundred years. That seems a very casual way to treat a hundred years of event-packed history, Mr. Chairman. Our great United State of America is not yet in its two hundredth year. But let us look at it from the standpoint of Ireland's history. It was not until after the middle of the twelfth century that the English armed forces came to Ireland. Ever since then, and in each generation, the battle in Ireland against the invaders of Ireland has continued, and wherever throughout the world the exiled sons and daughters of the Gael were forced to go in order to find the liberty and to make the living which was denied to them by the oppression of the foreigner in the land of their forebears that battle has also continued, and will continue until the end, Mr. Chairman.

So, as of today, for almost 800 years, the Irish have fought the continued foothold of that English invader, and, at long length, they have driven that invader out of 26 of the 32 counties of Ireland.

Why England's subsidy supports a puppet government in the remaining six counties—against the majority vote, again and again recorded—of all of the people of Ireland, and how England does this, is too long a story for me to detain you with today, but there are two things which I can do without taking time: First, I can file with you copies of David O'Neill's 38-page brochure, The Partition of Ireland, How and Why It Was Accomplished, asking you, Mr. Chairman, to regard that exhibit as an extension of my remarks; and second, I can emphasize for this record the fact, that since the last printing of Mr. O'Neill's publication saw the light, the head of England's puppet government in the six counties, namely Sir Basil Brooke, the six-county premier, has admitted in a public speech that the minimum subsidy by which England sustains the unnatural partition of Ireland is $40,000,000 per year. And in many years, England's subsidies go far, far beyond that sum. She carefully conceals the figures, but qualified estimates place the average at $200,000,000 per year.

I recognize that in a vastly changed world order, there may be some Senator, or some Congressman, with but a few Irish in his constituency, who may say: "Oh, well, this is a new strange world we are living in. Other countries are partitioned. Other countries are split apart. Why not Ireland?"

The easy, quick answer, Mr. Chairman, is that the very antiquity of Ireland has ingrained the fight of the Irish against the invasion of the English to such an extent that the fight has become an integral part of worth-while Irish character, and in the very nature of things that fight can never end until the invader ceases to encroach upon Irish soil. Until then there can be no permanent peace in the world, Mr. Chairman, because history shows that in generation after generation the Irish in Ireland have adopted every legitimate means—just as the American Colonies sought aid from France—in the necessarily bloody battle to win independence.

Ireland's background, Ireland's antiquity, merits freedom and independence, Mr. Chairman.

It is not my purpose to unduly spend any of the time of this honorable body, and I suppose that I might, with every fairness, ask the Senators to take judicial notice of the antiquity of the Irish. So, for the purpose of the record, let me say merely this:

From more than 7 centuries before the birth of Christ, the historians have adduced what they consider as the beginning of indisputably authentic Irish history.

I quickly carry you over more than 9 centuries, during which law and learning and the arts progressed in Ireland. During those centuries, the land which we now know as England came under the domination of the Romans. Ireland remained with the Irish. During those centuries the world saw a new light—the Man of Galilee was born, and lived, and was crucified.

Two hundred and twenty-seven years after the birth of Christ, there came to the high throne of Ireland, Cormac the son of Art. Cormac gave us the Psalter of Tara—a compilation, mind you, of the then previously enacted and functioning laws of Ireland. No wonder there is pride in the people of Irish blood—Ireland's sons and daughters everywhere.

Merely in passing, and because there is a moral and a lesson to be well drawn from it, may I add that Cormac's father was the son of that Irish king known as Conn of the Hundred Battles. Seventeen centuries later, this battle which we are fighting here today is but another phase of the age-long battle of the Irish, because so long as a single foot of Irish soil remains within the possession or control of the foreign invader, so long will the sons and daughters of Ireland battle for Ireland throughout every country of the civilized world.

Then, 2 centuries more, and in A. D. 432 St. Patrick comes to Ireland. And Ireland took St. Patrick and Christianity to its warm Irish heart.

I don't have to tell you the story of that. Just let me remind you of the one incident: That of the Irish chieftain who was brought to renounced paganism and to embrace Christianity. St. Patrick stood before him, face to face, and for freedom of hand the saint took his spiked crozier and rammed it down into the soft Irish earth. Then he proceeded with the instructions to the new convert. It was not until he finished, that looking down he saw the ground covered with blood, and found that he had hammed his bishop's crozier right through the foot of the convert chieftain. That chieftain had never winced. He had not shown a sign of pain. And then St. Patrick apologized and asked him why he had not said something, the chieftain merely said that he thought it was part of the ceremony, that the suffering was just something to bear—a little token of the price of being a Christian.

Maybe there is a lesson in that for the troubled New World of today, Mr. Chairman.

Here we are, preparing to make vast sacrifices of our substance for a supposedly democratic and largely Christian western Europe, Mr. Chairman. And we are told to build high hopes upon that western Europe for our own safety, Mr. Chairman. We are told that it may keep communism out of America, out of our own United States.

I point this honorable committee back to that chieftain who knew how to suffer. I point you back to that little land of Ireland where communism never could show its dirty head. I point you back to that little island of saints and scholars which, through all of the early centuries and down through the Middle Ages, sent the teachings of Christianity and of democracy to all lands. In spite of her own sufferings at home, Ireland spread the light, Mr. Chairman—and in America's vast new projects of today and tomorrow, whatever form these projects may finally take, you will find no safer, no braver, no truer spot than little Ireland. You will neither find communism in Ireland, nor will you find it among Ireland's sons and daughters in our own land, Mr. Chairman.

But by what rule of logic, by what method of reasoning, can it be held a sensible thing to keep that stronghold of light and of Christian religion, that European outpost of Christianity and of democracy, divided against itself? The answer does not lie in logic or in reason, Mr. Chairman. The answer lies in the stubbornness and in the cupidity of England. Let us examine it:

England has about the same area as our own State of Illinois. But she is overpopulated and she is industrially outmoded. Those are the admissions of her own statesmen and of her own spokesmen. Her density of population is about 715 to the square mile. Even according to the estimates of Mr. Churchill, she must move out about one-third of her population. Probably one-half is nearer to the real picture.

Ireland has about the same area as our own State of Maine. But she is underpopulated, and is industrially underdeveloped. Her population is about 115 to the square mile. Even according to our own Department of State, the 26 counties of Ireland must be a good credit risk. The State Department's report to your own committee, I remind you Mr. Chairman, is that in the event of advance of moneys as contemplated by the so-called Marshall plan, the advance to the 26 counties would be by way of loan, whereas the advance to Britain must perforce, and obviously, be very largely by way of grant.

May I divert here, to suggest what must be quite apparent to your learned committee, and that is that no such two classes of money should ever be disbursed from a common or mingled fund. He who approaches the banker to seek a loan upon his credit, approaches that banker with head up—seeking that which he can in honor take and which he expects to pay back. But, he who approaches a donor seeking a gift or grant necessarily comes with hand outstretched, and is in no position to discuss terms. He is a beneficiary. He must listen to and obey the instructions of the donor.

But little Ireland—again as I say of the size of our State of Maine—is burdened by England with two governments, two sets of customs, an unnatural internal customs border more than 270 miles long, two sets of police, two sets of armed defense forces, two sets of everything from the highest to the lowest.

If the 26 counties, so circumstanced, and as just a part of Ireland, are a worthy credit risk for our taxpayers' money, why should not all of Ireland (the Irish Nation) under one sensible government of her people, and with England's needless waste and squandering eliminated, be in very fact an excellent credit risk?

Of course, the real answer is that the division of Ireland is England's plan—it is the age-old continuance of the policy of

divide and conquer. What was once the Pale of Dublin has now in economic fact become the Pale of Belfast and of the six agricultural counties which serve that industrial city.

And, of course, the implements by which England maintains the division are subsidy and gerrymander. Again, I refer you to David O'Neill's pamphlet. Or, if you need some more figures, I refer you to Cahir Healy's Mutilation of a Nation.

It is true that the gerrymander may be for the Irish in Ireland to handle; but the subsidy is certainly not a thing for us to grant, Mr. Chairman.

Whence come the moneys which the Executive asks you to vote, Mr. Chairman? Answer: From the taxpayers. Well, taxpayers are before you, Mr. Chairman.

Speaking in the representative capacity in which I appear here today, it would be obviously improper for me to express either advocacy of or opposition to the projected legislation which lies before your committee. Each citizen is entitled to his or her own opinion upon the merits or the demerits of the so-called Marshall plan.

But upon one thing I do speak with all the emphasis that is at my command—and I bring to you all of the steadfast earnestness of the multitude of voters who have sent me to appear before you.

I speak and I protest—and we shall continue to speak and we shall continue to protest from hence forward—against the sending of a single dollar of American taxpayers' money to Britain while the Government at 10 Downing Street persists in the insane division of Ireland. It is beyond successful dispute that England is financing the partition of Ireland with American money. American citizens of Irish blood who are worth their salt are burning with hot indignation over this, Mr. Chairman.

As members of this honorable committee know, this Irish question is no new thing in Washington. But the difference is that it is no longer truly an Irish question. It is an English question.

The Irish in Ireland have demonstrated superb abilities in troubled times to govern themselves.

Our Irish citizenry in the United States have given us of their valor and of their zeal, in peacetime and in wartime, since the foundation of this our Republic, Mr. Chairman.

In the form and manner provided in the Constitution of the United States they are now bringing their protest to Washington. They have the right to be heard.

They say that England instituted the partition of Ireland under impelling threat of superior force. This is a fact of history, Mr. Chairman. Lloyd George admitted it, and gloried in the fact.

During the period of actual hostilities, and during the first step of reconstruction, our Irish voters have preserved an admirable attitude even when vast sums were being sent to England apparently to be very largely squandered.

But now, Mr. Chairman, what future moneys are to go, if any are to go, avowedly for constructive and allegedly for American protective purposes.

If this be so, there should be no waste. We assert that England's subsidy of Irish partition is unadulterated waste. We assert that it is both economic waste and military waste. Obviously a divided Ireland is less effective as a warm friend of the United States of America than would be a united Ireland.

If we are correct in saying that there should be no waste, then it follows that there should be no palpable violation of the democratic principles for which we assert that we are building. England's violation of democratic principles in the six counties of Ireland is open, is adverse, and is notorious.

If there should be no waste, there should be no weakening of the geographic and national units which might be expected to be a source of sound defense in the event of armed struggle between conflicting ideologies. England's interference in Ireland is a continuing cause of such weakening. It should not be permitted even to continue, much less should it be financed by the United States of America.

In the United States of America we give much weight to the free ballot, Mr. Chairman. I call to your attention the fact that free ballots are about ready to be cast in the 26 counties. But each of the conflicting political parties is in complete agreement with its opponents upon one thing, Mr. Chairman—partition of Ireland must end. That is a major plank in each political platform in Ireland.

Should question arise as to the propriety of what I am today discussing before your honorable committee, and of your action upon it, I call to your committee's attention the fact that this question of propriety was thrashed out before the Committee on Foreign Affairs of the House of Representatives at the third session of the Sixty-fifth Congress almost 30 years ago. I refer to the record of the hearings on House Joint Resolution 357, December 12 and 13, 1918. As a result that question was affirmatively determined, and the decision was in favor of Ireland's cause. Likewise in the Senate before the Committee on Foreign Relations, Sixty-sixth Congress, first session. The Senate went on record 60 to 1 in favor of Ireland's cause.

Not until, by the valor of Ireland's sons, and by the force of public opinion throughout the civilized world, England was driven to it, never did England seriously approach the problem of her withdrawal from Ireland. Then, 27 years ago she devised the accursed plan of partition, and drove the 26 counties into a bloody civil war. Today, Ireland as Ireland is confronted by the enforced secession of 6 countries from the 32. It is the same kind of secession that had to be settled by our own Civil War, but with this added insult: England is actually subsidizing, directly and unashamedly, the entities which constitute the six seceding units in Ireland.

Upon behalf of my people I protest. I say that the United States of America cannot afford to subscribe to such an iniquitous outrage upon human liberty. That is my case, in the merest outline, Mr. Chairman.

May I thank the chairman and the committee for the time and the courtesy extended to me upon this hearing, and may I offer, upon behalf of my colleagues and myself, to furnish any other facts, data, historical, or other matter for the record which may be required by the committee or by its chairman.

* * * * *

Mr. SWEENEY. Again we present the problem solely as American taxpayers. I do not know how to characterize it. But I can say it would be repulsive, to say the least, if this great Republic of ours would permit $40,000,000 or $200,000,000—whatever the relative amount is—to be siphoned by the British Empire into the six counties in Ireland known as the Belfast Parliament, there established because of a shotgun treaty, as Mr. Scott has so ably and dramatically presented his side to the committee.

I think it would shock the taxpayers of America, no matter what their origin was, no matter what their blood, that this country would lend its aid and support to keep the scores of Irish irritation going in the six counties in Ireland. By every test of a plebiscite the people have repudiated this so-called shotgun treaty. Religious friction is there. Make no mistake about it. You can, Mr. Chairman, obtain from the Legislative Service the record of the amount of money spent to maintain this garrison in Ireland. Since 1920 at various times as many as 60,000 soldiers have been poured into there, into those six counties. I am not concerned about how many were there during the war, when we collaborated with Northern Ireland as a nation. Leave that out of it. I don't know what the relative figures are today. But there are several thousand, and I don't know how much money they will want to maintain that garrison there, and that bridgehead and that parliament. Suffice it to say we have the proof—our committee can give you the proof. We have the word of Sir Basil Brookes, Premier of the Belfast Parliament, as to the amount of money they need and do get from England. Where is England getting the money? From generous Uncle Sam, as she got it before. From your Uncle Sam and mine, who is punch drunk and dizzy and weak because he has been so generous in pouring out lavishly of his treasure all over the world because we are a Christian nation, gentlemen, and none of us stands in the way of extending the corporeal works of mercy to the distressed people of the world. We want to help to feed and clothe them, yes, and to give shelter to the homeless, but we certainly do not want to encourage an alien government anywhere against the accepted will of the majority of the people of any country, and I am certain the wisdom of this committee, which is laboring under terrific strain, I know, in the troublesome days we are living in, trying to do the best we can for this country, will be sure we do not drain our blood out and weaken our own Government and our own economy when we extend the hand of good fellowship and charity to those unfortunate nations that are in distress today.

As an American taxpayer, Senator VANDENBERG and members of the committee, I make my protest in that direction, and I hope your committee will consider it from that source.

Thank you.

What Six Billions Mean

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. SCHWABE of Oklahoma. Mr. Speaker, I have just received from a constituent of mine, a very excellent graphic illustration of what six billions means to the American people. It means so much that it is beyond the comprehension of many of us to appreciate fully. I quote the item sent me by my constituent as follows:

SIX BILLIONS

Since 1932 we have become used to talking in billions instead of millions, but it is doubtful whether many of us have real understanding of the magnitude of such sums. For example, we are preparing to vote $6,000,000,000 aid to Europe on the theory that we would rather have Europeans on their feet than on our hands, but $6,000,000,000 is a tremendous amount of money.

Suppose you owned the United States and all it contains and someone came to you and said, "Uncle, 16 European nations are in a bad way. They must have help."

"What sort of help?" you might ask.

"Not just money," the solicitor would reply. "How about giving us some of your big successful business concerns?"

"You mean some of our big business concerns with all their assets?"

"Yes; that's what I mean."

"How many and which ones?"

"Well, your Ford Motor Co., for one. Also, Sears, Roebuck & Co.; and General Electric, Chrysler Corp.; Armour & Co.; F. W. Woolworth Co.; the Eastman Kodak Co.; Atlantic Refining Co.; Aluminum Co. of America; the Goodyear Tire & Rubber Co.; Republic Steel; International Harvester Co.; and the Reynolds Tobacco Co."

"Great heavens!" you probably would exclaim. "Do you really think I could afford to give you all these great business concerns with all their assets?"

"Why not? Their total value, with all their assets, is less than $6,000,000,000, which your Congress is going to vote us just for the first year of a 4-year aid program to get us back on our feet."

Does that give you any better understanding of what $6,000,000,000 amounts to?

What about $17,000,000,000?

Fort Douglas, Utah

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. DAWSON of Utah. Mr. Speaker, Fort Douglas, in the State of Utah, is one of the oldest and most historic Army posts in this country. In addition, its strategic location is of vital military importance in the event of a future war.

It is located inland a sufficient distance to give adequate protection from a sudden strike against our west-coast defenses.

It is extreme folly for the Army to abandon posts of such extreme strategic importance as Fort Douglas. The United Veterans' Council of Utah, representing 20 veterans' organizations from the State of Utah, protested the abandonment of Fort Douglas, and with leave granted me to extend my remarks in the Appendix of the RECORD, herein is their letter which fully presents their views as well as my own:

UNITED VETERANS COUNCIL,
Salt Lake City, Utah, February 12, 1948.

Hon. WILLIAM A. DAWSON,
Congressman for Utah, House of Representatives, Washington, D. C.

DEAR CONGRESSMAN DAWSON: The undersigned committee represents 20 veterans' organizations, 20 auxiliary organizations, and 10 closely allied auxiliary organizations representing the Patriotic Council of Salt Lake City, Utah. In the aggregate, their membership consists of approximately 50,000 veterans, their families, and those interested in their welfare.

In a meeting held at the Newhouse Hotel February 11, with 100-percent attendance, they voted unanimously to protest abandonment of Fort Douglas by the Army of the United States. They do so to you vigorously and ask that you use your influence to see that such institutions are not abandoned, and that we stress with all our might the absolute necessity of a preparedness program to keep America strong.

It need not be said to you that in this group are men who served in three wars; fathers who gave their sons on the altar of sacrifice in defense of a great America; mothers who are gold-star mothers, diligently and unselfishly seeking a way to make America strong. They are a powerful group for good in America.

In order that you may know who they are, this letterhead represents all of the veterans and auxiliaries in Salt Lake County, and the additional group represents the following organizations: Patriotic Defense Council, Disabled War Veterans Auxiliary, Ladies of the GAR, VFW Auxiliary, Gold Star Mothers, United Spanish War Veterans Auxiliary, American Legion Auxiliary, Daughters of Indian War Veterans, Canadian Legion Auxiliary, No. 97, United Daughters of the Confederacy, Gold Star Wives, and Gold Star Sisters.

We reaffirm our protest and ask that this letter be made a part of the CONGRESSIONAL RECORD in defense of our stand.

Sincerely yours,

BIRNEY K. FARNSWORTH,
Chairman, Salt Lake City, Utah.
Mrs. J. E. PENNOCK,
Salt Lake City, Utah.
Mrs. J. ROY WILSON,
Salt Lake City, Utah.
CECIL H. WILKINSON,
Salt Lake City, Utah.

The Work of the Eightieth Congress

EXTENSION OF REMARKS
OF
HON. WILLIAM J. MILLER
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. MILLER of Connecticut. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by my colleague, Hon. KENNETH B. KEATING, before the Connecticut Sheriffs Association on February 18, 1948:

Mr. Mitchell, Governor and Mrs. McConaughy, distinguished guests, members of the Republican State Central Committee, members of the Sheriffs Association, and Republican friends, it is a great privilege for me to be here this evening and a high honor to have been chosen to address your live organization which takes such an unusually active part in the affairs of your respective communities throughout the great State of Connecticut and exerts such a powerful influence for good government.

I feel unusually close to the congressional delegation from Connecticut, not simply because of our geographical proximity—and the natural affinity which two States would have which are much alike in their interests and requirements industrially, agriculturally, economically, and, I am happy to say, at least at the moment—politically—nor is it only because three of the delegation from Connecticut surround me and hem me in on all sides in the House Office Building. My chief reason for attachment to the State of Connecticut, I must confess, is because of the great respect and warm affection which I feel for the congressional delegation which you good people of Connecticut have sent to represent you in the halls of Congress.

Last month in New York, at the annual meeting of the New York State Bar Association, I was privileged to hear one of the finest addresses on the subject of foreign aid which has been made since the so-called European-recovery program was first envisioned. This address was by your distinguished Senator, RAY BALDWIN, and it so greatly impressed me that I asked Senator BALDWIN's permission to place his address in the CONGRESSIONAL RECORD, in order that my colleagues might have the benefit of his practical, statesmanlike thinking on this great question. I can do no better in appraising RAY BALDWIN than to quote my description of the Speaker in my remarks in the House, when I said:

"The enthusiastic reception accorded the address of this experienced public servant in State and Nation, liberal statesman and forceful leader was thoroughly merited not alone by his always masterful delivery, but equally by the thoughtful and constructive character of his remarks.

"As we grapple with the gigantic problems embraced within the European recovery program, it seems to me helpful to bring to the attention of the membership of both Houses the views of one of our distinguished colleagues, who, in experience and devotion to the best interests of our Nation, represents public service in its finest expression." I am happy this evening to have the opportunity to restate this tribute.

In the House, the dean of your delegation is, of course, your own BILL MILLER, of the First District, embracing your own city of Hartford. It is hard to speak of BILL MILLER without giving way to what Bill, at least, would call exaggeration. This American patriot without peer, whose sacrifice for his country is unmatched by any other Member of Congress of any party, is continuing his great record of service to the Nation as one of the soundest, most constructive, and most respected Members of the House of Representatives. He is a member of the Interstate and Foreign Commerce Committee, which handled some of the most important legislation presented to the Congress. The very reason why he is not here with us tonight, where we all know he is in spirit, is because his committee is right now, as it has been for some weeks, wrestling with the problem of petroleum and fuel oil for the country, and particularly the New England and eastern seaboard States. Bill, along with his distinguished colleague from neighboring Massachusetts, JOHN HESELTON, both members of the same committee, have been leaders in the struggle to alleviate the dire conditions brought about by the fuel-oil shortage. He called me up this morning before I left Washington and told me, as you would expect him to do, that the critical situation made him feel that his duty lay in keeping on the job in Washington. Where BILL MILLER'S duty lies, he has never been found wanting.

Your Second District representative is my very good friend across the hall from me in the House Office Building, HORACE SEELY-BROWN. SEELY is a member of the Merchant Marine and Fisheries Committee, and due to his war experiences, has taken an unusual interest in matters of national defense. If there is a more conscientious legislator who studies more thoroughly the great problems which confront us, I know not where to find him.

Next door to him and across the hall from me is ELLSWORTH FOOTE of your Third District. He sits with me on the House Judiciary Committee, where his fine legal and judicial background lend weight to his remarks and contribute greatly to the deliberations of this important Committee. Beneath that stern judicial manner, as those of you who know him realize, is a sense of humor which carries him, as well as his colleagues, over many of the rough spots which we all encounter.

JOHN LODGE, from the Fourth District, is my immediate next door neighbor. John has, as you would have expected, acquired in his first term of service, the stature of an old hand at the business of legislating. He is a member of the Foreign Affairs Committee, which has been charged with the responsibility for passing on matters of pre-eminent importance, not only to the welfare of our own country, but of the entire world. His extensive background of training and experience, his facile pen and his agile mind have rendered his services invaluable in the solution of almost insoluble problems.

From your Fifth District comes JIM PATTERSON, who has demonstrated in the Congress the same qualities of fearless leadership which he displayed when he commended a tank company in the Fourth Division. When Jim goes after a thing he never lets up until he gets action. He is as good an illustration as I can name of the reason why the United States won the war. He is very properly a member of the Committee on Veterans Affairs and also was recently honored by being named by the Speaker to the Joint Atomic Energy Commission.

As your Congressman at Large you have TONY SADLAK, a member of the Committee on Post Office and Civil Service. I have recently been working very closely with Tony on two propositions; one, to reduce the postage on shipments overseas of relief parcels containing food, clothing, medical supplies, and other necessaries, and the other to waive on behalf of aliens who served in our armed forces certain of the technical restrictions and fees which are now necessary in order to become citizens. Tony, too, is of course greatly interested in veterans' problems and has displayed this interest on many occasions.

There is one particular respect in which the entire Connecticut delegation is well known throughout the Halls of Congress. There is probably no group on the Hill whose average attendance record at the sessions of the House exceeds, if it equals, that of the Representatives from your State. Every one of them takes his job very seriously. One can and will make many mistakes in his legislative career, but barring illness or the unforeseen, it need not be because of inattention to duty. So long as the people of the State of Connecticut have the sound wisdom and good sense to return to Congress their present Representatives, the Nutmeg State will be able to hold its head high over the caliber of its representation in Washington.

When BILL MILLER called me on the telephone in my home city of Rochester, N. Y., and asked me to invade Connecticut, he said it would be appropriate to tell you people, who he said got around the State a bit and did no small amount of talking, second only, perhaps, to Congressmen, a little bit about the accomplishments of the Eightieth Congress; what it has done to date, and as time permits, a few words about what we may expect this year, before the doors close at the end of the present session.

When the voters of this country spoke out in the fall of 1946 and said, "we want a Republican Congress," many views naturally emerged as to the significance of the overwhelming vote of confidence which they gave to our party. It has always seemed to me that the word "mandate" is somewhat overdone and is frequently employed as a device to justify a particular action which would have followed regardless of the preference voiced by the voters.

Nevertheless there were some fundamental questions upon which our party waged its last congressional campaign and as to which certainly most of us clung to the belief that the voters had taken a definite stand.

One of these was on the subject of the continued and ever-increasing controls—always a threat of bureaucracy—over the economic and personal life of the citizens of this great country, over the everyday questions of what to eat, what to wear, where to go, how much, how often, when, and why.

Accordingly, although the President, before Congress convened, by Executive action, eliminated price controls, this Congress has passed a number of laws removing certain other controls on our economy and extending the life for fixed periods of some of the more essential controls which are still needed to bridge over the conversion to a peacetime economy.

Illustrative of the type of control continued was the control on rents. The rent control bill which was passed has been the subject of much agitation and a large amount of misinformation. Those who voted for the bill have been accused of not properly representing the interests of the tenants. Any analysis indicates that exactly the reverse is true. Rent control under bills passed in the previous Congress would have expired automatically last June 30th unless it had been extended. Those who voted against the bill voted for the immediate termination of all controls on that date.

Probably the bill extending the controls was not written in all respects to satisfy any single Congressman. That is frequently true of legislation which is almost always the result of a certain amount of compromise. It provided for the extension of controls until March 1 this year without any increase in rents whatever. It further provided, however, that if a landlord was willing to grant a long-term lease, he and the tenant could agree on an increase in rent up to 15 percent by striking a mutual bargain on the subject. This provision made it possible for the tenant in many cases to get his house painted, or the inside redecorated, or the plumbing fixed up, or some other necessary repairs made as prerequisites to agreeing to a modest rent increase.

Now the appropriate committees of both Houses are wrestling with the problem of what to do with rent control. The housing shortage has certainly not been solved, and it is almost certain that rent control in some form will be extended for an additional period. In taking that step I have advocated what seems to me simple justice that there should not be discrimination against those who voluntarily entered into an agreement for an increase in their rents. Unless special provision is written into the rent-control law to protect them, we will be faced at the end of this year with the anomalous situation that those tenants who agreed to increases will be denied any protection whatever, whereas other tenants who refused to agree to increases will be protected. Such a result seems to me obviously unfair. When I appeared before the House committee a couple of weeks ago to press this point, I gained the impression that the committee was favorably disposed.

As to price and wage controls which the President has been demanding from this Congress, I can only say that there is no great enthusiasm in either body for any trend in the direction of a controlled economy. The President has been urging price controls and a return to the days of under-the-counter transactions, black markets, and scarcities in order to reduce the high cost of living. Then, on the second or third day when the grain market started to fall, he demanded controls in order to prevent prices from falling. I guess the answer is, he simply wants controls, whether it looks as if we were going up or down.

I do not belong to what might be described as the extreme school of thought on this subject of controls. I recognize the complexity of our economy and the many factors which impinge upon the daily life of the citizen to an extent totally unknown to our forefathers. I fully recognize the necessity for strict and extensive controls during an emergency period. I am most emphatic, however, as I believe the majority of the Congress to be, in my opposition to a tendency all too prevalent in this country to solve all problems by looking to Washington for help.

We have seen what has happened in every other country where effort has been made to regiment the citizen. The economy of those countries is cracking up. All of them now look to this great Nation for assistance.

Steering a middle course which will make adequate and proper provision for those of the lower incomes for whom the struggle to maintain a decent standard of living is always the hardest, we must always beware lest this country give way to the economic fallacy that Utopia lies along the path to the police state.

Another thing which I believe the voters said to us last fall was to reduce the expenses of running the Government, eliminate unnecessary employees from the public pay roll, and as a result, provide for reducing the burden of the harassed and oppressed taxpayers and increase their take-home pay, which we must always remember can only be done by reducing the expense of piloting the ship of state.

Government expenses were reduced. The Presidential budget was cut to the tune of about $2,700,000,000, and in addition another $1,700,000,000 represented reductions in the present Budget brought about by this Congress and rescissions of obligations previously created. This is a total of $4,400,000,000. True perhaps it is not all that might have been accomplished, but it is still the greatest reduction in budget figures, both dollar-wise and percentage-wise, which has ever been made by a Congress since the establishment of the Budget Bureau in the early twenties.

Every cent saved was in spite of the vigorous opposition and against the united objections of the spokesmen for the minority party in Congress. Every time an appropriation bill was brought before us which provided for a cut, a motion was made by those directing the Democratic strategy to restore the cut to the figure originally stated in the budget or in some instances even greater. It is only fair to say that there was a minority within the minority which did not subscribe to this policy of opposing each and every economy, but nevertheless that represented the consistent policy of the opposition.

Speeches were written by the so-called public-relations divisions of various Government departments—the propagandists paid for by the taxpayers—which would be delivered on the floor by the appropriate Democratic henchmen, sometimes so unfamiliar with their contents that they could not even read them without stumbling over the words. They predicted the most dire results which would come about if this or that particular reduction were made. You have heard a lot about lobbies and they are certainly very much in evidence in Washington, but the most prowerful lobby of them all, which in extent and degree of pressure none of them can touch, is the Government itself.

Some of you have heard the story, for instance, of the projected cut in the appropriation for the Customs Bureau of the Treasury Department. Here was a Bureau which in fiscal '46 had spent 20 percent more than the year before. Then they came to us asking for a 22 percent increase even over the amount spent that year. Extended hearings brought out a sad case of inefficiency, extravagance, and waste in this outfit. Many of their top administrators were unqualified and incapable of performing their duties. Four of them were over 80 years of age. One was a practicing physician who visited his office once in every 2 weeks—probably on pay day.

They were cut, but mind you, they were not cut below what they had the year before. They were, in fact, given more than they spent that year but not as much more as the 22 percent which they asked for.

What did they do? They sent out a notice to their employees out in the field, not those holding cushy jobs in Washington but out in the country where the full drama of the situation would be revealed, telling 85 percent of their employees that they faced a layoff or dismissal. Not one in Washington was laid off. Not a stenographer, office boy, or clerk. But only those out in the field that were charged with the duty of protecting the country against smugglers and illegal traffic. Of course, there was an immediate uproar throughout the country. In New York City

for instance, 734 inspectors were laid off and there were scare headlines in all the papers. Governors, mayors, chambers of commerce, and officials and individuals from all over immediately started wiring, writing, and calling their Senators and Congressmen.

Of course, there followed a congressional investigation of this unwarranted procedure which resulted, incidentally, in the speedy reinstatement of most of these laid-off customs officers. Even the Secretary of the Treasury expressed his regret and removed the Commissioner of Customs from office—to another post with the same salary.

The budget for the Post Office Department was cut by less than 1 percent, the least of any Government department. But here, again, all through the country headlines appeared in all the papers about the lay-off of employees and curtailment of service due to congressional reductions. When the Department was called on the mat over this, they admitted it was all a grave error and officially rebuked the postmasters. When he was asked if any blame whatsoever could be attached to Congress for impairment of service or dismissals in the postal department, the Postmaster General replied "None whatsoever." I could go on reporting instances like this as to practically every department or agency of the Government which suffered any kind of a cut, whether or not that cut involved a reduction in the amount which they had spent this past year.

It is therefore very apparent that this Congress, in bringing about the reduction in expenses which it did and the elimination of some 300,000 out of 2,000,000 from the public pay roll, performed a really surprising job against the most terrific opposition.

Of course, the only way to increase the take-home pay was by reducing the expenses of running the Government. You all know the sad story on that, about the decision by the President twice to veto a tax-reduction bill. In that action he failed to disclose, until after he had acted, the fact that the estimated surplus for the coming fiscal year would probably be four and one-half billion more than he had originally figured, and with the cuts made by the Republican Congress in expenses would have permitted the tax reduction as contemplated, with some five billion left over to apply on the national debt.

Now this year again we are faced with the problem of tax reduction. The House has already passed a bill which would raise the exemptions $100—from $500 to $600—and grant graduated reductions ranging from 30 percent in the lowest-income brackets to 10 percent in the higher incomes besides giving additional relief to the blind and those over 65. On top of this, the bill removes the discriminatory situation which has existed for taxpayers of your State and mine whereby a husband and wife were not permitted to split their income for tax purposes, whereas in certain so-called community-property States this tax was allowed. What will happen to this bill in the Senate remains to be seen.

The President still publicly states that he is opposed to income-tax reduction, except the purely demagogic approach which even his own party does not support, of allowing a $40 credit to each taxpayer and dependent. He says tax reduction is inflationary. Instead of allowing the people to spend the additional money which they would have in their pay envelopes by a tax reduction, he says, "No; you let the Government spend that money. If we spend it there will be no inflation, but if you spend it, that will lead to dire consequences. No, my children, Uncle knows best. It is no time to increase your pay by cutting down on the deduction from your pay envelopes."

It is my sincere hope and firm belief that a tax-reduction bill will be enacted by both Houses, which will be of such a character that the President will be forced to sign it or if he vetoes it, the required two-thirds majority in both Chambers will promptly be forthcoming to override his veto.

Finally, in my judgment the voters said to us last fall: "We must have some legislation which will reduce the industrial strife in this country and will give to the members of labor unions a greater voice in the affairs and policies of their own organization. We do not want any punitive or repressive laws. We want you to study the labor-management picture and come up with something effective and fair. We have witnessed recently and specifically in the year 1946 the greatest loss in man-hours through strikes in all our Nation's history with all the disruption to our economy, individual suffering for the workingman and his family, and hardship on the consuming public which such stoppages necessarily entail. In addition a few radical and dictatorial labor leaders have seized a power and are exercising a domination over the lives and liberties of those who toil, the very backbone of our country, which cries out for corrective measures. We believe in collective bargaining. We want to see labor unions which we know have done so much for the improvement of the workingman's condition strengthened and made secure. But we insist, and those of us who are members of these unions most of all insist, that steps be taken to eliminate the abuses upon which unrestricted power so often feeds."

That I believe is a fair statement of the mission enjoined upon the Eightieth Congress insofar as labor law is concerned. Some would differ. There are two camps of extremists. Some would say we should have done nothing. Others, just as many Democrats as Republicans, by the way, would say we did not go far enough in imposing restraints and curing abuses.

I would be the first to concede with our own Senator IVES and your Senator BALDWIN, both of whom have been such towers of strength in their first senatorial year, that it is not a perfect law. One of its best features is the provision for a continuing joint commission to observe the workings of the law in actual practice and recommend legislation to alter and amend and supplement its terms.

Time does not permit any discussion of the bill finally passed after the most exhaustive hearings with witnesses from all walks of life and volume of debate. I am confident that in practice the law will have none of the dire consequences which its opponents so freely and in such extravagant generalities predict even in the face of the signing since its passage of some of the most favorable contracts in the history of organized labor, but that, on the contrary, it will improve the position of the men and women who labor, will foster true collective bargaining, will strengthen the labor-union movement, and will restore a measure of harmony to the industrial picture to the ultimate benefit of labor, management, and the consuming public.

That this has, indeed, already happened is evidenced by the statistics which are now issued by the Department of Labor, showing that the average worker earned $72 more in 1947 than in 1946; that he only lost 16 days of employment in 1947, as compared with 25 days in 1946; that there were 81,000,000 more man-days lost due to idleness in 1946 than in 1947; and 1,385 more work stoppages. These benefits mean dolars in pocket to the men and women who labored to produce the wealth of this Nation. Daily they are coming more and more to realize that this law, far from enslaving them, has given them a measure of benefit and protection for which they yearned and which they richly deserved even far beyond the predictions of those who voted for the legislation.

I wish I might discuss with you also other measures passed by the last Congress, less publicized perhaps, but of equal importance and long-range significance. In the field of national defense, the bill for unification of the armed services, in so many Congresses the subject of talk but in this one for the first time, of action. The bill for reorganization of the Army and Navy, providing for promotion on merit, rather than mere seniority, said by many to be the most important measure ever passed affecting the armed services.

In the matter of legislation for war veterans, many of you will remember the words of the President in his message to Congress. "Except for minor adjustments, I believe our program of benefits for the veterans is now complete." The Eightieth Congress did not agree. They did not agree with the Secretary of the Treasury that it was fair and just and free from discrimination to give officers terminal-leave pay in cash and say to the enlisted men who bore the brunt of the heat of battle and who, in most cases, needed the money worse, "You must wait 5 years for your money." So they undid the work of the Seventy-ninth Congress and said the first government obligation to pay now is our outstanding debt to our Nation's defenders. They also passed in both House and Senate 24 other measures on behalf of the veterans and many more are still in various stages in the legislative process.

Then there was the bill for establishment of a National Science Foundation vetoed by the President because he wanted to name not only the 24 members but also the director, whereas the bill provided, as all scientific men agreed, that the scientists should choose their director.

I could go on at length. In all, the House passed 985 bills and the Senate 812 and both Houses 519 which went to the White House, a rather impressive record to be chalked up by a body of men and women whose detractors would paint them as a "do-nothing Congress."

Much has been done but much remains to be done. Time only permits a sketchy reference to the gigantic problems which now challenge this Congress for solution.

Uppermost in our minds at the moment for the security of the land we love and the peace of the world is the so-called European recovery program. I wish I might talk about this at length. All I can say is that I feel confident that the Republican majority, as it faces the responsibility of a decision on this issue, will not allow any considerations of narrow partisanship to influence its action. That is not to say, however, that it will swallow whole without thoroughly digesting the recommendations made by the administration. Neither it nor the Congress is the repository of all wisdom on this subject. No one can assure that the final action which the Congress takes will be the right answer, but this assurance I can give, that it will be taken with the utmost sincerity and in the prayerful hope that it will lead to stability, prosperity, and peace in the world.

On the domestic front the still high cost of living and housing are perhaps the most pressing problems which we face. Another is increasing the benefits and broadening the base of the social-security law, extending the benefits to domestic servants, agricultural workers, employees of charitable corporations and self-employed not now covered, and giving to those now in the evening of their lives a more adequate provision for support as I understand can be done without substantial increase in tax because of the large fund which is already accumulated.

Also I feel strongly, as do most of those on the Republican side of the aisle, that the party of Abraham Lincoln should not close its doors on the Eightieth Congress without

enacting anti-poll-tax and antilynching legislation.

Also we face the solution in some manner consonant with justice and the national welfare of such complex problems as a universal training bill for our youth and the distressing and heart-rending plight of our displaced brothers in Europe.

Hundreds of other issues face us in the solution of which, as I said in my opening remarks, we are most grateful to the good people of Connecticut for the stature of the men whom they have sent to Congress to help us in our task.

The Republican majority has a great responsibility and a challenging opportunity. If we adopt and carry through a program of constructive liberalism within the framework of a free opportunity society, with our conscience as our guide, our eyes fixed singly on the ultimate welfare of the Nation we love, our political destiny is secure. Because by our fidelity to our public trust we shall have justified the confidence in us reposed, we shall celebrate together in November a smashing Republican victory.

Extent of Ratification of Anti-Third-Term Amendment

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. MacKINNON. Mr. Speaker, under leave to extend my remarks I include an article which appeared on February 16 in the Washington Times-Herald, reporting the present status of the anti-third-term amendment:

NINETEEN STATES HAVE RATIFIED TWO-TERM LIMIT AMENDMENT

The State Department revealed yesterday that 19 States have ratified a proposed constitutional amendment limiting a President to two terms in office. Thirty-six are required to make it effective.

Eighteen of the States have notified the State Department officially of their action, and Virginia, which also has approved the amendment, is expected to do so shortly.

Virginia is the most recent of the States to ratify the amendment and represents the only State with a Democratic legislature. It was the first State to act favorably on the amendment since last May 23.

The first 18 ratifications came shortly after the amendment was submitted to the States by Congress on March 23, 1947—between March 31 and May 23.

Most amendments have been ratified within a few years. The twenty-first amendment, which repealed prohibition, was adopted by the necessary 36 States in 1933 in 9½ months. Another proposed amendment, the so-called child labor amendment, was approved by Congress June 2, 1924, but has never been ratified by the required three-fourths of the States. Congress placed no time limitation on this proposed amendment.

The States which have ratified the proposed amendment and the dates on which they approved it in 1947 follow: Maine and Michigan, March 31; Iowa, Kansas, New Hampshire, April 1; Delaware, April 2; Illinois and Oregon, April 3; Colorado, April 12; California, New Jersey, and Vermont, April 15; Ohio and Wisconsin, April 16; Pennsylvania, April 29; Connecticut, May 21; Missouri, May 22, and Nebraska, May 23. Virginia ratified the amendment this year.

Cost-of-Living Index

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. BRADLEY. Mr. Speaker, I believe that the editorial which follows, taken from the February 14, 1948, edition of the Long Beach Independent, of Long Beach, Calif., will be interesting to many Members. It is to be noted particularly that the cost-of-living index for all items has advanced steadily since 1933, its lowest point since 1915. Except for a slight drop in 1939, the tables show that the advance has been somewhat regular even during the years of controls on our economic life. A larger jump is evident in the readjustment which occurred after the general removal of controls in 1946.

LIVING COST INDEX

Our readers may be interested in the table showing the ups and downs of the living cost index over the past 34 years. It is the only official index that has consistently measured the rise and fall of prices. It is the Bureau of Labor Statistics index which has functioned under Republican as well as Democratic administrations. In our opinion it is a sound index and free of politics.

The table we attach to this article shows how costs of living since 1914 have been up and down many times. It is reasonable to expect them to fluctuate widely again. But we doubt that prices will again fall as low as they were in 1939. Most economists whose opinions we have read doubt that the index will fall more than 20 percent from the present level during the next several years.

The index is based on what it cost a moderate income family to live in the period 1935 to 1938. It will be noted that in 1914 it cost 28 percent less than in 1939. In December 1947 it cost 66 percent more than it did in 1939.

In between these dates was the great depression. But even in 1933 the cost of living fell only 6 percent below the 1939 average. The fall was 30 percent from 1929 when the depression set in. Labor unions are so much stronger now than before 1939 there is less chance that wages will be greatly reduced. Large industrial monopolies control production to a greater extent than in 1939. These two elements will be a force that will not allow prices to fall as far as they have in past recessions.

Many other factors will slow down price reductions. Some of them are parity payments to farmers, which means guaranteeing farmers a high price for the major crops. Social security payments to retired persons and the unemployed will maintain purchasing power completely lost in past recessions. We used up many of our raw materials during the war. It takes greater production of everything for our increased population and for higher living standards.

The following table shows living costs have fluctuated over the past 34 years. Each year is based on December, except in 1934 when October is used, and 1935 when only November is available. The reader should understand the column "all items" represents the average of all necessities needed by the moderate-income family. The other columns show how some items are lower than in 1939, while food is almost 100 percent higher. The "all items" average for last December at 166.1 is 65.7 percent higher than in 1939.—L. A. C.

The Bureau of Labor Statistics index for the 34 years is as follows:

Year	All items	Food	Clothing	Rent	Fuel, ice	Home furnishings	Miscellaneous
1914	74.1	91.7	65.7	102.8	84.1	52.4	52.5
1915	72.7	87.9	67.5	100.0	84.4	55.7	51.5
1916	79.3	98.8	75.1	100.2	86.0	64.5	56.6
1917	93.9	120.7	95.3	102.2	92.8	81.9	67.7
1918	114.6	148.4	137.4	107.3	99.5	114.5	79.9
1919	134.9	166.1	175.8	130.4	113.7	144.3	93.0
1920	143.8	153.7	175.2	176.2	134.7	158.3	105.4
1921	132.8	133.4	127.7	195.5	141.8	127.4	104.9
1922	131.2	131.4	117.0	200.3	129.0	124.7	105.7
1923	134.8	137.4	120.3	206.6	118.8	132.0	107.3
1924	132.0	133.0	118.5	198.7	119.1	124.5	107.3
1925	133.6	145.7	116.8	178.6	119.1	122.4	110.7
1926	128.7	139.8	115.1	166.3	119.3	117.3	108.1
1927	126.7	135.2	112.8	162.1	117.7	114.5	109.3
1928	126.0	136.8	112.0	154.0	114.3	109.2	110.8
1929	124.4	134.9	111.2	147.8	114.2	107.9	111.2
1930	116.0	115.4	105.3	140.8	110.7	101.1	110.4
1931	105.7	99.1	92.0	129.2	109.8	89.7	106.9
1932	95.0	84.8	83.0	107.8	110.2	78.3	103.1
1933	94.1	91.2	92.5	92.0	104.7	87.9	97.9
1934	96.3	98.8	96.0	87.9	104.4	91.1	97.9
1935	95.1	98.2	96.9	88.6	104.4	95.8	93.4
1936	99.4	101.6	97.5	96.5	99.5	98.5	99.5
1937	103.2	101.2	104.3	106.9	98.8	105.8	103.1
1938	102.6	100.7	102.3	100.0	98.8	101.8	102.4
1939	100.4	94.6	103.2	107.4	95.5	102.0	102.1
1940	102.2	99.9	103.4	106.4	95.5	101.1	102.9
1941	112.3	118.6	116.6	108.5	94.2	115.3	108.6

Worse Than Living Costs

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. SCHWABE of Oklahoma. Mr. Speaker, the following article from the editorial page of the Daily Oklahoman of Oklahoma City, Okla., of January 19, 1948, speaks for itself:

WORSE THAN LIVING COSTS

Curiously missing from the average conversation on today's chief topic of discussion—the high cost of living—is another cost which not only is higher, percentage-wise, than the cost of food, clothing, and shelter, but which is only adding to those costs as it goes along.

Bread costs rose between 1940 and today approximately 50 percent. In the same period governmental costs or Federal spending increased 370 percent. And Mr. Truman's budget calls for no reduction—rather it calls for $2,000,000,000 more than the 1947–48 fiscal year.

Possibly it is a blind spot in the average American's thinking. Perhaps the full import of Government spending has not yet dawned on him. But if living costs had gone up 370 percent in the past 7 years his blind spot would have been quickly overcome. Of course, much of the mushroomed governmental costs are in hidden form but, if they are, their cost is no less real.

If we, as a whole, are really concerned beyond the conversational stage about our living costs, we will quit grumbling and calling for controls and more regimentation and demand of our Senators and Representatives a sharp reduction in Government spending as the speediest and surest relief. Even Mr. TAFT hasn't scratched the surface when he

suggests a $3,000,000,000 cut. With bureaucracy four times larger now than it was in 1940, there is ample room for trimming far beyond the surface scratch proposed by the Ohio Senator, or the vote buying and illusory $40 tax cut suggested by Mr. Truman.

Proposed Aid to European Nations

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. POULSON. Mr. Speaker, I am enclosing a letter from a reputable and successful attorney in Los Angeles, Mr. William D. Mann, who has just recently spent over 20 months in France. He has served in a capacity in the Army which would grant him the opportunity to make observations which, in my opinion, would be far more valuable than those made by casual visitors. There has been so much propaganda and so many false statements about the conditions in France and other European countries that I think this letter should be read by all who are interested in the foreign situation.

The letter follows:

JANUARY 27, 1948.

Hon. NORRIS POULSON,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR MR. POULSON: This is merely to restate, in more comprehensive form, the views I expressed to you a few weeks ago, while you were in Los Angeles, pertaining to the proposed program for aid to European nations.

I have recently completed a tour of nearly 6 years of active duty as a Reserve officer in the United States Army. My last assignment was as Staff Judge Advocate, Headquarters, American Graves Registration Command, European Area, Paris, France, from February 1946 to October 1947. During that time, I lived in Paris, traveled over a goodly portion of France, talked with other officers, whose duties took them to all parts of western and central Europe, and conversed with many French people, in all walks of life. Further, I made motor trips over parts of Italy and England. As a result of my observations and what I learned from others, I I have formed some rather positive opinions as to the present economic situation of the French, Italian, and English peoples, and the policies of their respective Governn ents. The announced policies of our Government and the intensive propaganda, which I found on my return to America, are so at variance with what I consider the factual situation to be, that I feel impelled to make my conclusions known to you.

In the first place, I do not believe there is starvation, or prospects of starvation, in France. There are no empty counters or shelves in the provision and meat stores and markets—wherever one goes, large stocks of foodstuffs are visible. It is true that there is a shortage of certain food products from time to time, but such things happen also in the United States. At the present time there is certainly a shortage of wheat on the open French market, resulting in reduced ration quotas of wheat bread and the use of mixtures of corn and other substitutes in the baking of bread, but it seems to be the thought that there is a year's supply of wheat on the farms, and the French Government has made some effort to loosen this up, by threats of prosecution. Then there are millions whose incomes are insufficient to meet the radically increased prices of the food necessaries of life and who certainly are suffering as a result. To my mind the problem is not one of supply but one of distribution. Profiteering and the black-market operations are rampant in France, and to this the inflation there is largely due. In that country inflation hits the wage earner much harder than it does here, for here compensatory wage adjustments have been accomplished through strikes and otherwise from time to time, while in France the wages until recently remained at about the 1938 level. I have been told that the cost of living for the poor man has increased about 800 percent since that year. So far as I could find any efforts of the Government of France to stamp out inflation have been very feeble indeed. On the other hand, that Government repeatedly and vigorously refused, until recently, to sanction any increase of wages to the worker, on the theory that such increase would operate as a further inflationary influence. In France the property classes can get just about anything they desire on the black market, but it is not their custom to readjust their appetities so as to permit a fair division of food products with their low-income brothers. The point I desire to emphasize is that the Congress should be careful to distinguish between inadequacy of supply and inadequate distribution methods and procedures. If it be true that the present food situation results from faulty distribution methods and economic administration, then the problem is clearly one for the respective nations and not one for us. An interesting side light as to France is dogs. Greater Paris is a city of about 6,000,000 people. Nearly every family has a dog. I've been told that there are 400,000 dogs in Paris. At that rate there would be nearly 3,000,000 dogs in all France. French do not go in for lap dogs or the small terrier type; they like big stout fellows, who need plenty of food. They take grand care of their animals; the horses are big, fat, and beautifully groomed, and I never did see a dog in Paris that didn't look very well fed. Now I am not advocating that they eat the dogs, but the willingness and apparent ability to support so many of them in the manner they do is a bit incompatible with the starvation story.

While I believe that there is no question but that the countries of western Europe should be supplied with some immediately needed machine tools, coal, and raw materials, or with the wherewithal to purchase the same, yet the coupling of political implications with the loans (or gifts), will, I think, prove to be a serious error in the long run. The peoples of Europe, particularly the Latins of Italy and France, have lived in an atmosphere of intrigue and suspicion for so many generations, that they suspect, not only their neighbors, but any who seek to influence them in their government processes or political economy. The proposed aid plan is considered by many Europeans as a device for American political and financial control of Europe. This apprehension is shared by many moderates. I am convinced that democracy cannot be successfully sold to the nations of Europe by the giving of a bonus in the form of financial support with political conditions attached. In any event, give them what we will, those peoples will be just the same after as before.

Assuredly, there are Communists in France, and trouble makers they are, too. But I have been told by intelligent French businessmen that France being predominately Catholic, a Communist dominated government in that country is impossible. Further, France is firmly entrenched in its parliamentary system. The average Frenchman is probably better informed as to political aspects and the administration of his Government than is the average voter in the United States. No radical change in its form of government could be accomplished excepting at the polls. Of course, if later a majority of the voters decide that a change to the communistic system would be desirable, that would be their business and our efforts and money would have been wasted anyway. However, that condition is very remote indeed. There are so many forms of socialism now that some of our people seem to find it difficult to distinguish between them. I am convinced that no nation of western Europe is, or will be, interested in the Russian brand.

For centuries the French have loved to demonstrate and parade. That is nothing new. I have seen long segments of parades converging on Place de la Concorde 200,000 strong. There doubtless were communistic elements involved in those demonstrations, and also in the recent parades accompanying strikes publicized by our papers. However, I believe that the primary motive for those strikes, as well as for prior strikes, was to force an increase of minimum wages from the equivalent of $58 per month to the official rate of exchange (it would be about $28 at the black-market rate) to the equivalent of $90 a month at the official rate. The newspaper headlines featured only "defeat of the Communists," yet in the text following I noted that substantial wage boosts had been sanctioned as a condition to termination of the strikes. As I see it, the strike situation in France grew out of the short-sighted policies of the French Government and its unwise and ineffectual administration of the economic affairs of the nation, rather than from a real communistic menace, which latter explanation the French may well be deliberately asserting for the purpose of protecting their upper and middle classes at our expense. It is very possible that those classes are crying "wolf" in order to avoid taxes necessary to feed their own poor and meet their country's needs.

As to Italy, I believe the situation and the country's needs to be about the same as in France, excepting as to the dog population. It is said that there, also, at least a year's supply of wheat is held on the farms. The large supplies of all types of merchandise in the stores of Florence, Rome, and other centers, indicate no lack of activity on the part of the factories. Certain bombed-out industrial centers are naturally in a bad way.

From what I saw of the farming regions of Germany they looked very prosperous indeed. Of course, in the bombed-out industrial cities there is much unemployment and many people do not have the means to buy sufficient supplies of food. But that situation does not act to decrease farm production—rather it has to do with distribution methods and procedures.

As to Great Britain, I think the situation to be rather different. Great Britain cannot raise enough food for its own people. It has in the past depended, and always must depend, on other nations for a large proportion of its food supply. Be that as it may, I feel that the British are of the opinion that they can work out their problems even without the proposed plan.

My purpose in writing this letter is to emphasize the importance of balanced thinking in any aid-to-Europe plan, and of measuring carefully the possible recoil thereof on our own domestic economy. The factual situation only, and not frantic propaganda, must be considered. Let's not get ourselves in a horrible jam. My own answer would be to permit substantial increase of coal production in the Ruhr and arrange a larger allocation of such coal to France, to send some wheat where absolutely needed and to supply needed machine tools immediately required. The vast balance planned to be spent I would appropriate to finance a universal military training program and to establish, train, and

maintain the damndest, biggest Army, Air Force, and Navy in the world. In such a program lies our protection, not in a highly idealistic plan, however well meant.

Perhaps I should add something about myself. In civilian life I am a practicing attorney. I am a Hamiltonian Republican, having the deepest respect for the provisions of the Constitution of the United States, these days so frequently disregarded. I no more desire that this country become Fascist than I desire that it become communistic.

Very sincerely yours,

WILLIAM D. MANN,
Los Angeles, Calif.

Margarine Taxes

EXTENSION OF REMARKS
OF

HON. ELLSWORTH B. BUCK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. BUCK. Mr. Speaker, under consent to extend my remarks in the Appendix of the RECORD, I include the following recent editorials from Wisconsin newspapers all advocating the removal of discriminatory Federal taxes on margarine:

[From the Janesville (Wis.) Gazette of December 19, 1947]

MORE COMMENT ON ANTIMARGARINE LAWS

Dairy folks in Wisconsin are deluding themselves if they still think that we can legislate competition out of the market, no matter what the commodity. Opponents of natural gas tried it and failed. The people interested in forcing out unfair competition succeeded in getting laws in many States to rule out margarine colored to imitate butter's yellow.

Taxes to eliminate margarine competition in a free market, however, is a different thing. Today, with butter prices inflated to nearly $1 per pound, Wisconsin still persists in taxing retailers heavily for handling margarine, taxing colored margarine out of the market, and taxing margarine at 15 cents per pound.

Housewives here who cannot afford $1 butter are put under an unnecessary hardship. Why should Wisconsin housewives be forced to pay 15 cents per pound extra for margarine when butter is out of their reach? Wisconsin's State margarine tax is unjust and unreasonable.

The dairyman's original argument for the tax against colored oleomargarine was just. The yellow substitute was being foisted upon an unsuspecting public. Since then, however, the heavy Wisconsin tax has simply served to place an extra burden on Wisconsin housewives. It does not serve its original purpose of eliminating the butter substitute which was then made from southern vegetable oils.

Today Janesville's soybean plant is extracting soybean oil and shipping one to three tank cars per week. Part of it goes to the making of margarine. Is it logical that Wisconsin's heavy margarine tax, passed to eliminate cheap southern oils in margarine for Wisconsin butterfat in butter, should also be used to force out Wisconsin vegetable oils in the butter substitute?

Regardless of what we in Wisconsin think of margarine, and regardless of our pride and desire to protect the butter market, we are fooling ourselves if we think the country is not rising up against the antimargarine taxes.

Newspapers in 23 States recently have printed editorials against the antimargarine taxes. Part of their arguments lie in the fact that butter prices are so inflated. Some of these States, however, are heavy dairy producers, like Wisconsin.

We might as well face the facts. Margarine consumption is rising tremendously. It was given very helpful support by the New Deal during the war. If butter is to compete successfully, it must meet that competition squarely and on its own merits.

No commodity can long depend upon legislation to outlaw competition. It cannot be done successfully, for when the people learn how it affects them, they eventually repeal the law.

Butter is the finest table spread on the market. Wisconsin butter has no equal. Despite the exaggerated claims of the margarine makers, margarine cannot compete on the same plane with our luscious dairy product. But butter is suffering a terrific blow because of price. Now it is more necessary than ever to advertise and capitalize its merits.

[From the Racine (Wis.) Journal-Times of December 24, 1947]

UNFAIR OLEO TAXES

With butter nudging the $1-a-pound figure, this appears to be an opportune time to examine the fairness of the State and Federal taxes on butter substitutes.

Today's housewife, who cannot afford high-priced butter, is unable to purchase oleomargarine in many stores. Even where she can, it is higher than in other States and is uncolored.

The reasons, of course, are the numerous State and Federal taxes and license fees which were voted by Congress and the legislature under the misguided notion that they could eliminate competition for butter.

In Wisconsin, the State puts a tax of 15 cents a pound on uncolored oleo, and the Federal Government adds another tax of one-fourth of 1 cent. The Federal tax on colored oleo is 10 cents a pound.

In addition there are special license fees for both wholesalers and retailers. The State license for retail stores selling oleo is $25, and the Federal is another $6. The State license for wholesalers is $500 and the Federal $200. If the oleo is colored the Federal wholesale license fee goes up to $480, and the retail license from $6 to $48.

This, of course, only means that the price of oleo is artificially forced far above the competitive price. It means that the thrifty housewife is penalized if she seeks to find a substitute for $1-a-pound butter.

The American Public Health Association declared that Federal and State laws handicapping oleo in favor of butter are detrimental to public health. Many people who cannot afford butter, either use oleo or they do not get a necessary element of diet. These laws keep oleo off the shelves of many stores, especially small stores which would have to sell a lot of oleo to cover the license fees.

Wisconsin farmers should realize that butter should be sold on its merits, as the finest table spread on the market, but not forced upon a people by legislation that drives substitutes out of the market.

Regardless of what we in Wisconsin think of oleo, and regardless of our pride in Wisconsin-made butter, we are fooling ourselves if we think that the country is not rising up against the anti-oleo taxes and restrictions. The State tax is unjust and unreasonable.

These taxes not only penalize the consumer by raising the oleo price, but they also penalize the farmers in many States who raise soybeans, cotton seed, corn, and peanuts, used in making margarine.

The Federal restriction against free competition of margarine with butter was voted back in 1886, and it cotninues to exist because the House Agricultural Committee, dominated by the dairy interest, is unwilling to allow the question to be decided by the entire Congress.

Representative MITCHELL, of Indiana, and Senator FULBRIGHT, of Arkansas, have introduced a new measure the repeal the Federal taxes. We hope that this move will have more success in the new Congress.

[From the Oshkosh (Wis.) Northwestern of December 15, 1947]

MANY TURN TO MARGARINE

Last week, in some places, including Milwaukee, butter soared to a dollar a pound, with $1.03 being charged where the butter is sliced into four sections and each section separately wrapped, which latter proceeding many consumers feel is just a device for charging more.

That there is a cutback in the production of dairy fat is not to be denied. Among the reasons given for this is the high price of feed for the cattle of the dairy farmers, and the fact that housewives are buying more fluid milk than ever before, also more ice cream, cheese, evaporated milk, and dried milk. Thus consumption of these items has been going up, while production of butter has fallen off.

Many households have turned to oleomargarine as a substitute for high-priced butter, but the tax put on the substitute product through the united efforts of butter production prevents that article from being sold to consumers at as low a figure as would be possible if the tax burden on the manufacture and handling of margarine were reduced.

For example, some time ago oleomargarine shipped in to consumers in Oshkosh from points outside the State sold for 35 cents a pound. Lately it has been 55 cents a pound. Even the latter price is a substantial saving over 98-cent butter.

Regarding the oleomargarine situation, a Minneapolis newspaper stresses:

"Butter probably would be higher than it is if it weren't for booming margarine production. Housewives are flocking to the vegetable product in droves. In 1939 they bought only 303,000,000 pounds of it. Last year it was 540,000,000 and this year it will amount to something like 740,000,000 pounds. Retailing in the 35-to-55 cent price zone, margarine costs less than half as much as butter."

[From the Oshkosh (Wis.) Northwestern of January 13, 1948]

RENEWED BATTLE FOR OLEO

The price of butter has dropped slightly hereabouts in recent days, but it still tries hard to reach that dollar-a-pound level that is the worry of the perplexed housewives. And the high cost of this product has given a new incentive to those in Congress who aim to have tax burdens taken off oleomargarine, so it can become a cheaper substitute for butter than it is at present.

Signs point to another spirited battle in Congress over what might be called the freedom of oleo.

From 1939 to 1947 the per capita consumption of oleo doubled in this country, while that of butter fell off by a third. In 1939 oleo consumption was 13 percent of butter consumption. In 1947 the figure was 40 percent.

These spectacular increases have been due to the fact that people like oleomargarine well enough to take advantage of the difference in cost, when butter prices start soaring.

[From the Oshkosh (Wis.) Northwestern of January 16, 1948]

WASTED MARGARINE

Sometimes statistics can be frightening. They turn trifles into monstrous totals. When a thrifty housewife, using margarine in place of butter, colors the product to

satisfy her family's preference for a yellow bread spread, she is likely to do it in a bowl. Inevitably some margarine remains on the side of the bowl when the operation is over. How much?

According to Ersel Walley, president of the American Soybean Association, this remainder of margarine mounts up to an annual national total of 15,000,000 pounds. Turned into tonnage, the waste is still impressive. Some better use could certainly be made of 7,500 tons of margarine.

Another kind of waste worries Mr. Walley. He believes that the coloring of margarine consumes 88,000,000 woman-hours per annum, greatly to the annoyance of the busy housekeeper.

All these figures, and others, contribute to the argument of the soybean growers that the 10-cent Federal tax on each pound of colored margarine should be cut to one-fourth of a cent, the present tax on white margarine.

Congress may find it difficult, in the near future, to convince the kitchen electorate that it shouldn't make that reduction.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. HOMER R. JONES
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. JONES of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Seattle Post-Intelligencer of February 14, 1948:

UNIVERSAL TRAINING VITAL FOR SECURITY—UNITED STATES WORLD POSITION DEMANDS POWER TO BACK PLANS

If the United States is to be in a position to preserve the peace in a world which looks upon us as a major arbiter among the nations, we need some form of universal military training, Representative HOMER R. JONES said yesterday in a letter to the Post-Intelligencer.

"Our world position demands of us that we have power to back up our proposals," JONES wrote. "It places us in the same position as an individual who must follow certain fundamental rules in order to maintain health and to build physical resistance to disease.

"In my opinion, protecting the security of the Nation and maintaining strength sufficient to resist and prevent aggression in any quarter of the world—a world no longer separated by simple arbitrary, geographical boundaries, but tightly knit together economically, politically and spiritually—are in the same category.

"I believe we can't afford again to repeat the mistakes of the past when lack of preparedness cost us thousands of lives and billions of dollars of resources. I do not believe that training the youth of our Nation to fulfill an obligation of citizenship in time of crisis is a move toward war, nor indicative of any national militaristic aspiration."

The Congressman said he believes that at this time the young men who would be called into service in the interest of preserving our possible national future would accept the responsibility as a form of national community service.

"It is not alone in times of war that our people have searched for ways in which to express their sense of responsibility and selfless devotion," JONES said. "In so-called times of peace a period of disciplined training might well represent to our young men a substitute for their wartime patriotism and could be an excellent beginning in their lives as citizens with a full sense of community responsibility.

"Such service could be for them the first intimation that they have obligations as well as privileges because of their citizenship in a democracy which, no matter how great the cost, all of us believe must be preserved."

JONES said he has the utmost respect for those who believe that universal military training might lead to distrust and world agitation, but is moved to extreme caution in the adoption of this point of view by his personal experiences and world occurrences, past and present.

"Were I convinced that total disarmament and abandonment of any training program by the United States would point the way to universal peace and set an example other countries would follow willingly, then I would embrace the theory which opposes universal military training.

"Certainly, I know something of the cost, the hardship, and the horrors of war, for I have served in uniform in both world conflicts, both as an enlisted man and as an officer.

"We look today at a world where hatred, suspicion, and greed seem to have been alleviated not a bit by the results of the late, great war. We see at least one nation pursuing policies and tactics reminiscent of the rise of Hitler in the 30's, and we watch this advocate of armed might engulfing smaller and weaker neighbors."

Universal military training, he said he believes, is the most important gesture which Americans can make to convince the nations of the world that the United States means to remain strong in a military way until some settlement is made within the United Nations organization which will make it possible for that body, "dedicated to the continuance of world concord and peace," to become strong enough to hold even a big nation in check.

"Until that time comes," he said, "I do not feel it is wisdom on our part to avoid any means of strengthening our ability to defend our interest in time of an emergency."

No Controls, Please

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. SCHWABE of Oklahoma. Mr. Speaker, the following expresses the thinking of many people of this country. One of my constituents has crystallized her thoughts and expressed them in verse on the subject, No Controls, Please.

They are pulling the wool down over your eyes
And telling you committeemen scarcity lies;
Yes, laying their plans for a police state,
Better get wise before it's too late.

They ask you Republicans for control legislation
And work to that end by misrepresentiton,
By hollering "No meat" and a "Big inflation";
It's simply a scheme for control of this Nation.

So they concoct excuses of the flimsiest kind,
Hoping you Congressmen will change your mind;
How I wish that I could sit in your place;
I'd tell 'em it's lies right to their face.

They are plenty shrewd and sly as a fox
And count you Republicans dumb as an ox,
And sometimes I'm thinking that maybe they're right;
If you don't say "no" and put an end to this fight.

If you were a landlady and in my place,
Then you'd perform the "right about face,"
You would kill the regiment of this OPA,
Else it'll grow a new head and be here to stay.

Under rent control there is no freedom;
Last August I was sued by a Mr. Creedom,
It's pure and simple old communism,
Just anything else but Americanism.

Mr. Woods wants power the landlords to sue;
Why not give him a deed to our properties, too;
Give him hundreds of police to turn him loose,
He'd soon have us all in the calaboose.

To extension of rent control we say "no";
We ask you give it a death-dealing blow,
For we elected you Republicans as our only hope,
Expecting you to rid us of this New Deal dope.

When you vote millions for the bureaucrats,
You make thousands of votes for the Democrats;
Now if I can see it then why can't you?
You could if you would and wanted to.

On February 29 we listen to hear you say,
You've ended rent control and the OPA;
No extension please, not even a day,
It's dangerous—no good—take it away.

Revive the Republic

EXTENSION OF REMARKS
OF
HON. MARION T. BENNETT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. BENNETT of Missouri. Mr. Speaker, I addressed a Lincoln Day banquet at Point Pleasant, W. Va., February 21. At that time my attention was called to a statement prepared by the Mason County, W. Va., Superintendent of Schools, Robert H. Ferguson. It is a fine summary of evidence to prove that this Nation is a Republic, was so conceived, and that propaganda about Democracy is misleading. The sooner we try to get back, all the way, to a Republican form of government, the better off we will be. The clever propaganda campaign of the Democratic Party to convince America and the world that such political party is synonymous with the principles of our form of government has succeeded too well. It is time we woke up and insisted, with the founding fathers, that the Republic and our Republican form of government for which the Republican Party stands, should be preserved.

The statement of Superintendent Ferguson is as follows:

REVIVE OUR REPUBLIC

We are seeing and hearing the word "democracy" through press, radio, books, and textbooks. This habit so referring to our form of government has been growing since 1932. (Could it be that a clever campaign has been on for years and is continuing to din the word into our ears and into our brains so that we will believe it?) Russia has now adopted the word.

The truth is that this Nation was formed a Republic and for a long time was a Republic with a republican government. In a democracy the people vote on all public questions themselves. Proof is in the Constitution which says in the fourth article, sixth section: "The United States shall guarantee to every State in this Union a republican form of government."

George Washington said, "The destiny of our republican model of government."

John Adams said, "A government in which the executive authority as well that that of all the branches of the legislature are executed by citizens selected at regular periods by their neighbors to make and execute laws for the general good."

Thomas Jefferson, who knew words so well that he was selected to write the Declaration of Independence, referred twice in the same address to republican government. He said, "We are all republicans." In the same address he said, "Let us then, with courage and confidence, pursue our own Federal and republican principles, our attachment to union and representative government."

President Madison said, "Our own republican institutions * * *. This rising Republic."

The learned John Quincy Adams referred to our Republic when he said, "Our happy condition under a Constitution founded upon the republican principle of equal rights."

Andrew "Old Hickory" Jackson said, "The eyes of all nations are fixed upon our Republic."

Martin Van Buren said, "The earliest and foremost pillars of the Republic * * * the power and influence of the Republic."

President Harrison said, "A simple representative democracy or Republic."

James K. Polk said, "The infancy of the Republic," and also "The ends for which our Republican Government was instituted."

Zachary Taylor was called "The Chief Magistrate of a Republic," he referred to, "Our own widespread Republic."

Daniel Webster spoke of our Nation as a Republic. He said in speaking of the death of President Taylor, "The Chief Magistrate of a Republic died suddenly * * * and those grand and imposing rites which the Republic confers on the most distinguished of her sons."

Franklin Pierce called our Nation a Republic. He said, "I have been called for a limited period, to preside over the destinies of the Republic."

James Buchanan spoke of our Nation as a Republic. In speaking of the necessity for honesty in our Government he said, "Public virtue is the vital spirit of republics."

Abraham Lincoln, who prized the United States of America above all considerations repeatedly referred to the Republic and republicanism.

President Grant said, "Our Republic" and "Under our Republic."

James A. Garfield said, "The new Republic was beset with dangers on every hand," and "Our own little children will soon control the destinies of the Republic."

Grover Cleveland said the "Constitution launched by the founders of the Republic," and "Presidential economies are best suited to the operation of a republican form of government."

Benjamin Harrison said, "Equipping the young Republic for the defense of its independence."

William McKinley said, "Our full duty as citizens of the great Republic," and illiteracy is "a grave peril to the Republic" and "the trust imposed upon the Chief Executive of the Republic" and "the builders of the Republic" and also "the Republic has marched on and on."

Teddy Roosevelt, who boasted one name only, said, "the tasks set before our fathers who founded this Republic in the days of Washington, which made great men who preserved the Republic in the days of Abraham Lincoln."

These men said, "Republic." What is a republic? It is a representative form of government in which sovereignty is "of the people, by the people, and for the people" but in which the sovereignty is not exercised by them directly but through selected representatives elected by the people and subject to their will.

Democracy is the form of popular government wherein the power to govern is retained by the people and exercised directly by the people as in Switzerland. Democracy is practicable only in very small countries. Democracy in a land of over 135,000,000 people would be unwieldy.

Representative government with the power of election, change, recall, resting in the people with representatives acting for them, is republican in form and makes a republic.

Were these great men we have quoted wrong in their statements? If they were wrong, then we are right in speaking of our Nation as being a democracy. If they were correct in statement, then we must be wrong in the use of the term "democratic." We conclude that unless this Nation has changed from the ideals set by our forefathers that this Nation is a republic with republican form of government. The choice of Washington, Jefferson, Adams, Jackson, Lincoln, Cleveland, McKinley, and the others as to what our form of government should be called is our guide.

What caused this sudden change from the republican ideals of our forefathers? Over the world today the cloak called "democracy" covers much and many alienisms. Let us reverently say again the pledge to the flag and stress "and the Republic for which it stands one Nation indivisible with liberty and justice for all."

Poems by Horace C. Carlisle

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. SHEPPARD. Mr. Speaker, in commemoration of the passing of another birthday of Washington, with the present perplexed with national and international problems, and with the future beclouded with uncertainties and alarms, it is refreshing to view, in retrospect our patriotic past, whose most inspiring character is the immortal Washington, now and forever, first in war, first in peace, and first in the hearts of his countrymen.

In keeping with the persevering spirit inherent in the far-seeing founders of our Republic, Americans of today appreciate, in a very special way, the character, courage, and capacity of Washington, as portrayed in a small group of poems from the pen of Horace C. Carlisle, frequently referred to as the poet laureate of Congress, because of his many appropriate poems which have been published from time to time in the CONGRESSIONAL RECORD.

Knowing, as many of us do, the hearty appreciation of the American people of Mr. Carlisle's contributions to the columns of the CONGRESSIONAL RECORD, under unanimous consent, I include in the RECORD as part of my remarks this little group of picturesque poems, characteristic of the ever-enlarging life of the illustrious Washington, and unhesitatingly I recommend them to the teachers in the schools of the Nation as a means of implanting and cultivating the great fundamentals of patriotic Americanism in the minds and in the hearts of our aspiring youth:

WAKEFIELD

In the wilds of Westmoreland, Virginia,
Back when power laughed justice to scorn—
That such tyranny might not continue—
Freedom's unafraid founder was born,
Making Wakefield, the home of his parents—
As the banner of hope was unfurled—
Wherein virtue spurned further forbearance,
The New Bethlehem of the New World.

Tho' no star hovered over his manger
To direct the wise men, from the East,
To the spot where this newly born stranger
Lay, unchristened by prophet or priest,
As he humbly was born into being—
Ere the Stars and the Stripes were unfurled—
Wakefield woke, as the shadows were fleeing,
The New Bethlehem of the New World.

In the arms of caress—and correction—
Up thru infancy, Washington grew
Into childhood, approaching perfection—
Nearer still than his own parents knew—
And the site of the home of his childhood
Stands today, 'neath Old Glory unfurled,
Souvenir from the primitive wildwood,
The New Bethlehem of the New World.

"MARY, THE MOTHER OF WASHINGTON"

In the mem'rable days of devotion and danger,
With her hands folded peacefully over her breast,
The once belle of the famed Northern Neck of Virginia
By affection's kind hands was laid gently to rest—
And above the lone spot where she's silently sleeping,
Where in life oft she met with her Maker in prayer,
Simply, "Mary, the Mother of Washington", graven
On an obelisk, tells us who's slumbering there.

None but God knows the depths of the inner emotions
That welled up in the secrets of Washington's heart,
As he turned back the years, thru divine meditation,
At the spot where his mother and he had to part;
For this mother of his, who endowed him with being,
And in infancy taught him her love for the truth,
Had bequeathed him a character, conscience, and courage
That directed his course from his earlier youth.

And, in all the long years of the fierce Revolution,
Thru which Washington fought with miraculous skill,
The great principles, practiced in life by his mother,
And transmitted to him, were his guardians still;
And these principles, born in him at the beginning—
Robbing enmity's wounds of its coveted scars—
Guard America still in her every great struggle,
And give glory divine to the Stripes and the Stars.

WASHINGTON, FIRST PRESIDENT

Washington, first both in war and in peace,
Master supreme of the sword and the pen,
Was, long before his untimely decease,
First in the hearts of his own countrymen.
Character fashioned his boyhood and youth,
Not so much thru the restraints of the rod
As thru his love for the eternal truth,
Verified in the great volume of God.

Washington, back in his earlier teens,
Laid for his future a practical plan,
Using his every available means,
Growing in favor with God and with man—
He became master, deservedly so,
Of every great task that he tried to do—
And thru experience he'd come to know
That with God's help he could carry it thru.

Washington had a sweet mother, and she
Poured her best self into his budding life—
He, to her God, learned to pray at her knee—
And kept it up, in the midst of the strife
For independence, that had to be won
'Gainst proud Old England, in spite of her boast—
And, as he prayed, "Not my will, Thine be done,"
England surrendered, and her fight was lost.

Washington, when Independence was won,
Went to Mount Vernon, his haven of rest;
But, ere his surcease from toil was begun,
And peace, renewed, reigned supreme in his breast,
He was called back into service again,
And eight more years he courageously spent,
Serving his countrymen who, in refrain,
Hailed him their choice as their first President.

Washington, great both in peace and in war,
Shines upon history's pages today,
As the most lovely, illustrious star
That ever scattered the darkness away—
Throughout the dark Revolution's long night,
Briskly and brightly and bravely he shone
With a reflected, most marvelous light—
Pillar of fire through the night for his own.

Washington loved both the church and the state—
He loved them both from the depths of his heart—
But knew that both of them could operate
In greater harmony, if kept apart.
If throughout all wisdom's realm we should search
Out the real cause that makes both of them great,
Love is the power that governs the church,
Law is the power that governs the state.

MOUNT VERNON

By the side of the silver Potomac,
Where his waters flow silently on
Is the spot set apart
In America's heart
As the dearest the sun shines upon—
Here the flowers still grow in the garden,
And the grass still grow at our feet,
In the fashion that they
Grew in Washington's day,
When he lived in this quiet retreat.

Here the world's greatest human exemplar
Sought repose in the calm tides of life,
Hid away from the cares
Of the Nation's affairs,
Snuggled in from confusion and strife—
In the sweet rustic stillness of nature,
With her ways so entrancingly odd
Like the Psalmist of old,
Did he oftentimes hold
Sweet communion with nature and God.

Not a call ever came from his country
To which he did not gladly respond,
And when came the last call—
For life's curtain fall—
He was ready for heaven's beyond.

But his beautiful home at Mount Vernon
Still is ours to have and to hold—
May the footfalls of time
On this treasure sublime
Fall more tenderly, as it grows old.

When the wasting of centuries crumble
The old mansion to ashes and dust,
And the little brick room
Guarding Washington's tomb
Is dissolved by the rain and the rust,
Will his character, spotless and perfect—
Unbesmirched by iniquity's scars—
In the sweet by-and-by,
Where the great never die,
Ever shine, on and on, like the stars.

And our beautiful Capitol Building—
Like Mount Vernon in favor and fame—
On the Capitol Hill,
Grows more popular still,
With the worshipful Washington name.
Even tho it expands with the Nation,
More majestic, imposing, and grand,
It has graciously grown
Round the same cornerstone
That George Washington sealed with his hand.

AMERICA'S MEMORIAL TO WASHINGTON

Our National Capital, matchless in grandeur,
In every respect, from foundation to dome,
Stands fixed in the mind, an indelible picture—
"Wherever we wander, wherever we roam"—
A fitting memorial to its great founder—
Conceived in the womb of his wonderful brain—
Whose plans, from the past, for the present and future,
Conclusively prove that he planned not in vain.

And Washington City, with all its attractions,
In ready response to the call of the States,
Reaches out, past the District, in every direction,
Where natural beauty invitingly waits.
But this the great Capital of our great country—
That had its beginning in his thoughtful brain—
Is but a Memorial to its wise founder
Whose labors of love have been spent not in vain.

The United States, with its forty-eight nations,
United, by common consent, into one,
Long since recognized by the world's greatest powers
As first of all governments under the sun,
Expanding by leaps and by bounds down the ages——
Commensurate with the great breadth of his brain——
Is but proud America's master memorial
To Freedom's defender who fought not in vain.

NOT THE NATION'S WISH, BUT WASHINGTON'S WILL

Immediately under the spacious Rotunda,
Beneath the great Capitol Dome,
The crypt was perfected—tho later rejected—
For Washington's last earthly home;
For he had requested, as his will attested,
To be laid away to his rest,
To sleep thru the stages of time's ageless ages,
As Mount Vernon's time-honored guest.

While, like a song-poem, the river below him
Sings on 'neath the sky's changing gleam,
Unharmed and unhurried, unwatched and unworried,
He wished there to silently dream,
In unbroken slumber, thru years without number,
Till his Lord and Master shall come,
And gently awake him, and lovingly take him
To his waiting, eternal home.

Yes, directly under the vaulted Rotunda,
Beneath the world's most noted Dome,
His Nation intended that, when his life ended,
He should rest in this rock-wrought home;
But, since he requested to sleep, unmolested,
At Mount Vernon, he's laid away,
Contentedly sleeping, in her care and keeping,
Until comes the great Judgment Day.

LEAD US EVER ON

Blessed God of our salvation, on this, Washington's birthday,
O deliver us from evil, and purge all our sins away—
Grant that we Thy righteous precepts may remember and obey—
And lead us ever on

Chorus:
Look upon us, Lord, in mercy—look upon us, Lord, in mercy—
Look upon us, Lord in mercy——
And lead us ever on

As we look out on our country, may we stray not into doubt—
Banish every thought of envy, and thus drive all hatred out—
Lord, prepare these hearts of ours for a world-peace vict'ry shout—
And lead us ever on

May we keep on marching forward underneath the Stripes and Stars.
In the name of right and justice for the sake of freedom's cause,
May the Price of Peace direct us in our fight to end world wars,
And lead us ever on

By the valiant sacrifices that illuminate the past,
O Thou Father of the ages, from the first one to the last,
We've attained to heights of glory, now by shadows overcast,
Lead Thou us ever on

(Tune: Battle Hymn of the Republic.)

Service Activities of the DAV

EXTENSION OF REMARKS
OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. MARTIN of Iowa. Mr. Speaker, recently I had lunch with a long-time friend of mine, who is a past national commander of the Disabled American Veterans, which has served to remind me of the outstanding record of achievements and the future program of this unique organization of which I am proud to be a life member.

Formed in 1920 and chartered by the Congress in 1932 to render service to, for, and by America's disabled war veterans, the DAV has been generally recognized as the official spokesman for America's disabled defenders.

DAV MEMBERSHIP ELIGIBILITY

According to its Congressional Charter of Incorporation—Public Law 186, approved June 17, 1932, as amended by Public Law 668, approved July 15, 1942—active membership in the DAV is open only to those Americans whose bodies bear the scars of wounds or injuries, or the blight of ailments or disabilities, incurred during or by reason of active war

service in the armed forces of the United States, or of some country allied with it, during time of war.

More and more wounded and disabled veterans of World War II are becoming active members of the DAV.

Eligibles may become life members of the DAV upon payment of a fee of $100—$50, if born before January 1, 1902—in cash, or by a down-payment of $5, or more, plus such installments as will complete payment of the full fee by the end of the second succeeding fiscal year ending on June 30, after which, if not fully paid, a carrying charge of $5 per year would accrue. A growing number are becoming DAV life members.

DAV SERVICE TRAINING PROGRAM

Realizing the need for extending assistance to all veterans and their dependents after the close of World War II, the DAV entered into an agreement with the Veterans' Administration and the American University in Washington, D. C., back in 1944, to train some 400 World War II handicapped veterans to become National Service officers. An intensive 6-months special course was set up, followed by 18 more months of on-the-job training in three different regional offices of the Veterans' Administration under the supervision of old-time, long-experienced DAV service officers.

The members of the tenth and last class of such trainees received their diplomas in May 1947 and are now completing their job training in all parts of the country.

This is the most intensive and ambitious program yet attempted by any veterans' organization, to provide, without cost to the applicants, expert aid and assistance in the solution of the many problems confronting veterans and their dependents.

No veterans' organization has any more extensive and effective Nationwide service staff to take care of the problems of all veterans and their dependents, and particularly those who have service-connected disabilities, than the DAV.

During the more than 28 years of its service activities, the DAV has sponsored and supported much liberalizing legislation on behalf of disabled veterans and their dependents.

Liberalized application of such laws, too numerous and too technical here to set forth, has, each year, been brought about by numerous conferences with officials of the Veterans' Administration and other governmental agencies.

DAV NATIONAL HEADQUARTERS

Located at 1423 East McMillan Street, Cincinnati 6, Ohio, the national headquarters of the DAV takes care of all administrative matters and records and publishes the Disabled American Veterans' semimonthly newspaper containing accurate, up-to-date information as to all existing and pending legislation, Presidential Executive orders, court decisions, opinions of the Attorney General, Comptroller General, and VA Administrator, VA regulations, service letters, circulars, and other instructions, as well as much other information of interest and of value to disabled veterans and their dependents.

The present national commander of the DAV is John L. Golob, of Hibbing, Minn., a badly wounded World War I veteran—an insurance agent in private life—who has had a broad background of 28 years of experience in various local, State, and national DAV activities which qualify him to lead an organization composed exclusively of America's disabled war veterans.

Its national adjutant, Vivian D. Corbly, has been secretary-treasurer—business manager—of the organization, and editor of its newspaper since 1925. Capt. Cicero F. Hogan is his able assistant.

The largest bank in Cincinnati, the Fifth Third Union Trust Co., has for 28 years been the depository for the funds of both the DAV and of its incorporated trusteeship, the Disabled American Veterans' Service Foundation. Officials handling funds have always been adequately bonded by the Fidelity & Deposit Co. of Maryland.

NATIONAL SERVICE SET-UP

The national service headquarters of the DAV is now located in a beautiful building at 1701 Eighteenth Street NW., Washington 9, D. C., which was acquired by the organization in 1945.

In this Washington office are located the department of claims, headed by William E. Tate; the department on legislation, headed by Mr. Francis Sullivan; and the department of public relations and employment, headed by my good friend, Millard W. Rice. In addition to these service departments, the DAV service headquarters has its office manager, John E. Fighner, as assistant national adjutant. All of these various departments are staffed by trained experts, all of whom are themselves war wounded or disabled veterans.

These DAV national officers know all about the technical complications that disabled veterans must overcome factually to prove the service connections of their disabilities to the satisfaction of rating agencies of the United States Veterans' Administration, under the limitations and restrictions of existing law, as legalistically interpreted and as administratively applied.

Understanding such vexatious problems by personal experience, DAV national service officers are naturally more sympathetic than are non-disabled veterans or civilians and are therefore generally more effective in helping disabled claimants to comply with technical requirements to prove legal entitlement to benefits to which they may be lawfully and equitably entitled.

DAV SERVICE ACCOMPLISHMENTS

The DAV has freely rendered technical help to thousands of disabled veterans each year in obtaining compensation for service-incurred disabilities, medical treatment, hospitalization, insurance benefits, pensions for dependents of deceased veterans, vocational training, civil service appointments and, last, but really first in importance, suitable, gainful employment.

During the past 18 years, for which records are obtainable, the paid national service officers of the DAV have extended service as indicated by the following brief résumé:

Claims handled, 1,525,753.

Monetary benefits, $132,512,111.87.

Additional compensation payments thus obtained for thousands of disabled veterans and their dependents, who might not otherwise have been able to procure such needed benefits, have converted such beneficiaries from local liabilities into community assets.

It is, of course, not practicable, in a brief statistical résumé, to indicate the many different types of service extended by service officers. Many liberalizing precedents have been established by the decisions obtained, which subsequently have proved of value to hundreds of thousands of disabled veterans having similar claims, the results of which cannot be computed from service reports.

DIFFICULTIES OF PROVING SERVICE ORIGIN

Most citizens agree with the DAV that the Federal Government should bear the burden of providing for the Nation's defenders, but only when it has been established that the veteran's disabilities were incurred in or aggravated by his military service.

To prove service connection of a disability, however, is not an easy thing to do, except where official records show its inception in service. An equitable claim cannot necessarily be legally established.

Many different factors may make it extremely difficult, and in many cases impossible, for a veteran factually to prove that his disabilities were caused by his war service, even though actually service-incurred or aggravated.

EMPLOYMENT PROGRAM

The DAV has adopted, on a Nationwide basis, a man-job-matching-method program to provide suitable, useful, gainful employment for all disabled veterans. Less than 7 percent of the Nation's 2,100,000 compensated war-disabled veterans are totally unemployable. The remaining 93 percent are less than totally disabled and must, therefore, supplement their inadequate compensation payments with income from employment.

This scientific approach to a most distressing problem has produced some worth-while results thus far. The handicapped veterans' abilities have been matched with the requirements of the job rather than stressing his disabilities. It has been demonstrated by the employment record of such disabled veterans that they have a low absentee record, a low turn-over record, a low accident record, and a higher efficiency and production record. It has thus been demonstrated that to hire disabled veterans is just plain good business, bringing benefits directly to them, their dependents, their communities, their employers, and taxpayers generally.

AN INVESTMENT IN PATRIOTISM

It is definitely in the interest of all Americans that the fight for justice must be made for those who have sacrificed their youth and a part of their bodies or their health in our country's most hazardous occupation, its military and naval services during time of war.

The faith must be kept with those who have made such sacrifices in the past, as well as with those who are, or have been, dependent upon these heroes, so that other young men who, in the future, may be called upon to make similar sacrifices, will have the assurance, on the basis of past performance, that if they, too, should also be so unfortunate they

will not be permitted to become mere forgotten heroes.

The determination of the DAV to see to it that America's disabled veterans are adequately provided for should be generously supported, as a public investment in the future patriotism of our youth, and as practical patriotism which brings huge humanitarian and financial dividends to every community, to every State, and to our country.

HOW DAV SERVICE IS FINANCED

The DAV has been able to maintain its extensive service program primarily out of funds contributed by disabled veterans themselves, by their payment of membership dues in the DAV through its State departments and 1,443 chapters.

A national per capita tax of $1, plus a national service fee of $1, is paid each year to the national headquarters by every local chapter for each of its members.

Local DAV chapters finance their own service and relief activities out of their portion of the annual membership dues which average about $5 per year, by annual Forget-Me-Not Day drives, dances, and other projects.

Nationally, the DAV has recently been successful in raising substantial needed funds through its sale of Ident-O-Tags, miniature automobile license plates, to be attached to one's key ring. The value of this Nation-wide key insurance is indicated by the fact that about 4,000 sets of lost keys are returned each month to their owners.

DAV SERVICE FOUNDATION

To make possible a much-needed expansion of its rehabilitation activities, the DAV is hopeful that understanding fellow Americans will help to build up a needed trust fund of $10,000,000 or more by generous donations to its incorporated trusteeship, the DAV Service Foundation, 1701 Eighteenth Street N. W., Washington 9, D. C.

This DAV Service Foundation has 11 trustees, 5 of whom each serve for 5-year terms, 1 expiring each year and replaced by another as confirmed by the annual national convention of the DAV, 2 of whom automatically consist of the national commander and national finance committee chairman of the DAV, with the remaining 4 consisting of prominent social-minded citizens, each successively elected to serve for a 4-year term.

Donations received by the DAV Service Foundation are placed in separate State trust-fund accounts according to State of origin, with 60 percent thereof to be available for allocation to the DAV when needed, for the expense of maintaining one or more full-time national service officers in each such State, and with the other 40 percent to be available for use wherever needed.

WHY DAV NEEDS OUTSIDE HELP

Many eligible disabled veterans fail to become paid-up members of the DAV and, thus, do not help to maintain its Nation-wide service set-up on behalf of less fortunate disabled veterans, for varied reasons—some because they know very little about the DAV, some because of indifference, others because of selfishness, some because of negligence, and many others because they cannot afford it. If they all understood the implications involved, every service disabled veteran would decide that he should belong to the DAV.

The American public is, I am confident, desirous of fulfilling its obligation that those who return from hazardous military employment in the armed forces of the United States, handicapped by reason of such active service, shall be adequately provided for by a grateful Nation.

Such a service program deserves the solid support of all service-disabled veterans and of all Americans.

COMMENDATIONS OF THE DAV

Among many statements commending the DAV and its rehabilitation services the following are a few examples:

I am glad to learn that the Disabled American Veterans is endeavoring to expand the rehabilitation program on behalf of all handicapped ex-servicemen. Your committee is to be complimented on its leadership and patriotism in placing your organization in a position to render adequate service to those men who have so well served the Nation. I am sure that all Americans, particularly families and relatives of the war disabled, will approve this step. You have my best wishes for the success of the endeavor. (President Harry S. Truman.)

I am delighted to learn that you are taking effective steps to raise substantial sums for the purpose of providing for the future welfare and rehabilitation of disabled veterans. Your efforts will be fully rewarded in the lasting appreciation of veterans who have sacrificed so much." (Gen. Dwight D. Eisenhower.)

The purpose of your Nation-wide rehabilitation program * * * to extend needed assistance to members of our armed forces who become disabled, as well as to disabled veterans of the World War and their dependents, is, indeed, a worthy one and merits the full support of our citizens. (Franklin D. Roosevelt.)

Please express for me to the Disabled American Veterans my continued appreciation of their services to the country. (Herbert Hoover, former President.)

It is, therefore, particularly gratifying to me to learn of the plans of the Disabled American Veterans to expand its already extensive service program so as to make available to the handicapped servicemen of World War II, who are coming out of the present conflict in ever-increasing numbers, the valuable advice and assistance it has long rendered their fathers of World War I. These new veterans and their dependents also will need a helping hand, and I hope that the organization will meet with complete success in its campaign to provide now for the extension to them of its worthy activities. (Gen. John J. Pershing.)

I accept membership in the Disabled American Veterans with a sense of distinction. Membership in no group in the world carries greater honor than does membership in the Disabled American Veterans. (Gen. Douglas MacArthur.)

I am pleased to add my endorsement of the national service fund of the Disabled American Veterans. Certainly this program, which has for its objective the rendering of service to those who served, is a worthy one. It merits the support of all who are interested in the welfare of our disabled ex-servicemen. Your efforts are commendable and I wish for your program the success it deserves. (Gen. Omar N. Bradley.)

I feel very keenly the necessity for our proving to the lads who have really taken the rap in this war that the American people do not intend to forget them. I want to congratulate you on your willingness to take leadership in the drive on behalf of the Disabled American Veterans. The way in which we respond to the needs of our returning soldiers and sailors, and particularly the proof of our enduring recollections of their sacrifices, will provide one of the great tests of this Republic. (James V. Forrestal, Secretary of Defense.)

The DAV is not appealing for your sympathy nor to your patriotism, but is presenting a practical plan for making useful, independent citizens of our disabled veterans. It is to be commended for its excellent work. (Robert R. Wason, former president, National Association of Manufacturers.)

Be assured that we of the American Federation of Labor, who have long relied upon the principle that unity develops strength, look with favor upon the valuable service-giving activities of the Disabled American Veterans organization. (William Green, president of the American Federation of Labor.)

Labor's heart goes out to the disabled veterans, many of whom come from its own ranks, and we are eager to do everything we can to help these handicapped veterans and their dependents to secure the fair and generous treatment to which they are entitled. (Philip Murray, president, CIO.)

The Military Order of the World War passed a resolution endorsing the Disabled American Veterans * * * for the purpose of assisting disabled veterans in the preparation and presentation of their claims * * * a most important work. (Col. George E. Ijams, past commander in chief, Military Order of the World War.)

I know of no organization that I can more heartily commend and support than the DAV, whose purpose is the rescue and helping of disabled veterans. Let us hope all loyal Americans will recognize the DAV's humanitarian objective and program as their opportunity to demonstrate loyalty and patriotism. The people of the United States must not and will not fail those who did not fail them. (Gen. Robert Lee Bullard.)

It affords me real pleasure to heartily endorse the Disabled American Veterans * * * to assist individual deserving veterans in their local needs and in the technical prosecution of their equitable claims for compensation resulting from war-incurred disabilities. (JAMES E. VAN ZANDT, past commander in chief, Veterans of Foreign Wars.)

The DAV is helping to protect and to promote the best interests of disabled veterans, and of the general public, by maintaining and further expanding its national service bureau in Washington, D. C., and its Nation-wide set-up of national service officers. To do the job properly, however, the DAV needs to have at least three or four times as many full-time national service officers as it now has. (Congressman WALTER G. ANDREWS, of New York.)

The Unemployment Trust Fund

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1948

Mr. REED of New York. Mr. Speaker, the Social Security Act of 1937 provided for the laying and collecting of certain taxes from employers of labor in the States and for the use thereof for the relief of unemployed persons in those States.

In a closely divided Supreme Court, the constitutionality of the Social Se-

curity Act was upheld, on the theory that the greater number of the States had passed cooperating legislation and waived what was asserted as an infringement on the rights of States to manage their own internal affairs. At any rate most, but not all, of the States went along with the scheme contained in the Social Security Act for providing unemployment relief.

The Social Security Act, in the plainest of terms, provides that the moneys raised by taxes on employers of labor within the States shall constitute, and be, an unemployment trust fund in the Treasury of the United States. It is known, however, that no trust fund has ever been established, as required by Congress; and, on the other hand, the gigantic fund has been, and still is, being handled as a special deposit account which means that expenditures therefrom do not have to have the approval of the Comptroller General through the countersignature of warrants, as would be the case if the fund were handled as a true trust fund.

It is known that the Comptroller General, as early as 1937, insisted that the Treasury create a trust fund with those taxes, but the Treasury failed, neglected, and refused to do so, contrary to the will of Congress, with the assertion by the Treasury that a true trust fund would hamper the making of authorized investments of, and disbursements from, the fund. At any rate, despite the demand of the Comptroller General that the fund be established and handled pursuant to law, nothing has been done to carry out the expressed wish of Congress in that regard.

The Social Security Act authorizes the Secretary of the Treasury to invest such part of the unemployment trust fund as may not be needed for unemployment payments in direct obligations of the United States, or in obligations fully guaranteed by the United States. And the Secretary of the Treasury is empowered to credit the accounts of the several States with interest on the investments, namely, with interest payable on the securities in which the fund is invested. However, it has been ascertained that the Secretary of the Treasury has been, and is, crediting the accounts of the States with earnings at the rate of compound interest, so that the over-all earnings which have been credited amount to more than 6 percent of the total deposits made by the several States in the fund. Government securities do not bear compound interest, and it is manifest that Congress did not mean that compound interest should be credited and paid on the States' investments in this fund.

Inquiry discloses that, to June 30, 1947, the Government of the United States had credited compound interest on the States' investments amounting closely to $1,000,000,000, and the balance in the fund as of that date amounted to the very great sum of almost $7,000,000,000. Is not that a terrible price for the Government to pay for the mere privilege of receiving, handling, and paying out the States' funds deposited to relieve unemployment?

Examination of the Annual Reports of Social Security show, I am informed, that even during times of highest employment of labor throughout the States, withdrawals for the unemployed have far exceeded withdrawals in times when employment was far less than it was, and is, during, and since the war. Furthermore, it is said on good authority, that withdrawals since the war for unemployment have been heaviest in States where major and prolonged strikes took place; and it is known that, since the end of World War II's shooting, 11 of the participating States withdrew more from the fund than there was deposited by them in the years involved. Can it be that Congress meant and intended that this gigantic fund should be used, as it seems to have been used, as a war chest for striking workmen? It most certainly would seem that Congress did not so intend.

Another thing for consideration, in addition to the payment of compound interest on the investments, payments to strikers, and the like, is the fact that the longer this fund exists, the greater it becomes, and the greater the fund becomes, the greater its cost to the Federal Government.

With the recurring clamor for the extension of social security and the expansion of unemployment compensation benefits to be paid from the unemployment trust fund, and with rumored efforts of administrative officials to extend benefits of social security and unemployed persons without waiting for congressional extension of such privileges and benefits, it seems high time that these and possibly many other irregularities to which I have adverted be considered and corrected.

Much has been said concerning chiseling on these and other sociological plans of the administration; and it would be most interesting to know to what extent, if any, there has been overlapping of payments to persons entitled to unemployment compensation and other forms of governmental handouts. Surely, Congress did not mean and intend that one individual should receive duplicate benefits under the different schemes.

It has come to attention that the Social Security Agency's social workers, acting under the terms of Social Security Reports Nos. 8 and 10, have, in effect, passed out the word that citizens are expected to claim and get benefits under the Social Security Act any way they can; and that close questioning as to need and uses made of the benefits paid is not to be indulged in by representatives of the Social Security Agency. Those pamphlets certainly portray grossly loose methods of operation, and it is well to remember that the thoughts advanced and the policies followed by those administering the Social Security Act have been made the subject of a scathingly critical report by the Commission on Governmental Efficiency and Economy, Inc., Baltimore, Md., which conducted a survey of relief and charitable activities in that city by local relief agencies and the Social Security Agency of this National Government. That report was dated December 1937.

I repeat, Mr. Speaker, that it behooves Congress to examine these agencies with a view to corrective action.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include an article which appeared in the Boston Sunday Post, Boston, Mass., February 15, 1948, entitled "Seaway Peril To This Area," by Lester Allen:

SEAWAY PERIL TO THIS AREA—NEW ENGLAND TO PUT NOOSE AROUND NECK IF PLAN GOES THROUGH—MANY INDUSTRIES TO DIE

(By Lester Allen)

New England has a standing invitation to put an economic noose around its own neck by engineering an already unfavorable geographic location into a complete isolation.

If the Senate bill authorizing joint United States-Canadian action to provide a channel for ocean-going vessels from the Atlantic to the Great Lakes and construction of a 2,200,000-horsepower hydroelectric plant at Massena, N. Y., is voted on February 27, New England can mount the scaffold and make its farewell speech to the world.

That may sound drastic, but it is the inevitable effect of the St. Lawrence seaway and power project, which will cost the Nation many times $500,000,000 before it is effective, and will compel New England through taxation to pay for a good share of the means of accomplishing its own ruin.

New England opposition to the St. Lawrence seaway and power project is not alone on the basis of the added tax burden. New England railroads are already operating at a grave disadvantage through this region's geographical isolation from the rest of the country, but the power development features will place New England at a great disadvantage, for today New England power needs can best be supplied by steam-generating plants.

Moreover, American-flag shipping will not be benefited by the seaway, if, indeed, the seaway were practicable in the first place. It would bypass all of New England's ports during 7 months of the year.

GREEDY GRAB

Coastal shipbuilding plants might just as well start to demolish their ways if the bill is passed, for this is a greedy grab on the part of heavy industry in the Great Lakes region to hog the business and put across a deal that will accomplish the ruination of New England. They have dressed it up with the phoniest set of statistics that ever beguiled and befuddled the people of a whole region.

Let's pry into the statistics the advocates of the St. Lawrence seaway offer. Let's pry into the personalities shouting loudest for the seaway.

Starting with Senator ALEXANDER WILEY, Wisconsin Republican, who is merrily logrolling in the Senate and threatening reprisals against Senators, interested in inland waterways and other measures if they do not vote for the seaway.

LARGE STAKE

The Senator is from a Great Lakes State, which today has a large stake in the iron and steel industry. The fact is that the Wisconsin and Minnesota iron-ore deposits are running out. What's that got to do with the St. Lawrence seaway? Just this: There are two alternatives for the Great Lakes States. They must either develop low-grade ores at enormous expense or get a supply of richer ores at a cost comparative to that of removing ore from the Lake Superior iron beds.

The only large bodies of such ore available are in Labrador and Newfoundland.

Do you begin to get the picture? Note that the ship channel advocated by these advocates of the seaway calls for a 27-foot channel. The channels in Boston are 40 feet, Philadelphia 35, Montreal 32, Baltimore 35, and New York City deeper than Boston with 42 feet.

FOR ORE BOATS

So it really isn't ocean-going steamers the boosters of the seaway want in the Great Lakes. By a strange coincidence Great Lakes ore boats draw slightly more than 20 feet, and the only port on the Great Lakes with a channel deeper than 26 feet is Detroit.

What is desired, then, is a seaway to take ore boats and not ocean-going steamers. There is, of course, still another alternative which is much cheaper than the seaway for the dilemma of the Lakes States. A New England steel industry could be built at a cost not greater than $100,000,000, one-fifth of the initial outlay proposed by the seaway boosters.

Even more strange is the opposition of Great Lakes shipowners to the seaway. In Ottawa a few days ago American and Canadian inland shipowners blasted the plan as a "political pork barrel." Canada and United States, they declared, would be saddled with $35,000,000 a year carrying charges. They neglected to add what their interest was in this, but at the moment it is the fact that existing vessels plying the Great Lakes would have to be rebuilt internally to use the seaway, since the Great Lakes are fresh water and the St. Lawrence River from the estuary to the rapids is salt water. Great Lakes steamers have no equipment for converting salt water to fresh for their boilers, and Diesel engine operation is enormously expensive on the lakes.

COST OF PROJECT

Senator WILEY has declared that the cost of the project would be amortized by payments from hydroelectric earnings and from tolls for passage of ships through the canals.

Let's take those claims in order. The development of hydroelectric generation does not depend upon the building of a ship canal. Such development could take place right now. But New England wouldn't get any of the power generated, much as the few friends the seaway has in New England would like to believe.

Right now Maine is experiencing a power shortage because of the freezing conditions which have caused low water on the rivers—and this same condition exists on the St. Lawrence, frozen 5 months out of every year. The problems of transmission of such power as the St. Lawrence project might produce for effective use in New England are technical and formidable, but for New York and points west, relatively simple. Therefore, New England can reckon on getting little or nothing from the power development.

BASED ON SURVEY

The tolls for the ship canal, based on a survey of possible traffic through such a canal, estimated at 4,000,000 tons of shipping each season of 7 months, would require a toll of $6 to $15 a ton, without a Government subsidy. The Senate limited the tolls to $1.25 a ton, which would produce a maximum revenue of $2,600,000 annually. The annual cost of the seaway under present plans would range from $25,000,000 to $62,000,000.

If you are willing to pay a subsidy to move Canadian grain to world markets, grain which during the winter season normally flows through east coast ports, then you ignore the economic facts of New England's position in world commerce. We are trying to build up New England ports instead of bypassing them.

The seaway, as planned, would have 67 miles of canals, 6 miles of restricted channels, and 18 locks through which vessels might pass from Duluth, Minn., to the open sea of the St. Lawrence estuary at Montreal. Five months a year this would be frozen fast. That means that for 5 months a year east coast ports would be expected to handle the leavings of commerce flowing out of the Great Lakes area, and 7 months of the year commerce would be ladled from hand to hand along the seaway in a spoon at enormous cost.

TO HAMSTRING HUB

Only one sample of cost of shipment is needed. Pittsburgh pays a little over $5 a ton for freighting ore. Gary, Ind., on the Lakes, pays about $2.60 a ton for freighting ore. A real toll cost of $6 to $15 for freighting ore through the seaway would mean that the American taxpayer would pay a subsidy to provide the steel industry with cheaper ore.

The power development, you may be certain, would benefit only the production of steel in electric furnaces from New York State ore deposits, and very little else.

Boston is the nearest big American port to Europe. But there seems to be a willful and even vicious desire to hamstring Boston and New England.

Another technique was adopted by the seaway boosters to isolate New England opposition, the possibility of a cut-off of the canal through Lake Champlain and the Hudson River, which would divert some traffic through the port of New York. This is an adroit move to line up the mid-Atlantic ports against Boston, Portland, and Providence.

NEGLIGIBLE FACTOR

Outbound commerce in the foreign trade is a negligible factor in the St. Lawrence seaway proposals. The chief items of outbound commerce from the Great Lakes are dairy products and grain. Dairy products are a perishable item and it is entirely unlikely that the 10 to 12 days in transit through the seaway project would be risked.

But inbound commerce is another matter. The chief import items here bound for the Midwest Lake States are coffee, vegetable oils, wood pulp, burlap, and jute. Special handling facilities for this traffic exist, in Boston—and the westbound freight is a vital part of New England economy.

Henry Foley, who is one of the bulwarks of New England's fight against the seaway, has exposed the fallacies of the statistics offered by the seaway boosters over and over again. But that is not enough when a piece of legislation is being considered in the Senate. The log rolling and back scratching of expedient legislation make strange bedfellows.

ENTERING WEDGE

The $500,000,000 expenditure is only an entering wedge, a ruinous wedge for New England, which will be asked to pay a generous share in taxation to accomplish its own disaster. If the 27-foot channel proposed is deepened by only 3 feet, which would still not open up the ship channel for large ocean-going vessels, it would cost another $500,000,000.

New England now depends upon its water-borne commerce for the movement of a vast amount of freight, and its railroads are of minimum vital trackage for the needs of the area, and are staggering along under immense problems of decreasing revenue.

If the average wage earner in New England believes that all this rumpus about the seaway is not his concern, it is important to drive home the truth that the seaway will cause many, many New England industries to wither and die.

In effect the seaway chops New England off from the rest of the continent and makes it an island, a have-not area forever debarred from developing its chief resources, the technical skill of its people.

The noose is waiting. New England can put it around its own neck and strangle—or stage a fight now, before the seaway goes to vote in the Senate.

Radio Address to My Constituents

EXTENSION OF REMARKS
OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over Station WNBF on February 21, 1948:

Dear friends of the Triple Cities and my congressional district, within our community there live untold hundreds of patriotic citizens who have loved ones and relatives in the Old World.

Today, great concern is being expressed for these relatives, and Americans are responding privately as well as publicly to help them. Packages filled with much-needed food and clothing are being sent in greater amount each day.

I am receiving many letters from the people who are mailing such packages. They feel they are being compelled to pay an exorbitant price for necessary postage to carry this aid to its destination.

They tell me the cost of mailing bundles to Europe is as high as 14 cents a pound and upward.

To me this seems outrageous. I believe folks ought to be permitted to send such mercy packages for less. Oftentimes the postage exceeds the actual value of the contents by several times. Certainly, it is unfair. I hope the Postmaster General will take immediate steps to lower the high postal rates for sending articles overseas.

Bear in mind, also, there are many thousands of our boys serving on the Continent, and they like to hear from home, too.

This week I addressed the House on the Hall pension bill for veterans of World War I. My speech was as follows:

Mr. Speaker, today I am introducing a bill granting pensions to veterans of World War I.

For the past 7 years the accent has been to spend billions of taxpayers' dollars in foreign countries. Without batting an eyelash we have voted tremendous sums of money to pour down the rat holes of Europe and Asia.

Some of this money must have found its way to succor the downtrodden, to feed the hungry, and clothe the naked. But much of it has been wasted and is being wasted.

Be that as it may, we keep providing these billions for the nations across the sea while our own people are laboring to keep their heads above water and the wolf from the door.

I regret that it has come to the point when a Member of this House runs the risk of attack and abuse when he becomes presumptuous enough to request something for the Americans he represents.

All of which strikes no fear to my heart because my job is to consider the needs of the Americans who elected me before anybody else abroad.

I believe the time is ripe to come to the aid of the veterans of World War I. With the natural importance placed upon the needs of our younger veterans, we have overlooked, for a time at least, those who served so valiantly in the stirring days of '17 and '18.

We are guilty, therefore, of forgetting that our World War I heroes are older, their ranks thinning, and the exigencies of former military sevice beginning to tell upon the numbes that remain.

They are the forgotten men of our generation. We have looked after the fighting men of every other American war but them.

As near as I can judge, the present average age of veterans of World War I is 57. Many are, of course, older. All have started down

the trail which eventually leads to the setting sun.

These men are for the most part still vigorous. We owe them almost as much for what they did in the way of moral encouragement and keeping the home front in line during World War II as we owe them for their physical contributions in the first struggle.

But they ought to have consideraion. We provided pensions for the GAR, the Spanish War vets, for all who went before. We have no choice but to begin thinking about the men who came back from France after participating in the war that was to end all wars.

Therefore, I submit the following bill and I urge upon the House its early, friendly acceptance. The Nation must be willing to meet her responsibility by preparing for final and equitable treatment of so patriotic and noble a group as the veterans of the first World War.

My bill reads:

"A bill granting service pensions of $75 per month to veterans of World War I, and for other purposes

"*Be it enacted, etc.*, That any person who (1) served in the armed forces of the United States at any time between April 5, 1917, and July 3, 1921; (2) was honorably discharged from such service either after 90 days or more of service or for disability incurred in service in line of duty; and (3) either (A) is 60 years of age or over, or (B) has a disability of 10 percent or more and is 55 years of age or over, shall be entitled to receive a pension of $75 per month. If any such person is, on account of physical or mental disabilities, helpless or blind, or so nearly helpless or blind, as to need or require the regular aid and attendance of another person, he shall be entitled to receive a pension of $100 per month in lieu of such pension of $75 per month.

"SEC. 2. The original award of a pension to any person under this act shall be effective from the date of application or the first day of the second month following the enactment of this act, whichever is later.

"SEC. 3. No pension or compensation payable to any person under any law or Veterans Regulation in force on the date of the enactment of this act shall be reduced or discontinued by reason of any provision of this act, but a person may elect to receive pension under this act in lieu of such pension or compensation.

"SEC. 4. The Administrator of Veterans' Affairs is authorized to prescribe such rules and regulations as may be necessary to carry out the provisions of this act."

Fairness to Postal Employees

EXTENSION OF REMARKS

OF

HON. ALBERT L. REEVES, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. REEVES. Mr. Speaker, at the request of several of my constituents, I am including in these remarks the text of an excellent editorial on the subject of increasing and equalizing the pay of employees of the postal service. It appeared in the Kansas City Times of February 17, 1948, and is as follows:

FAIRNESS TO POSTAL EMPLOYEES

The efficiency of the United States postal service is a matter of concern to virtually every person in this country. That efficiency is now seriously threatened because of the shamefully low pay of the postal employees. They deserve better treatment not only on this ground but as a matter of plain justice.

These employees make up a group of faithful workers who have patiently borne the unfairness in pay. They are not threatening to strike and could not consider that alternative. But there is a limit to human endurance and the clear fact is they cannot meet their living costs under the present conditions. The morale of the service is being undermined and there is increasing difficulty in the enlistment of efficient workers into the service.

Since 1939 or since the start of the rise in living costs the postal employees have received total pay increases of only about 35 percent. In that time the pay of industrial workers has been just about doubled, while national income, industrial profits, farm income, and the like have increased still more. The last pay advance for the postal workers was more than 2 years ago. At that time the Associated Press wholesale price index of 35 basic commodities stood at less than 113, with 100 as the 1926 average. On the latest report, adjusted to the recent price declines, this index stood at approximately 186.

In this period of rapid living cost advances the postal employees have gained nothing. The situation has produced bills in both the Senate and the House which are designed to remove the injustice to a fair extent. Under these measures the numerous classifications of the employees and their pay would be given consideration. If no other workable method can be found there ought to be some adjustment in postal rates to provide the funds for this urgently needed compensation.

The responsibility for this action falls upon Congress. It can maintain the efficiency of this service to the public and will be held accountable if nothing is done. It should get busy and deal justly with a neglected group of public servants.

Rural Electrification

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. RANKIN. Mr. Speaker, I am today introducing a bill for a deficiency appropriation of $300,000,000 for rural electrification.

That amount will be necessary in order to carry on this great program from now until the end of the present fiscal year.

Every dollar of it will come back with interest, and it will add untold millions of dollars and probably billions of dollars, to the wealth of the Nation.

When I started in this fight for rural electrification in 1933, just less than 10 percent of the farmers in this country had electricity in their homes; while 90 percent of the farmers of Germany, 94 percent of the farmers of France and Italy and approximately 90 percent of all the rest of the farmers of western Europe, as well as 90 percent of the farmers of Japan, had electricity in their homes.

After a struggle of 15 years we have managed to get electricity to about 60 percent of the farmers of this country.

The rest of them are pleading for this service.

It will mean more to them than everything else this Government has ever done for them.

While we are being urged to pour billions of dollars of our taxpayers' money into Europe and Asia, we had better pay a little more attention to the farmers of this Nation, who fight its battles in times of war, feed and clothe our people at all times, and sustain our institutions in times of peace.

By helping these farmers to electrify their homes, we are building up the strength of the Nation, and not dragging it down toward bankruptcy and destruction.

Let us electrify every farm home in this country, at rates the farmers can afford to pay.

I Am Private Enterprise

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. SCHWABE of Oklahoma. Mr. Speaker, the following quotations appear to have been first reprinted from Benjamin DeCasseres' column in the New York Journal-American. It should do our souls good to read, digest, and contemplate the basic philosophy contained in these statements. They are fundamentally American in their ideology, and are, perhaps, just as applicable today, for all practical purposes, as when they were written.

I AM PRIVATE ENTERPRISE

(Reprinted from Benjamin DeCasseres' column in the New York Journal-American)

I am the spirit of private enterprise.

Wherever I have existed freedom of mind and body have existed.

Wherever I have been murdered by collectivist laws and governmental strangulation freedom of mind and freedom of body have died.

I was the physical lever of Athenian civilization.

I died in the collectivist feudal ages.

I was resurrected in the Renaissance, beginning the modern age.

With the rebirth of free private trading came the vastest expansion in the arts and sciences the world has ever known.

I, private enterprise, have brought men of the same countries and men of distant countries closer together in friendly intercourse than all the socialistic and communistic doctrines combined.

My trade routes have been the routes of human progress.

I am the expression and sustainer of all that is lordly in the human soul—self-reliance, the adventurous spirit, emotional and mental initiative, ambition, and inventive resourcefulness.

With my rebirth in the Renaissance the human level of living began to rise.

The shackles on slave labor began to rust and crack.

Money became international.

Man at my touch took on something of the aspect of a creative god.

I, private enterprise, built America.

If she is a giant today in production it is I who have made her a giant.

I cleared her forests.

I built her railroads.

I tunneled her mountains.

I erected her factories, dug the coal and ore in her mines, and sent out her ships on Seven Seas.

In my brain was born every creature comfort you enjoy.

I, private enterprise, with my free laborers and my unshackled captains of industry, built the muskets, the airplanes, the tanks, the submarines, the great guns that were used in the Revolutionary, Civil, and World War No. 1 and that are now protecting the United States from invasion.

I am the hope of Europe and Asia.

I, private enterprise, am the working classes, the middle classes, and the well-to-do classes.

I am the butcher shop, the bank, the newsstand, the great department store, the giant furnaces of Detroit and Pittsburgh, and the electric light.

I, private enterprise, am Edison, Ericsson, Goodyear, Wanamaker, Westinghouse, Fulton, Whitney, Morse, and the Wright brothers.

I am that free business, big and little, on which civilization alone depends.

I am the body of a great spiritual entity—liberty.

I am the body of a great sociological and biological fact—self-interest.

It is I, private and free enterprise, that is winning this war for Russia, England, China, and the United States of America.

I, private enterprise, am the power behind your son, your father, your brother fighting for you in Africa and the Pacific.

I am the minuteman of Uncle Sam.

I am the very essence and body of Jeffersonian democracy, for I am private property and personal liberty.

I am the old deal. I am America.

Lithuanian Independence Day, February 16, 1948

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. LANE. Mr. Speaker, this is the thirtieth anniversary of the Declaration of Independence by the people of that small country on the shores of the Baltic Sea.

For 120 years prior to 1918, they had worked unceasingly to throw off the yoke of foreign domination.

All Americans, no matter from what race they stem, consider themselves as brothers, in mind and in spirit, to the people of Lithuania, because we both detest authoritarianism.

In the latter part of the eighteenth century, Americans and Lithuanians rose against their oppressors. Through the grace of God and the courage of our forefathers, we, in America, separated by 3,000 miles of ocean from those who held us in bondage, were able to win our freedom. Lithuania, however, hemmed in by large and powerful neighbors, was not so fortunate. But freedom is not isolated. To have meaning, it must be shared.

Through 120 years of tyranny, Lithuania did not despair. Her passion for freedom could not be smothered by ukase or by the secret police of her temporary masters. Her integrity and faith bore fruit in the hearts of those who had already won their independence. At the proper time, they would come to her assistance.

As a result—in 1918—and largely because of the principle of national self-determination as expressed by President Woodrow Wilson, the Lithuanians proclaimed their independence.

With the Allied victory, Lithuania stood up as a nation again, and her people rejoiced.

With liberty, came the incentive and the pride to work hard for progress. In the 1920's and 1930's, Lithuania hummed with constructive activity. Her people were free from fear, and soon they would be free from want.

They were too busy and happy to see the war clouds that were gathering. And when the storm broke and the floods came, communism and nazism swept back and forth, smearing the face of her fair land. There was no choice. Lithuania went under again.

But history has a strange way over the years of reversing itself. Lithuania has been conquered before but never for keeps. Her people have been schooled to endure temporary misfortunes, knowing that in the end, faith triumphs over material power.

This is the secret of Lithuania's character. It will not be denied.

Secure in the Christian faith which, in 1399, gave her the will to stop the Tartar invasion and thereby save the civilization of Europe from being overwhelmed by the barbarians, Lithuania will outlive the foreign dictatorship which presently enslaves her.

The people of Lithuania are proud of their religion, their language, and their culture. In spite of alien efforts to tear out her roots, they will not die.

Even at this black and depressing moment in history, when Lithuania is cut off from the rest of the world by the iron curtain of communism and her people the being subjected to relentless oppression, the passion for liberty is not extinguished.

The secret police cannot reach the hopes and aspirations that glow in every Lithuanian mind and heart as they silently rededicate themselves on this day to the eventual liberation of their homeland.

Lithuanians in all other parts of the world openly celebrate this day of their independence—an independence temporarily lost, but in the losing, inspiring them with fresh determination to work the harder for its redemption.

Here in the United States they are strengthened in their purpose by the moral support of their freedom-loving fellow Americans.

By the Marshall plan we shall help the countries of Europe to rebuild themselves so that they shall not fall victims to the juggernaut of communism.

In view of our realistic policy, there is hope that communism in time will moderate its ruthless treatment of small nations and their people.

Through this and the leadership of the United States in developing the United Nations into a strong federation where all peoples will have representations and will be heard, we have goals which can be reached.

In the truly democratic world toward which we strive we expect to see Lithuania present in her own right as a member of the family of nations.

Ex-New Dealers Now Work for Nations Seeking United States Aid

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1948

Mr. REED of New York. Mr. Speaker, it is the hope of the Truman administration that, with the Marshall plan in operation, it will be possible to reward the New Dealers and all the Communists, who, because of their un-American activities, were removed from the pay rolls of the United States Government by placing them in high-salaried jobs abroad.

Thus far it is obvious that the departments here have let many of their faithful New Dealers go abroad at increased salaries, but the real rewards will come under the Marshall plan. It is a clever way to fool the people, and with a propaganda machine that can charge the air with emotionalism, half-truths, and lies, the taxpayers at home, who pay the bill, can be kept in the dark with respect to all of these inside intrigues and deceptions.

Under leave to extend, I am inserting an article which appeared in the Washington Times-Herald on February 19, 1948. It may be many months before the political turpitude of the Marshall plan can be unearthed and revealed to the public, and unfortunately it will then be too late to either stop it or recover the billions of dollars paid out by the taxpayers of the United States.

EX-NEW DEALERS NOW WORK FOR NATIONS SEEKING UNITED STATES AID—JUSTICE FILES REVEAL HIGH FEES GIVEN FOR HELP CONCERNING MARSHALL PLAN

(By James Walter)

How numerous ex-New Dealers, most of them refugees from the State and Treasury Departments, are using their bureaucratic knowledge to help European governments climb aboard the Marshall-plan gravy train was revealed yesterday by the Justice Department.

Files in the foreign agents registration section of the Justice Department disclosed that scores of Roosevelt administration protégés, as well as many domestic Communists and fellow travelers, have hired themselves out for salaries as high as $3,000 weekly to the 16 nations which are slated to share in the spoils of the European recovery program.

ROBERT NATHAN ON LIST

Top names on the list include Robert Nathan, a long-time advocate of the planned economy favored by Henry Wallace and the CIO; Earl Browder, temporarily deposed boss of the United States Communist Party; Oscar Cox, former White House intimate and lend-

lease expert; and Alger Hiss, a protégé of Dean Acheson during the latter's reign in the State Department.

Browder, despite the fact that he was ousted as top-dog United States "commie" several years ago, is momentarily expected to resume leadership of the party with the personal backing of Premier Stalin. Meanwhile, Comrade Browder has listed himself as a literary advisor to the Soviet Union at a decidedly capitalistic salary.

Nathan is using the knowledge of Government finance he acquired under the New Deal for the advancement of the French and Polish Governments in return for fees as high as $20,000 for 6 months' work.

COX WORKS FOR THREE

Cox, who was buddy-buddy for years with Harry Hopkins, Roosevelt's Svengali, is hard at work for the Governments of Costa Rica, France, and Italy, in the last two of which Communists are particularly strong.

Harry Dexter White, who has been described as the "father of the international monetary fund," and who served as an assistant to Treasury Secretary Morgenthau, pulls down $18,000 yearly from the Bank of Mexico.

Randolph Feltus, a favorite of Florida's Senator PEPPER, gets $3,000 a week from France and the Netherlands Governments and received additional fees from the East Indies and Borneo. He also has an expense account of $500 a week.

FELTUS' $20,000 FEE

Feltus picked up a $20,000 fee from the Polish Government in 1947 for services rendered during the time when the Soviet satellite was trying to promote a $600,000,000 "loan" from Uncle Sam. Feltus, in turn, has his wife, Ann, on his pay roll and also one Robert T. Miller, who was permitted to resign from the State Department in 1946, and who appears often on the files of the House Un-American Activities Committee.

So steady has been the stream of ex-New Dealers from Uncle Sam's pay roll to that of the Marshall plan recipients that some Government bureau chiefs fear their organizations are "falling apart."

John W. Pehle and Lawrence S. Lesser, along with White and Feltus, resigned from the United States Treasury March 26, 1946. Pehle had been in the office of the General Counsel and was director of foreign funds control from 1940 to 1944. Lesser, an attorney with the Treasury Department, joined Pehle in setting up a law firm after the pair had quit the United States Government. They currently represent France and Romania.

Donald Hiss, a brother of Alger Hiss, also is connected with Acheson's law firm of Covington, Burling, Rublee, Acheson and Shorb. The firm now represents Denmark, Greece, and Iran. It formerly represented Poland, too.

Donald Hiss was a former State Department legal adviser and is an active member of the Washington Committee for Democratic Action. His wife is a member of the League of Women Shoppers.

European Recovery Program

EXTENSION OF REMARKS

OF

HON. WILLIS W. BRADLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. BRADLEY. Mr. Speaker, since it is likely that the House will soon be considering the Marshall plan in all its aspects, I am pleased to present herewith a petition and memorandum in re European recovery program, as adopted by the West Coast Local No. 90, Masters, Mates, and Pilots of America.

I believe this petition and memorandum is worthy of careful consideration by every Member of Congress.

PETITION AND MEMORANDUM IN RE EUROPEAN RECOVERY PROGRAM (MARSHALL PLAN)

Re Sections VII and VIII of the European recovery program

To the Honorable the President of the United States and the Members of Congress in the Senate and House of Representatives of the United States:

On behalf of the national organization of Masters, Mates, and Pilots of America, west coast local No. 90, representing the licensed deck officers of the United States merchant marine who sail out of United States Pacific coast ports and who are 100 percent American citizens, we repectfully submit this petition to strike out sections VII and VIII of the European recovery program, hereinafter referred to as the Marshall plan.

UNITED STATES BEST INTERESTS

In making this request, we believe it is for the best interests of the United States merchant marine and of our country as a whole. Our organization is on record for the European recovery plan, and furthermore we wish to emphasize that we are not opposed to the Marshall plan.

Our organization is in favor of sound comprehensive legislation which will enable these nations to recover their prewar economic stability without damaging or ruining any specific American industry or our American economy as a whole. Under sections VII and VIII of the present plan, there is a recommendation for the allocation of 500 United States-owned merchant vessels to the 16 nations for the purpose of carrying all relief and other United States export cargo. It is inevitable that American labor and industry must make great sacrifices in order that this plan may serve its purpose. We sincerely believe that these unfortunate nations should be assisted in achieving their prewar status, and subsequently they should through their own ingenuity and energy provide for more stability and prosperity.

TESTIMONY GIVEN

National officers of our organization have testified before the Committee on Foreign Affairs in Washington, D. C., when that committee held public hearings on the Marshall plan. Therefore, we do not wish to repeat protestations made against sections VII and VIII of the plan. Neither is it our desire to submit voluminous statistics which disprove statements made by our State Department and others in favor of virtually giving the United States merchant marine to foreign nations. Such remonstrances have been ably presented by others, including the President's Merchant Marine Advisory Committee and the United States Maritime Commission, all of whom are vitally interested in keeping a United States merchant marine, second to none, for economic and security reasons in the best interests of the United States as a whole.

AMERICAN LABOR

On the west coast, because of our Government's selling over 1,000 vessels of all classes to foreign nations under better and more favorable terms than a United States citizen is able to secure, employment of American labor which mans, operates, builds, repairs, supplies, and supervises ships, has dangerously declined.

Tables below were prepared from an examination of advertising services of 17 lines of the 5 hereinafter-mentioned nations, and the number of vessels quoted would be greater if the vessels not advertised were included.

1947 compared with 1938

	1938	1947
Great Britain	13	35
Norway	20	40
Sweden	10	14
Denmark	(1)	12
Netherlands	8	23
Total	51	124

[1] Nonadvertised.

If these nations are sincere and willing to carry relief cargo, they have sufficient vessels to do so without the transfer of more American vessels to them. The more vessels they obtain from us, the more they will be able to deduct from their essential national trade and the more they will enter into competitive trade in the Pacific.

The following table will show how this has affected employment of officers and men in the merchant marine on the west coast, although it does not include shore workers.

Seafaring employment—west coast (officers and men)—total employment—average number men employed

For quarters ending—	
September, 1945	48,857
December, 1945	47,247
March, 1946	44,323
June, 1946	36,588
September, 1946	27,325
December, 1946	19,018
March, 1947	20,119
June, 1947	19,741
September, 1947	20,085
December, 1947	18,668

There is no justification for making more unemployed United States seamen. Hundreds of thousands of seamen have been trained, and millions of the taxpayers' money have been spent for that purpose during the past 6 years. When recruited during the past war, the men were promised a permanent seafaring future and that the history of the First World War would not be repeated. However, today many thousands of young men are disappointed, and again the seaman is the forgotten man, "beached," and the jobs are turned over to foreign seamen and in some instances to former enemies.

The American-built vessels which cost the American taxpayers billions of dollars should not be delivered to any other nation which will compete against our own by using cheap labor.

SPEND MILLIONS

The Maritime Commission and several States are still spending millions yearly of the taxpayers' money to train officers and men for the merchant marine. Are they trained to go on the unemployed relief?

Finally, what of our national-defense requirements? By Federal law our merchant marine is an auxiliary of our Army and Navy. If by some program, we give ships to other nations; reduce ourselves again to a third-rate maritime nation; do not provide for our required national security—the saving of a few millions, which is claimed to be made under the Marshall plan—could in another emergency mean a loss of billions.

This should be clear to you, Mr. President, gentlemen of Congress, and to the American taxpayers to whom it was brought home sharply in 1917 and again in 1941. No; do not let it happen again.

MAKE RECOMMENDATIONS

When legislation is adopted, we recommend that it include:

(1) That no funds under the European recovery program be used for the transfer, charter, purchase, or hire of any American vessel by foreign nations and for foreign-flag operation, and no ships built by foreign nations shall be paid for out of those funds.

(2) That a minimum of 65 percent of all cargo originating anywhere in the world under this European recovery program be carried on American ships, operated and manned by Americans.

There is no doubt that a workable plan must be adopted. We agree with the statement of our Secretary of State, General Marshall, that "the United States faces one of the greatest decisions in history, which will have a far-reaching effect on the whole world, and if adopted, it will stand as one of the great historic undertakings in the annals of world civilization." However, while we are giving aid to our unfortunate European friends at great risk to our own economy, let not our charity exceed reasonable bounds. Conditions do not justify the scuttling of our merchant marine to accomplish that purpose.

We hopefully appeal to you to help to strike out sections VII and VIII of the Marshall plan and in lieu thereof insert recommendations made by the National Organization of Masters, Mates and Pilots of America.

Most respectfully submitted.

NATIONAL ORGANIZATION MASTERS, MATES AND PILOTS OF AMERICA, WEST COAST LOCAL NO. 90,
Capt. C. F. MAY,
President and National Vice President.

Jefferson-Jackson Day Address by Hon. Clinton P. Anderson

EXTENSION OF REMARKS
OF
HON. ALBEN W. BARKLEY
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Monday, February 23 (legislative day of Monday, February 2), 1948

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered by Secretary of Agriculture Clinton P. Anderson at the Jefferson-Jackson Day dinner held in Louisville, Ky., on February 21, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A TIDE IN THE AFFAIRS OF MEN

I am happy to be in Louisville to join you in honoring two superb Americans—two great Democrats, Thomas Jefferson and Andrew Jackson. There is a saying: "The nation—or the people—which does not honor the memory of its heroes is dead." This gathering tonight is wholly convincing: The Nation—and the Democratic Party—are very much alive.

But, most of all, I am glad to be here because being here gives me opportunity to get something off my chest. I want to tell you why I am proud to be a Democrat.

It is not only that the Democratic Party is the oldest of all existing American parties.

It is not only that the Democratic Party traces its beginnings back almost to the founding of our Nation.

Nor is it only that the Democratic Party is the one political organization which has stood by the people through virtually every period of the Nation's grand history—through boom and bust, through war and peace, through the many ebbs and flows of social progress.

Naturally I am proud of all this—who would not be?

But, above all, I am proud of the way the Democratic Party has contributed to the growth of progressive spirit in our Nation.

A hundred and fifty years ago it was Thomas Jefferson and his political followers who typified the progressive spirit of the infant Republic. In our day it has been Franklin D. Roosevelt—and it is Harry S. Truman—who have continued to typify that spirit. In the future, whatever it may bring, I am confident that Democrats will still lead the Nation to new frontiers of political, social, and economic progress.

I have come here to say to you in dead earnest that if I were starting out in life again—knowing the history of this country—wanting to be part of an organization that is attuned to American ideals—that stands for true economic and political freedom—that holds the best hope for the United States of America down the corridors of the future—then, I say that I would become a fighting Democrat.

Yes, a fighting Democrat.

You know we are taunted sometimes by our political opponents. They say we are a patchwork party. They say we can't even live peaceably with ourselves. They sneer whenever we squabble.

But let me ask you: Isn't it true that a donkey that doesn't kick up a little dust now and then—a donkey that doesn't bray from time to time—is a mighty sick critter? Certainly, we have the gumption to fight and squabble. But when election time comes, isn't it true that we stop kicking ourselves and start kicking the stuffing out of the Republican elephant? We have done it before. What do you think—can we do it again?

Personally, I have confidence in our ability to do it—here in Kentucky—and throughout the Nation—when November comes. For I keep thinking of something Woodrow Wilson said: "The great tides in human affairs * * * rise in their power and irresistible might and those who stand in the way are overwhelmed."

Those words sum up the history and predict the future of the Democratic Party. From Jefferson to Truman, by and large, the Democratic Party has ridden the crest of a great wave of progressive spirit. We have not stood in the way. Other parties of the past have stood in the way; and they have been overwhelmed and have disappeared in the turbulent seas of history. One political party is standing squarely in the way of that tide today.

I have brought with me a chart [not printed]—the chart that you see before you—which testifies that what I have just said is true.

Let me tell you how I came to bring this chart to Louisville.

I have a fondness for history, especially American history. The other day I was reading some American history of the period about a century ago, and I grew interested in an account of the election of 1840. That was an election in which the Whig Party defeated the Democrats by shenanigans. The Whigs had seen the people rally around Andrew Jackson in 1828 and 1832. They cunningly decided, therefore, to palm off their candidate in 1840 as a man of the people—another Jackson. He owned 2,000 acres, but that didn't matter. For electioneering purposes, he was as poor as a church mouse. Until election Tuesday in November he was going to be an honest-to-goodness "log-cabin" man.

So the Whigs got some big wagons and put log cabins on the wagons. They nailed coonskins to the cabin doors. They built atmosphere all right—they even had live raccoons climbing all over the premises. And, finally, they had big barrels of hard cider on tap.

It was a remarkable show. But who do you suppose was really sitting in those log cabins? A man of the people? Not on your life! The easy-money boys in their stovepipe hats and frock coats—the representatives of vested interests that Andrew Jackson had fought tooth and nail.

I hate to recall it, but the Whigs put their man over. But that isn't all of the story. You know the old sayings, honesty is the best policy? Well, the Whigs were just a little too slick. They chose for Vice President a Virginia Democrat, thinking that would make the election dead sure. And they were right. When the hot air of the election died down, their candidate caught pneumonia. A month after he was inaugurated he was dead. And the Whigs found they had put a Democrat in the White House—for sure.

Well, as I read that history, I thought how times have changed. Even our political opponents don't go in for such shenanigans nowadays. I certainly would not want to come to Louisville with a torch, a log cabin, or a barrel of hard cider. And I don't usually carry a live raccoon around in my pocket.

We need no shenanigans. We Democrats can fight our battle with facts—with reason—with truth.

And so I brought this chart. And just as the pen is mightier than the sword, so is this chart a much better weapon of truth than a torch, a log cabin, a live raccoon—and—I hope you will agree with me—even a big barrel of hard cider. For this chart points to a tide of human affairs—a tide like those Wilson was talking about—the tide of the American spirt of progress.

If you look at this chart, you will see much that is interesting. It shows the periods of control of the House of Representatives by each of the two major parties from 1854—when the Republican Party came into being—to 1946 when the general elections were last held.

Note that the periods of Democratic control are shown as peaks above the line. That is appropriate—those were the times when the Nation was having its "ups." The periods of Republican control are valleys below the line—when the Nation was having its "downs." Note that these valleys are depicted in dark colors—that, too, is appropriate—that is a sign of mourning.

Speaking seriously, I want to say that this chart has been prepared by a keen political analyst, Dr. Louis H. Bean; and it will be further developed in a forthcoming book. It is based upon cold facts, not fervid fancy.

Note the intensity of the swings up and down. In 1920, for example, the Republicans elected 69 percent of the House as against 31 percent for the Democrats. Sixteen years later, the Democrats elected 79 percent of the House, as against only 21 percent for the Republicans.

I seem to recall that there was some squabbling in the Democratic Party about that time, too.

Next, note the frequency with which minor trends have been reversed. Three times—in 1854, 1880, and 1888—the Republicans gained control of the House and lost it at the very next election. I think we might pay special attention to that—I think history is going to repeat in 1948.

But most significant of all, note the long-time trend of increasing Democratic control and the dwindling degree of Republican dominance. If this trend continues the Democratic Party in the future may be expected to elect on the average about 60 percent of the House of Representatives.

I am not indulging in wishful thinking when I say this. I am merely interpreting statistical facts and a historical trend. In the 1860's and 1870's a Republican-controlled House was the norm.

Today a Republican House is the exception.

In the future a Republican House could become the rare—the catastrophic—like an earthquake or a flood. In fact if the trend continues to its logical conclusion, the House of Representatives might well become just the place for the tired old Republican who longs to retire to the sweet delights of a quiet life.

No doubt there are many factors which must be taken into account in attempting to explain this chart. No doubt business conditions have much to do with the ups and downs of political popularity.

Another important factor probably is the increasing proportion of the voting population that is concentrated in large cities—for the large cities are predominantly Democratic. In 1860 only one-fifth of the vote was urban. In 1940 nearly three-fifths of the vote was urban.

But the big factor to my mind is the thing I keep stressing here tonight—the progressive spirit of the Democratic Party. We are a progressive people. From the time of Jefferson the Democraitc Party has been a progressive party. It has been a party of the people, devoted primarily to the promotion of human rights.

You and I are the inheritors of great Democratic traditions. We should never lose sight of our responsibilities to push forward in the continuing struggle for human rights.

And I think one way to remain aware of these responsibilities is to recall to our minds from time to time the great men of the party—the great deeds of the party—and the great future which the party can help secure for America.

On this day, which we have dedicated to the memory of Jefferson and Jackson, nothing could be more fitting than that we should do this.

So let us ask ourselves some questions. What does America owe to Jefferson?

First of all, it owes much of the Bill of Rights.

Jefferson was a strong advocate of the Constitution. But he realized that the Constitution without a Bill of Rights could become a sword of Damocles poised threateningly over the head of human liberty. No one fought harder—and probably no one fought as effectively—for the right of the people—not just the propertied classes—for the right of the people to rule; for equality in the courts; for a free press; for the right to petition for redress of grievances; for religious freedom; for all those fundamental rights which are guaranteed by the first 10 amendments to the Constitution.

We have those rights today, you and I. Do we sometimes call to mind how much we are indebted to Jefferson?

After Jefferson, in an unbroken line came other Democratic Presidents—Madison, Monroe, John Quincy Adams, Jackson, Van Buren.

That was a tremendous era. Near its end, the lean, vital figure of Andrew Jackson dominated the American scene. Again let us ask a question: What do we owe to Jackson?

Above all, we owe the strengthening of the belief in human equality. With him, no man was king and none was servant. He is known to history as the first "people's President."

I like to think of Jackson, the boy. When he was 14, the historians tell us, he was redheaded, aggressive, exuberant. Boylike, he could not bear to miss the fighting of the American Revolution, and he ran away and joined a band of backwoodsmen. Soon he was captured. One of his captors, sensing his fierce pride, ordered him to shine his shoes. But young Andy Jackson was servile to no man. He refused. He refused even when his captor swung his saber and cut a gash in his head.

That was Jackson, the boy. That same spunk was in Jackson, the general—Jackson, the President.

In the footprints of these magnificent leaders other men of similar stature followed.

There was Grover Cleveland toward the close of the nineteenth century. What do we owe to him? Cleveland brought to the White House a rugged honesty—like a breath of clean air sweeping away the stench of the Republican scandals of the preceding decade. He far overshadowed the Republican candidate who ran against him in 1884—so far, indeed, that a veritable army of liberal Republicans deserted their party and voted for Cleveland.

Then there was Woodrow Wilson. Do you think of Wilson only as a scholarly, gentle man who suffered, as President, the agony of leading a people whom he loved through a world war? Do you think of him only as the farsighted idealist—the disappointed architect of the League of Nations—who was vindicated only by a second and more terrible world war?

Wilson was all this and more. Wilson was a superb leader in a tremendous wave of progressive spirit—a wave exceeded only by that of the 1930's.

And then there was Roosevelt—and now Truman. I shall say more of the achievements and leadership of these men later.

But do you see how right it is that our hearts should swell with pride as we contemplate the pedestals that Democrats occupy in the halls of American history?

Let us turn now from men to deeds.

Picture the United States of America as it was about 1800. A small group of States clustered mainly about the Atlantic seaboard. A tiny Republic, sneered at by much of the world—expected to collapse like a toothpick house in the first gust of the winds of dissention. A Nation so weak that the minister of a foreign power threatened possible war unless we bought our way clear with money—and the deathless answer of our minister: "Millions for defense, but not one cent for tribute."

And then picture that Nation 40 years later—after 40 years of democratic guidance. Now there are 26 States. By the Louisiana Purchase alone, the Nation has acquired a huge tract, stretching from the Mississippi to the Rockies, and from the Gulf to Canada. In that period of 40 years we have consolidated our independence by the War of 1812. We have promulgated the Monroe Doctrine, warning European nations that the American continents are not subject to European colonization or encroachment.

And in that period Jackson has thrown down the gage to the powerful Bank of the United States in the first clear-cut conflict between the rule of the people on the one hand and government by privilege on the other.

This was a bitter struggle. The bank fought Jackson with every weapon it had. It used its money to tempt the press by subtle bribery. Industrialists openly threatened to close their factories if Jackson were reelected. The supporters of Old Hickory found the channels of credit effectively closed against them.

The question of whether or not to fight the bank posed a terrible dilemma for Jackson. But as one historian has said, Jackson was ready at any time to meet a dilemma "more than half way and spit in its face." Figuratively speaking, he did exactly that. Neither as boy nor as President, would Jackson lick any man's boots.

And the result was that farmers and workers, recognizing him as a "people's President," flowed out of the fields and factories to the polls—to vote—and Andrew Jackson won reelection by a majority of more than 4 to 1.

Thus in those days more than a century past, the progressive spirit of the American people found its mate in the progressive spirit of the Democratic Party. And the marriage has been successful and no political opposition has been able permanently to put it asunder.

Oh yes, there have been family quarrels. Sometimes these quarrels left us unable to reform our shattered troops in time to win the next encounter. Sometimes the Democratic Party forgot its principles, and when that happened, the people punished the party.

We see that illustrated on the extreme left-handed side of the chart. In 1854—the very year it was organized—the Republican Party won control of the House of Representatives.

Do you know why? It was because the Whig Party—and many members of the Democratic Party—thought they could straddle a great issue. They tried proviso and compromise. They courted delay and indecision. They let the day pass when a solution might have been reached without bloodshed and by far less hurried disposition than a war finally achieved. But the Whigs and the Democrats straddled. With that election the Whigs virtually disappeared from the American scene. And although the Democratic Party recovered in the elections of 1856 and not only won control of the House but elected a President, yet 4 years later—in 1860—the Democrats split hopelessly again over the same issue. Then nominated two candidates—wrote two platforms—and while Abraham Lincoln wisely stayed home and made no speeches—Douglas in the North and Breckinridge in the South handed him the Presidency. I will not forget that history whenever I lift my voice in this election.

Looking again at the chart, you will note that it took quite a while before the American people remembered the old glories of Jefferson and Jackson and restored the Democratic Party to control of the House.

Even after it did so, in that period running through the larger part of the 18 years from 1874 to 1892, Republicans were in the White House most of the time.

They remained there, despite the scandals of the Grant administrations, until it began to dawn upon farmers and workers alike that the Republican Party had deserted them and was consorting only with the high priests of business and apostles of reaction.

Then, and then only, did the Democrats return to favor. But we need to pause and look at that history in relation to the election that lies ahead.

In 1860 when Lincoln came in, the progressive groups were behind him. The farmers, the labor leaders, the intellectual giants found congenial company in his camp.

But the progressive sentiments of Lincoln's party died with him. His party turned to conservative ideals. It lost labor, gradually but nonetheless surely. By 1900, labor was not welcome in the party.

The farmer in the Northern States stayed Republicans for a long period after labor left. The farmers didn't quit until the 1930's. They were busted then, the great mass were, and they rebelled because two Republican Presidents had vetoed the McNary-Haugen bill to bring them assistance.

So in the 1930's, the political situation was the reverse of 1860, labor, farmers, and progressive citizens generally uniting behind a Democratic candidate. The task to which we must dedicate our best endeavors is to make that combination stand in the election of 1948 behind President Truman and Democratic candidates over the Nation.

In the period that followed Lincoln's death, the Democratic Party continued to fight the battle of the common people. Constantly, it struggled against the mounting tariff which raised higher and higher the cost of living. And toward the end of the period, in the administration of Cleveland, an impressive step forward was made when the civil service was reformed so soundly that the merit system then inaugurated remains substantially the same today.

Thus, even in those difficult years, landmarks of progressive policy were established that are basic in our democracy in 1948.

And then with the elections of 1910, and 2 years later the victory of Wilson, the progressive tide began to flow in earnest. I mentioned earlier that Wilson was a great leader in this tide. Let me list some of the accomplishments of his administrations:

The Federal Reserve System was organized.

Labor was specifically and legally declared not a commodity.

Farm loan banks were organized to meet the need of farmers for loans at reasonable rates of interest.

Women were given the vote, Nation-wide.

The income tax amendment was adopted.

For the first time, Members of the Senate of the United States were elected by popular vote.

Do you know anyone who today would urge repeal of any of these progressive programs? Think for a moment how large these reforms bulk in your lives—you women who vote—you men and women who now can elect your Senators—you farmers who can obtain credit—you workers whose rights as human beings are safeguarded—you business and professional people who benefit from a sound banking system. Would you give these up without a fight?

And now we come to another period, an era when the tide of progressivism came in with a roar and literally swept aside all who stood in its way, just as Wilson had said it would.

The first hundred days of that era were among the most dynamic hundred days in American history. I believe historians of the future will agree that in that short period we traveled as with seven-league boots farther along the road of social progress than in all the Republican administrations since the time of Abraham Lincoln.

May I refresh your minds about those days?

Think back with me. It is March 3, 1933. In Wall Street and the Loop of Chicago howling mobs surge around the pillars of closed banks while the police struggle to hold them back.

There is a sickening sensation in everyone's heart as we watch the financial life of the country come to a dead stop.

And then suddenly a day later there is hope again—hope surging through the vitals of this Nation as a great leader—though he was a man who could not even walk unaided—comes to the microphone and tells you—and tells me—that the only thing we have to fear is fear itself.

Never will the Nation forget that day. Never will it forget those first 100 days that followed.

On Sunday, the day after inauguration, the President uses a lingering power from World War I to declare a 4-day bank holiday.

On Monday a conference of governors meets at the White House.

On Thursday Congress convenes, an emergency banking bill passes both Houses and is signed by the President.

Six days later, the economy bill becomes law.

The day after this, farm-relief legislation is sent to Congress.

And in the next 3 months:

The banks are made sounder than they have ever been.

The Agricultural Adjustment Act is passed, laying the foundation for the national-farm program which both parties now support.

The National Industrial Recovery Act is set up to provide jobs, improve wages, and eliminate unfair business practices.

The Tennessee Valley Authority Act is passed to provide an example of long-range planning and use of natural soil and water resources.

The Civilian Conservation Corps is established to take boys off the streets and out of hobo "jungles" and give them useful work.

The Home Owners Loan Act enables people to save their homes from foreclosure.

The Railroad Coordinator Act helps keep the railroads operating.

The Glass-Steagall Bank Act sets up the Federal Deposit Insurance program.

The Emergency Relief Act furnishes food and clothing to the needy and wipes out the bread lines.

The Securities Act protects investors against sharp stock-promotion dealers.

The Wagner Employment Exchange Act helps men and women find jobs.

One hundred days. One hundred days in which the wolf of depression is flung back from the throat of the American economy. One hundred days in which the progressive spirit rises triumphant over fear and despair.

You have heard Republicans curse the New Deal. They have now controlled the Congress for more than a year. What bills have they passed to repeal any of the acts I have mentioned?

Today the Democratic Party, under President Truman, still continues in the progressive spirit of Jefferson, Jackson, Wilson, and Roosevelt. And strangely, that seems to trouble some people. They sometimes ask, "Why doesn't the President coast along? Why does he raise troublesome issues?"

Do you see why? Don't you see, it is because our party can never coast, can never straddle. There is no standing still. We are a great party because we forever push ahead toward the ideals of democracy. We are swept along on a great progressive tide and our strokes are with it—not against it.

Only so long as the Democratic Party remains the champion of human rights—the defender of human liberties—whether in the political or the economic sphere, only so long will it continue to ride the crest of the tide.

Otherwise, the two-party system goes dead and there is little to choose between the Democratic donkey and the Republican elephant.

The distinction between Democrat and Republican must remain clear. Democratic leadership must be as completely in step with the times as the Republican leadership is out of step. Many Republicans today are little more aware of the nature of the world crisis than they were in 1940 when the party overwhelmingly voted against selective service and lend-lease. Do not take my word for this. It was Candidate Harold Stassen who said last week that the Marshall plan faces "shortsighted opposition within our own party"—meaning the Republican Party. And it is Candidate ROBERT TAFT who wants to debate about the last $300,000,000 for ERP while the people of Europe scan the skies for signs of their deliverance.

Nor is the Republican leadership today any more aware of the nature of the domestic crisis than it was in 1929. Do you remember? With depression just around the corner, do you recall how Republicans halleluiahed that prosperity was here forever and soon there would be a chicken in every pot and two cars in every garage? And do you recall the classic remark of the radio comedian a few years later who said that if half the people who didn't have a pot would buy one, the pottery business would pick up? Do not take my word for it that the Republicans are still living in a dream world. It was Republican Senator AIKEN who suggested after the 1946 elections that his party had lost touch with reality.

True, the people momentarily turned to the Republican Party in 1946. But it has not taken them long to get enough. They are fed up with the results of what the Republicans themselves take credit for—high prices.

Again, do not take my word for it. It was a Republican, Senator WHERRY, who said: "TAFT! TAFT! Everybody is always talking about what TAFT has done to OPA. I'm the fellow that knocked out meat control." And it was Senator WHERRY who repeated recently, "It was the Republican leadership in the House and Senate that was responsible for ending OPA."

Last year you, the people of Kentucky, decided that you had had enough of that misguided leadership. You heard ALBEN BARKLEY stump this State in a great campaign on the cost-of-living issue. You voted Gov. Earle Clements into office by the biggest majority in Kentucky history.

In so doing, you proved once again the direction of the tide. Governor Clements, as a Congressman, fought for a progressive farm program. He took his stand against the Taft-Hartley bill. He was proud of his record, and it was on his record that he waged his campaign for the governorship. I am happy to see that the progressive tide—the tide that has so often reelected Senator BARKLEY—still runs strongly in the Blue Grass State. I expect that tide—Nation-wide—next year to return ALBEN BARKLEY to the post of majority leader in the Senate. And I expect, moreover, that when next January comes, the State of Kentucky will again be represented in the Senate by two Democrats.

The people are not long fooled. Last year, they were first amused, then worried, by the antics of the Republican ax wielders, who were going to chop up the budget like so much kindling wood. The House proposed to cut the budget by $6,000,000,000. Then, cooler heads in the Senate prevailed, and they came up with a compromise figure of four and a half billion.

What was the result? Congress finally appropriated for this fiscal year more money than the President had asked. The Republicans had merely marched their soldiers up the hill and marched them down again.

No, the people are not fooled. The Gallup polls daily look better to the Democratic eye.

And this chart doesn't look so bad, either.

And that is why, knowing all that is behind this party, I look hopefully to November and to the years ahead, why I rejoice to see the great tides in human affairs * * * rise in their power and irresistible might.

For this year we Democrats have both a short-run and a long-time trend with us.

In 1948, we enter the short-run trend when the big outturn at November Presidential elections works in our favor. We will prevail. We will reelect Harry S. Truman.

And when we make the hurdle in 1948, then we capitalize on the long-time trend that has carried us upward for 100 years—and can carry us higher.

But it will only do it if our armor shines spotless in the sun, if we are alert to our destiny at home and abroad, if we are loyal to our cause, if we remain the party of the people.

What South Can Expect

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Memphis (Tenn.) Commercial Appeal of February 20, 1948:

WHAT SOUTH CAN EXPECT

If Senator J. HOWARD MCGRATH speaks for the Democratic Party's top command, the

South now knows just how much consideration it can expect. It is none.

Senator MCGRATH must so speak, because he is the Democratic national chairman, and therefore one of the party's chief policy makers.

His statements relative to the impending visit of the southern governor's committee to Washington almost destroys hope that differences over President TRUMAN'S "civil rights" program can be settled within the party itself.

"I can't see," he says, "what purpose the committee hopes to accomplish."

Either Senator MCGRATH is politically blind or stupidly naive. Maybe it is both.

The governor's committee plans to make clear the South's position on the civil rights program and to demand greater consideration for the dominant position it occupies in the party. Senator MCGRATH'S declarations preclude any fruitful results, but the committee should go through with its plans if for no other reason than that of keeping the records straight.

He has made it plain that there will be no reversal of policy as to the civil rights program, and he attempts to explain Southern opposition by saying that it was due to the fact that all of the civil rights proposals were "wrapped up in one package."

He knows better. The South has opposed FEPC, antilynching, and antipoll tax legislation singly and collectively.

It will continue to oppose them.

It will continue to labor in behalf of the principles on which they are based through realistic methods. If that does not make sense to Senator MCGRATH, let him study the South's record of self-progress toward the ends of racial understanding and the elimination of mob violence.

On the same day that the Democratic Party's national chairman was expressing lack of understanding as to the purpose of the governors' visit, he made what was a shameless public appeal to Henry Wallace to repudiate his Communist supporters and return to the Democratic fold.

That was tantamount almost to a confession of desperation and another low in the field of political expediency. It will only serve to encourage the Wallace Reds and further disgust true Democrats.

If the Democratic Party's dismal failure in the recent Bronx congressional election and the so-called southern revolt brought that appeal about, the Democratic Party's top command had already lost all reason and balance.

Henry Wallace's political philosophy and followers are as alien to genuine Democratic Party principles as the civil rights program is in origin.

Neither deserve the consideration of right-thinking Democrats.

What doesn't seem to have penetrated the confused minds of Democratic leaders like Senator MCGRATH is that the South is in earnest.

Perhaps the governors' committee can, at least, set Washington and the rest of the country straight as to that.

There's infinitely more than the matter of a civil rights program at stake, although that is plenty of itself, involving, as it does, those rights to which the Democratic Party seems to be giving little heed—the constitutional rights of majorities.

There is involved that matter of being taken for granted—of assuming that after the South has been kicked around long enough it will still take more.

"Beware of the fury of a patient man," wrote Dryden. That goes for a section.

Patience and party loyalty both have their limitations.

Perhaps the governors' committee can help Senator MCGRATH see that.

Jefferson-Jackson Banquet

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oregonian of February 17, 1948:

AT $100 A THROW

Oregon Democrats show both ambition and optimism in planning a Jefferson-Jackson banquet at $100 a plate. The figure is not an unusual one for this event in places where Democrats are in lucrative office, such as Washington, D. C. In Portland, attendance will have to depend upon party hopes and party enthusiasm, rather than upon party obligation.

There are, however, two elements that should help attract a Democratic turn-out in Portland. The principal speaker will be J. HOWARD MCGRATH, former Governor of Rhode Island, former solicitor general, now United States Senator and Democratic National Committeeman. The other element is that this year the Democratic National Committee attains its one hundredth birthday. The committee was formed in Baltimore on May 22, 1848. Oregon Democrats will dine on April 7.

April 7 has no direct significance as a day in party history that we know of. Neither has February 19, when Jefferson-Jackson dinners will be held in most other large cities. It is not the birthday of either founder of the party. Jefferson was born on an April 13; Jackson on a March 15. So April 7 is as good a combination date as February 19.

Orators at these banquets will have a wealth of material to recall respecting the statesmanship of Jefferson and Jackson. But comparison of the political philosophies of the two with the policies of the present-day party does not lend itself to warm acclaim. The party's founding fathers, were they now alive, would not recognize their child.

Both adhered to strict construction of the Constitution. That is to say they opposed centralization of Federal Government in internal affairs—and look what happened under the New Deal. The early proponents of liberal construction were Hamilton, the two Adamses, Webster, Story, Clay.

Jackson vetoed, on the ground of unconstitutionality, several bills appropriating Federal funds for internal improvements. Now localities compete for them. Jefferson thought his Louisiana purchase required validation by constitutional amendment, but nothing was ever done about it. Jefferson believed in economy in government and a small public debt; in confining the currency strictly to gold and silver; in a well-trained militia and a small standing army. What the latter-day party has done or wants to do, regarding the last three, would better be left unsaid by the banquet orators.

In one respect, however, the Democrats could defend Truman appointments on the basis of notable party precedent. Jackson believed in rewarding his personal friends. And, as already remarked, much can be declaimed about the two without going into embarrassing political contrasts.

These Jefferson-Jackson banquets are money-raising projects. The diners will not get $100 worth of food and drink. Whether they will be as financially productive as formerly is in some doubt. It had not been unusual for corporations, seeking good will come what might in politics, to buy blocks of tickets and distribute them among employees. But the Taft-Hartley law tightened restrictions on political activity by corporations. Formerly they were forbidden to make "contributions" in connection with election of a President or Congressman. Technically the buying of tickets to a banquet was not a contribution—the buyers received something in return. Now the law forbids "expenditure" by corporations in connection with any election at which the people vote for President or Congressmen.

A Democratic banquet at $100 a throw to help fill the campaign chest, now depends more closely on the open-handedness of individual party stalwarts.

TVA Handles a Flood

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include an editorial from the New York Times, dated Saturday, February 21, 1948, concerning the handling of floodwaters by the Tennessee Valley Authority. This editorial is timely and praises the efficiency of the TVA system of harnessing and checking the recent high waters in the Tennessee Valley area. Areas without the TVA chain-dam system suffered great losses during the recent flood. High waters in the Tennessee Valley area were checked and millions of dollars saved our citizens by reason of the existence of this great flood-control project. Extensive damage occurred in the Duck River Valley and other areas in Tennessee where the TVA watershed does not extend. Nashville, Tennessee's capital city, situated on the banks of the Cumberland River, suffered losses variously estimated from $400,000 to $500,000 from the now waning and recent flood. The bringing of the Cumberland River and its tributaries under the TVA watershed would mean untold savings to the people of the South. Flood control is a great problem with which this Congress is or should be concerned. The example demonstrated by the benefits of the TVA program is clear and explicit.

The editorial is as follows:

TVA HANDLES A FLOOD

Latest reports on the recent high water in the Tennessee Valley again confirm the efficiency of TVA's system of tributary and main-river dams. The great reservoirs of Norris, Cherokee, Douglas, Fontana, and Hiwassee, on the tributary streams, took all the water that was poured into them and had plenty of room left. By this means the flood crest at Chattanooga was cut 10 feet, with an estimated saving of $6,000,000. Real damage was done in the valley of the Duck River, where the flood broke the Weather Bureau's 70-year record, but as there are no TVA dams on Duck River the blame must be placed on the weather.

Below Chattanooga some water from the main-river dams was allowed to inundate low-lying farm lands, causing losses of a few thousand dollars. This, however, is standard practice. Such lands are kept cleared of

farm structures and though occasionally flooded in winter are protected throughout the growing season. Finally, the vast Kentucky Reservoir, above the Ohio junction, still has sufficient capacity to halt the whole flow of the Tennessee, if necessary, while the flood crests pass down the Ohio.

It is important that these facts be understood. They are of record and in no way affected by political or economic controversy. They stand for sound engineering. We have a right to look forward to a day when comparable engineering will control the flow of the Missouri and other rivers not yet adequately under man's domination.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and petition:

LA CROSSE, WIS., *February 18, 1948.*
Hon. WILLIAM H. STEVENSON,
Member of Congress, Washington, D. C.

DEAR CONGRESSMAN: A petition signed by some of the best citizens of La Crosse, urging you to further legislation establishing some form of universal military training is enclosed. This is not just an ordinary petition, for the reason that it represents the wishes of our thinking citizens in this community. We believe the cost of universal military training is a very small premium to pay for the protection of our country.

Very truly yours,
L. V. WEISENSEL.

PETITION

Hon. WILLIAM H. STEVENSON,
Member of Congress,
Washington, D. C.:

Peace is worth striving for. Therefore we, citizens of the United States and voters, urge you, our Representative in the Eightieth Congress of the United States, to support and vote for legislation establishing a system of universal military training for American young men, as recommended by the President's Advisory Commission on Universal Training.

Emie Georgie, John Michels, O. C. Smerog, Marvin M. Lee, J. D. Christie, William Gantenbein, Harry H. Miamto, Lawrence E. Clark, Louis George, Tom G. Dowling, Robert Rio, Delmer J. Secord, Robert Meyers, N. L. Gittetz, S. W. Gifford, R. I. Deml, R. S. Winesburg, George A. Rau, C. L. Klein, Cal Lachman, Roy Myers, La Crosse, Wis.

Becker, Alfred F. Tubanek, J. W. Reidelbach, La Crosse, Wis.

Sam Hardy

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. JENKINS of Ohio. Mr. Speaker, loyalty is one of the finest of all human virtues. Loyalty is a firm constant reliability which encompasses courtesy, honesty, and fidelity. A loyal friend or employee is one who will stand when others run away.

My good friend Sam Hardy exemplifies all these virtues every day as he goes about his duties as messenger for the Ways and Means Committee. He has been employed by the Ways and Means Committee for 40 years. During that time he has been intimately associated with many of the leaders in the House and Senate.

With an unfailing courtesy and with an alacrity, born of a desire to render helpful service, he has been a most efficient and popular employee. Many of his intimate acquaintances do not know his surname, but they all know Sam. Thousands of persons who have in the past 40 years had business with the Ways and Means Committee know and have known Sam. They know him as Sam and they will always remember him as Sam.

For the many kindnesses to me and for his readiness to render service which is a part of his position, I shall be forever grateful to him. May he continue long in the place which he has filled so competently.

The Steel Shortage

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. BECKWORTH. Mr. Speaker, I desire to include in the CONGRESSIONAL RECORD the following letter from Mr. John C. Virden, Assistant to the Secretary, Department of Commerce, concerning steel:

DEPARTMENT OF COMMERCE,
OFFICE OF THE SECRETARY,
Washington, February 16, 1948.
Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN BECKWORTH: In reply to your inquiry of February 10, the Steel Committee undoubtedly will explore the possibilities of using all iron and steel facilities to the utmost to insure as large production of the basic commodities as is possible during the present emergency.

We are gratified to learn of the increased facilities of several of the larger steel producers which will go into production this year. It is doubtful, however, even the stepped-up production will be sufficient to meet all emergency requirements of the farming, petroleum, and housing industries. Caution, accordingly, will have to be exercised in working out industry agreements whereby the more critical of the programs receive prior attention. Among the latter undoubtedly will have to be certain segments of the petroleum, gas, and oil industries. The steel requirements of the latter group are now being prepared by an industry advisory committee under the general guidance of the Department of the Interior. The necessary data is scheduled to be available by March 1.

The steel requirements for maintenance and repairs to keep the entire industry operating at full capacity will comprise the foundation of the report. Superimposed on these requirements will be the minimum steel requirements for increasing production to meet the over-all stepped-up domestic economy. How far one must go beyond these domestic requirements to take care of the European recovery program is naturally a matter of speculation at the moment.

Please be assured this office will make sure the question raised by you as to possible surplus war-plant steel facilities being available is given the serious consideration it deserves at the very earliest date.

Sincerely yours,
JOHN C. VIRDEN,
Special Assistant to the Secretary.

Rent Controls

EXTENSION OF REMARKS
OF
HON. CHARLES K. FLETCHER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. FLETCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune of February 20, 1948:

A COWARDLY BILL

The Senate Banking Committee has approved a bill to extend rent control to the end of April 1949. There is the usual palaver about liberalizing regulations to protect landlords against hardship, but all this boils down to the Senators' reluctance to pick the landlord's pocket of a dollar but their willingness to pick it of 85 cents.

One example of shocking bad faith is the provision that would extend those leases, voluntarily entered at 15 percent increases of rent, until the 1949 date. Last year's act, authorizing these leases, provided that they should expire at the end of this year, and that thereafter the properties so leased should be free of rent control. Now the control is extended, violating the legislative promise.

Congress has also provided that new construction shall be free of rent control. There has been very little new construction of rental properties, and after this action on the 15-percent leases, there may be still less. One reason that investors have been unwilling to put their money into rental properties has been the fears that when they are built Congress will go back on its word and slap rent controls on them. The Senate

committee has shown that these fears are well justified.

This pending rent-control bill, like every other action of National, State, and local legislative bodies on the subject, betrays the complete cowardice of the politicians of the United States. They know there is no moral or legal justification for rent control and they vote for it for one reason only. That is their hope to win the votes of the vast army of tenants by helping them defraud their landlords.

Rent control is always presented in the same guise, which is that it is to give emergency relief from a shortage of housing. The emergency will last as long as the rent control, and not more than 6 months longer. As long as the control is maintained, the shortage will grow worse because rental units are wearing out and falling apart faster than new units are being built.

Removal of controls would of itself remedy most, if not all, of the housing shortage. It would force people who are occupying more space than they need, because they get it at artificially low rent, to restrict their use to fit their purses, and thereby make room for other tenants.

There should be no mistake that the lifting of rent controls would immediately result in a considerable increase in rents. It will also result in gouging by a certain number of landlords, though probably not by the more foresighted ones. The lifting of other controls has resulted in farmers getting the last penny they can for their crops and in labor unions getting the last penny they can in wage increases. Only the landlord is expected to defray 1948 costs out of 1942 income.

The only people who can gain in the long run by rent control are the public-housing racketeers. The housing shortage will persist and they will have an excuse to use tax funds to provide shelter at less than cost to another favored group. That racket, however, won't be financed by landlords alone. Tenants also pay income taxes.

Butter Industry Must Not Be Destroyed by Oleo—Here's What Grover Cleveland Said About It

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include excerpts of Grover Cleveland's message to the Congress when he signed the oleo tax bill, August 2, 1886. These excerpts are:

[Excerpts from Suggesting Certain Amendments to the Oleomargarine Act (H. R. 8328—49th Cong., 1st sess.)]

EXECUTIVE MANSION,
Washington, August 2, 1886.

To the Congress:

I have this day approved a bill originating in the House of Representatives, entitled "An act defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine."

* * * * * *

The Constitution has invested Congress with a very wide legislative discretion both as to the necessity of taxation and the selection of the objects of its burdens. And though, if the question was presented to me as an original proposition, I might doubt the present need of increased taxation, I deem it my duty in this instance to defer to the judgment of the legislative branch of the Government, which has been so emphatically announced in both Houses of Congress upon the passage of this bill.

* * * * *

It has been urged as an objection to this measure that, while purporting to be legislation for revenue, its real purpose is to destroy, by the use of the taxing power, one industry of our people for the protection and benefit of another.

If entitled to indulge in such a suspicion, as a basis of official action in this case, and if entirely satisfied that the consequences indicated would ensue, I should doubtless feel constrained to interpose Executive dissent.

But I do not feel called upon to interpret the motives of Congress otherwise than by the apparent character of the bill which has been presented to me, and I am convinced that the taxes which it creates cannot possibly destroy the open and legitimate manufacture and sale of the thing upon which it is levied. If this article has the merit which its friends claim for it, and if the people of the land, with full knowledge of its real character, desire to purchase and use it, the taxes exacted by this bill will permit a fair profit to both manufacturer and dealer. If the existence of the commodity taxed, and the profits of its manufacture and sale, depend upon disposing of it to the people for something else which it deceitfully imitates, the entire enterprise is a fraud and not an industry; and if it cannot endure the exhibition of its real character which will be effected by the inspection, supervision, and stamping which this bill directs, the sooner it is destroyed the better, in the interest of fair dealing.

The Work of the Eightieth Congress

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks, I wish to include the address made by the Honorable JOSEPH W. MARTIN, JR., Speaker of the House of Representatives, at the Veterans of Foreign Wars' Washington Birthday banquet at the Statler Hotel, Washington, D. C., February 21, 1948:

Fellow citizens, it always gives me a special pleasure to talk with war veterans. The contact always renews my confidence in the capacity of our people and the strength of our Nation. The most wholesome and helpful practice we in America can adopt is always to keep in the forefront of our thinking the great debt of gratitude we owe the men and women who have worn the uniform of their country's service. We must never forget that our soldiers, sailors, and marines, dead and living, have preserved our America. They have kept strong the one remaining beacon of freedom in a dark and stormy world. They have kept the fires of freedom bright when despots, and ruthless aggressors, would have extinguished them in a night of horror and human suffering.

A great responsibility has rested upon the young Americans who, over the years, have gone forward to lay their all, if necessary, upon the altar of their country's service. War service always demands the flower of our citizenship, the best of our youth, and the greatest human sacrifice in suffering and agony known to humanity. You and the other citizens who have served in the armed forces discharged your responsibility well.

A great responsibility still rests upon you, and all the other young Americans who are now coming into control of the Nation. America is the last bulwark of liberty. It must be kept strong, and solvent, and free, to lead a world cooperative movement back to peace and sanity and prosperity. You will keep it so.

By virtue of the very service you have rendered your Nation, you are keenly aware that liberty is not something government gives to the people. Liberty is something the people keep government from taking away from them. The men who founded this Nation knew that. Therefore, they placed all the power of government in the hands of the people. They very cautiously gave only a few powers to the legislative, the executive, and the judicial branches. They were careful to establish as many checks and balances as possible. Whenever these checks and balances are impaired, the liberty of the citizen is endangered. The veterans will see that our American system is preserved. They have seen all governments in the world in operation. They came home knowing by experience our American system is the best.

The Nation will always pay homage to those who, through valor, sacrifice, and courage, prevented aggressive despotism from enslaving perhaps the whole of the Old World.

You, as veterans and as citizens, have a major contribution to make to your peacetime Nation. The veterans have come back from the wars to undertake leading roles in industry, in agriculture, in the labor movement, in the professions. Above all, the veterans will continue to resist, as they have resisted with all their might, any subversive attempts to destroy our constitutional system of government, our free economy, our free society. The veterans will be the first to rise to the defense of our liberties when the Government seeks too much control over us, or when traitors to our Nation seek to curb our liberties. The veterans will be the mainstay of our Nation in any attempts which might be made earlier by stealth or by force to overthrow our American way of life.

The men and women who have laid away the uniforms of their country and their service continue to serve under the banners of the several veterans' organizations of the Nation. They continue, in those organizations, to serve the best interests of America. As the veterans were our country's first line of defense in war, they continue to be our first line of defense in that never-ending struggle to maintain our full liberties and privileges under our free way of life.

Something has happened in the world in the last few months that holds a very deep significance for the veterans of all our wars.

For many years some people have been telling us that perhaps in Russian communism there might be something a little better than our American system. I want to remind you now that under the test, communism utterly and completely failed. Revelations made within the past few weeks show conclusively and accurately that in the land where the Kremlin had complete control of government, industry, agriculture, labor, and of every detail of the private citizen's life that control has failed utterly to produce efficient results. They have had worse inflation in Russia than we have had in the United States. Our tax rates are too high, but in Russia just recently they executed a 90-percent capital levy. How would you veterans feel if your Government were to order you

to bring all of your dollars to the nearest bank and have the bank take 9 out of those 10 dollars and allow you to keep only one?

Russian living levels are only about a tenth as high as those of the United States. The prices of all goods and services in Russia are very much greater than in the United States. Men are chained by governmental decree to their jobs in factories, or on the land of the collective farms. Citizens are not permitted to have radios, or automobiles, or telephones, or any of the other luxuries or comforts of life. Wages are low and are rigidly regulated by the Kremlin. Labor strikes are impossible. They would be settded by a firing squad. There are grades and classes of living. The privileged rulers and their favorites deal at different stores. They get better goods and lower prices than do the rest of the people. Most of the Russian people live in mud hovels, log huts, or else are crowded like so many animals into quarters which would make even our crowded conditions in America seems highly luxurious. The people are slaves. Just the other day there came out of Russia an authentic statement on their budget. It revealed that inefficiency, waste, graft, and corruption have been widespread, and still are today in the whole of Russia. They have nothing under the system of the Soviet that even remotely compares in excellence, efficiency, or equality with our American system.

The job ahead of us now is to keep America the kind of country, to keep our Government and our economic system and our social system, the kind of Government, economy, and society you veterans and your comrades fought and bled and died to preserve.

There are some 18,000,000 veterans now. Actually a few aged veterans of the Civil War still live. Quite a few veterans of the Spanish-American War are among us. Still more of World War I—and about 14,000,000 World War II veterans.

We must make certain the debt this Nation owes to all veterans is paid in opportunity for progress, and not canceled by a crushing burden of taxation or in the corrosion of inflation.

Our first concern, as we go about this tremendous task of trying to lead a cooperative world movement back to peace, sanity, and decency, is to look to our national defense. We must have a defense—especially in the air—both military and naval, amply adequate to meet any possible need of the future. We know now that science has become a very important factor in our national defense.

Let me say to you at this point there are those who, either deliberately or unwittingly, seek to mislead the people as to the attitude of the Eightieth Congress toward the national defense. It has been claimed that by a pinchpenny policy the Eightieth Congress wrecked the national defense, reduced it to about fifth place in the world's defense system. It has been charged our defense in the air was made a hollow shell. Your veterans' organizations recognize this necessity for air supremacy to be in the hands of the United States. A resolution unanimously adopted at the forty-eighth national encampment of the Veterans of Foreign Wars at Cleveland in September 1947 stressed this fact. Your excellent pamphlet entitled "Formula for Peace" is a powerful plea put forth to keep the Nation alert to the need for the most efficient defense possible for us to maintain.

Now, what are the facts about congressional recognition of this necessity? The truth is the first session of the Eightieth Congress allowed the air services $76,000,000 more to spend than the budget called for. Over the whole range of national defense, the Eightieth Congress reduced the requests by only $120,000,000 or 1.3 percent. We gave the services $9,400,000,000 to spend on the national defense. I do not have to tell you our national defense could not go to wrack and ruin on nearly $9,500,000,000 merely because the appropriations were reduced 1.3 percent. Of course, the Congress means to appropriate all the money necessary to maintain the safety and security of this Nation. We intend to be sure the money is actually needed. We intend so to safeguard expenditures that your dollars, and the dollars of the other taxpayers, will not be wasted. We intend to see that efficiency and economy are exercised to the last degree possible to attain. Duplication must be avoided. To that end the Eightieth Congress enacted unification of armed services. You know and I know that is the only way we will get a national defense which will stand up to its job if ever the time comes—and pray God it never will—that we have to use that national defense in war again.

One of the reasons why we must get back to a peacetime-size government, to peacetime-size bureaus and departments, is because it is the veterans and their families who have to help carry the crushing burden of taxes to pay for governmental spending. You and your comrades want your fair chance to get ahead; to establish homes; to save money; to lay up something for your old age. You cannot do that if the hand of the tax gatherer is going to be thrust into your pockets to take a third or half of all you can earn. You cannot do that if, at the retail counter, hidden in prices, you've got to pay taxes up to 20 or 25 percent of the price mark of all goods and services you need and use.

We recognize that we must aid Europe and the Orient. But there again efficiency, economy, common sense—and cooperation—must be attained if we expect our attempts to aid the other peoples of the world to be successful.

The war was like a fire breaking out in a settlement. All of us had to help put out the fire. Now all of us have to help clean up the ruins, stamp out the plagues; reestablish the sanitary systems; help homeless and desperate peoples to get back on their own feet. But America's help must be recognized as being designed not as a world WPA unlimited; it must be recognized as a cooperative effort to help the other peoples of the world to get in position to help and maintain themselves.

At this point I want to pay a tribute to the American soldiers, and sailors, and the Wacs, and the Waves, and all the others who were in the services abroad, as ambassadors of good will. There is no soldier in the world who is the equal of the American soldier for being an ambassador of good will in countries outside his own. While he might fight his enemies resistlessly, he never fails to be a fair foe. But just let a little child, or a hungry woman, or a suffering aged person, or even a beaten foe, appeal to him for help, and what is the first thing the American soldier does? He reaches for his chocolate bar, or his can of K-rations. He reaches for a shirt or a suit of underwear. He reaches for something to give comfort to those who are suffering. What a magnificent mission of good will that is.

Perhaps such small incidents as these may be lost sight of in the great program of international relations. But let me say to you good will among men grows out of a multiplicity of just such small incidents as these. Governments may make mistakes—and do; diplomats may blunder—and do; someone in business may be greedy—and some are; some tourists may behave like hoodlums—and a few do; but in the long run, it is the day-by-day kindnesses exchanged among peoples which generate good feeling or ill feeling. One of the greatest tributes in all history to American fighters is that they are always welcomed back in peacetime to the countries wherein they fought.

Our efforts to aid the world must be based on a foundation of understanding and good will between the masses of the peoples.

Now I want to speak for a moment about what the Eightieth Congress has done to recognize the debt of gratitude we owe to the veterans of the United States. In broad general terms, you already know we stand for every educational advantage for the veteran it is possible to give him.

We have already passed a bill in the House of Representatives to lower tax rates. More than 71 percent of those reductions go to those in the lower-income brackets.

We are moving to reduce the debt as rapidly as practicable in order to take off of the veterans and their children as much of that service load as possible.

Here I would like to point out some of the accomplishments which have been achieved by the Eightieth Congress for the benefit of the veterans.

The Eightieth Congress did not have the benefit of a great publicity machine. But in spite of turbulent world problems much was accomplished for veterans. Following are the measures passed by the Eightieth Congress:

Public Law No. 5, to extend the time limitation for reinstatement of national service life insurance policies.

Public Law No. 34, to provide for renewal for a fifth 5-year period the 5-year level premium term insurance plan for World War I veterans.

Public Law No. 36, to grant officers of the Army and Navy Nurses Corps comparable rank, pay, and allowances with officers of the Army and Navy.

Public Law No. 82, to permit husband and wife to combine their armed services credit for homestead purposes.

Public Law No. 85, authorizing $35,500,000 to complete temporary reuse housing for veterans.

Public Law No. 115, increasing the revolving fund in the Veterans' Administration from $1,500,000 to $3,000,000 for the purpose of making noninterest bearing loans to disabled World War II veterans taking vocational rehabilitation courses.

Public Law No. 126, extending until January 1, 1948, the time during which alien fiancées of veterans may enter the United States without being subject to immigration quotas or visa regulations.

Public Law No. 161, to extend for another year the authority to purchase automobiles for World War II veterans who are leg amputees or have suffered the loss of use of a leg.

Public Law No. 213, to permit the admission to the United States of racially inadmissible alien spouses of veterans.

Public Law No. 254, to provide for the cash payment of terminal leave bonds any time after September 1, 1947.

Public Law No. 270, to provide a 20 percent pension increase for veterans of the Civil War and Spanish American War.

Public Law No. 310, to restore the tax exemption status of those members of the armed services removed from former American possessions during captivity by the Japanese.

Public Law No. 314, to authorize the acceptance by officers and enlisted men of the Armed Services of medals and decorations tendered them by co-belligerent and neutral nations of World War II.

Public Law No. 316, to permit retired Armed Services personnel to represent veterans organizations in claims before the Veterans' Administration.

Public Law No. 325, to make mandatory on Federal agencies the rulings of the Civil Service Commission on appeals by veterans for reinstatement.

Public Law No. 337, to improve the Army and Navy medical services.

Public Law No. 338, to increase the minimum allowances payable to disabled veterans undergoing vocational rehabilitation under Public Law No. 16.

Public Law No. 350, to provide cash in lieu of terminal leave for veterans.

Public Law No. 365, to provide additional pay of $100 per month for officers of the Army Medical Corps and Navy Medical Corps.

Public Law No. 367, to refund income tax so paid by any member of the armed services who died on active duty for the year in which death occurred and for the years during which he was in the armed services.

Public Law No. 377, to provide full subsistence allowances for veterans taking on-the-farm training.

Public Law No. 396, to extend veterans' preference benefits (civil service) to widowed mothers of certain ex-service men and ex-service women. Approved January 19, 1948.

Public Law No. 398, to increase by 20 percent the pensions payable to veterans of Indian wars and the dependents of such veterans. Approved January 19, 1948.

Public Law No. 411, to increase the subsistence allowances to veterans pursuing full-time educational training courses under the GI bill of rights. The measure increased such allowances from $65 to $75 a month for single persons, from $90 to $105 for veterans with one dependent, and to $120 for veterans with more than one dependent. The increased allowances will go to about 1,500,000 veterans and cost around $217,000,000 a year. Approved February 14, 1948.

S. 1393 to raise the ceilings and allowances payable to veterans undergoing training on the job is in conference. The Senate voted to increase the ceilings from $175 to $200 a month for a veteran without a dependent and from $200 to $250 for a veteran with dependents. The House voted to increase ceilings $250 for a veteran without dependents, $325 for a veteran with one dependent and $350 for a veteran with more than one dependent.

Hospital facilities for disabled veterans must be adequately expanded. No disabled veterans must ever be allowed to suffer for a lack of hospital care.

We are bedeviled by high prices. We are confronted with demands for further governmental controls. Nearly everyone now knows high prices are the result of years of deficit spending on the part of the Government and the inflationary effects of the war activities. The greater part of the goods and services were destroyed on the battlefields or sunk at sea, while the unspent wages and salaries stayed at home. The postwar demands for aid for foreign countries are also an inflationary force. Like war activities, the goods and services go abroad and the unspent wages and salaries stay at home.

Our shortages of materials, our inflated prices, aggravated by hidden taxes, which amount to 20 percent of price, all bear hard on the veteran and his family. These problems must be solved. The veterans will have a very important part in solving them. The answer, however, certainly is not more regimentation; more control over your lives; more interference with your activities or your business. We can never get this Nation back to economic soundness by thinking only in terms of governmental controls, curtailed liberties and privileges of the citizen, and planned economy, with the Government doing all of the planning. Other countries have that kind of government today. Under those governments people are being told what they must eat, what they must wear, where they must work, what their wages will be. Under that kind of government they may not travel about in automobiles. What they may buy is very sternly regulated. But that kind of government is bogging down. It doesn't work for people who love freedom.

We can't serve the best interests of the war veterans by a topheavy supercostly structure of inefficient governmental agencies. I suspect you veterans didn't always relish the necessity of having to snap to attention when the "big brass" barked, although discipline is vital to military efficiency. I am sure you do not want to spend the rest of your lives having to snap to attention and follow orders when bureaucratic "big brass" barks.

America must be kept the land in which the citizens tell the government what to do. It must not be permitted to become a country in which the government tells the citizens what to do. Every government tends to grow bigger and bigger. Our Government is no exception. One of the most bitter struggles being made by the bureaus today is against the Congress cutting them back to peacetime size and expenditures.

What this means to the veteran and his family may be realized when I tell you that as of January 31, 1948, the per capita debt in this country was $1,776.10. That meant that every veteran and his wife owed on the debt $3,552.20. If he has a child he owes another $1,776.10. It is now proposed to the Eightieth Congress that we permit the Administration to spend in fiscal 1949, $1,020 for every family of four in this country.

Those figures have a sinister meaning for veterans and other young people who are trying to get ahead in these times. It behooves us to cut back all governmental bureaus and activities which can be dispensed with, or reduced, so we may lighten as much as possible the tax load upon our people. In the interest of the veteran we must watch Government spending and its accumulation of debt.

After all, the veteran is a taxpayer the same as everybody else.

The Veterans' Administration has just completed a survey which shows that of every hundred Americans today 32 are veterans, or members of veterans' families.

It is estimated that within 5 years from now, veterans and their families will constitute 43 percent of the population.

A recent study shows that within 20 years, the veterans will comprise about half of all the taxpayers in this country. It is plain then the veteran is greatly concerned over continuing spending policies of the Government.

I do not need to take your time to warn you against subversion. You know as well as I there are too many people in this country who given their allegiance to foreign doctrines and foreign powers. They must be rooted out of position of influence in the Government, and rendered powerless to injure us in the moment of a national emergency. If we should send back to their own countries those who come here and find so much wrong with ours, there would be fewer subversionists to pester us. Strangely, none of those fellows ever want to go back home to their own countries. You veterans are going to have a lot to say about that situation, too.

Those who have fought in the wars of their country have kept faith with those who, under Washington, left their bloody footprints in the snows of Valley Forge. So we must keep faith with all of those, living and dead, who shed their blood, or risked their lives, in the defense of this grand, free Nation which Washington had such a great and noble share in building.

On the side of one of the great stone pillars supporting the arch to the main entrance to Valley Forge, there is this beautiful inscription:

"And here, in this place of sacrifice, in this vale of humiliation, in this valley of the shadow of that death out of which the life of America rose, regenerate and free, let us believe, with an abiding faith, that to them union will seem as dear, and liberty as sweet, and progress as glorious as they were to our fathers, and are to you and me; and that the institutions which have made us happy, preserved by the virtue of our children shall bless the remotest generation of the time to come."

Since tomorrow is the immortal Washington's birthday, and since, but a little while ago, we paid homage to the immortal Abraham Lincoln, I should like to conclude these remarks with that wonderful tribute to Washington voiced by Lincoln:

"On that name no eulogy is expected. It cannot be. To add brightness to the sun, or glory to the name of Washington, is alike impossible. Let none attempt it. In solemn awe pronounce the name, and in its naked, deathless splendor leave it shining on."

What Do the People Think?

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. BENNETT of Missouri. Mr. Speaker, under leave to extend my remarks, I include the following talk which I made February 21 and 22 over radio stations KWTO, KGBX, and KDRO, in my congressional district. In this talk I give the results of a poll of public opinion in my district on six controversial questions pending in Congress today.

Fellow citizens, I am glad to be back with you today to resume this series of radio reports from Washington, the Nation's Capital. It has been my privilege to bring you such a report over the air and on this station at this hour each week Congress has been in session during the 5 years I have been a Member. We are now starting the sixth year of that service. Congress is faced by many problems I expect to discuss with you today and in the weeks ahead. This is in the spirit of true representative government. You are invited to listen, tell your friends, and to write to me or to the radio stations giving your comments or views on the program or suggesting topics for discussion.

The main jobs the Eightieth Congress faced when it took office were tax reduction, reduction of Government spending, reduction of the number of Government employees, and passage of a law putting labor and management on equal footing before the law and reducing the causes of strikes. Congress has pretty well made good on all of these propositions, or has taken long strides toward their accomplishment. Of course, it hasn't reduced your income taxes yet. The President stopped that twice last year with his veto. However, he will be given another chance to reduce the high cost of living by approving a new tax-reduction bill in the near future.

This tax-reduction bill increases the exemptions for each taxpayer and each of his dependents; doubles the exemption for persons over the age of 65 years; increases the special exemption for the blind; eliminates the tax discrimination between taxpayers in community-property and other States; and reduces taxes from 10 to 30 percent, with the larger reduction applying to the lower-income groups. This bill gives the greatest reductions to those who need it most, those with lower incomes, the aged on fixed incomes, and the young people just beginning to earn a livelihood. This bill recently passed the House by an overwhelming vote.

What do the people think about these and other questions? Or do they think, or does it make any difference?

The founders of our form of government had two ideas about that. One idea was that the people should elect Congressmen who would devote their full time to the job, study the issues and evidence and vote as they saw fit without necessary regard to the public's wishes. The assumption was that the public didn't have time to go into the details of the complex legislative questions and that their trained and experienced representatives would vote in their interest and if it didn't work out that way they could be fired at the next election. The opposing view, was that the Senators and Representatives, should carefully feel the pulse of the public and vote the way the public wanted regardless of the views and conscience of the Congressman. In other words, the Congressman should be a sort of glorified weather vane which at all times could tell the direction of the political winds.

Your Congressman has tried to strike a happy medium between these extreme views. The public judgment is not always right because it is not always fully informed and cannot be expected to be. On the other hand, even an expert can give an answer to a problem which will look good on paper, or in theory, but which in practical application may not be in the best interests of the public. A good Congressman should give respectful hearing to the views of his constituents and, other things being equal, should give them considerable weight. He should keep in touch with the needs of his people, report to them frankly and often and solicit their opinions. Today, with the press and radio, the public is better informed than ever before, and it would be a foolish Congressman, indeed, who tried to assume he had all of the wisdom in his district. While exercising independent judgment based on his own studies and experiences tested in the fires of legislation, he should give due consideration to the popular will. That is both expedient and right. And it can be done.

In January, I sent out a questionnaire on the back of a Government bulletin check list offering the citizens of the Sixth Missouri Congressional District useful and valuable publications put out by their Federal Government. Each Congressman has a small annual allotment of these publications which are also for sale at the Government Printing Office. He can distribute his allotment any way he sees fit, free to his constituents.

The letter and questionnaire which went with this check list did not attempt to cover all of the questions of public and congressional interest just now but did make reference to six of the most important and controversial. Fifty-three thousand questionnaires were sent out in the Sixth District. They were distributed to all rural, star, and post-office boxholders in the district. In addition, 10,000 went to telephone subscribers in all of the various cities of the district. This distribution did not cover everybody but certainly is a complete cross-section of the political, racial, and occupational elements of the population in the district which the New Deal St. Louis Post-Dispatch in 1943 said, "Is perhaps the most typically representative American congressional district." A few returns are still coming in but indications are that the percentages will vary only slightly if at all. That is the way with polls and elections. Over 6 percent of those questioned have replied, filling out the questionnaire and furnishing their own return envelope and stamp. That is a higher return than any other Congressman has received who has followed the same plan this year. Two other Missouri Congressmen have done the same thing. Congressman PARKE M. BANTA of the Eighth District, adjoining the Sixth District on the east and running to the Mississippi River, had a 5-percent return. Congressman MAX SCHWABE, of the Second District, just east and north of the Sixth District, had a 4.8-percent return. Five percent would seem to be about average and far above the usual response to inquiries of this kind. But the higher return may be accounted for by two factors: People like to tell their Congressman how to conduct himself, to express their views to him, and the questionnaire carried the lure of an offer of free bulletins for any who completed and returned it.

Here are the six questions asked and the percentage answers from the Sixth Missouri Congressional District:

1. "Do you believe the Taft-Hartley labor law of 1947 should be left alone?" "Yes," said 57.1 percent. "Repealed," say 6.1 percent. "Changed and made stronger," say 15.5 percent. "No opinion" say 21.3 percent. Those who say it should be left alone or made stronger total 72.6 percent. This may be of interest to labor leaders who hope to drive union members to the polls this year like sheep, to vote against those Congressmen who voted for this labor bill. The rank and file of labor supports its provisions. The Gallup Poll of February 18, 1948 bears this out. The same question was asked by Dr. Gallup, and on a Nation-wide basis only 13 percent of the people who vote, favor repeal of the bill, as against 6 percent in our congressional district. But, there are no Detroits, New Yorks, and other big industrial centers in our district to run this percentage up to the national level as found by Gallup. The Look magazine poll says that 68 percent of union members approve the individual provisions of the Taft-Hartley bill. Apparently those who do oppose it haven't read it, don't know what is in it or are taking the word of the union bosses and press agents who don't like it because it has reduced the number of strikes, helped stabilize the industrial unrest, ousted many Communist leaders, and has given the working man (often at expense of the union leader) more democratic rights than he has ever had before over his union affairs. Nowhere can be found the "slaves" which union bosses said the bill would make of the working man.

2. The second question asked was: "Do you favor a reduction now from the wartime burden of taxation?" Those who say "yes" to this Republican proposal total 74.3 percent, "No," 21.3 percent, and "No opinion," 4.4 percent.

3. "Do you favor compulsory peacetime military training?" "Yes," say 44.7 percent. "No," say 48.5 percent. "No opinion," say 6.8 percent. This is very close with only about a 4 percent lead for those opposing, which may surprise some people.

4. The fourth question is based on the double request of the President in his message to the special session of Congress. The question inquires as to the Marshall foreign-aid plan and the restoration of wartime controls in peacetime. It is necessarily a little long. Here it is:

"Do you favor the so-called Truman-Marshall plan which calls for our Government to borrow and to raise by taxation $17,000,000,000 more to give foreign countries in the next 4 years and, as recommended by the President, to reestablish Government price fixing and rationing in this country as among the necessary steps which must be taken to prevent further inflation from such expenditures?"

The people of the Sixth Missouri Congressional District would seem very definitely to oppose these propositions. Here are the returns: "Yes, we favor such aid and controls," say 15.2 percent. "No," say 76.9 percent. "We have no opinion," say 7.9 percent.

5. "Do you think the administration is following the right course to avoid war with Russia?" "Yes," say only 17.7 percent. "No," say 56.3 percent. "We don't know," say 26 percent.

6. "Should undistributed profits of farm cooperatives be subject to Federal income tax in the future?" "Yes," say 45.8 percent. "No," say 40.3 percent. "No opinion," say 13.9 percent.

This last return is a little surprising in view of the tremendous strength of farm cooperatives in the Sixth District, where they have their largest plants in the State and probably the bulk of their members. Recently, some elements of business have been protesting what they claim is an unfair competitive advantage enjoyed by these organizations which pay no Federal income taxes, although they pay all other taxes. Some businessmen said that I had weighted the question in favor of the co-ops. If I did so, it was not intentional. They suggested it should have read as follows, and that this language would have brought a heavier percentage in favor of taxing them: "Should undistributed profits of farm cooperative corporations be subject to Federal income taxes in the future like other corporations?"

Just how Congress will resolve this controversial question is not now apparent. It is considering the Ploeser plan, to give all small business a tax-free base of profits up to $25,000 annually. At present there is double taxation on corporation profits. The whole matter is before the Ways and Means Committee, which has held hearings on it recently and which some say indicates informally that it would like to repeal that provision of the law giving cooperatives exemption from income taxes, if the cooperatives don't distribute their profits as patronage dividends to members but use them to expand or to go into new lines of business. It would be my guess that this touchy subject will not be legislated on in an election year. Whatever the committee does decide, however, will likely be adopted by Congress because tax bills are always brought out of committee under gag rule which prevents amendment from the floor, on the grounds that they are technical measures the average member shouldn't be allowed to clutter up with ideas not actuarily sound. But, if the tax laws could be in any worse mess than they are now, as written by the self-appointed experts, it would be interesting to see the mess.

I want to thank the thousands of constituents who cooperated in this project and who so often wrote me in considerable detail their views on these and other important national questions, for the most part in an intelligent and informed vein.

My time is running out. This is Congressman MARION T. BENNETT speaking and returning you to your local announcer.

Baptist Joint Conference Committee Endorses the Stratton Bill

---

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1948

Mr. HAYS. Mr. Speaker, the Joint Conference Committee on Public Relations, established by four of the leading Baptist conventions of America, recently adopted a resolution endorsing the Stratton bill. This committee is composed of ministers and laymen who maintain an interest in foreign mission activities and

civic responsibilities of these denominations. I am confident that the individual members appreciate the difficulties confronted by members of the Judiciary Committee in considering the Stratton bill. While the committee favors the admission of displaced persons under the terms of the bill, it does not advocate the impairment of statutory standards for immigration which have been built up. The committee's formal resolution does, however, draw attention to the plight of fellow Christians and others in the camps for displaced persons in Europe.

Under leave previously granted, I include the resolution embodying the views of the joint conference committee:

Your committee would beg to call to your attention the matter of displaced persons now in Europe, for whom efforts are being made by the churches and other organizations, and some consideration has been given at the hands of Congress.

The failure of our Congress at its last session to act upon the Stratton bill (H. R. 2910) has placed upon the conscience of this Nation a great moral burden. This bill, which would authorize emergency legislation to permit the entrance of 100,000 displaced persons a year for 4 years, is now pending in the Subcommittee on Immigration of the Judiciary Committee of the House of Representatives, while close to 120 national organizations representing the bulk of church, farm, labor, civic, women's, veterans', and other important groups are asking that immediate action be taken. Now that the second session of the Eightieth Congress has convened, this call for humanitarian action on behalf of part of the 850,000 displaced persons of Europe should be considered along with all other measures intended to create a larger measure of well-being for all people everywhere, as well as fundamental freedoms and principles designed to create world peace.

Eighty percent of these unfortunate victims of the war are Christians. The largest part of them are in camps now under the supervision of the United States military government. We are deeply interested in the fate of all displaced persons, but have a special concern for the moral, spiritual, and physical welfare of these our fellow Christians.

More than money is needed. Back of the money should be a demonstration of our Nation's concern for suffering people, our love for liberty and justice, and the full realization of commitments already made to the United Nations. We, of the churches, believe that America should practice its humanitarian professions as voiced over the air waves and elsewhere. We are convinced that the United States Government cannot expect other nations to take all the responsibility for the resettlement of these displaced persons; that unless we, as a people, act quickly to aid these DP's we shall be guilty of creating in the very heart of Europe, just where reconstruction problems are the greatest, a physical and moral plague which no amount of cash will be able to cure. This is a human problem which requires humanitarian action.

Church World Service, our interdenominational cooperating organization for relief and rehabilitation, through its Committee on Displaced Persons, is ready to act. In fact, it has already taken as much action as the limiting provisions of the immigration quota system will allow. It is prepared to take action on a much broader scale just as soon as the Stratton bill becomes law. Already the committee, through its 36 workers in Europe and its staff in this country, besides other services, has given assistance to 1,488 persons coming at a rate of 100 a month. These have been resettled in 32 States and in 124 communities throughout the United States. The committee has a current operational budget calling for an estimated expenditure of a little over $1,000,000 a year.

In anticipation of the passage of the Stratton bill, which would permit the committee to do the service it was established to render, it is now in the process of making a careful and extensive survey of the practical aid which its constituent denominational members will be able to render in the resettlement of DP's. The Northern and Southern Baptist Conventions are cooperating with the Church World Service

We are recommending that once more, in line with expressions from our conventions approving this effort, we respectfully ask Congress quickly to enact the Stratton bill.

Rent Controls

EXTENSION OF REMARKS
OF
HON. CHARLES K. FLETCHER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. FLETCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wall Street Journal of February 19, 1948:

RENT CONTROLS

The Republican policy committee in Congress has decided to extend rent controls for "at least" another year. It seems to us that the Republicans are yielding to political pressure to perpetuate a moral inequity, and, from the practical viewpoint, an economic insanity.

As a matter of ethics we do not understand how Congress can rightfully single out one particular service, namely housing, and say that the provider of this service must subsidize the receiver when all other services are freely competitive. We have no wage controls; the laborer may exchange his service for money on a free market, selling it to the highest bidder. We have no price controls; the farmer can sell his wheat for whatever the public will pay him for it. But most landlords can sell their housing only for what some Government official thinks is right.

The public would be shocked at a law that required John Doe to subsidize John Smith. Smith himself would be indignant at the suggestion. Even in caring for our indigent we make the charity a community enterprise. But if John Doe is required to sell a month's housing to Smith for, say, $10 less than its value, we are making him subsidize Smith, give him charity, in a word, to the tune of $10 a month.

We agree that for many the cost of housing would go up if controls were ended. But morally there can be no justification for requiring Smith's lower cost of living to be subsidized by his landlord rather than by the farmer who supplies his food, or the coal miner who supplies his heat, or the garment worker who makes his clothes. Our whole wage-price level has moved upward. The seller of anything, labor or goods, gets more for it than he once did. That is, except some sellers of housing.

The inequities of rent controls do not stop with landlords. Smith may rent his apartment for $65 a month. Jones may rent an identical apartment (or perhaps one of poorer construction) in a new building across the street for $85 a month. Even the controllers know that today they cannot get the same apartment built to rent for $65. There is one standard for Smith; another for Jones.

Equal treatment under law has become inequity by law.

There is the controller's dilemma. He would like to restore equality among tenants by widening his rent ceilings to cover new as well as old housing. Yet if he does there is no new housing at all. The bricklayer and the carpenter, the brickmaker and the timber supplier, will not subsidize Jones' new apartment. They want full market value for their goods and labor. So the double standard is born.

The planners can see the hopelessness of trying to lick the housing shortage by holding the old line on new dwellings. They see no economic damage from holding it on old houses. In fact, if they relax it they will "just make landlords rich."

What they forget is that utility in a house is not a matter of age. We have many useful houses that antedate our country. But a house that falls into disuse from disrepair is as much a loss as a house that was never built. Anyone who lives in a rent-controlled house or apartment is aware that it is slowly falling apart around him.

Who is to keep it in repair? The man who lives in it? Or will we just increase the tenant's subsidy? Or perhaps the plumber will kindly work for prewar wages so that Smith can keep his prewar housing standard at the prewar rent?

Putting artificial price tags on housing is as blind and futile an operation as putting them on a man's labor or any other of his products. It not only creates impossible moral problems, it is also insane economics.

The rent-control law is legislation for a privileged class: those lucky enough to buy their housing at less than its market value. Economically it retards rather than promotes a real solution to our housing problem.

We had hoped the Republican leaders would not be carried away by the emotionalism of the word "rent" and would instead take a broader view of the housing problem, as they did on wage and price controls. Now we admit, ruefully, that it isn't likely.

Attack American Schools

EXTENSION OF REMARKS
OF
HON. C. JASPER BELL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. BELL. Mr. Speaker and Members of the House, I arise at this time to call your attention to the latest attack by the Communists upon this country through an appeal to the school teachers.

Because of the great debt of gratitude we owe to the high minded patriotic teachers of our children, preparing them as they have so well for the full duties of citizenship, I feel impelled to suggest that this information be made available to all of the teachers in your home districts to prepare them to ward off the appeals for their regimentation under the banners of the Russian Comintern.

It is well known that for many years the Communist Government of Russia, acting through the Comintern throughout the world, has secretly and quietly subsidized many professors and teachers in our schools and universities. Now by the use of that nucleus of converts to the ideologies of communism, an organization in New York City is now planning to

branch out by making a Nation-wide appeal to teachers everywhere.

I feel that such an appeal will be welcomed and accepted by only a few teachers and then only when they lack the background of information about the dastardly attack against our Government. I am sure they will understand, as we do, that the appeal comes from despicable traitorous rats who, while enjoying the shelter of their American citizenship, accept pay from a potential enemy of the United States and spend their time destroying the ideals and corcupting the thought of our youth.

I am inserting in the RECORD as a part of my remarks an article clipped from the Washington Daily News of Monday, February 16, 1948, under the headline "New Commie Front To Ask Marxist Schools be Cleared." The article reads:

NEW COMMIE FRONT TO ASK MARXIST SCHOOLS BE CLEARED

(By Frederick Woltman)

NEW YORK, February 16.—A new Nation-wide Communist front is being hatched. It will be called a Statement of American Educators.

President Truman and Attorney General Tom Clark within a few weeks will receive an appeal to remove from the Government's list of subversive organizations the 11 so-called Marxist schools which the Justice Department found to be adjuncts of the Communist Party.

The plea will be in the form of an open letter with a statement bearing the names of professors and administrators from universities throughout the country.

The statement will speak in lofty terms of "academic freedom" and "our national ideal of freedom of thought."

But the catch is this: The whole deal has been cooked up by the Communist schools themselves.

As bait, the names of 12 professors are affixed to letters now making the academic rounds collecting signatures to the Statement of American Educators. Replies are to be addressed to Prof. Lyman R. Bradley, Five Hundred and Seventy-fifth Avenue of the Americas, New York 11, N. Y.

Omitted from the letter is the fact that No. 575 is the headquarters of the Jefferson School, chief of the Communist Party's training schools listed in the Clark report. Omitted also is the fact that Professor Bradley, New York University, is chairman of the board of trustees of the Jefferson School.

Nor is this mentioned: Three more of the twelve are trustees of the Jefferson School—Prof. Dorothy Brewster, Columbia; Prof. Margaret Schlauch, NYU; and Prof. Dirk J. Struik, Massachusetts Institute of Technology. One is a former trustee—Prof. Walter Rautenstrauch, Columbia—and one is an instructor there—Philip S. Roner, who was dismissed from City College in 1941 as a secret member of the Communist Party.

A seventh professor of the 12—F. O. Matthiessen, Harvard—is trustee of the Samuel Adams School in Boston, another of those cited as Communist.

The letter signed by the 12 professors is addressed "Dear Colleague."

"As educators," it begins, "we are perhaps more sensitive than some of our fellow Americans to the social and political implication of events and actions taking place today. We could not call ourselves responsible members of the teaching profession were this not so."

Then it asks for their signature to the prepared statement.

Citing the Jefferson school as an example, the statement holds that the 11 schools are victimized by "thought control" and "thought police" simply because they are teaching the philosophy of Marxism.

There is no hint that the Jefferson School was set up by the Communist Party; that it teaches, not theoretical Marxism, but revolutionary Stalinist-Marxism.

According to the prepared statement, "The right to study Marxism" is being "denied by arbitrary Government fiat." The fact is that no one has even suggested closing down these schools. They were included in the Clark subversive list as a guide for helping Government agencies determine whether any of their employes are Communists.

One of the signers of the come-on letter is Prof. Colston E. Warne (Amherst), who last November resigned a Federal job in protest against President Truman's loyalty check.

The program outlined indicates the daily increasing brazenness of the Communist attacks on America. For any teacher to join that attack by teaching Marxism in our schools would clearly indicate that teacher was a traitor in our midst.

It is my hope that the floodlight of truth and revelation of these nefarious enterprises will continue to be made through our daily press, by the Congress, the administration, and by right-thinking people everywhere in the United States.

Sam Jones Replies to Congressman Hébert

EXTENSION OF REMARKS

OF

HON. JAMES DOMENGEAUX

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. DOMENGEAUX. Mr. Speaker, on Saturday last the gentleman from Louisiana, Representative F. EDWARD HÉBERT, who has apparently become the spokesman of Earl K. Long, candidate for Governor of Louisiana, sent Sam Jones, also a candidate for Governor, the following telegram requesting him to read it at the Sam Jones rally held in the city of New Orleans on that date. The telegram is as follows:

WASHINGTON, D. C.

SAM JONES,

New Orleans:

In order to keep the record straight I wish to inform you that Commissioner of Internal Revenue refused me permisison to examine your income-tax records based on authority which you say you issued that anybody could see the returns if they applied. Also informed that Commissioner of Internal Revenue previously notified you that your public statements to this effect as well as your request was not in accordance with law and you were informed that only manner in which records could be examined were under provisions of law which was manner in which Earl Long permitted me to have photostatic copies taken from the official files of the Internal Revenue Department proving conclusively charges made by Congressman DOMENGEAUX on floor of Congress not to be founded on the facts of the case. Commissioner of Internal Revenue George Schoeneman also told Congressman DOMENGEAUX the day before he made charges that he could not make such charges as they were not true and were not in accordance with the facts. Knowing your deal to keep the record straight I am sure you will take advantage of the opportunity to read this telegram at your rally tonight.

F. EDWARD HÉBERT.

Mr. Jones read the telegram as requested.

The following is a copy of the telegram which Mr. Jones sent to Congressman HÉBERT in reply:

HON. F. EDWARD HÉBERT,

House Office Building,

Washington, D. C.

Re your telegram. I am disappointed that you were refused permission to examine my income-tax figures by the Commissioner of Internal Revenue. However, I am easily remedying this by wiring Commissioner Schoeneman requesting him to give you copy of a letter addressed to me yesterday. Since you profess fairness you will, of course, read this to the House Monday, as I am reading your wire to our rally tonight.

Commissioner Schoeneman's letter confirms the income figures made public by me February 9. Earl Long still hides his official record. The office of Collector Donnelly and Revenue Agent Logan reveal there are no assessments or penalties against me. You are authorized to check with Pear, Marwick Mitchell & Co., CPA of New Orleans, on this.

Following is the text of Commissioner Schoeneman's letter: "Further reference is made to your telegram dated February 20, 1948, requesting to be advised by wire the total net income for the years 1936 through 1947, reported in the Federal income-tax returns by you and by your wife, Mrs. Louise G. Jones. Your income-tax returns presently available in this office, discloses the following listed net income for the years indicated: 1938, $4,580.20; 1939, $6,202.23; 1940, $3,963.25; 1941, $6,925.48; 1942, $7,614.05; 1943, $6,803.75; 1944, $9,690.87; 1945, $11,367.97; 1946, $13,640.38. A similar communication is being addressed to Mrs. Jones in your care. If further correspondence relative to this matter is necessary, please refer to IT:REC: IW:P-MSG."

In order to keep the record straight, I call your attention to these facts:

1. Both the United States Government and the State of Louisiana have tax claims pending against Earl K. Long. In your strange defense of the tangled tax matter of this "poor man" you have admitted that the case involves a fraud penalty.

2. You know, Eddie, that you blocked revelation by congressional action on Earl's complete tax and income record, and you know you blocked it because that record is packed with the fraud assessments you have confessed.

3. The State case against Earl Long is shown in the public records of the State board of tax appeals.

4. Earl Long swore to the people on the radio on February 16 that his total net income was (including his wife's), 1936, $6,124.80; 1937, $14,185.38. Earl Long reported to the State of Louisiana on his sworn tax return (including wife's), 1936, $10,967.50; 1937, $11,890.74. The State of Louisiana claims that Earl's actual income (including wife's) was, 1936, $50,728.12; 1937, $78,096.19.

5. The file notation of the board of tax appeals says of the "other income, taxpayer (Earl Long) received money from Mr. Clem Sehrt and Mr. Shirley Wimberly. He was the beneficiary of a so-called gift fund. He made numerous deposits of cash and receipts which he has refused to identify or explain. He received a monthly allowance from the Louisiana Democratic Association, commonly known as the deduct fund."

6. Mr. Long and his spokesmen have made the above admissions in the second primary campaign because they knew these facts could not be concealed from the people. Yet, on January 19—1 day before the first primary election—Long had published in full-page newspaper advertisements, in bold-faced type, this statement: "Long owes no tax. Statement of Charles A. Donnelly, United States collector of internal revenue for Louisiana * * * said he knew of no claim against Earl Long."

The intent and purpose of that Long ad was to deceive the voters of Louisiana on the eve of the election—to delude the people into believing that there was no tax case of any kind against Earl K. Long.

Most important, this case is now revealed to have been pending for a number of years. That means Earl Long deceived the people deliberately and falsely when he declared, and had collector Donnelly declare, before the first primary that there was no tax against him, that his hands were clean. Since then, Long's every action has been to prevent the hidden truth about his tax records from coming to light.

Throughout the first primary, Earl Long told the people of Louisiana that he was a poor man who never received 1 cent he was not entitled to get. But now that he is revealed to have enjoyed a large income, the people no longer believe his frantic efforts to pose as a poor man.

He has not come clean with the people as I have done. He will not do so because he cannot.

You remember, Eddie, my support put you in Congress. You became a political opportunist and deserted—not only me—but our cause of good government.

SAM JONES.

What I particularly object to in the statement in Representative HÉBERT'S telegram is:

Commissioner of Internal Revenue George Schoeneman also told Congressman DOMENGEAUX the day before he made charges that he could not make such charges as they were not true and were not in accordance with the facts.

This statement of Congressman HÉBERT is entirely and completely incorrect and false.

On the same day and before I made the charges on the floor of the House I had a conference with Commissioner George Schoeneman and Mr. Aubrey R. Marrs, head of the technical staff of the Bureau of Internal Revenue. I presented to these gentleman the charges that I were to make and Mr. Schoeneman replied that under the law he was prevented from discussing the case in any particular. Last Friday I had an opportunity to again see Mr. Schoeneman, together with Mr. Edward H. Foley, Jr., Assistant Secretary of the Treasury. I told Mr. Schoeneman that he had been quoted as having said that he had told me that the charges I were about to make were incorrect and not based on facts. In the presence of Assistant Secretary Foley, Mr. Schoeneman said he had not made any such statement to me on this case.

All that Congressman HÉBERT needs do is to contact Mr. Schoeneman and I am certain he will be informed that the statement with reference thereto that I have made is correct. I think in all fairness he should do this.

The Polish Betrayal

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, that eminent writer, Frank R. Kent, in the Chicago Journal of Commerce, on February 14, commented upon former Ambassador Arthur Bliss Lane's book and pointed out the Polish were betrayed at Yalta. The evidence keeps on piling up against that unconscionable agreement. I am including as part of my remarks the article by Mr. Kent:

THE POLISH BETRAYAL
(By Frank R. Kent)

WASHINGTON, February 14.—It is typical of the worshipers of the late Mr. Roosevelt that they should agree with practically everything in the impressive and significant book of Mr. Arthur Bliss Lane, I Saw Poland Betrayed, except the single statement that at Yalta and Tehran Mr. Roosevelt, in his effort to charm Mr. Stalin, abandoned the principles of the Atlantic Charter and, in effect, cast aside his promises to Poland, opening wide the door for the savage and brutal domination of that suffering country by the Soviet forces.

That, of course, is an extremely serious charge—particularly when it is recalled that in 1944 hundreds of thousands of American Poles voted solidly for Mr. Roosevelt in the firm conviction that he was the vigilant and unshakable champion of Polish freedom and independence. But it is not a new charge. Others have asserted that at these Roosevelt-Stalin meetings Poland was blithely "sold down the river," the former American President trustingly relying upon the unsupported word of the Soviet dictator, utterly ignoring his long, black record for violation of treaties, agreements, and pledges; incredibly permitting him to have a free hand in Poland.

Of all who have made this devastating accusation, Mr. Lane carries the most weight, presents the most convincing evidence and was in best position to know the facts. It no more can be claimed that he was inspired by a personal or political motive than it can be contended he did not fully appreciate the nature and implications of his statements. Here is no Roosevelt hater, no representative of "reactionary forces," no "economic royalist" or ambitious seeker of office. Instead, here is an outstanding American with a distinguished career of diplomatic service covering more than 30 years in various parts of the world.

Appointed Ambassador to Poland by Mr. Roosevelt himself, he was in London in 1944 when Poland was occupied by the enemy and her Government was in London. He entered Warsaw immediately following the German surrender and remained there until last year, an eye-witness to every step of the Soviet seizure of Poland, with full understanding of the callousness of the pledge violation and of the humiliating failure of our Government to lift a hand to prevent, or utter an effective word to protest what, beyond question, was one of the most dreadful and indefensible crimes against a free people in all world history.

Because of his official position and by reason of our Government's apathy, Ambassador Lane was personally impotent to halt the strangulation of Poland. When he talked with Mr. Roosevelt, after the latter's election in 1944, he urged the importance of insisting to the Soviet Government that the independence of Poland be maintained. The Roosevelt reply was, "Do you want me to go to war with Russia?" When he returned to Warsaw he did what he could, but the Soviet representatives paid slight attention to him, and his own Government not only did not back him up but, over his earnest protest and with American citizens unjustly imprisoned, loaned the Polish puppet Government $90,000,000.

The whole story as told by Mr. Lane is a sickening one of shameless treachery, broken promises, and unshackled brutality. It is interesting to note that the Lane report, both as to responsibility for this murderous assault upon the integrity of a great people and upon the character of the occupation, coincides with that made in Mr. Jan Ciechanowski's book, published 2 years ago. Mr. Ciechanowski for many years was the distinguished Polish Ambassador to this country. By some it was unfairly argued that as a Pole he was prejudiced. But no prejudice can be charged against Mr. Lane. He is not a Pole; he is an American diplomat with no political connections, aspirations, or purposes. Early last year he resigned his post as Ambassador to Poland, and at the age of 52 closed his long diplomatic career solely to be able to tell the American people the truth of what happened to Poland—and why.

This he has done in his book and is doing in his lectures. It is a shocking story and few Americans can reflect upon their country's part in it without a feeling of shame. The defense of Mr. Roosevelt's role, at Yalta, Tehran, and after the seizure began, is not a convincing one. Chiefly, it amounts to statements from his former intimates that while Mr. Lane has made a valuable contribution, they personally know of Mr. Roosevelt's deep concern for Polish freedom and had often discussed with him his ideas for maintaining it. This clearly inadequate reply is supplemented by a transparently futile effort to shift the blame for what happened, first to former Secretary of State Stettinius and then to former Secretary of State Byrnes.

In other words, no reply worthy of the name has been made. Nor is it likely one will be. For the historians probably the kindest thing is to accept the explanation that Mr. Roosevelt was a sick man whose judgment was impaired. Certainly the notion, which so many agree Mr. Roosevelt cherished, that he, who spoke no word of Russian, could, through two interpreters, charm Mr. Stalin, who spoke no word of English, seems hard to reconcile with reason.

So These Are the Objectives of the Oleo Promoters?

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. MURRAY of Wisconsin. Mr. Speaker, in this oleo-butter controversy too few people realize that the whole dairy industry is being jeopardized. If oleo can be sold to masquerade as butter, then oleo evaporated milk will be the next legislative objective, then oleo cheese legislation, and then oleo milk, where the vegetable oil will be substituted for butterfat in milk will be the final goal.

Just because some dairyman sells his milk as fluid milk, or to a condensing

factory or to a cheese factory, he does not want to be deceiving himself into thinking that the market for his dairy product is not going to be faced with this substitute synthetic approach.

In Business Week of February 14, 1948, a copy of which the editor was kind enough to send me, I note several interesting statements on page 25 under the title of "Margarine Gets a Break." Among these statements are, first:

The margarine lobby's timetable has worked smoothly this year.

Second:

After that the lobby's high command believes the ways are greased for quick and favorable action by Congress and the President.

If oleo is used it will surely be greased.

Third, and be sure to get his one:

Repercussions: If the margarine people get what they want, it may have some repercussions elsewhere in the United States farm economy. Further inroads by margarine into the butter market would undoubtedly weaken butter prices. This, in turn, might well bring down fluid-milk prices. For fluid-milk prices are determined under a Federal-State formula, based on the prices for butter and skimmed milk. So dairy farmers would be sure to want a revised milk-price formula, based on something more solid than butter.

Lincoln Day Address of Hon. Kenneth B. Keating

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a Lincoln Day address delivered by Representative KENNETH B. KEATING, of New York, at Muncie, Ind., February 11, 1948:

Fellow Republicans, it is a great pleasure and high honor to have been chosen as the speaker as the Republicans of your fine city and community join in their annual celebration of Lincoln's birthday.

Indiana, and particularly the Tenth Congressional District, occupies a warm spot in my affections. There is something fundamentally fine about the soil of an area which produces men like the late Ray Springer, who represented your district with such marked distinction for some 9 years before his death last fall. I served on the Committee on the Judiciary with this true and loyal friend and this patriotic servant of the highest order. There and on the floor of the House and in his contacts with his colleagues, he rendered conspicuous service in matters of the utmost importance to the welfare of our people. With marked ability he guided through the committee and the House intricate bills of great complexity, such as the measures passed at the last session relating to various controls over the complex economy of our country.

In the mind of this statesman, so serious in purpose and so indefatigable in efforts, although like you good people, a loyal and professing Republican—at no time did considerations of narrow partisanship becloud his views or dictate his action.

Ray was always a great team player, preferring, with unassuming modesty to advance the common interest rather than his own personal fortunes. We who worked with him day in and day out and who came to know and love him, and you who sent this great public servant to us, can all be consoled and take comfort from the sure knowledge that he now enjoys the rewards of a good and faithful servant.

Following Ray's departure, you sent to us in the same tradition, a sound and sensible thinker and a most amiable gentleman in the person of RALPH HARVEY. Out of his extensive agricultural and business experience he is already, in this short time, making his presence and his influence felt among his colleagues in a most constructive fashion. He is a member, not only of the Committee on House Administration, but also the exceedingly important Committee on Expenditures in the Executive Departments. The responsibilities and corresponding opportunities for public service in work on this committee are almost limitless. When the Congressional Reorganization Act of 1946 was adopted, with the vast expansion of the activities of the Federal Government touching the lives of more and more citizens at ever-increasing points, it was felt that some committee of the Congress must be charged with nothing else except to keep a watchful eye on the mounting expenditures in the executive departments and constantly study the governmental activities at all levels with a view of determining possibilities for increased economy and efficiency, and perhaps most important of all, to study and pass upon the constantly recurring reorganizations which necessarily take place in the various departments of government. This, then, is the extremely important work to which RALPH HARVEY has been called. Great indeed are his responsibilities, which we who have had the opportunity, as you have, to measure the man, have become convinced that he is well equipped indeed to discharge.

The entire Republican congressional delegation from the Hoosier State is one in which you Republicans have every reason for justifiable pride. Without detraction from the luster of the names of any of your Representatives, I know that all of them would join me in paying our highest tribute to the distinguished majority leader of the House of Representatives, who hails from Hoosierland—CHARLES A. HALLECK. With infinite tact and patience, utmost devotion to duty, and brilliant statesmanship he has guided the deliberations and legislative program of the Republican majority in the House in most trying times and against most stubborn opposition. A young man, as I classify anyone no older than myself, CHARLIE HALLECK, I predict, will rise even above his present exalted position of trust and honor.

The day before I left Washington a newspaper said: "Republican speakers will address this week the 700 Lincoln Day banquets which are slated to take place in 44 States. They will speak, of course, for the Republican Party and victory next November." True to form, I bespeak victory for the Republican Party next November. Having stated that, however, I turn not to the controversial issues of the day, but rather to a story, an epic which depicts better than anything else I know, the fundamental principles and philosophies for which the Republican Party has always stood.

In this time when civilization is menaced by the aftermath of war; in this time when free government is struggling for survival everywhere in the world; in this time when millions of people are questioning in their own hearts whether or not security under despotism may not be better than risk under freedom; in this time when America is the last great bulwark of individual liberty and freedom, I want to portray for you, if I can, an epic of liberty, opportunity, energy, perseverance, all transmused by a divine spark into a powerful, marvelous instrument of good. Nowhere but in America could this have happened in this way. Let me now recite the epic.

In a log cabin about 3 miles south of Hodgen's mill on what was known as the Singing Spring farm, in what was then Hardin, but is now LaRue County, Ky., a manchild was born. The condition of the parents, their way of life, could hardly have been more humble than it was. Life was a humdrum, backwoods existence. The birth of a boy baby to Tom and Nancy Hanks Lincoln was of no particular significance to the settlers.

Truly nothing had happened except that Abraham Lincoln had been born. His father was a shiftless, uneducated, self-sympathizing man who just couldn't seem to stick at anything long enough to succeed. His first wife, Nancy Hanks, the mother of Abraham, like her husband, was untutored.

Abraham Lincoln's early childhood was spent about 8 miles from his birthplace at a locality known as Knob Creek. The family did not remain long there. When Abraham was seven his father and mother were on the move again. The Indiana woods was their destination. Here the family of four, the father, Abraham, Sarah, his sister, and the mother, lived very poorly. Scarcely more than a hut sheltered them the first winter. Broken by the hardships of pioneer life, Nancy Hanks sickened and died.

Then came another event. We can look back and see now how it must have been a part of a pattern planned by Providence. Thomas Lincoln married again. His second wife was Sarah Johnston, of Elizabethtown, Kentucky. She was a widow, who came with her three children to the Lincoln cabin. She became a very important factor in Abraham Lincoln's rearing and career. She was a real mother to him. She warmly encouraged his thirst for knowledge.

Lincoln's youth was that of an easy-going backwoods boy. He did hard labor on the homestead. He performed odd jobs for his neighbors. He had practically no formal schooling. His attendance did not exceed a year all together. But a singular and fateful destiny moved this boy. He had every opportunity to sympathize with himself, as his father had before him. He had every example to encourage him to be shiftless, and a ne'er-do-well. He might easily have taken to the strong drink and the rude brawls of those backwoods days. He was a good wrestler. He might have frittered away his time in the excitements of the hunt, or the thrills of fishing. He loved the river. He was fond of fun. He had a natural bent for humor. He thoroughly enjoyed a joke, even on himself. But deep within that gangling awkward, backwoods boy Providence had planted a spark of genius. The All-Knowing had endowed that nature with a great thirst for knowledge. As a result Lincoln developed a deep sense of justice, and tolerance and a desire to serve his fellow men.

Stretched out on the floor of the rude shack, by the light of the fireplace he read such few books as he could get, and by the light of divine inspiration he came to have that philosophy of right and justice, of courage, of a simple, profound faith in God, and a simple profound faith in his fellowmen, which ultimated in the immortal Lincoln whose memory we honor here tonight. That boy baby born in that log cabin on Singing Spring Farm, where nothing ever happened, was the Abraham Lincoln who had the courage, and the faith, and the gentle justice, and deep love for his fellowmen which kept this Nation united when it was at a breaking point which might have made of this country two bitterly antagonistic peoples.

Never in all history has there been a more wonderful, beautiful epic of a rise from obscurity, through the vicissitudes and hardships of pioneer life, to a place of destiny such as that of Abraham Lincoln. He lifted his gaze from the soil with which he worked,

and, looking on high, sought his destiny in the stars. Strangley enough, just a few days ago another great emancipator, another great apostle of peace and gentleness, Mahatma Gandhi, of India, was martyred, as Lincoln was martyred, by a tragically mistaken fanatic with a smoking pistol.

Lincoln absorbed education. He was born with greatness in him. He got his wisdom not alone from books but from his meditations close to nature, and above all from his prayers to the Master who guided his destiny.

For several years—almost to midlife—Abraham Lincoln appeared to be more or less of a mediocre individual. He did not seem to succeed at anything he tried. The trouble was he was always in the wrong business up until the moment he found his true vocation. Lincoln's real business was being great. His real calling was to serve and guide his fellowmen.

He knew many sorrows. The great love of his life was denied him. The fires of those sorrows must have burned out any dross that may have been in his nature, leaving the pure gold of inspired greatness, molten and shining over the flame of his burning desire to serve his fellowmen. It was slavery, the cruelties and inhumanities practiced upon the negroes, which stirred him to his depths, and moved him to the epochal accomplishments of his life.

Although his life was filled with sorrows; although he knew the stings of bitterness, and the gall of ingratitude, and the poison of treachery—Abraham Lincoln never for a moment ceased to be a gentle, peaceful, forgiving, wise, and just man.

Picture him if you can, a shawl draped about his gaunt shoulders, pacing the corridors of the White House in the still hours of night, praying to his God for strength and guidance to save his Nation and his people from hatred, and war, and a severance of the Union which would have destroyed the great Nation the founding fathers had erected. He said many times that he was driven to his knees often because he had nowhere else to go. A better place he could not have gone.

Lincoln himself stated the marvelous opportunities which our American system of government, of economy, and society make possible better than anybody else ever stated it before or since. Said he:

"I happen temporarily to occupy this big White House. I am a living witness that anyone of your children may look to come here, as my father's child has. It is in order that each one of you may have, through this free Government which we have enjoyed, an open field and a fair chance * * * that the struggle should be maintained, that we may not lose our birthrights."

Think you, my friends, that the remarkable phenomenon of Abraham Lincoln could have taken place under a despotism? Think you he could have risen from the obscurity of a log cabin to his immortal place in history in any country which did not have the open field and fair chance that existed in America?

If we had no other example of the grand and glorious freedom of choice and equality of opportunity which lie before every boy and girl in the United States of America, Lincoln's life alone would prove the case.

Today, as it has always been in America, our way of progress to spiritual and cultural heights, and to material achievements, lies in equal opportunity for all, and not in limiting opportunity for some.

We can see Lincoln's divinely bestowed wisdom shining through when he declared that:

"The strongest bond of human sympathy, outside of the family relation, should be one uniting all working people, of all nations, and tongues, and kindreds. Nor should this lead to a war upon property, or the owners of property. Property is the fruit of labor; property is desirable; it is a positive good in the world. That some should be rich shows that others may become rich, and hence is just encouragement to industry and enterprise."

All the wisdom underlying free America was expressed in those words. Lincoln would never have been a Socialist. He would never have been a Communist. He believed every man and every woman was entitled to the right to get ahead, but not to pull the other fellow down in getting there.

What a marvelous instrument of Providence Lincoln turned out to be. He had none of the finished suavity of the slick politician. He was a man of the people. He loved the people. He believed they had inherent in them a wisdom and a sense of justice which would instinctively find the right path if they were given the truth and left alone to make their own decisions. How wise he was, how clearly he perceived the proper function of government when he said:

"The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do, for themselves in their separate and individual capacity. In all that the people can individually do as well for themselves, government ought not to interfere."

Now listen to these further words:

"I believe each individual is naturally entitled to do as he pleases with himself and the fruit of his labor, so far as it in no wise interferes with any other man's rights."

Now, my friends, to what are we to attribute the rise of our own Nation in 172 years from a humble, struggling group of colonies, just as Lincoln was a humble, struggling member of a humble, struggling family? You know, of course, that in 172 years we in America have accomplished spiritual, cultural, and material progress which nations in the Orient and Asia have not been able to do in more than 5,000 years, which other nations in continental Europe have not been able to equal in a 1,000 years of warfare and struggle.

From a country of log cabins and woods and pioneers the American people have produced the Washingtons, and the Jeffersons, and the Lincolns—a whole immortal group of men, wise with the wisdom of providential grace, and not with the fleeting and changing beliefs of unstable human theories.

We have in the United States the highest living levels; the highest wages; the best working conditions; the finest transportation and communication systems; the finest educational system; and the best government to be found anywhere on the globe.

Now, was it some peculiar genius on the part of our poplc which produced all this? That could not have been, because our forebears came from all these other nations in which for over 1,000 years their ancestors had failed to achieve what we in America have accomplished in a century and three-quarters on this continent. What did our forebears possess that set them apart from this great Providential demonstration in free Government, and the capacity of men to govern themselves? First, they had courage. They pulled themselves up by the roots, they left the scenes of their childhood and their early life; they embarked with their families in cockleshell boats, and dared the stormy seas. They were coming to the shores of a land which was uncharted forests and trailless plains. They were coming because they loved liberty more than they loved their early environment, or even security.

The real reason, however, that we in America today are the richest, most powerful Nation on the globe is because of the character and kind of Government, economy and society established by the founding fathers. They knew the people could not prosper, except in rare individual instances, under despotism and tyranny. They knew no autocrat could guide, and no tyrant could compel the people to wiser actions concerning their own affairs than they in their individual capacities might exercise. So the founding fathers set up the kind of a government which would act as an umpire; which would hold things even, so that the fair might not be injured by the unfair; so that the just and gentle might not suffer at the hands of unjust, aggressive despoilers. But as Lincoln said, they left every man free to do with the fruits of his labor as he chose, so long, and so far, as it in no wise interfered with any other man's rights.

It was under that kind of government, safeguarded by checks and balances against too much dominance or domination by any one or any two of the three coordinate branches, that our country grew great. It was under that kind of government, economy and society that Abraham Lincoln made his way by his own efforts from the little log cabin on Singing Spring Farm to the great white mansion in his Nation's Capital.

It is that kind of government, Lincoln's government, of, by, and for the people, that millions of our boys and girls went forth in two world wars to preserve against the onslaughts of ruthless, power-mad aggressors. It was that kind of government of opportunity we have always fought and always must fight to maintain and perpetuate.

And yet we have among us, and we have in other parts of the world, those who would proclaim that this kind of government has become obsolete and oppressive. They declare that the common man no longer has an opportunity in America. Let me say to you that if Lincoln were here tonight he would proclaim that opportunity in America never ceases to exist for the man or the woman who will embrace it and "work diligently to build a house for himself, thus by example assuring that his own shall be safe from violence when built." The house Abraham Lincoln was talking about then was not a physical structure, either a log cabin or a marble palace. He was talking about a trade, a career, a calling, a profession, the accumulation of something for old age, the opportunity to exercise one's talents in freedom, and to raise as high as one can rise, if he has the inherent ability, energy, and integrity so to progress.

Therefore, let me say to you that we must, in justice to Washington, and Jefferson, and Lincoln; we must, in justice to all of those who have fallen in the past, in the wars in which we have engaged to preserve this great free Nation of ours in its freedom, we must continue to perpetuate free, constitutional government, free economy, and free society. We must continue to preserve that freedom of opportunity which will permit a child born in some hovel to aspire, if he will, to the portals of the White House.

Lincoln was always vigilant on behalf of liberty, just as he was always determined on behalf of justice. It is a striking fact that Lincoln's great strength was his gentleness. Go back of him and you will find that the great Nazarene, whose teachings he followed, found his great strength in His incomparable gentleness.

Oh, if only we can make every young man and woman in this country realize what it means to them to live in a land in which an obscure child born of unlettered, poor parents, can attain the wisdom, and make the journey to the State house, or to the halls of Congress, or to the White House, as Abraham Lincoln did.

Oh, if we can only make all the world realize what an inexpressible blessing our kind of Government and society is, some faults though it may have! Oh, if we can only make all mankind understand that the American people are moved by a sense of gentle justice in all they want to do for the other peoples of the world, driven into poverty and suffering and despair by war! How well we know we want only to help other peoples

to attain enduring peace and progress! How well we in American know that we want to be friendly, and just, and cooperative with everybody else in the world, if only they will let us.

No young man or woman can possibly study the life of Lincoln and not realize in the end that his whole career is a living, vibrant, shining proof in the pages of history that our American way is the finest way ever devised by the mind of man to permit individuals to rise to spiritual heights, to cultural achievements, and to material prosperity.

Thus we see this epic of the immortal Abraham Lincoln, which is a symbol of the inexpressible grandeur of our constitutional system of Government and our American equal opportunity society.

As we now leave until next year our observance of the life and works of this great man we can pay to him that beautiful tribute which he once voiced of Washington. As he said this of Washington, so we say of Abraham Lincoln: "To add brightness to the sun or glory to his name—is alike impossible. Let none attempt it. In solemn awe pronounce the name, and in its naked, deathless splendor leave it shining on."

Federal Regulation of the Petroleum Industry

EXTENSION OF REMARKS

OF

HON. HERBERT A. MEYER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. MEYER. Mr. Speaker, under leave to extend my remarks in the RECORD, I call attention to a letter written by Mr. Russell B. Brown, general counsel of the Independent Petroleum Association of America, to Mr. Merle Becker, of St. Louis, Mo., the president of that organization of independent oil operators.

Mr. Brown has a Nation-wide reputation as a profound student of the many problems affecting the petroleum industry. His rich background of experience enables him to speak with authority on all its phases of activity. His analysis of the present much-discussed oil situation and his expressed confidence in the ability of the domestic petroleum industry, functioning under conditions of free enterprise, to care for our future supply of petroleum and natural gas, has been widely commended. A thoughtful reading of his letter will serve to remove certain current misunderstandings. I commend it to my colleagues and others for such reading. Mr. Brown's letter follows:

MR. MERLE BECKER,
President, Independent Petroleum Association of America:

For the first time in several years Federal regulation of the oil industry in all its phase, including production, is formally proposed in Congress. A bill has been drafted by Congressman HESELTON, Republican, of Massachusetts which would establish a board or commission with broad powers.

The sponsor of the measure is a member of the Interstate and Foreign Commerce Committee of the House and has been one of the most active members of the committee in the hearings it has recently conducted on petroleum. His several speeches in the House on the supply and distribution problems affecting home heating with oil and his insistence on cutting down exports of petroleum during the period of shortage in eastern areas, have reflected his deep concern.

The exact details of the Heselton bill are not so important to us as the reasons for its introduction. Because of the over-all significance of the move to solve by legislation a number of interrelated problems, I am going to confine this report to discussion of the one subject.

Proposals of the type made by Congressman HESELTON are extreme and outside the normal concept of our Government. I seriously doubt that such remedies will provide the relief desired by those who make them. This is not a new method of meeting such situations and we do have some experience which should enable a critical examination. I would emphasize, however, that whatever inspires the attempt to use the method should have our careful and thoughtful attention. The proposals are not settled or minimized by refusing to honestly consider the elements which gave rise to them.

Many of our people in several areas have been cold because of lack of oil during this extremely severe winter. Cold homes and family suffering inspire determined impulses and action. The action may not always be logical but it cannot be ignored safely just because it is illogical. Sympathetic study and analysis would seem to be a sounder approach in answering the demand for action. It is not sufficient to say that there is no shortage of oil in the United States. There is a shortage of oil in the homes of the consumers who are making the complaints or a shortage at the factory which provides their income. That is real to them. The fact that there may be oil some other place and good and sufficient reasons why delivery cannot be made do not satisfy them. The fact that in all the history of the oil industry it never before failed under peacetime conditions of free enterprise to supply all of the products which were desired is also not a sufficient answer.

So, those in distress appeal to the Congressmen. The latter try to find an answer, not necessarily an answer that is fundamental but one that will provide relief. Failing to find assurance of oil supply they turn to the agencies of Government that are presumed to know something about the situation. Here again we run into the human element. Government agents often believe, quite honestly, that if they were given the power they could solve any problem, so they suggest controls—Government controls with power lodged in their hands. This being the only suggestion in sight of a solution to a difficult problem some will adopt it in the desperate hope that it will work.

FACTORS IN THE INCREASE IN CONSUMPTION

Too often hasty remedies, adopted in desperation and without careful consideration, may lead to serious consequences and inflict lasting harm. It is hoped that in the present situation there will be careful analysis of present conditions and of the suggested remedial measures. I would like to suggest to our people the study of certain outstanding facts in the hope that they will be helpful. The following factors are basic in the approach to the question:

1. There has been a general trend, and one that has been rapid in application, to convert the national fuel economy from traditional dependence on solid fuels—coal of various types—to the more desirable and convenient oil and gas fuels. The reasons for this trend have been, in part, as follows:

(a) The two fuels, oil and gas, were under severe Government price controls at depressed levels for a long time while other fuels were not so closely controlled. The result was that oil and gas prices for a number of years were much lower than prices of other fuels customarily used in home heating.

(b) The supply of oil and gas has heretofore been plentiful, uninterrupted, and sufficient to the needs of all users. Other fuels were subject to uncertainties of supply caused by labor interruptions and other factors affecting supply and distribution.

2. The use of oil and gas for fuel and power for farms, railroads, air transport, and many other uses has grown rapidly in recent years. The use of motor fuel has continued to increase. The sum of the several forms of increase in oil and gas use have been enormous. As an illustration, the demand for crude petroleum in the last full prewar year, 1940, was 3,635,000 barrels per day. In 1947 it was 5,090,000 and the projected demand for 1948 is 5,385,000 barrels per day. There was neither time nor materials to prepare for the swift increase, postwar, in the new and increased uses of oil and gas fuels. The experience of the industry had not been such as to enable it to be forewarned of the necessities. To illustrate, users of coal through long experience had learned to provide against heavy winter demands by storing the winter requirements gradually through the summer months, thus spreading procurement and transportation loads over a longer period. Like provision was not made as to oil for these reasons:

(a) Oil users had no experience as to the manner and quantity of storage required;

(b) Storage facilities required the use of great quantities of steel which has been in short supply ever since the close of the war.

Because of the foregoing factors, fuel-oil users relied on small storage and thus threw the heaviest load on transportation facilities during the heaviest consuming season. Where the coal consumer laid in a supply of fuel that would last for weeks, the householder heating with fuel oil is limited to storage that carries him for but a few days in severe weather. Transportation facilities, such as tank cars, pipe lines, and water transport were not developed sufficiently because of lack of material and lack of anticipation of the enormity of the problem.

DIFFICULTIES IN SUPPLYING ALL USES

The foregoing are some of the points of difficulty on the consuming side of the problem. On the supply side there have also been unusual difficulties. During the war steel went first into military usage. It was diverted from the usual petroleum producing, refining, and transportation needs to the more direct war uses. The petroleum industry was thus prevented from carrying on its customary scale of exploration, development, and maintenance work and the expansion of refining and transportation facilities in accordance with the needs of the consumers. There was thus no opportunity to conduct operations which would provide the surplus of capacity above immediate needs—the safety factor needed to meet new and unusual demands such as now confront the industry. The industry has done a tremendous job in increasing its operations under severe limitations but it has not been able to avoid spot shortages of serious proportions in some areas.

Thus, we have had and still have a problem of considerable proportions. We may now consider the suggested remedies. The first proposal, that of Government control, as suggested in the bill referred to earlier, relates only to petroleum. The sponsor of the bill was quoted as saying that natural gas was omitted because it was already under Federal control. I believe we may at this point consider the result of Federal regulation of natural gas.

To an extent it is true that there is such regulation. The transportation, distribution, and sale of natural gas in interstate commerce are controlled. The production of natural gas is not controlled by the Federal Government. The division of the industry that is not so controlled, acting through the free play of industrial effort, has built up the

largest supply of natural gas in our entire history. Yet there is an ever-increasing and a largely unsatisfied demand for natural gas. The bottleneck is somewhere between that section of the industry which operates under free economics and those who desire gas for fuel. It is, therefore, in that section of the industry which is under Federal control.

It would seem that in this instance Federal control has not functioned to relieve unsatisfied demand.

RESERVE CAPACITY EXHAUSTED DURING WAR

As to petroleum and its products, the necessity of war suggested that the Federal Government exercise control over the industry's production and operations during the war. When the controls were first imposed the industry had a vast reserve of producing capacity. It also had a reserve of refining capacity above demand. The producing capacity was a million barrels per day or more above actual requirements. During the war this excess capacity was used up because of the inability of the producing industry to get the materials and the manpower and to exercise the freedom of action necessary to maintain normal operations. It was only through extreme rationing of petroleum products for civilian use that the military program was supplied. Again we have experience on which to draw as to the efficacy of Federal control. Again it does not suggest that control as being the answer to our increased demands.

In June 1946 when the last of the wartime controls were ended, the production of crude oil in the United States was approximately 4,900,000 barrels per day. Since that time, operating under conditions of free industrial activity, we have increased the production until we reached the daily average of 5,330,000 barrels for the 4 weeks ending February 7, 1948. This is the highest in the history of the industry in the United States. The gain was accomplished in spite of the serious handicap of shortage of steel for oilfield equipment.

CONTROLS HAVE BEEN INEFFECTIVE ELSEWHERE

It is to be hoped that the experience of an industry under control contrasted with its experience under free conditions will be given careful attention in the consideration of whether controls should be reimposed as the answer to current difficulties. We can look also to other countries for their experience in Government controls as a solution to fuel problems during cold weather. Great Britain in the winter of 1946–47 was desperately short of fuel. Government control of their coal and other fuel resources failed to provide the relief that was so greatly needed and it was the free-enterprise industries of the United States that were called upon to provide from our none too plentiful available supply much of the oil and coal that were needed.

We have much more in the experience of other countries which may well be considered. In our own hemisphere, Mexico and Bolivia confiscated the oil properties which had been discovered and developed by private industry. They attempted to operate these properties. The result is that our Government today is attempting to help those countries to alleviate their petroleum shortages by financing expansion and further development of their petroleum industries.

It is now proposed to further aid Great Britain and other European countries as well in the matter of fuel supplies, among other forms of aid. In the face of the experience under Government controls, wherever exercised, why will Government control be proposed here? I believe we may consider the following as principal or contributory answers to the question:

1. Desperation often suggests a change—any change—to those whose needs are great and remain unsatisfied. This is especially true of those commodities required for basic needs, such as food and fuel.

2. There are those in government who would like to exercise power under a system of control. Some of these, wholly lacking in experience, believe that with full power they could do a better job than industry has done. These have not failed to take advantage of the present difficulties to suggest Federal control as the remedy.

3. There are some whose philosophy of government is based upon the theory of centralized control of industries. They, too, have not failed to take advantage of the fuel-supply situation this winter.

4 Some in various branches of the petroleum industry have for different reasons been suggesting that the petroleum industry of the United States is not capable of further expansion to meet the increased demands. They suggest greater and greater reliance on the foreign sources of supply in which they are interested. This group has gone far toward building an atmosphere of uncertainty among those who do not have the opportunity to learn the facts and know the true condition. These persons and their friends, through careless testimony before congressional committees and through public utterances, have created an impression in the minds of some in Congress that the industry is greedy, selfish, and indifferent to the situation in which we find ourselves. Just a few days ago a man who has wide acceptance as an authority on some phases of the petroleum industry told a committee that the price increases on crude oil were unnecessary. He suggested certain impractical forms of relief. Such testimony has the effect of prejudicing the minds of some in Congress against the petroleum industry of the United States. Of course, all who are familiar with the industry's operations realize that such statements are unsound and stupid, but because of the reputation heretofore enjoyed by some of these spokesmen, there is a considerable contribution to the embarrassment of the industry.

INDUSTRY HAS MADE PROGRESS

The facts of the domestic situation should be kept in mind. The entire industry from the beginning of our participation in World War II has suffered severe restrictions on essential supplies of steel. Despite this the industry has continued to increase its discovered reserves of crude petroleum and natural gas until they are now at the highest point in history. The first published estimates of reserves, compiled by the Oil and Gas Journal, are 23,737,000,000 barrels. This is an increase of more than 4,000,000,000 barrels of presently available discovered crude oil over the estimated reserves at the close of 1941. In the meantime the domestic industry has supplied most of the oil used in our war effort and the greater part of that used by our allies during the war, as well as supplying our own economy.

These are typical of the facts which we should remember constantly. They are evidence of the assertion which the industry has always made—that it can be expected to grow and progress under free, competitive conditions. There is no magic in government. Is the rail-transportation system of the Nation perfect today? I think there is plenty of evidence that they have many problems. They have been under close Federal regulation for many years. And we may also ponder the fact that the "have not" nations in respect to petroleum are those which have either guided and directed their petroleum industries or conducted them as direct functions of government.

I would not minimize the proposal to regulate or control the industry. It grew, in the final sense, out of the current shortage of home-heating oil in some areas. It is the industry's job to do all that it can to ease the situation and to provide for future situations. It is also our job to keep in mind the fact that during the war government had a free hand in the distribution of supplies, yet people were cold—there were shortages of all kinds of fuel. The job which government tried to do then has been enlarged since 1941 by about 1,000,000 oil burners of the furnace type and 2,250,000 space heaters burning oil. This does not take into consideration all the other forms of increase in the use of petroleum products—locomotives, industrial plants, farm tractors and trucks, busses—the list is long and each item is significant of the greatly added burden on the petroleum industry.

Those who now suggest Federal control see disruptions in petroleum supply. Some of them honestly desire to correct the situation, even at the risk of employing drastic methods. What they should understand is that the industry is now convalescing from the very disease they now suggest as a remedy—Federal control.

All of us have heard of sufferers from a hang-over who proposed as a remedy the "hair of the dog that bit me." The dog did bite us all right, but there is neither scientific nor popular support for the theory that his hair will heal the injury; rather, repeated dosage will make the hang-over permanent.

Since the removal of the more direct type of controls there has been Government control on exports of steel. These controls have been used in a manner to take steel from the uses of the domestic oil industry and send it abroad. This process continues. The industry at home then is blamed for a condition which Government itself helped to produce—and the assertion by some of the men in Government is made that the shortage which they have helped to create will last through 1951.

Yours very truly,

RUSSELL B. BROWN.

Why Does Not Mr. Brennan Provide 7 Cents Per Quart Oleo Milk?—Why Does Not He Recommend 12 Cents Per Quart Reconstituted Whole Milk?

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. MURRAY of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include the following article from the February 5, 1948 Washington Evening Star:

BRENNAN CALLS FOR END OF OLEOMARGARINE TAX

Roland M. Brennan, purchasing officer for the District, has recommended to the Commissioners that they indorse the bill now pending in Congress to eliminate the tax on oleomargarine.

In a memorandum to the Commissioners, Mr. Brennan said his office has discontinued the purchase of butter "until the price of butter comes down to a figure within reason," and that if the tax were eliminated, the District would save considerable money.

The District has contracted to purchase, in this fiscal year, 37,750 pounds of uncolored oleomargarine at 35½ cents a pound and 7,200 pounds of colored oleomargarine at 47 cents a pound, which is more than the District paid for butter several years ago.

While the tax on uncolored oleo is only one-quarter of a cent a pound, there is a great deal of labor involved in coloring it in the various institutions, Mr. Brennan told the Commissioners.

Mr. Brennan could incorporate the vegetable oil in the skim milk without the "great deal of labor involved." At the support price the United States Department of Agriculture paid for skim milk for the school-lunch program, oleo milk could be produced for 7 cents per quart. At the support price for dried skim, this oleo milk could be made for less yet. Reconstituted whole milk and not a substitute for milk can be obtained and made at District institutions for 12 cents per quart. Why not this saving instead of telling the Commissioners to be telling the Congress what laws to pass?

American Foreign Policy

EXTENSION OF REMARKS
OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, February 24 (legislative day of Monday, February 2), 1948

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered before the Economic Club of Detroit, on February 23, 1948, in Detroit, Mich.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I consider it a great privilege to be invited to address the Economic Club of Detroit and have an opportunity again to visit Michigan where live so many of my old friends. I do not suppose there are any two States in the Nation more alike than Michigan and Ohio in their forms of local government and in the governmental philosophy of their peoples. Of course, it is pleasant for me to come to a State with a long Republican record and an able line of governors, mostly Republican, ending with your present efficient and excellent executive, Kim Sigler.

I could not come to Michigan without testifying to the voters of Michigan regarding the exceptional representation they have in the United States Senate. Since I have been a Member of the Senate, I have worked closely with your distinguished senior Senator, ARTHUR H. VANDENBERG. From a minority of 17 just before my election in 1938, we have seen the Republican Party grow to command the Senate, and we have worked together in harmony for the development of progressive Republican policies. I shall discuss later his services to the Nation in the foreign field, but on every question, domestic or foreign, he commands the respect and admiration of his colleagues.

I have a warm affection also for your junior Senator, HOMER FERGUSON. I think he is the hardest worker in Washington. One of our duties is to investigate the doings of the executive administration and see that the people really understand what is going on. The Republicans have usually assigned Homer to this rather unpleasant job, and he has often had to sacrifice much more attractive work in order to carry it through with the success which he has achieved. No State has more influence in the Senate than Michigan.

I hope also that you may retain your very excellent representation among the Republicans of the House for as long as they will be willing to serve. There are none better than those who represent Wayne County, HOWARD COFFIN, HAROLD YOUNGBLOOD, and GEORGE DONDERO.

My title is given as "Congress Today." Since most of our thoughts at the moment are devoted to the Marshall plan, I desire to speak today on the foreign policy of the United States and its relation to the Democratic and the Republican Parties. How far is our foreign policy bipartisan? How do the foreign policies of the two parties differ? How far is foreign policy a partisan question at all?

In the first place, foreign policy is peculiarly within the jurisdiction of the President of the United States. Any role played by Congress or by a minority party must be a secondary one. Under the Constitution, the President is given the right to initiate all negotiations with foreign nations, to make executive agreements with such nations, to appoint ambassadors and to declare policy. Such an important policy as the Monroe Doctrine, for instance, was never formally approved by Congress and arose simply by a declaration of the President of the United States. True, when an agreement finally reaches the condition of a treaty, it must be confirmed by a two-thirds vote of the Senate, but more and more the Executive is claiming the right to cover almost all subjects by executive agreement which requires no consent of Congress unless appropriations are involved. In recent years, and particularly since the adoption of the United Nations Charter and its subsidiary agreements, still more power over foreign policy has been delegated to the President. He has been given complete power to direct the American representatives in the Security Council and the General Assembly of the United Nations as to the action of the United States. Under this power he can even involve us in war without the declaration of war by Congress required by the Constitution. Under the Reciprocal Trade Agreement Act he can lower tariffs to 25 percent of the statutory rate without any action by Congress. That is lower in most cases than the Underwood tariff, and gives the President the power to destroy an industry which requires protection. Almost the only power remaining to Congress is the power to refuse funds necessary to carry out any special feature of foreign policy. Since our relations today with foreign nations consist for the most part in loaning them money, this power is not negligible. But even in the remaining fields of congressional policy, the President can so far commit the Nation by his acts and statements that it becomes very difficult for Congress to make any substantial modification in his commitment.

Ordinarily, foreign policy has not been a party matter. In recent years, substantial differences on foreign policy have cut across both parties. In time of war it is regarded as almost unpatriotic to oppose the current foreign policy of the Government no matter how wrong it may be. In time of peace the condition is somewhat different, and I believe that those who regard any foreign policy as likely to involve the Nation in an unnecessary war or substantially interfere with our own economic welfare, are obligated to present a public opposition to administration policy. On the other hand, on less important matters I have felt also that between elections, at least, it is better to withhold criticism. Under the Constitution and laws I have described, only the President can be the effective voice of America, and unless issues vital to the welfare of America are involved it is better that foreign nations do not feel that we are speaking with two voices.

In accordance with this policy, the Republicans in the Senate have usually refrained from criticism where it could not change administration policy. They have often supported proposals which, to their own mind, contained little promise of success.

But certainly before an election, it is the duty of both parties to present to the people the foreign policy they will follow if elected. In such an election, I believe it is their duty as well as their right to criticize at that time those past policies of the administration which have failed and the present policies which threaten unnecessary disaster to the Nation. This week President Truman, in effect, opened his campaign for reelection. The campaign is on. At the Republican convention in June, we Republicans will agree on a program of foreign policy. I am confident it will be suited to the present world conditions. It will protect the interests of the American people while recognizing our responsibilities the world over.

Today, I wish, first, to point out the irreparable and destructive results of the foreign policies of Presidents Roosevelt and Truman; second, to show how the Republicans, for the most part through Senator VANDENBERG's participation, have been responsible for most of the recent improvements in that policy; and, third, point out a few of the dangerous prospects involved in administration policy today.

During the war, President Roosevelt practically ignored the Republican opposition, and the Democratic Party must assume full responsibility for everything that happened through the Potsdam Conference. Most of our difficulties today were brought about by the foreign policies of the Democratic administration.

The policy of unconditional surrender destroyed the German state. It left no one with whom we could even begin to negotiate and no possibility of setting up such a state. It left a vacuum in Europe into which Russia has successfully moved. Decisions were made at Tehran and Yalta which have completely wrecked the economy of Germany and thereby seriously hindered all European recovery. Reparations in impossible sums were agreed to which have resulted in the dismantling of German plants, many of which were used for civilian purposes long before the war. In effect, the Morgenthau plan which was adopted intended to reduce the German people to a bare subsistence level, largely on an agricultural basis. In Washington this plan was constantly denied, but, nevertheless, it was substantially put into effect. It was more than successful in its unwise aims, because it reduced the German people to well below the subsistence level, and it is now costing the United States $800,000,000 a year to bring them up to a subsistence level. In the meantime, they are unable to supply the goods needed by other European nations and, of course, they do not provide a market for the goods of those nations. I once questioned Secretary Morgenthau in a committee meeting as to whether this would not be the necessary result of his proposal. He assured the committee that German industry was unnecessary, and that industry would spring up in all the surrounding countries to replace it. Of course that has not happened.

Neither in 1941, when we first extended lend-lease aid to Russia, nor at Tehran or Yalta was it ever suggested that Russia give some assurance of cooperation after the war in return for our lend-lease goods. The President knew of Stalin's deal with Hitler and his unjustified attack on Finland, yet he chose to put complete reliance on his own hunch that Stalin would behave in an angelic manner if we gave him everything that he asked. We poured out billions in aid to Russia without obtaining anything in return except their continuing to fight a war against Germany which they would have had to fight anyway. We agreed to Stalin's strategy of attack on Germany which resulted in the complete Soviet occupation of

budgets, whether they stabilize their currencies, whether they give incentive to men to invest money in new or expanding plants, whether they give proper incentive to men to export their production. All we can do is help them to help themselves. I strongly object to the theory that they can add up their desired imports, subtract their possible exports, and hand us a bill for the difference. Secretary Marshall's claim that the appropriation must be $6,800,000,000 or nothing is about as fallacious as any argument ever presented to Congress. Whatever we give them will aid them that much, and if we give it too lavishly it can well do more harm than good. Why should a man struggle to build a new plant and produce more goods when there may be a chance several years from now to get one for nothing from the United States? Why should a government take unpopular steps to put its own house in order if it can get cash from the United States to carry it through, without critical examination of what it does with the money?

The whole success of the plan depends on the manner in which it is administered. I doubt if a wise and careful administrator can spend more than $4,000,000,000 in a year, exclusive of Germany. If he is not a wise and careful administrator and is not prepared to check each expenditure and see whether it is really producing results, we had better not give him more than four billion.

In this field the Republican Foreign Relations Committee under the leadership of Senator VANDENBERG has done a most effective job in improving the plan. They have removed the $17,000,000,000 figure from the bill, thus eliminating any implication of a commitment for that amount or any amount during the last three of the four years. By cutting down the period from 15 months to 1 year, the commitment implied at this time is reduced by a billion and a half dollars. Beyond that five billion three hundred million, I can see no moral commitment, though the momentum of the plan, of course, will carry it on at least into the second year at some additional expense. I still think this amount is too large and that it will encourage the granting of money for dubious projects which should properly be eliminated. This, however, is a question of degree and one on which men may differ, and do; but there is no difference of principle in such a question.

A magnificent job was done by the committee in completely destroying the State Department plan to have this money administered under the direction of the State Department. The Republicans in Congress, and I believe most of the Democrats, feel very strongly, and I think with justification, that the State Department has no consideration whatever for the American taxpayer or American economy. The Department seems to share the foreign view that this country is an inexhaustible reservoir of money and commodities. Sometimes I think it shares the view that we owe these European countries an annual present. Even $4,000,000,000 is not hay. Seven billion six hundred million dollars as originally proposed by Secretary Marshall (which includes $800,000,000 for the German civilian population) means on the average about $200 more taxes for every family in the United States this year payable in taxes or in higher prices or both. It means a tax of about $100,000,000 on the people of Detroit to provide their share of the proposed expense for the first 15 months. Excessive expenditures mean a drain on our resources which may further increase prices, particularly as the European countries want the very goods which are still in inadequate production. It is vitally important that this tremendous sum be administered by a hard-boiled businessman who only pays it out when he can see that results are obtained.

The committee has set up an independent administration with a man at the head of cabinet rank. He will be on an equal basis with the Secretary of State and the Secretary of Commerce in presenting his policies to the President, who will have the final decision. As far as the form of organization can control the administration, the Republican plan will do it. Let us hope that the President will appoint a man to act in accordance with the theory of that plan.

From Potsdam until today, Republican cooperation has strengthened the plans for international organization, has resisted the advance of communism and has insisted on economical and effective administration of assistance to war-torn nations. It was impossible to correct the mistakes of foreign policy committed at Tehran, Yalta, and Potsdam, but the Republican Party can only be proud of the record that it has made.

But the ordinary day-to-day policy of the State Department is conducted without Republican participation of any kind. While the Marshall plan is justified by the restoring of production and opposition to communism, we dismantle German plants in direct opposition to the principle of the Marshall plan. We ship machinery to Russia. We distributed UNRRA supplies largely to the military advantage of Tito. Today in China we continue a policy which threatens to undo in the Far East everything the Marshall plan is trying to do in western Europe.

From the beginning we have encouraged the Chinese Communists. Every Commie symypathizer in the United States has been damning Chiang Kai-shek, whom we were taught in the early years of the war to regard as the greatest patriot in the Far East, and the greatest friend of the United States. He was the same man then with the same faults that he has now, but forces in the State Department have encouraged the propaganda against him. Yet he is today the only hope to prevent the spread of communisim in China. His armies in Manchuria are surrounded, and are unable to combat the Communists, for the reason that for months we gave these armies no ammunition for their Americans arms, while the Communists have been lavishly supplied by the Soviets with the Japanese arms they captured at the end of the war.

Unless vigorous action is taken immediately, all Manchuria will be lost to communism. It is not only a tremendous agricultural area, but one of the great industrial sections of China. If communism dominates Manchuria, how can we hope that in future years we will be able to keep it out of Japan? The practicability of rehabilitation for China and the value of relief is open to question, but certainly we can provide the Chinese Government with the arms and ammunition necessary to resist Communist forces in Manchuria as we have undertaken to resist them in Greece.

This week, Secretary Marshall presented his Chinese plan to Congress and testified before the House committee. He said that China was completely wrecked by civil war, but he opposed the policy of extending vigorous military aid, which alone could bring an end to civil war. He suggested a limited amount of economic relief which, of course, by his own testimony, will completely fail to solve the problem. Secretary Marshall admitted on the stand that if the Chinese Government collapses, China north of the Yangtze River would be taken over by the Communists. He admitted that north China would present the equivalent of a second Poland under Russian domination. He admitted that under those circumstances, our position in Korea would be untenable. He admitted that Japan would probably be Communist when we withdraw. The truth is that Secretary Marshall does not like the Chinese and has no interest in their problems. For 7 months he tried to force Chiang to accept the Chinese Communists into his cabinet. He has been unwillingly forced into proposing a relief program. He says that ammunition is now being shipped to the Chinese, but obviously with no interest or vigor. Yesterday, the column of Mr. Joseph Alsop, who certainly is extremely friendly to General Marshall, said that he is deeply influenced in his views on China by a sharp personal distaste for Chiang which produces a wholly negative approach on his part to the Chinese problem.

Certainly, this whole policy is absolutely contrary to the traditional policy of the Republican Party in support of a free China and an open-door policy in China. I believe very strongly that the Far East is ultimately even more important to our future peace than is Europe. We should be at least as much concerned about the advance of communism to the shores of the Pacific through people who are ready to accept dictatorship as we are to its possible advance in Europe through nations which have a history of independence and popular government.

Another curious instance of the administration's inconsistent battle against communism lies in the loan being granted to the Polish Government by the International Bank, which is practically under American control and uses American funds. Sixty million dollars is to be given Poland in coal-mining machinery. The theory is that the Poles will ship some of this coal to western Europe. The fact is they will do with their coal exactly what Russia tells them they can do. Whether or not any is shipped to western Europe you can be certain that the majority of it will go to munitions plants at Skoda and other factories to build up the military strength of Soviet Russia. The truth is we have in our departments, both in the Commerce Department and the State Department, men at the intermediate levels who yearn for more economic planning, and others who still sympathize with Russia in spite of all that has happened.

I cannot emphasize too strongly that foreign policy is dominated by the President of the United States. He may assume the whole responsibility as did President Roosevelt. He may accept in selected fields the assistance of the minority party as has President Truman. The Republicans have had an opportunity to show not only their willingness to cooperate when consistent with their principles, but to suggest and carry through great improvements in special fields of foreign policy. If American policy, however, is to be consistent, if it is to represent first and above all the interest of the American people, if it is to stand open and unashamed for a system of freedom of the individual, of commerce, industry and agriculture and oppose consistently the philosophy of communism, then the only certain recourse is to put a Republican administration into control of all our foreign policy.

Freedom Is the Issue

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Tuesday, February 24 (legislative day of Monday, February 2), 1948

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject "Freedom Is the Issue", delivered by the Senator from Wyoming [Mr. O'MAHONEY] to the First National Convention of Americans for Democratic

the Balkans, of Vienna, and of Berlin. In fact, we actually withdrew our troops from land which we had conquered to carry out our agreements while the Russian Government was not asked to make any agreements restricting its territorial advance, and failed to keep its other agreements.

In the course of this policy, we completely tore up the Atlantic Charter and all the ideals for which the war was fought. We never even mentioned the freedom of Latvia, Lithuania, and Estonia. We failed to guard effectively the freedom of Poland, the very freedom for which England and France began the war. We abandoned Mihailovich and the Yugoslav patriots who had been urged to defiance against Hitler by our own State Department. We turned against Finland, whose only crime was that it was determined to be free from Soviet tyranny. We won the war against Germany, but we have not brought freedom or self-government to Europe or peace to the world. We have made a mockery of the Atlantic Charter.

At Yalta, President Roosevelt gave Russia wide interests in Manchuria and the best half of Korea, to say nothing of the Kurile Islands and the Japanese half of Sakhalin. These islands were given with no strings attached, so that they may be heavily fortified as a threat to our whole position in the Pacific. Secretary Marshall, who was at Yalta, says that he knew nothing of this agreement, although he admits that he insisted upon the necessity of getting Russia to enter the Japanese war. If anything is clear today, it is that he was completely mistaken and that the Japanese armies in Manchuria would never have been an important factor after their homeland was occupied.

Throughout the whole period, we seem to have been dominated by a complete inferiority complex to Russia. Whatever they asked they received, and gave nothing in return. This failure in foreign policy was not chance. It resulted from the character of the New Deal administration. For years they had criticized the American principles of republican government. They had favored the steady growth of a totalitarian state directing the economic and individual rights of all its citizens. Men like Henry Wallace, Vice President and Secretary of Commerce, had regarded communism as another form of democracy, perhaps a little better than our form of democracy. Communists were encouraged to support the Democratic candidate in national elections, and to take over important labor unions. Harry Hopkins, the President's adviser on foreign affairs, was extremely friendly to the Communist regime. Other men who were thus friendly were raised to influential positions in the departments. Those who expressed opposition to, or criticism of, Russia were silenced or relegated to nonentity. In fact, the Government service acquired so many Communists that President Truman a year ago requested $50,000,000 in order to investigate and rout them out. As Russia's attitude became more aggressive, Communist influence in the United States declined but even today there seem to be curious areas in some of the bureaus where opposition to Russian claims is deplored.

Just before his death, President Roosevelt for the first time invited Republican congressional cooperation in foreign policy by appointing Senator VANDENBERG as a member of the United States delegation to the San Francisco Conference. The reason for this was obvious. Without Republican votes, the United Nations Charter could not be adopted. From the date of that appointment, however, the Republican Party can claim credit for most of the improvements in American foreign policy without which the present chaos would be infinitely worse. Senator VANDENBERG on January 10, 1945, saw very clearly the dangerous situation brought about by the Russian policy and the apparent determination of Russia to occupy all of eastern Europe. He proposed that if Russia abandoned that policy, we would agree to join Russia and Great Britain in a permanent occupation of Germany which would prevent a new aggression. He felt that if Russia could be certain of such a long continued occupation, it would feel safe against Germany and would not be suspicious of our using Germany to build up a new attack on Russia. President Roosevelt took copies of this proposal to Yalta, but as far as we know he never even suggested the idea to Mr. Stalin. The Russian attitude became more and more aggressive and difficult as we continued to yield on every point, if not openly, then by secret agreement of the President.

Republican influence had a substantial effect in improving the Charter of the United Nations. I do not know who wrote the original draft of Dumbarton Oaks proposals. They were based, however, entirely on force and expediency, and there was little discussion of law or justice. All power was concentrated in the Security Council dominated by the large powers and given power to act whenever it felt that it was desirable to act to maintain international peace and security. The word "justice" was not mentioned in the entire draft. Mr. Thomas Jefferson and the members of the Constitutional Convention would have shuddered at the first American approach toward an international organization.

It was through Senator VANDENBERG'S insistence that the Charter of the United Nations required that all collective measures be taken in conformity with the principles of justice and international law (art. 1, par. 1); that members settle their international disputes by peaceful means in such a manner that international peace and security and justice are not endangered (art 2, par. 3); that the General Assembly initiate studies encouraging the progressive development of international law and its codification (art. 13). I think that the Charter still places too much dependence upon the arbitrary power given the Security Council to do whatever it may think opportune to secure peace and security, but now we have every right ourselves to exercise our veto power against any decision which does not include considerations of justice. The ground was laid for further improvement toward a world of equal justice under law, when the Charter is revised. It was also due to Republican insistence that the General Assembly was given wider freedom of debate (art. 10), and also the power to recommend measures for the peaceful adjustment of any situation regardless of origin (art. 14). We were determined that the whole proceedings of the United Nations be not dominated by the direction of the great powers.

Senator VANDENBERG participated in other conferences, particularly the conferences at Paris in 1946. It was largely his influence which finally forced the administration to abandon the policy of appeasing Russia. His experience at San Francisco and thereafter convinced him that nothing could be accomplished by adhering to that policy, and his influence with Secretary Byrnes was such that we finally committed ourselves definitely to complete opposition to further Russian expansion. Most of what had already been conceded could never be undone. It was also the influence of Senator VANDENBERG which forced through the only peace treaties which had been made with Italy, Hungary, Bulgaria, and Rumania. Unsatisfactory as they were, it was better that we work from a peace basis than from an armistice basis, and there can be no doubt of the improvement of conditions in Italy through the adoption of the Italian Treaty.

Again, in South America, most of the commendable policies have had a Republican origin. Senator Austin played a vitally important role at Chapultepec before the San Francisco Conference in working out the international agreement in such a way that it could be fitted later into the United Nations Charter. It was agreed that after the Charter was adopted the American nations would meet again to complete an inter-American peace agreement. State Department policy in South America after that, however, practically destroyed all of the friendship which had existed at the time of the San Francisco Conference. Secretary Braden carried on a largely unnecessary dispute with Argentina and continually postponed any further conference. It was only on Republican insistence that the Rio Conference was held in August 1947. Senator VANDENBERG was the American leader at that Conference. The results of his work and that of Senator Austin were finally made evident in the treaty between all the American nations entered into at Rio de Janeiro on September 2, 1947. Under the Inter-American Treaty of Reciprocal Assistance, 19 republics agreed that an armed attack by any state against an American state shall be considered as an attack against all the American states, and each undertook to assist in meeting the attack. For the first time an attempt was made to define aggression so that some tribunal could determine the merits of an international dispute on principles of law. This agreement may well set an example for future revision of the United Nations Charter. Without Republican insistence, guidance, and leadership this epoch-making agreement would not have been completed.

Republicans were not consulted in advance regarding the Greek and Turkish loan or the Marshall plan, involving no bipartisan policy. Though they were dubious as to the wisdom of the policy and particularly of the possibility of successful administration they, for the most part, felt that support of Greece and Turkey were in the national interest. I felt myself that the chance of our being involved in war was not great, and that some action was necessary in order to discourage Russian advance until the world could be stabilized. We did our best to impose conditions which would make the policy effective, recognizing, however, that the responsibility for its success must rest entirely on the Executive.

With regard to the Marshall plan, we have adopted the same generally cooperative attitude. I have always felt that we must continue Government aid to Europe while the threat of communism still remains substantial. It is vital to our interest that the philosophy of communism does not advance throughout the world. Certainly, it should not be assisted by the maintenance of unstable conditions which we can do something to improve.

I do not agree that there should be any economic plan for the world or for Europe. I don't think it is possible to make any such plan. I don't think this country can possibly underwrite any global plan for the world without wrecking our own economy. I do feel that these countries are handicapped in many ways and that without our aid, even assuming their own complete and effective action, it will take them many years to recover their prewar prosperity, whereas with our aid they can reach that goal much more quickly. I feel that we can supply machinery and raw materials which will enable them to put their people to more effective work and produce the exports necessary to pay for the import of food. We can prime the pump. We can help them remove bottlenecks. We can provide some food while they go to work. I agree with the theory of the plan that our aid must be contingent on their doing the best they can.

I do feel, however, that nine-tenths of their success will depend on their own efforts. It will depend on the policies of their governments whether they balance their

Action, at Philadelphia, Pa., February 21, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FREEDOM IS THE ISSUE

Whenever the political life of a people, or their economic life is controlled for them instead of by them, they have lost freedom.

This first convention of Americans for Democratic Action has assembled because everywhere throughout America forward-looking men and women realize that the basic principle of Americanism is in our time undergoing one of its greatest tests and they are determined that freedom shall not be lost. I congratulate all who have assembled on the evidence you have given by coming here that you have enlisted for the duration in the fight to preserve liberty.

Americans for Democratic Action stand for the best traditions of American statesmanship. You recognize that the people come first, that the individual is free and that dictatorship, whether it is exercised in the name of the "haves" or in the name of the "have nots" is the negation of everything for which this Republic was brought into existence.

For the first 50 years after our Government was formed every President, either in an inaugural address or in a message to Congress, referred to popular government as an experiment, the fate of which resides in the hands of the people of the United States. Tomorrow when we celebrate Washington's birthday we can remember his declaration in his first inaugural that the preservation of liberty and the destiny of free government are to be considered as "deeply and finally staked on the experiment entrusted to the hands of the American people." In 1825, when John Quincy Adams assumed the duties of the Presidency, he looked back upon the history of the intervening years since Washington and asserted with gratification "that this experiment upon the theory of human rights has, at the close of that generation by which it was formed, been crowned with success equal to the most sanguine expectations of its founders." Almost three decades later another great American President made clear his conviction that ours was indeed "a new Nation conceived in liberty and dedicated to the proposition that all men are created equal."

POPULAR SOVEREIGNTY THREATENED

We have lived to see the time when the experiment in popular sovereignty is once more threatened by arbitrary power. It is a more dangerous threat than ever arose before, because it is a threat of tyranny armed and strengthened by all the discoveries of science and the inventions of technology.

It is for those of us now living here in the United States to prepare for the Presidential election of 1948 with knowledge that we shall by our action shape the world in which our children and our children's children for generations to come are going to live. It will be a free world or it will be a controlled world and the lines are now forming between those who believe in freedom and those who believe in arbitrary power. We who are gathered here and the many thousands who are aligned with us throughout the United States have taken our stand upon the side of freedom. We are against arbitrary power. We are against tyranny. We are against all those who pretend to believe that they have the wit to tell the rest of us how we must live and how we must be governed.

Our first great task, therefore, is to make clear the issue which must be settled by this generation of men and women.

If we are to have a free world it will be a free world in which the individual is recognized as the only source of whatever authority, political or economic, that is to be exercised over him. That is the American system.

If, however, it is to be a controlled world the individual will not be the master of his own destiny either in economics or in politics, but will be subject to some arbitrary will that is imposed upon him.

BETWEEN TWO SYSTEMS

We stand between two systems. One of these is the authoritarian It prevails by force. It will not tolerate the liberty of the individual. It ruthlessly stamps out any opposition to its will. It is headed back into the distant past from which civilization has so painfully emerged and this is true whether it is the authoritarianism of an alleged proletariat dictatorship or the authoritarianism of so-called "vested" economic power.

The other system and the one to which Americans have always given their allegiance is the one in which the individual is free, in which he is subject to no dictator, economic or political, in which he enjoys the right to govern himself and the right to support himself, in which by tolerance and cooperation he recognizes no barriers of race or creed, but devotes himself to the progress of all.

Democracy prevails by reason and self-restraint among all the individuals who compose society. Its very virtues are sometimes its greatest danger for democracy does not suppress opinion. It is not suspicious, it is tolerant and trustful. Democracy encourages debate. It is slow to anger. It hates war for it will not attack unless attacked, but in the modern world with all its scientific achievements, it can be overwhelmed by ruthless force before it is aware of its danger.

Thus it is that the people of America must rally as never before to the defense of the American system.

WHAT IS THE AMERICAN SYSTEM?

What is this American system which we have inherited from the past and which, in our time, has been repudiated by those who have yielded to the false dictatorship of totalitarianism. It is the system of popular sovereignty in the name of which every great advance in our history has been made. If anybody doubt that it was intended to be what Jefferson and Jackson called the government of all, or of what Lincoln described as a government of the people, by the people, and for the people, let him read the Constitution itself. From the preamble to the tenth amendment its provisions constitute an assertion and a reassertion of the doctrine that the people and only the people are the source of power, that the government is an instrument to promote their welfare according to their will and that it is the constitutional duty of the Congress so to regulate commerce as to preserve the economic freedom of the people.

"Popular sovereignty," the phrase which was so common in the earlier history of this Nation, is the very heart of the American system, but upon this basis of popular control there has been superimposed in our time an economic system which is in conflict with the fundamental principles of individual supremacy. One finds little debate against the proposition that the state was meant to be the servant of men, but blind leaders of the blind are now contending in the camp of the police-state Communist and in the camp of the economic royalist that man is either the servant of the state, upon one hand, or of the economic system, upon the other, and that those who happen to be able to seize control of either the state or of the economic system are entitled by some divine right to impose their will upon their fellows.

During the current month we have been treated to the strange spectacle of hearing men who call themselves the followers of Abraham Lincoln proclaim a score of reasons why the Government should not be permitted to serve the people in economic affairs. Knowingly or unknowingly, they are willing to create the vacuum into which economic totalitarianism is always ready to rush and by assuming direction of the way men can live eventually gain control of their political rights as well.

ABRAHAM LINCOLN'S MESSAGE

To such persons I recommend the reading of a fragment of writing in Lincoln's hand found last July when the new Lincoln papers were opened in the Congressional Library. It is a message which all Republicans may well ponder while they are being urged to countenance the abandonment of the regulation of commerce into the hands of totalitarian industrial reaction. These are the words of Lincoln:

"The legitimate object of government is to do for a community of people whatever they need to have done but cannot do at all or cannot do so well for themselves in their separate and individual capacities. In all that the people can individually do as well for themselves the Government ought not to interfere."

The threat to freedom in our time has arisen from the fact that we have failed to follow the injunction of Lincoln who, like Washington, Jefferson, and Jackson in the early days, like Wilson, Theodore Roosevelt, and Franklin Roosevelt in our time, have been devoted advocates of the principle that the people are entitled to use the powers of government to prevent the loss of their economic liberty. Central economic power, exercised in an arbitrary fashion by those who control the modern instruments of commerce, has been the cause of the development of arbitrary central political power in the modern world. Mussolini, Hitler, and Stalin, all three have been the direct products of the concentration of economic power. The fight for freedom begins with the fight against monopoly.

This fact was clearly seen by President Franklin D. Roosevelt who, in his masterful and penetrating message of April 29, 1938, laid before Congress a program for the establishment of economic freedom:

"Once it is realized that business monopoly in America paralyzes the system of free enterprise on which it is grafted, and is as fatal to those who manipulate it as to the people who suffer beneath its impositions, action by the Government to eliminate these artificial restraints will be welcomed by industry throughout the Nation."

COLLECTIVIST INDUSTRY

With unerring vision he pointed out that the danger of this centralization of economic power in the hands of a few giant corporations is not mitigated by the distribution of their shareholdings among a few hundred thousand people. He understood that concentrated industry is not managed by its owners, but by a few experts who are themselves employees and that the modern economic system thus has become a collectivist pattern for the collectivist state.

This is a lesson for all who believe in the democratic tradition to learn. It rises above all partisanship. It has nothing to do with political faction. It has its roots in the most sacred institutions of a free people and the members of this group of American citizens who have organized for democratic action can go forth to their neighbors and friends, Republicans and Democrats, firm in the knowledge that they are preaching the basic political doctrine to which the people of this country have adhered since the beginning.

If America is to lead the world to a higher standard of living for all peoples of all races and nations, if it is to teach all mankind how freedom can be maintained, it must begin by appealing to the instinctive belief of all Americans that our economic system,

as well as our political system, belongs to the people.

This is a campaign for Republicans as well as for Democrats for most Republican voters of this Nation, like most Democratic voters, are believers in popular sovereignty in all its aspects. Victory in this campaign depends upon our success in making it clear that the policy of economic laissez faire, the policy of tax concessions to the very wealthy, the policy of abandoning any pretense of Government regulation of monopolistic groups which has marked the 80th Congress will, if permitted to proceed, make impossible the attainment of the salutary objectives for which Democrats and Republicans alike have, in their best moments, labored.

The dominant steel companies which have now for the second time in 6 months decreed an increased price of steel will collect their tribute from Republican businessmen as well as from Democrats. They draw no party line. They regulate commerce in steel and by private decision fix the costs for all industry. A handful of big companies, acting behind closed doors, set the pattern for 140,000,000 people and the American Congress, under reactionary leadership, repudiates the concept of government function held by Lincoln and Jefferson and all other progressive American leaders by whatever party name they were called.

ECONOMIC FREEDOM ESSENTIAL

A Congress which refuses to exercise its constitutional powers to abate the spiraling cost of living and which surrenders to concentrated economic power the control of industry and of commerce, is false to every tradition of Americanism.

The old issues which have divided the political parties of America in the past have disappeared. The new issue is the fight against economic and political collectivism. They are one and the same for economic freedom is part of the same ideal as political freedom. Man cannot long preserve the right to govern himself if he is not free to support himself, and he cannot win back the right freely to support himself by yielding to Communist dictatorship.

Those advocates of social progress who are willing to compromise their convictions of individual liberty by appeasing the leaders or the advocates of political collectivism are even more dangerous foes of democracy than the frank advocates of arbitrary power. They are dangerous because they play the game of the totalitarian whose first step in the struggle for power is the attempt to create confusion. The political totalitarian sees in confusion the best instrument with which to abolish personal and democratic ideals and establish the all-powerful police state. There can be no compromise with the totalitarian. There can be no successful appeasement of him for he regards all such appeasement as only the silly and naive offerings of those who do not understand that the dictator has no associates, but only dependents, no equals, but only slaves.

The fight for democracy in the modern world begins in the economic field for it is in this field that the totalitarian doctrine of control from above first developed. We must base our fight upon the axiom of free society that the people and only the people are the sovereigns. All political organizations are created to serve them, not to rule them. Therefore no economic organization may be permitted to do that which the state itself cannot do.

We must recognize the fact that economic organization in the modern world, necessary though it is and beneficial though it can be, should never be permitted to gain control of the Government.

BIG BUSINESS SEEKS CONTROL

That battle is on right now. The stock exchange would like to control the Securities and Exchange Commission. The National Association of Manufacturers wants to direct the policies of the Federal Trade Commission. Private utilities are battling for dominance of the Federal Power Commission and are endeavoring to cripple the United States Bureau of Reclamation as an instrument of public power. Wall Street would like to take over control of credit. In short, concentrated business aspires to exercise the power to regulate commerce in its own interest, a power which, by the Constitution, was granted to the Congress of the United States to be exercised in the public interest.

Neither government nor monopoly should have the power to control the people. Government does have the power to regulate commerce, for the drafters of the Constitution placed that power in the Congress, but monopoly should have neither the power to control nor the power to regulate the affairs of the people.

As Americans for democratic action, we must first of all recognize the difference between the individual who is the creature of God and the economic organization which is only the creature of man. We must recognize that the people, through their Government, in self-protection must lay down the rule of order which the organization must observe.

We must recognize that we cannot safely permit economic concentration to proceed further than it has already gone. The end will only be the destruction of both economic and political freedom in the erection of the totalitarian state.

We must recognize that the road to social progress and to the establishment of prosperity is the road to the establishment and to the maintenance of economic opportunity. This road can be opened only by strict adherence to the antitrust laws, by the stimulation of investment in free competitive enterprise, and by the taxation of excess profits.

The people of America will not surrender the powers of government to those who abuse liberty by indulging in economic exploitation. Neither will they abandon their devotion to world peace by surrendering, upon the one hand, to the isolationist who does not realize that American genius has made the world so small that no people can isolate themselves, nor, upon the other, to the blind leaders of the blind who do not recognize that the prevention of the recovery of the people of western Europe would be the prelude to the triumph of totalitarian communism.

Now, for the second time in this century, the people of the United States have the opportunity to lead the world to peace. After World War I, we were turned aside by isolationists who, attacking the League of Nations first by indirection and deceit, finally prevented our adherence. As a consequence, mankind drifted into World War II.

ISOLATIONIST AND VISIONARY FOES OF PEACE

The price of that mistake was the sacrifice of the lives of more than 300,000 young Americans. Who can predict how many more hundreds of thousands will pay with their lives if the people of the United States should now fail again? We must not permit ourselves to be turned aside from the attainment of this great end so necessary to civilization either by isolationist leaders who are attacking the Marshall plan by the same indirection with which the fight against the League of Nations was launched, or by visionaries who would defeat the Marshall plan though such a failure would mean the destruction of economic freedom throughout Europe.

Those who pretend to shudder at the cost of the European recovery program are closing their eyes to some simple facts. In 1946, before the last election, the Seventy-ninth Congress rescinded war appropriations amounting to more than $63,000,000,000. Those were funds which had been appropriated without a dissenting voice for purposes of war. Had the conflict continued those $63,000,000,000 would have been expended for purposes of destruction within a period of 6 months, and no one in the United States would have hesitated at the expenditure.

Now we are asked to spend $17,000,000,000 for purposes of peace over a period of 4 years. Compare $17,000,000,000 which would be expended for reconstruction and rehabilitation in a constructive program during 4 years with $63,000,000,000 to be expended in 6 months to destroy all productive capacity as well as life itself. Shall we hesitate to spend for the restoration of the world one-third of the sum we were prepared to spend to destroy?

We are offered the choice of working for peace or of once more permitting ourselves to drift helplessly into war. The isolationist who does not recognize that American genius has made the world so small that no nation can live unto itself alone, is no less blind than the naive visionary who would keep the democratic peoples of western Europe in nonproductive misery while the police state with military and economic preparation lays its plans to erase both economic and political freedom throughout the world.

This is the challenge that is presented to those of you who have assembled as Americans for democratic action. Action is the word! Action! For freedom and liberty both in the field of government and in the field of peace.

The Heritage of John Wesley

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 24 (legislative day of Monday, February 2), 1948

Mr. HILL. Mr. President, the Christian Advocate, Methodism's church-wide newspaper, in its issue of October 9, 1947, carried an article prepared by me entitled "The Heritage of John Wesley." The Alabama Christian Advocate, the official organ of the Alabama and North Alabama Conferences of the Methodist Church, carried the article in its issue of February 12, 1948. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article war ordered to be printed in the RECORD, as follows:

THE HERITAGE OF JOHN WESLEY

(By Hon. LISTER HILL, of Alabama)

Sometimes I wonder whether we Methodists fully realize the heritage John Wesley left us. He was not only the foremost evangelist of modern times, and the founder of a mighty church which stands today as the shadow of a great rock in a weary world, but his gospel carried an influence far beyond his own faith.

His teachings brought light and hope to millions in his day who never heard of Methodism. His burning evangelism kindled vital reforms in other churches at the same time it drew millions into his own.

He lifted up a whole nation from moral degradation.

He awakened and challenged man's sense of responsibility for his brother.

And through the religious democracy of his gospel he inspired political democracy, the democracy upon which our Nation is built and the strength of the English-speaking peoples.

The heritage of John Wesley is still a living force, an abiding inspiration. The face of the world has changed, but his truths are eternal.

When Wesley rode across England on horseback carrying the word of life to the people, there was no atomic energy, no radios, no railroads, no steamboats. Even matches were unknown.

Science has moved far and swiftly since that day, until now the divine secret of the atom has been given man. But, for all its machines, the world we live in is still a world of men. The revelation Wesley brought to the people of his century is today the source of spiritual inspiration to all men.

Let us recall that in the middle of the eighteenth century the established church in England had sunk into moral lethargy. The fox-hunting parson and the absentee rector, attached to the nobility and the wealthy, devoted themselves largely to pleasure and material pursuits. Their concern was not with men's souls, certainly not with the souls of the common people.

By the time of Wesley's death his reform movement had served to cleanse the Church of England. For more than 150 years the religious life of that land has been vital and wholesome, and an influence for good in the affairs of all the world.

When Wesley began his ministry he found the English people of all classes sunk into almost helpless depravity. The fire of his evangelism aroused a moral enthusiasm which swept the nation. Through the pestholes of the cities and the primitive dwellings of the country his word caught the imagination of the people. Miners, workers, farm tenants bound for a lifetime to the same acres caught Wesley's vision. They became conscious of their manhood and jealous of its honor.

Life became to them something more than a sordid struggle for a bare existence. It assumed the dignity and sublimity of a great adventure of the soul. The people were lifted out of their depravity and started on the long journey to spiritual enlightenment.

The fervor of Wesley's gospel also stirred the nation's conscience. He was moved to anger by the callousness among civil officials and the upper classes to the conditions that existed among the common people. He knew that poverty brought moral decay.

In the cities of the time the poor lived in misery and want. Most of the labor was done in the "home factory" at viciously low wages. Women and children did much of the work. Coal miners worked beyond dawn-to-dusk for a pittance which could not give their families the necessities of life. Agricultural workers were treated more like beasts than human beings.

Wesley poured out the vials of his wrath upon those who prospered on the people's wretchedness. The whole nation was seized with compassion for the ignorance, the suffering, and the social degradation of the masses of the people. Hospitals were built, charities endowed, and refuges established for those who were helpless—physically or mentally. Sunday schools were founded for the religious education of poor and neglected children.

It was in the age of Wesley that Hannah Moore went among the agricultural workers and drew the attention of England to their poverty. John Howard began his struggles for prison reform. Edmund Burke made his great plea for the people of India. And Clarkson and Wilberforce started their crusade against the British slave trade.

Modern philanthropy and social reform flowed from the wellsprings of Wesley's evangelism. A people began to assume their responsibilities to their fellow beings.

Wesley made a further contribution to the modern Christian world. He carried over the land the gospel of universal redemption—of Christ's atonement for all mankind. His gospel proclaimed that each man possessed equal opportunity to save his own soul. The most wretched and depraved people learned from Wesley that it was within their own power to be redeemed. Men, seeking salvation, were freed from dependence upon social caste, ecclesiastical privilege, or royal favor.

The democracy of the Methodist teaching was contagious, the political institutions of the day caught it. Religious democracy lighted man's way to political democracy. The revelation of spiritual freedom created a passionate desire in the hearts of the English people for freedom from political bondage—for equal opportunity to achieve knowledge, place or power. Wesley's doctrine that men equal before God should be equal before their fellow men made him a founder and prophet of present-day democracy.

As we turn from a reading of John Wesley's life and times, we look upon a world which still has hunger and cold, fear and want. Millions over the globe face death from malnutrition and disease. The physical degradation Wesley fought still impedes the way to Christian peace in the world. If men are to dwel together in peace, there cannot be hunger in the midst of plenty, brotherhood in a world of distrust.

We have joined in setting up the machinery for achieving world peace—the United Nations. Into this family of nations America must carry the gospel of Wesley: All men are brothers; all men are equal in the eyes of God.

We Methodists must not forget that we share as individuals in the heritage of John Wesley. As he brought the word to the poor and oppressed despite threats and persecution and stoning by the mob, so must we practice his gospel in our daily lives. Each of us must make Wesley's teachings a living force within us, sharing God's beneficence through charities and good works. Each of us must do all we can, without counting too much the cost to ourselves, to right moral wrongs and correct the social injustices of our own day.

The goals of John Wesley must be our goals.

Decent housing to replace the slums of today, breeding ground of disease and crime and juvenile delinquency.

Commerce without exploitation so that men may receive just rewards for their toil.

Adequate education for our children so that they may grow up to be useful citizens.

On the farm and in the city, the opportunity for a decent American standard of living for all our people.

We must demonstrate the everlasting truths of the Christianity we profess and on which our democracy is built.

There is still a long road ahead. But Wesley's teachings yet burn in the hearts of men. Lasting peace and happiness can be won if we follow the Christian way.

Regulation of the Steel Industry

EXTENSION OF REMARKS

OF

HON. ERNEST W. McFARLAND

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 24 (legislative day of Monday, February 2), 1948

Mr. McFARLAND. Mr. President, I ask unanimous consent to have printed in the RECORD a statement entitled "Steel Industry Asking for Regulation," issued today by the Senator from Wyoming [Mr. O'MAHONEY].

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STEEL INDUSTRY ASKING FOR REGULATION

The action of the steel industry in announcing a second huge increase of prices within the past 6 months indicates that United States Steel has established a virtual monopoly in the industry upon which all little and local business and all consumers are dependent. By their indefensible action they are virtually asking Congress to declare the steel industry a public utility. Immediate remedies which are absolutely essential in the public interest are the adoption of an excess-profits tax and an appropriation sufficient to enable the Federal Trade Commission to conduct a thorough-going investigation into the big industry pricing policies.

FEDERAL TRADE COMMISSION PROBE

The House of Representatives in acting upon the independent offices appropriation bill this year eliminated an appropriation of $185,000 requested by the Federal Trade Commission and the Bureau of the Budget to throw the spotlight of publicity on the methods used by the managers of big business to drive prices up and exploit the public.

I am introducing an amendment to the appropriation bill to restore the full amount requested by the Bureau of the Budget.

This is necessary because it is quite evident that the Joint Committe on the Economic Report which will allow some of the spokesmen for big steel to attempt to whitewash themselves next Thursday is not prepared to carry on the investigation which the facts demand.

No preliminary study has been made by the staff of the joint committee with respect to the activities of national interstate business in the pricing field, although it has been clear that interstate corporations have been making the greatest profits in history under the extortionate prices they have maintained. This is particularly true of steel, and when the joint committee goes into its steel session on Thursday, it will not have the benefit of any information gathered by its own staff.

Months ago it became apparent to the Small Business Committee that action in the case of steel was particularly necessary. A letter was written to the Federal Trade Commission on behalf of this committee, asking what the probable cost of such a study would be. The response was to the effect that it would cost about $225,000. There has been no action except the action of the House committee in cutting out the appropriation requested in the President's budget for a study of administered prices.

I am asking the Joint Committee on the Economic Report to have representatives of the Federal Trade Commission and of the Department of Justice present when the Economic Committee hearings open on Thursday. The Federal Trade Commission and the Anti-Trust Division of the Department of Justice are equipped to make a much-needed revelation before the committee of the pricing policies followed in the steel industry.

Attention ought to be called to the fact that in August 1947 the Federal Trade Commission filed a complaint against the American Iron and Steel Institute and 101 steel producers, alleging price fixing and combination in restraint of trade. Several public hearings have been held already, but they have not received the public attention to which they are entitled. It was revealed at these hearings, for example, that during the year 1940, before war preparations had begun, whenever the Navy Department or the Tennessee Valley Authority had occasion to

buy steel products, identical bids had been submitted by the steel producers down to one ten-thousandth of a cent. It made no difference what steel company was the seller. There was no competition; the price was the same.

MONOPOLY IN STEEL INDUSTRY

Even though there are 101 defendants in the Federal Trade Commission case, the fact is that in all probability most of these defendants were compelled in self-defense to go along with the decisions of the few big companies which dominate the steel industries. They have no freedom of action, much less competition in this industry, because the little fellows stand at the mercy of the big companies which dominate the scene. The fact of the matter is that the four largest steel producers call the tune for the entire industry. As long ago as 1880 the four largest producers owned 25 percent of all American rolling-mill capacity. Before the beginning of World War I, more than 60 percent of the capacity was in the hands of the Big Four, and when World War II began, that control included about 64 percent. It is even greater now. As a matter of fact, the eight largest steel companies own approximately 80 percent of all steel capacity.

When these big fellows speak, all the others fall in line. Worse than that, seven of the eight fall into the "me, too," category because United States Steel alone has more than 35 percent of the total capacity. In other words, United States Steel is the controlling power in an effective steel-industry monopoly. Failure upon the part of Congress to act positively and speedily will only mean that these big steel companies will be confirmed in their power to turn on or off the supply of steel for all the people and all the industries of America, as well as to fix the price which all industry and all the people must pay.

These eight companies are United States Steel Corp., Bethlehem Steel Co., Republic Steel Corp., Jones & Laughlin Steel Corp., Youngstown Sheet & Tube Co., National Steel Corp., Inland Steel Co., and American Rolling Mill Co. There is every reason to believe that the American Iron and Steel Institute does the bidding of United States Steel as conveyed through this small group of eight.

It ought to be clear to the managers of big business that the action of the steel industry in announcing its latest price increase is an invitation to have the steel industry declared a public utility. Every State in the Union, every business which uses iron and steel, every worker employed in any position or industry which uses steel is now dependent upon the private decisions of these blind steel magnates who do not see that they are destroying the basis of free enterprise.

The action of the steel companies in making this most recent boost is evidence of their complete confidence that the Congress of the United States under its present leadership will do precisely what they want. That is to say, leave them alone to regulate the commerce of the country so that they may make huge profits.

EXCESS-PROFITS TAX PROPOSED

I have prepared and will introduce before the end of the week a new excess-profits-tax provision which I shall offer as an amendment to the pending tax bill.

This provision will be designed to force big business to decide either to cut prices so that little business and local business throughout the United States, as well as all consumers, may benefit, or be prepared to turn their excess profits over to the Government for application on the national debt.

This new excess-profits-tax provision will carry a sliding scale running from 50 perpercent of all profits in excess of the base rate to 100 percent, so that the choice will be inescapable. The mandate of this provision to big business will be:

"Unless you are content with reasonable profits, be prepared to reduce your prices or to pay all of your extortionate gains into the Federal Treasury to help reduce the public debt."

My amendment will allow an excess-profits credit of 135 percent of normal profits, so that there can be no allegation that reasonable profits are denied. The excess-profits-tax rate will be 50 percent on the first 5 percent above the 135 percent of normal profits, 75 percent of the amount of profits above the next 10 percent of normal profits, and 100 percent on all profits in excess of 150 percent of normal.

The Missouri River Basin

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, February 24 (legislative day of Monday, February 2), 1948

Mr. YOUNG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address entitled "Your Future—the Missouri Basin Project," delivered by Hon. William E. Warne, Assistant Secretary of the Interior, before the student assembly, State Teachers' College, Minot, N. Dak., on February 9, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

YOUR FUTURE—THE MISSOURI BASIN PROJECT

Whether you plan to farm, to teach, or to start a business or a family in North Dakota or a neighboring State, what happens in the Missouri River Basin is of vital importance to your future, as well as that of the whole country

You've read and studied a great deal about conservation during the last few years. You have also seen the results of letting a river run hog wild during spring floods.

Some of you may even remember the drought of the 1930's when streams dried up and the soil of your home farm turned to dust and blew over into the next county, or farther away.

Because of recurrent floods and droughts, conservation has become more than a word in the Plains States. It is a way of life, of finding how to guard and use land and water and related resources so that they will multiply for the benefit of this and coming generations.

Conservation is more than contour farming; it's more than crop rotation; it's more than a sound irrigation policy.

Conservation is the sum total of measures for preserving and making wise use of our fish and wildlife, our forests, our minerals, our waters, our land. Each of these natural resources is interdependent. Denuded forests and grazing lands result in silt-burdened rivers that run amuck in flood time, wasting waters that should be salvaged for irrigation and hydroelectric power development.

The time has long since passed for merely talking conservation. Secretary Krug said recently, "If we lose our productive soil or if we fail to use it fully and properly, we are committing mass suicide as surely as if we turn loose our modern weapons of instantaneous destruction."

It is, therefore, literally of utmost importance that we conserve through prudent use our resources. Consider this: During the war we drew heavily on our natural resources capital. Our needs are still great, but if we continue to consume our reserves, careless of the future, we will be designing a catastrophe for our children.

For example, in order to preserve the fertility of our soil, we must return to it a ton of essential soil minerals for every ton used. Now, it is calculated, that about two tons of soil minerals are taken for each ton returned. One ton disappears in the harvested crop and another is lost, mind you lost, through erosion.

We must stop the waste and we must find new mineral reserves and develop them wisely. All of these things must be included in the development of our river systems, the first mature program we have architected to meet our recognized conservation needs. Our continued prosperity as a nation depends on the wise husbanding of the abundance of natural resources that are to be found in our fertile river basins.

The Missouri River Basin—one of America's greatest storehouses—contains almost fabulous riches of soils, phosphate, oil, and other nonmetallic minerals. There is water power and enough coal here in this basin to have made a European kingdom rich.

During this critical period of world food shortages we have comfort in knowing that the Missouri River Basin is the source of many cereal grains, sheep, and cattle. In fact, this basin has been called the great American breadbasket, for here the Nation finds food to fill one-half of its cupboards and butter for about one-fifth of its bread. One-sixth of the pork, one-fifth of the beef, and a quarter of the mutton produced by the United States are raised right here in the Missouri River Valley. This is too great an American agricultural stake to risk through continued droughts and floods.

It is of national concern that the Missouri Basin faces serious economic problems, that its land resources are being wasted; its rivers are glutted with silt washed from its cultivated and grazing lands; that its people are leaving their impoverished lands to find other areas of opportunity.

An estimated 57,000 persons moved from North Dakota farms during the drought years prior to 1938. Approximately 45,000 people moved to villages and towns in North Dakota and in other States, and 12,000 established homes on farms in other States.

Some North Dakota counties, perhaps the one where you live, lost over 25 percent of their total population in the 1930's. In that same decade the State as a whole lost 16 percent of its population. In 5 years between 1930 and 1935 a total of 150,000 persons moved away from the Great Plains because their livelihood was removed by drought.

The drought of the 1930's is only one of many that the basin has endured. Back in 1890 it is said that 250,000 people were driven out of western Kansas by a series of bad years. Many returning prairie schooners carried the banner, "In God we trusted; in Kansas we busted." At that time 18,000 retreating prairie schooners passed eastward over the Omaha bridge in one season.

Dependence on a dry farm and range economy has weakened the social structure of the Great Plains States. Abandoned homes, forced sale of farms, of livestock and foundation herds, delinquent taxes, closed schools—these are evidence of a sick economy. A few years of good rain, good production, and good prices, such as have been experienced recently, should not cause us to forget; for they cannot, they will not last, and they are unable to correct the basic natural difficulty.

The Missouri River Basin project, a joint plan of the Interior Department's Bureau of Reclamation and the Army Corps of Engineers, authorized under the Flood Control Act of 1944, is not a panacea for all basin

ills, either. It can, however, cure many of the agricultural and industrial ailments that are now plaguing this region's prosperity. The Missouri Basin project has been designed to bring land and water resources of the basin into harmony; to make it possible for farmers here to make a more secure year-to-year living from their land. The project cannot prevent droughts, but it offers insurance against them and the means of safeguarding crops and livestock during long, dry periods. It offers a source of low-cost power that will lighten farm labors as well as attract new industries to the region. Those of you who don't plan to farm will have a better chance of finding a job to your liking in towns that will grow with the basin's industrial advancement.

The Missouri River Basin project will regulate the river, hold its waters in check, so that they can be used to benefit all of the people. Flood control, irrigation, hydroelectric power development, improved navigation, silt control, domestic and industrial water supplies, fish and wildlife preservation, and establishment of recreational areas—these are some of the benefits that accrue to you and to the Nation from such comprehensive basin plans.

Reservoirs will be created on the Missouri River and its tributaries in North Dakota, South Dakota, Montana, Wyoming, Colorado, Nebraska, Kansas, and Missouri. All of these will serve one fundamental purpose—to impound the water in periods of heavy run-off from the land and release it during periods of low stream flow.

In all cases, by impounding floodwaters, the reservoirs will reduce flood hazards downstream. Water released from the reservoirs will serve both rural and urban needs.

Irrigation is one of the most important benefits of the plan. Approximately 5,000,000 acres of land will be irrigated by the project in the basin States. Of this amount, about 27 percent, or 1¼ million acres, are in North Dakota.

Power plants will be built at many of the reservoirs to convert into electricity the energy from falling water. The fullest development of power is a basic principle incorporated in the Missouri Basin project. The plan as now contemplated includes 22 power plants, with a total installed capacity of approximately 1,900,000 kilowatts with power plants in North Dakota and South Dakota located at Garrison, Oahe, Big Bend, Fort Randall, Gavins Point, Crosby, Des Lacs, and Miller. These power plants will have a total capacity of approximately 1,500,000 kilowatts.

This is a gigantic amount of power when you stop to consider that the present power demands in North and South Dakota combined total only about 200,000 kilowatts. Some of the power will be used in pumping water for irrigation, but a large part of that block will be generated at power drops located on irrigation canals at Crosby and Des Lacs here in North Dakota and at Miller in South Dakota. Present studies indicate that approximately 1,000,000 kilowatts will be available for domestic, commercial, and industrial loads in North Dakota and South Dakota. A region-wide network of transmission lines, the main high-tension arteries of which will be built by the Bureau of Reclamation, will connect the power plants with each other, with other power systems and with consumer distribution facilities.

Good conservation practices demand that the waters of the Missouri River Basin must be used to the fullest. Flood prevention, irrigation, and power production alone do not discharge the responsibility. The Missouri Basin project plan demands more than that. Besides these beneficial uses, it calls for control of silt which glut our streams, for supply of water to domestic, industrial, and municipal consumers, for pollution abatement, for recreational development, for navigation, and for conservation of fish and wildlife. Never before has a conservation program of this magnitude been instigated by man.

The multiplicity of problems that are in need of solution before the Missouri Basin's vast store of resources can be made to serve its people are a challenge to everyone and particularly to you, to all of the young people of the Basin.

Generations preceding you have demonstrated their quality by their ability to withstand the rigors of the elements, by their steadfast determination to maintain homes and rear families despite drought, flood, and hail; by their hard work and their individualism.

I am sure that you have inherited from those ancestors the vigorous characteristics that will be required to carry the challenge of the problems. Individual characteristics of initiative and enterprise will be at a premium.

Development of the basin cannot be done overnight. Years will be required to carry out the detailed investigations. The vast Missouri-Souris unit, for example, which lies directly to the north of Minot is now under detailed investigation. The exact extent and pattern of its development will be determined only after careful soil classification, topographic mapping, economic studies, structure, and major canal lay-out plans are completed. The response of the local glacial soils to irrigation and the adaptability of diverse crops to the soils must be more exactly determined.

Your initiative and enterprise will be needed to its maximum extent in developing the farms for which irrigation water will be provided and in developing crops and adapting varieties to the 1,200,000 acres of land to be irrigated in North Dakota.

The full beneficial results from irrigation will be achieved if full integration is provided with the surrounding agricultural areas. Each irrigated acre is capable of supplementing many acres of nearby range land. In many areas an ideal enterprise is an integrated farm composed of a combination of irrigated land, dry farm land, and grazing land, with the irrigated land serving as a forage base during winters and unfavorable seasons.

Beyond the irrigation phases of the Missouri Basin project lies a real challenge to the people of the basin. The project as I have pointed out will bring about the production of vast amounts of power. Local initiative and enterprise will determine the extent of industrialization.

With low-cost power and an abundance of agricultural products, the people of this basin can well develop many regional industries processing agricultural products. They can also develop mineral resources. The basin is self-sufficient in nonmetallic minerals. To date, only a small portion of these has been used. A virtual catalog of minerals exist such as bentonite, refractory clays, gypsum, potash, phosphates, glauber's salt, arsenic, cadmium, iron, magnesium, tantalum, corundum, fluorspar, lithium, and tripoli. These are a representative few.

Coal reserves amount to 65 percent of the United States total. Of an estimated 92,000,000,000 barrels of oil in United States shales, 49,000,000,000 barrels are in the basin. About 8 percent of the United States crude petroleum output comes from the basin. The natural-gas potential is not determined, but there are indications of immense supplies.

The establishment of industries present many stubborn problems. Distances are great within the basin. Lower cost transportation and more transportation will be needed to bring the raw materials together and to transport the finished products to the consumers. Use of many resources will await the development of improved technological methods. Despite the problems, the industrial outlook for the basin is good under the influence of the Missouri Basin project.

There are those in the United States today who would stop this great resource program for fear that industrial developments here will lessen the area's dependence upon the older sections of the country for manufactured products. I have sufficient faith in the future of America to believe that we have not reached the acme of our agricultural and industrial development. There is plenty of room for extensive industrial development in the Missouri Basin as our Nation grows in economic security.

I have discussed briefly what the Missouri River Basin project can mean to this region and to North Dakota. I am personally convinced that the success of this undertaking rests upon you who will soon leave school to carry on the future activities of the basin. The greater goals, for the area and the Nation, can be attained only through hard work, consistent effort, and the youthful vision. That is your natural heritage.

Buying Good Bureaucrats

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 24 (legislative day of Monday, February 2), 1948

Mr. MURRAY. Mr. President, much has been said of late about the difficulty of securing men of high character and ability for positions of importance in the Government. This is a problem which justifies our serious consideration.

The Washington Post of February 11, 1948, carries a very timely article by the columnist, Malvina Lindsay, discussing this question. I think this article should be read and pondered by every Member of Congress. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BUYING GOOD BUREAUCRATS—HECKLED LEADERS

(By Malvina Lindsay)

"No outstanding men or women will come to work for me," laments Uncle Sam.

"What is the country coming to?" cry the viewers with alarm. "We'll soon be completely governed by rabbity bureaucrats."

"Somebody do something quick!" shouts the public.

"I have it!" exclaims the man of the hour. "We'll pass a law—give 'em a raise of a thousand or two. No sound, high-caliber millionaire is willing to starve on $10,000 a year."

Thus it is all neatly settled, this crisis in Government executive service. For many of us would solve this problem the same way we would like to write Europe and China off our conscience—with a hand-out.

However, other reasons than money are causing able Americans to refuse executive posts, and causing many of those in such posts to leave them. Men and women highly paid by private business do not, as a rule, take governmental jobs for the salaries. Usually they are responding to calls to patriotism.

Badgering by Congress and ingratitude from the public cause many outstanding citizens to shy away from big Government jobs.

Also they cannot be sure of being backed loyally and aggressively by their superiors, or have security and stability in their work. They are in imminent danger of being made pawns of political conflict, of being thrown to the wolves personally by those who are fighting their programs. Sometimes the value of what they have done is recognized only after it has been torn down.

A case in point is that of William Benton, former Assistant Secretary of State in Charge of Cultural Affairs, who is now receiving wide tribute for what he did in setting up an overseas information program, including the Voice of America. At the time of Mr. Benton's resignation the report was bandied about that he and Congress could not get on together, hence the paring down of his information program. But now Members of Congress, including those who were represented as clashing with him, have been praising him highly.

Members of Congress who went to Europe last summer came home enthusiastic about the foundation laid there for an information program. It is now generally recognized that Mr. Benton was responsible for getting from Congress the backing that enabled him to organize this program. The Government has continued calling on his services. He recently headed the United States delegation to the Mexico City Conference of the United Nations Educational, Scientific and Cultural Organization. It is reported he will soon be asked by the Secretary of State to represent this country at another important world conference.

If the country is not to be run by the mercenary and the mediocre, some way must be found to create an atmosphere in Government that will attract the most capable men and women. No one can imagine a rush of volunteers to be heckled at congressional inquisitions, to be derided by an unthinking public baying "bureaucrat."

Women, of whom there should be more in policy-making governmental posts, often seem to be special game for this sort of thing. Who does not remember the punishment the first woman member of the Cabinet took? Lesser women officials frequently have to "ride the goat," suffering discourtesy and sarcasm, when presenting to congressional committees the needs of their departments.

Authorities on Government are deeply concerned about this, especially since the University of Chicago recently announced that it would no longer advise its faculty members, or graduates, to take governmental posts. A widespread education of the public is needed to awaken it and its representatives to the consequences of tearing down by misunderstanding and misstatement those it pays taxes to employ.

Government Decentralization

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, February 24 (legislative day of Monday, February 2), 1948

Mr. WILEY. Mr. President, on Friday night, February 20, 1948, I was scheduled to deliver an address on the subject of Government decentralization, over the network of the National Broadcasting Co., on the Pro or Con Program. Unfortunately, I developed a cold and was unable to appear personally to deliver my message. I was very grateful and happy that my colleague, the distinguished Representative of the first congressional district of my State, Hon. LAWRENCE H. SMITH, kindly consented to give my message over the radio.

I ask unanimous consent at this time that the text of this message, which I prepared, and which my friend, Representative SMITH, so graciously and so well delivered, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

DECENTRALIZATION OR DOOMSDAY

I am going to talk to you during the next few minutes about the end of the world as we know it—the possible wiping out by war of all the progress that has been made since the beginning of recorded time. This is not a speech of idle speculation. It is not a scare message or an alarmist message. It is going to be a statement of cold fact, as I see it, in my humble opinion, and as many scientists, military men, and businessmen see it.

As you know, the end of the world, as we know it, has been something that has been discussed in scientific fiction, like H. G. Wells' War of the Worlds. It has been mentioned in talk by astronomers who have prophesied that one day the sun might explode, or some other natural catastrophe occur. Yes, this subject has been discussed, too, in children's comic books in flights of pure fancy.

OUR CHANCE FOR PEACE IF WE WILL IT

I am speaking to you now about how our world of machines and buildings and cities and culture on this little spinning planet can come to an end, because of the dread possibility of atomic and bacteriological warfare. I repeat, I am not trying to scare anybody or alarm anyone. I believe that we have a wonderful chance of preserving peace through the United Nations if all of us, particularly the Soviet Union, manifest the true spirit, the will, the intent, and the purpose for peace.

PRESENT STRAIN IN RELATIONS

But our eyes are open to the fact that international relations are severely strained. Our eyes are open to the fact that, whether or not we like to admit it, there is a possibility that man's ingenuity and inventiveness may unloose terrific forces, atomic, and other germ, in another war which could wipe out human living as we know it.

WHAT ARE WE TO DO IN UNITED NATIONS?

What are we going to do about it? We must redouble our efforts for international peace in the spirit of true friendship and cooperation. We must pray for divine guidance and direction for our faltering steps and those of other nations.

We must make sure, too, that we are adequately prepared with modern instruments of warfare for any eventuality of the atomic age. We are told that some brass hats always prepare for the preceding war rather than for future war because they are caught in ruts and in mental mires. We dare not risk the possibility of experiencing another Pearl Harbor which some of our brass hats may not be able to foresee. This means that we must decentralize government, industry, and population in the United States.

Why? Because, without decentralization, we will be ripe for a one-two punch which could end the war in a matter of seconds. The choice is ours—decentralization or doomsday. On America's fate hangs the fate of the world. If we endure, freedom will endure, and there will be no end to the world as civilized man knows it.

OUR PRESENT VULNERABILITY

Let's bear in mind these facts. Ten atomic bombs blasting Washington, New York, Detroit, Los Angeles, Chicago, Philadelphia, Boston, St. Louis, Milwaukee, and New Orleans could destroy our principal agencies and offices of government, could obliterate 70 percent of our industrial facilities, kill or maim one-half of our national population and, in one terrible flash, end the world of democracy and human freedom and happiness.

All of this is possible. It is foolish to presume that the next war will be declared with months of speeches, with newspaper headlines, with a formal diplomatic break before a blow is struck.

On the contrary, in our time, two world wars have been lost by the aggressor because he failed to strike at America first with a holocaust blow. The next aggressor will not dare to take that chance. He will come like a thief in the night. * * * With the glowing arc of guided missiles hissing through the sky or the roar of clouds of planes, loaded with atomic bombs, winging down on 50,000,000 Americans peacefully asleep in their cities.

There would probably be no declaration of war—no warning. Our world could end in a horror of cities exploding into rubble. The mushroom clouds of atomic desolation would rise as tombstones above man's hope for freedom and democracy. Our world would end. And the reason for its end would be our own inert smugness and false sense of security in the oceans that surround us.

How, then, can we save ourselves? By speedy and adequately planned decentralization. It's not a military or economic cure-all; it's not a magic formula, but it will work.

WHAT DOES DECENTRALIZATION MEAN?

Decentralization means not only a physical spreading out of people away from the big cities and the centers of population. It means likewise a spreading out of concentrated economic power, of concentrated government and a universal reawakening of individual responsibility of each citizen for the common welfare.

It means, specifically, that enough factories and supply depots must be built in rural and semirural areas, away from the big cities, to insure us of an adequate supply of essential machines, airplanes, guns and bombs—in the event of our cities are destroyed by atomic attack.

Decentralization further means that the Federal Government in Washington must disperse some of its functions to small communities and to widely separated areas so that, when and if (and I pray it will never happen) the Capitol, the congressional office buildings, the War and Navy Departments, the White House, Supreme Court, and Pentagon Building are all destroyed, in a single atomic blast, our civil and military branches of government will still be able to function from decentralized secondary points.

NEED FOR ECONOMIC CHECKS AND BALANCES

The amazing thing about this whole decentralization concept is that it will have great social and economic benefits over and beyond its utter necessity as a measure of national defense.

Decentralization is important because it provides another check and balance in the American political and economic set-up. Monopoly, meaning lack of checks and balances, is dangerous wherever it exists. If we only have big business and no small business, if we only have healthy big cities but ailing small communities, it is a dangerous condition and must be corrected.

The frantic speed of city life, the crowded tenements, the high crime rates, the boss rule of many municipalities, the domination of men by machines, will all be remedied, if only in part, by decentralization. Getting close to the land, getting close to one's neighbor, getting close to one's God, means getting back to fundamental American truths and principles.

MORAL DECENTRALIZATION

We must have military, economic, political, and, yes, moral decentralization—uplifted moral standards brought about by our self-reliance rather than reliance on Government in Washington, D. C.

OTHER EFFORTS TO DECENTRALIZE

As you can see, my friends, this idea of decentralization is no flash in the pan. It is not somebody's brainstorm conceived one night and discussed the next night. Many men have been devoting years and years of intensive study to this problem. To cite but one man, Mr. Thomas Hewes, of Hadlyme, Conn., has written a stimulating book, Decentralize for Liberty, which provides possibly the most comprehensive plans for decentralization ever offered. Mr. Hewes is a former Assistant Secretary of the Treasury, and I commend his book to your attention. Whether or not you or I agree in full detail with Mr. Hewes, the important fact for us to determine is whether or not we agree with the fundamental concept of decentralization in this atomic age and then to evaluate Mr. Hewes' plans.

I, personally, have been endeavoring to spread Uncle Sam's Government and to spread business out to the grass roots ever since I came to Washington in January 1939.

MILITARY ADVANTAGE OF DECENTRALIZATION

Decentralization, you understand, will strengthen America's hand in international diplomacy. Russia, for example, although a dictatorship, is far more decentralized than we are and has spread her government and industry over one-sixth the space of the earth. In any military emergency, we would be at a hopeless disadvantage with our bloated, congested cities ripe for atomic attack.

PROBLEMS OF DECENTRALIZING

Please don't think for one moment that I underestimate the terrific problems—administrative, financial, and others—of decentralization. But we do not have any adequate alternative to taking on these problems if we are to be adequate in our defense.

WHAT ARE WE GOING TO DO ABOUT IT?

Now, what are we going to do about all this? Here is what I respectfully suggest:

In your own community's organizations, start thinking, reading, talking, and acting decentralization. In your veterans' post, in your chamber of commerce, your women's club, in your fraternal group, wherever appropriate, emphasize to your friends and associates the need for decentralization for purposes of national defense.

In your talk to your legislators—and I mean city, State, and national leaders—try to point out the importance of speedy decentralization.

WHAT UNCLE SAM SHOULD DO

Of course, the Federal Government can't do the job alone, but it should pioneer in decentralizing because it is the most overcentralized octopus of all. How? Here's how:

(a) I believe that every committee of the Congress should begin to work with representatives of the Government department or agency within its jurisdiction to help lay plans to speed decentralization.

(b) The Congress should plan for decentralization of the legislative branch of Government. Yes, this might mean legislation by television, simultaneously from 30 or 40 different points in our country in case of a national emergency.

(c) Our armed services, in particular, should keep the wheels rolling. They should retrain personnel for decentralization and take the central headquarters of our Army, Navy, and Air Force out of the Pentagon Building in Washington, D. C.

(d) The Civilian Defense Unit of the Department of National Defense, which Secretary Forrestal has announced, is a very enheartening development. It should speedily mobilize the best brains in the land for adequate, practical, realistic planning on decentralization.

(e) Former President Hoover's Commission on Reorganization of the Executive Branch should, and I know it will, make suggestions on decentralization.

(f) The present trend of Federal agencies to recentralize, that is, to move back to Washington, should be halted and reversed.

CONCLUSION

My fellow Americans, I am grateful for your kind attention and to this great radio network for its cooperation.

There we are, my friends. The choice is ours; yours and mine.

Decentralization or doomsday.

Order or chaos.

Vigilant preparedness or smug inertia.

I know that with the fundamental intelligence of the American people, with our fundamental vision and initiative, we will be adequate to this problem.

"Without vision, the people perish," the Good Book tells us. We will have vision.

There will be no end to the world.

America shall endure under God.

Dr. Parran Retires

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to insert several editorials which have appeared in the press with reference to Dr. Thomas Parran, for many years Surgeon General of the United States Public Health Service, who is about to retire from the Service.

The editorials follow:

[From the New York Herald Tribune of February 15, 1948]

DR. PARRAN RETIRES

The imminent retirement of Dr. Thomas A. Parran, Surgeon General of the United States, is occasion for some surprise and a good deal of regret. Dr. Parran has devoted his career to public health—nearly all of it, with the exception of the 6 years he served as commissioner of the New York State Department of Health, in the United States Public Health Service. To a high degree of technical competence he added enthusiasm and the capacity for dramatizing health problems in terms which the public would understand and to which it would respond. A notable instance of his ability to stir the popular consciousness of health problems was seen in his campaign against venereal disease, which admitted healing sunlight into a condition which had long festered in the shade of old taboos.

For Dr. Parran's long and successful service the Nation owes him a debt of gratitude. Fortunately, his designated successor, Dr. Leonard A. Scheele, at present the Assistant Surgeon General, is also a distinguished member of the Public Health Service, who has been honored for his work in typhus control in western Europe, and who is now director of the National Cancer Institute. With the lively appreciation of the need for a national approach to health problems which now prevails, the post of Surgeon General will certainly increase rather than diminish in importance. The selection of Dr. Scheele gives reason to hope that the traditions which Dr. Parran did so much to establish will be carried forward.

[From the Washington Sunday Star of February 15, 1948]

DR. PARRAN STEPS DOWN

President Truman's decision not to reappoint Dr. Thomas Parran as Surgeon General of the Public Health Service when his term expires on April 6 could not have been an easy one to make. Dr. Parran has served so long and so well in that post that his replacement could be justified only on the most compelling grounds. It was the very length of his service, as a matter of fact, that was cited at the White House as the reason for a change.

Dr. Parran has occupied the important Federal health post for 12 years, or for three full terms. It would be manifestly unfair to his colleagues in the service to give him indefinite tenure as Surgeon General. It is sound policy to rotate the job among top-ranking officers of this essentially career service. Dr. Parran attracted the attention of the late President Roosevelt while the latter was governor and the physician was on loan to New York State as health commissioner. As head of the Public Health Service, Dr. Parran expanded to national proportions the campaign he had waged in New York to remove venereal diseases and cancer from behind the veil of tabooed subjects for general public discussion. He felt that the more the public knew about these killers, the better prepared it would be to fight them. His campaign has paid dividends in lives saved and suffering eased. His leadership in many other public-health endeavors has been outstanding.

It is fortunate that his successor, Dr. Leonard A. Scheele, is one so closely identified with Dr. Parran's work and so highly regarded not only by the retiring Surgeon General but by the medical profession generally. Dr. Scheele, as Assistant Surgeon General in charge of the National Cancer Institute, has specialized in a field which, unlike that of venereal diseases, still puzzles the best minds of medical research. If, during Dr. Scheele's term as Surgeon General, as much progress is made toward ending the scourge of cancer as was made under Dr. Parran in the fight against syphilis, the Public Health Service will have even greater cause to be proud of its leaders and its record under their inspiration.

[From the New York Times of February 15, 1948]

DR. PARRAN'S RETIREMENT

Once upon a time there was a Secretary of the Treasury who decided that it was not in keeping with the dignity of the fiscal department of the Government to issue an educational bulletin for the benefit of the syphilitics cared for by its Public Health Service. When Dr. Thomas Parran was made Surgeon General of that Service this ice of reticence was broken. Largely influenced by him, the press has been discussing syphilis and gonorrhea openly for nearly 20 years. Because he was an expert in the field of venereal diseases he became health commissioner of this State and later Surgeon General of the United States Public Health Service. Franklin D. Roosevelt as Governor and President was responsible for both appointments.

Whatever the reason for Mr. Truman's failure to reappoint Dr. Parran, there will be Nation-wide regret at his departure from an office which he administered with zeal and distinction. His whole professional life has been devoted to the public health. Only 2 years after graduating from Georgetown University Medical School he joined the Public Health Service. By 1925, at the age of 32, he was head of the Service's division of venereal diseases and there made a remarkable record.

As Surgeon General he realized that it was far easier to deal with tuberculosis, influenza, and the epidemics that sweep the country at rare intervals than with the veneral diseases. Only a man of sterling honesty and high courage could deal with the worst of infectious scourges by discussing them candidly in popular writings. No one man did more to reverse the traditional policy of the Treasury Department and to place syphilis on much the same basis as any other infectious disease.

It is not likely that so distinguished and useful a career has ended. Dr. Parran is still in the prime of life. That we shall hear more of him in public-health work is certain.

"F. D. Too Ill To Understand Quebec Pact"—Stimson

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. ELLIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement by Willard Edwards in the Washington Times-Herald, Tuesday, February 24, 1948.

The statement follows:

"F. D. TOO ILL TO UNDERSTAND QUEBEC PACT"—STIMSON

(By Willard Edwards)

The late President Roosevelt was so tired and unwell in September 1944, that he signed the Quebec Conference agreement to destroy Germany as an industrial state without realization of its purport, former War Secretary Stimson disclosed yesterday.

Stimson said Mr. Roosevelt himself confessed this at a White House meeting 2 weeks after he and British Prime Minister Churchill had initialed their endorsement of the Morgenthau plan.

The Quebec Conference took place 7 months before Mr. Roosevelt's death on April 12, 1945. The President was seeking a fourth term at the time with his followers insisting that his physical and mental health had never been better.

MORGENTHAU'S "BONER"

In the third installment of his wartime biography, published in the current Ladies Home Journal, Stimson's diary gave the following account of a White House luncheon October 3, 1944:

"I reminded him (the President) that he had asked me to talk with him over the treatment of Germany. He grinned and looked haughty and said 'Henry Morgenthau pulled a boner,' that he had no intention of turning Germany into an agrarian state.

"He got so affirmative to this effect that I warned him that the paper which Churchill had drawn and which he initialed (on September 16) did contain the proposition of converting Germany 'into a country primarily agricultural and pastoral in its character.' "

Stimson then read the agreement to Mr. Roosevelt.

HADN'T GIVEN IT THOUGHT

"He was frankly staggered by this and said he had no idea how he could have initialed this; that he had evidently done it without much thought," Stimson wrote in his diary.

Stimson revealed that he was practically alone in his battle against the Morgenthau plan. He termed it "the most violent interdepartmental struggle" of his Government career.

Former Treasury Secretary Morgenthau was "not unnaturally, very bitter," he wrote, and the leader of those who desired a Carthaginian peace. He found "to my tremendous surprise" that State Secretary Hull was "as bitter as Morgenthau against the Germans" but later modified his position.

HOPKINS FAVORED PLAN

The late Harry Hopkins, Mr. Roosevelt's intimate associate went along with Morgenthau and Hull so far as to wish to prevent the manufacture of steel in the Saar-Ruhr area, Stimson said, "which would pretty well sabotage everything else."

Stimson protested against "turning a gift of nature into a dust heap" and reducing the German people to the edge of poverty. Such methods, he contended, "do not prevent war; they tend to breed war."

Just before the Quebec conference with Churchill which began September 11, Stimson's diary disclosed that he was uneasy about the state of the President's body and mind.

FEARED REVOLT IN FRANCE

Mr. Roosevelt was hampered by an obsession that a revolution in France was forthcoming and "had worked himself up into an apprehension of this," Stimson wrote.

Morgenthau's ace argument at the Quebec conference was that the destruction of Germany's mines and heavy industry would give advantage to British trade, Stimson declared.

Storms of protest from the press greeted disclosure of the Quebec agreement and Stimson again pleaded his case against the plan. The obviously "tired and unwell" President then admitted that he had indorsed the agreement without knowledge of its most important terms.

Bad Weather Doesn't Stop the Rural Mail Carrier

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. HAGEN. Mr. Speaker, few of us realize how important the rural mail carrier is to the farm families on his rural route. In good weather and bad, he makes his appointed rounds and in addition to delivering the mail, is a daily contact between the farm family and the community. The average rural mail carrier is a friendly fellow who deserves and has the respect and cooperation of his patrons.

Just recently, I had the pleasure of reading a human-interest story published in the February 12 weekly Review of Battle Lake, Minn. The story was written by a Review reporter who made the rounds of a rural route with the mailman following a snow storm.

My chief purpose in bringing this story to the attention of my colleagues and the readers of the CONGRESSIONAL RECORD, is to emphasize again the need for more adequate compensation and better retirement provisions for the faithful men who comprise the corps of mailmen serving the rural areas throughout our Nation.

The article follows:

"Now watch this dog," said Glen Salts to me.

I saw the animal, fine, tawny cattle dog, threading his way with exaggerated casualness through the thicket next to the road. Glen slowed his panel delivery truck to nearly a stop. The dog, with a disappointed look, slunk back into the thicket, thinking, no doubt, about the spoil-sport attitude of man.

"Can't take a chance of running over a dog," Glen said. "The kids would never forgive me."

All this came about Saturday, when, with a brisk breeze whipping up loose snow, a Review reporter accompanied a Battle Lake mailman on his rural route as a "scooper." A "scooper" is an assistant who helps a carrier dig out of drifts and through other hazards of the road.

Carrier Salts' route takes him west of Battle Lake then down through the Stalker Lake country and back. Even in the subzero cold and with a blanket of deep snow, the terrain on this route is beautiful—and doubly so in summer. But the beauty of the terrain, while appreciated by the carrier, is sloughed aside by the immediate task of getting the car through to the mail boxes. And there, as the man with chiggers said, is often the rub. Getting stuck is just something that a rural carrier accepts with the patience of Job.

"Take a look," said Glen, "at my weapons." Glen is an ex-GI who believes in preparedness against the elements, so he carries an assortment of chains, scoops, and other paraphernalia, all designed to get the mail through.

Much of the route was freshly plowed Saturday and the boss chortled with glee at the prospect of snapping mail into boxes that had been inaccessible for days.

"I've really got good people on my route," he said. "Finest people you ever knew." A few minutes later I learned part of the reason. One farmer double-timed quite a distance over the fields to warn him about the road and the plow operations ahead. "See what I mean?"

I learned, too, of the peculiar driving position a carrier assumes on approaching a mail box. He sits about halfway across the front seat and eases the car up to the box. Then with a bundle of mail in hand, he reaches out the right-hand window, unsnaps the box lid, and drops the packet.

"What," I asked, "are all those cans and jar covers I see in the mail boxes?" First one I saw I thought someone had cached a can of angleworms for fishing last summer and forgot to take it out. "Oh, those," he said. "You'll find out."

And so I did. They are used for pennies and small change for stamps when a snowbound patron has no access to getting stamps. I don't know the technicalities on this, but a carrier assumes it as part of his job. And he checks out with the patron and post office to the half cent.

A while back we mentioned snapping open the mail box and placing therein the mail. If you'll take a look at a rural carrier's right hand, you'll probably see it is chapped and scuffed. The lid often bangs against the hand—and those boxes are cold.

Snow was already drifting into the roads and it looked like some of the places would be filled by the next morning.

At one point two men came out to meet the carrier truck. As they transacted business, Iver Iverson told about his first, and only, experience with smoking. As a small lad he tried out an old pipe of his father's. He got a habit from it. A habit of never smoking. After the doctor had been called and he had recovered, he kept mum about the basic reason for his illness. "I thought I put one over on the folks by not telling," he explained. "But I noticed my father filled that old pipe with tobacco and laid it

on the shelf. He didn't say a word. But I could hardly look at the thing."

All this took but a matter of minutes. Glen kept looking at his watch like a railroad engineer. "I try to keep a schedule," he said. "When the conditions are normal I can just about time it the same every day. But winter driving isn't normal. Down past Stalker there's a sharp left turn up an icy hill. Made it yesterday, O. K." But he didn't quite make it this time. He had to make a second run for it. "I was 3 inches off on that patch of ice the first time," he apologized.

As we drove along, Glen said aloud, "I wonder if my deer have gone through today." They had. There were tracks across the road leading from the woods to the field. He's seen deer there often. Not one but several.

Then, despite the cold, there was the little girl who came out to meet the mailman. "Hello, honey," said the mailman. "How are you today?" The little tyke smiled shyly, took the mail and went back to the house.

So it went—and the trip ended much on the same vein as the outset. A dog came down the road from the house. "Watch him now." The dog started, retreated, started again. Glen did the business of slowing down. The dog frustrated, ambled back to the house—a little miffed at calling off the race.

It's quite an experience, being a mailman. You have to give 'em credit.

It Can Be Peaceful

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a very timely article by Mr. Edwin L. Dale, Jr., which appeared in the Worcester, Mass., Evening Gazette on February 5, 1948.

The article follows:

IT CAN BE PEACEFUL

(By Edwin L. Dale, Jr.)

We hear so much about strife and animosity in the field of labor relations that we often forget how much is accomplished on a peaceful basis. Right in our own back yard in the past month has been a good example of unheralded negotiating that has preserved peace in a big industry probably for 2 years to come.

In that time no less than 25 contracts have been signed between woolen, worsted, and felt manufacturers and the Textile Workers Union of America, CIO. Not a strike was called. Nobody evaded the Taft-Hartley law or tried to, though the union did have a clause inserted in the contract protecting it from financial damages in the case of wildcat strikes.

HOW IT WORKS

A quick history of those negotiations gives a good picture of how wage patterns are set and how collective bargaining works. Back in November the union's top men got together and decided what their basic demands on the wool and associated industries would be. They demanded raises, they said, because of the increased cost of living.

They settled on a bargaining figure of a 20 cents an hour wage increase and seven paid holidays plus a number of other demands. Then in early December they sent notices to the companies that negotiations for a new contract were beginning. This was because under the Taft-Hartley Act, 60 days' notice is required, and most of the contracts expired February 1.

Actual negotiations took about a month; that is, they lasted through most of January. In most cases the contracts weren't actually signed until shortly before the contract deadline. In the few that are still being negotiated, extensions have been granted and any wage increases finally agreed upon will be retroactive to February 1.

As would be expected, the union didn't get all it was asking for. The negotiations were no doubt helped by the fact that the huge American Woolen Co. signed up earlier for a 15-cent pay raise and six paid holidays. That pattern was followed pretty much throughout.

In every case the negotiating was carried on by officials of the company, Charles J. Auslander, regional director for the union, officials of the plant local, and occasionally one of the officers of the international union. Though it turned out that the basic pattern was about the same everywhere, each contract was worked out individually and there are some minor variations between them.

WILLING TO BARGAIN

Nobody is claiming that the companies enjoyed paying higher wages or that the union feels that now its men are as highly paid as they should be. There is no love lost between the manufacturers and the union. But on the other hand, there was a real willingness to bargain.

Sure, you can say that once the pattern was set, the companies figured that they'd have to fall in line. And true enough, most woolen and worsted companies raised their prices slightly in anticipation of the wage boost. No one will probably ever agree whether that price boost was necessary or justified. The union will continue to talk about high profits and the companies about high costs.

But just the same, the contracts were signed and work in the industry goes on. There is no trouble about Communists because the textile workers constitution won't allow a Communist or Fascist to be an officer anyway. The men still want the union, too, as is shown by the union-shop elections provided for by the Taft-Hartley Act and the contracts just signed. Of the men voting, 96 percent so far have favored a union shop, and that is 90 percent of the total membership in the shops.

As we said, there is probably no love lost. But the negotiations, both sides admit, were for the most part friendly. And labor peace was preserved for 7,500 textile workers and 25 manufacturing plants in Worcester County and part of Franklin County.

Article by Paul H. Eisenbise, of Morrill, Kans.

EXTENSION OF REMARKS
OF
HON. ALBERT M. COLE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. COLE of Kansas. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein the following article written by Mr. Paul H. Eisenbise of Morrill, Kans.:

IS THIS THE WAY WE EXPRESS OUR THANKS?

After years of toil on the part of the American farmers, farmers' wives, farmers' sons and daughters working hard, working long hours, plowing, tilling, producing, and harvesting the food and fiber to feed and clothe our people, our armies, and our allies,

After years of sacrificing our sons on the battlefields of the world for the cause of freedom and liberty for those who would love and cherish freedom and liberty,

After years of making the best of shortages of the materials and machines they have so desperately needed to substitute for the shortage of labor to produce and harvest record-breaking crops to feed ourselves and those around us,

After years of sending food and clothing to the needy of the world and at the present time making up freedom trains with grains, etc., for the needy and suffering of the world,

After years of cooperating with God and the elements of nature to produce and feed more than we have ever fed, we get a large gift package handed us in the way of the biggest price drop for our commodities in the shortest length of time ever recorded at the Chicago Board of Trade.

Was it just a coincidence that a midwestern market receiving from 30 to 60 cars of corn daily should, a day before the price crash started, receive 261 cars? I ask again was this merely a coincidence?

Was it just a coincidence that a daily paper printed January 27, 1948, carried an article stating that the American Bankers Association urged banks to deny credit to the speculative farmer "who bins his wheat or cribs his corn purely for higher prices"?

This, according to the bankers, was an anti-inflation move.

Thus we would gather that storing grains on the farms where they are produced causes inflation, but if it's sold to the grain speculators it produces a very healthy condition. Healthy for whom?

Well, I can't say that we farmers are altogether thankful to those responsible for this sudden price crash in our commodity prices, and that's putting it mildly.

Haven't we been faithful to our charge of plowing, tilling, producing, and harvesting when these commodities were most vitally needed?

Please consult our record of performance when it was vitally needed to maintain peace and security at home and help win the peace abroad.

Have you forgotten so soon?

As if this weren't enough to have our prices slashed as they have been the past 2 weeks, word comes from Washintgon that this is a step in the right direction.

Does this mean this is a step in the right direction to thank the American farmers for a good task faithfully and diligently performed?

Is this the new and modern way of thanking those who have been true, faithful, spent long hours toiling, sacrificing to feed our country and those around us?

It seems there has been enough uncertainty and unrest without adding more at this time.

Is this not biting the hands that have been feeding you?

Federal Aid for Education

REMARKS
OF
HON. GERALD W. LANDIS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. LANDIS. Mr. Speaker, the importance of education becomes more apparent with the passing years, but today the United States is confronted with a serious crisis in public-school education.

Our qualified teachers are abandoning their teaching profession for more lucrative pursuits, fewer and fewer graduates are coming from the teachers' colleges, schoolhouses are inadequate in many areas, and there are overcrowded classrooms and other disheartening conditions. Unless present trends are arrested, teaching may become a vanishing profession.

Education is a matter of national concern. It cannot be disputed that we do not have enough teachers and that many of our schools do not have proper and sufficient equipment with which to properly educate those who will direct the next generation. Education is not an activity that pertains merely to children and school teachers but has a direct bearing on all of us. Wage earners, housewives, farmers, and businessmen all share in the benefits that education affords and each individual should assume certain obligations toward it. If there are educational inadequacies in any State, the whole Nation suffers.

Fortunately, the State of Indiana, which I have the high honor to represent in Congress, has been able to keep its school system among the Nation's best although there is still room for improvement and much to be desired. But many States have struggled in vain, chiefly because they do not have sufficient resources to finance good schools for all their children. As pointed out in a recent editorial appearing in one of the leading Indianapolis newspapers, if Mississippi tried to bring its school expenditures per classroom up to the New York level, for example, the tax on Mississippi real estate—the chief source of school revenue in predominantly rural areas—would be so high as to be confiscatory.

The solution to this crisis has been offered in the form of Federal education bills pending before both Houses of Congress. As a former instructor in the Indiana public schools, a member of the House Education and Labor Committee, and a member of the bipartisan House Committee for the Support of Federal Aid for Public Schools, I believe it is the responsibility of the National Government, through grants-in-aid, to assist States in providing adequate public facilities and education standards, without exercising Federal control over education.

Legislation proposing Federal aid for education should receive immediate consideration by our Congress. The education of the Nation's future citizens cannot be ignored or slighted.

Issuance of New Currency

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. BOYKIN. Mr. Speaker, may I take this opportunity of addressing myself to H. R. 5239 now before the House Committee on Banking and Currency.

This bill was introduced by my good friend, the Honorable FRANK SUNDSTRUM, of the Eleventh District of New Jersey, who has long been distinguished by the splendid work which he has been doing in this House.

Himself an economist—his devotion to duty and his work in behalf of good government on the several committees on which he serves, as well as on the floor of this House—has already won him the esteem of every last Member of this body.

The Sundstrom bill, H. R. 5239, provides for the recall, as well as the reissue of new currency.

It is not a so-called new money bill in any sense of the word, inasmuch as it does not change the value, void, or in any manner even impair the existing value or use of the dollar. It merely issues new bills for old, bills in identical denominations and identical amounts.

It has put one purpose—to bring out of hiding the illicit gains which have accrued to those engaged in bootlegging, black and gray markets, hoarding, and other operations—and upon which no income taxes have ever been paid.

Mr. Speaker, time after time we in this House have heard tell about the hoarding of money in foreign countries—and of the tremendous sums locked up in the safe-deposit boxes by foreign nationals.

Mr. Speaker, we in the United States, as Mr. SUNDSTROM has so ably pointed out, have a situation comparable if not more intolerable than that in Europe.

It has been stated, and on good authority, that there is at present some several billions of dollars—collected in transactions which for some reason these people did not want to disclose—or which if disclosed might be adjudged illegal by the Internal Revenue Bureau, now hidden away in safe deposit.

Many of these are ill-gotten gains. Fearful of disclosing their operations—and the sources of the revenue—the holders of the currency under question have deprived the Government of the United States of hundreds of millions in income taxes, revenue which they should have paid.

It is high time that we make it possible for the Internal Revenue Bureau to catch up with these malefactors.

The Sundstrom bill will enable that Bureau to see that these evaders are disclosed—and all legitimate revenue due on these holdings is covered into the Federal Treasury.

With the Sundstrom bill written into the law of the land the resultant revenue collected will enable us better and with greater ease to balance the annual budget—reduce the existing rates of income taxes now paid by all other classes who meet and pay their taxes. In this wise we can afford all American workers and housewives further relief from the currently prevailing high cost of living and government.

Change Our Presidential Election System So as To Make It Responsive to the Voters and the Political Parties—Address of Hon. Estes Kefauver, of Tennessee, to Law Students of Vanderbilt University

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include an address delivered by me to the law students at Vanderbilt University on February 11, 1948. The address is as follows:

A strong and real two-party system is the most intelligent, responsive and lasting way to operate a democracy. The party in power formulates the policy and program of the Government. The minority party criticizes and tries to improve that program.

The present system of electing a President prevents the candidates of the political parties from being truly expressive of the members of the parties. It also results in the head of the parties taking positions which are out of harmony with a large segment of the party.

Recently we have heard complaints from Republicans in the "sure" New England States to the effect that the Republican Party was not taking their viewpoint into consideration in connection with rationing, price control, and allocations. We are now hearing a loud and vociferous criticism from southern democrats to the effect that President Truman in his civil-rights message to Congress was disregarding the "solid South." Both of these accusations have substance. The truth is that Presidential candidates throughout the years have made whipping boys of those sections which are considered to be definitely in the camp of their party. That is, the Republican candidates do not feel that they have to worry too much about Maine, Vermont, Michigan, Wisconsin, etc., in formulating their platform. The Democratic candidates feel that they must appeal to the voters of the North and East in formulating their platform and in carrying out their program. The fault is with the system more than with the individuals. In the light of these circumstances let's examine our present method of selecting a President and see what can be done to make the heads of the parties more responsive to all segments which make up the large political parties.

Whenever I consider the fact that the United States has grown into the strongest and most enlightened nation in the world under our Constitution during the past 160 years, I marvel at the wisdom and foresight of the founding fathers who conceived this memorable document. It is, indeed, the most remarkable system and formula of government ever devised by human minds. The Constitution makers, however, recognized that changed conditions would require changes in our basic law and they wisely included a provision for amendments. The Constitution, as Jefferson so wisely said, must be a growing document which will embrace and guide the conduct of the people in generations to come under circumstances which could not be conceived by the founding fathers.

The greatest demonstration of popular government in our time is when 50,000,000 or more American citizens, untrammeled, with freedom of thought and action, go to the polls and determine who shall be the next President of the United States. No patriotic citizen will question the contention that such an election should be conducted under rules which will definitely result in the election of one of the candidates and that all votes should be counted by a method that will accurately and justly reflect the will of the American people. We do not have such a system today. Ever since 1824, when a deadlock threw the election into the House of Representatives, all students of government have recognized that our system of electing a President has serious defects and that they should be remedied.

Section I, article 2 of the Constitution provides that each State shall be entitled to a number of Presidential electors equivalent to the number of Senators and Representatives of that State in Congress; that the electors of each State shall meet in the State Capitol on the same day and choose a President and a Vice President.

I have joined a number of Representatives in Congress, both Republicans and Democrats, in sponsoring an amendment to the Constitution. House Joint Resolution 108 is the bill I have pending. It would provide for the elimination of the electors and that each State should be entitled to a number of Presidential votes, the same as we have at the present time, and that these votes should be divided between the candidates for President and Vice President in proportion to the number of popular votes cast in that State. For instance, in a Presidential election, assuming that the Democratic candidate secured 600,000 popular votes and the Republican 200,000 popular votes, the Federal votes for Tennessee would be divided on the basis of 9 for the Democrats and 3 for the Republicans. The votes under the amendment would be directly for the candidates and not for the electors.

Let us see the conditions that have arisen which makes this amendment necessary. The founding fathers did not anticipate political parties. They intended that the people of a State would elect a superior group of people known as electors and that these electors would use their independent judgment in selecting a President. This method was carried out for about 12 years but by 1800, with the formation of political parties, the electors became mere robots or automatons of the party will and since that time we have gone through the rather ridiculous formality of voting for electors who are not supposed to exercise any discretion in the choice of a President. This, however, places the Nation in a dangerous situation. During the last election you will recall certain Democratic electors in Texas threatened to vote for someone else other than the Democratic Party candidate. Had their threat been carried out, and if this had determined the result of the election, we might have had a very bad disturbance or a revolution in this country. There is no logic or wisdom in holding onto a system which does not represent what the people, by common practice, have decided should be done. We should make our Constitution comply with the practice which is actually taking place.

Under the present provision, if no candidate has a majority of the electoral votes, the election is thrown into the House of Representatives. The House then ballots on the three highest on the list. Each State, regardless of size, has one vote. The Jefferson-Burr controversy of 1801 almost wrecked the young Republic and resulted in the adoption of the twelfth amendment providing for separate votes for President and Vice President. In 1824 the Presidential election was thrown into the House. On that occasion the unquestioned will of the people was not followed because Jackson had a plurality of more than 50,000 votes, yet the third person on the list, John Quincy Adams, was elected President. The scandal which arose on that occasion did not do our Government any good. The Tilden-Hayes controversy in 1876 was so bitter that Congress could not decide the issue but set up a special commission and agreed to abide by its findings.

These controversies could not arise under the plan proposed in the amendment because in every instance some candidate would have a plurality of the Federal votes of the States.

There are other important and compelling reasons why this amendment should be adopted. Under the present system if any candidate wins by a plurality of one the entire electoral vote of that State goes for that candidate. The minority, therefore, has no voice in the election of the President. The result is that the Democratic and Republican national organizations fight out every Presidential election in a relatively few States. The Republicans mark off the solid South; the Democrats concede certain New England and Midwestern States will be in the column of the GOP and there is virtually no campaign carried on in those States which are conceded. The people in the solid South and those New England States do not actually participate in the Presidential election because it has already been determined which way those States will go. Under this proposed amendment every vote would count whether it was cast in the solid South or in the State of New York. The issues would be discussed in every State and every citizen who went to the polls would be actually participating in the work of our democracy.

We all recognize that the political control of States has a great deal to do with the benefits that will be secured from the Federal Government. It should not be that way but it always has and it always will be. The Democratic Party is inclined to feel that there is not much need of doing anything for the South because the South will be Democratic in any event. When the Republican Party is in power it does little for the South because its leaders feel that politically there is no need of placing improvements and benefits in our section. As a matter of fact, practically every Presidential election hinges upon the votes of New York, Pennsylvania, Ohio, Illinois, California, and a few other States. And these are the sections that receive the special consideration in the way of patronage and public improvements from the two political parties. If the amendment I am proposing is adopted, each State in the Union would receive its fair and just share of Federal benefits.

Furthermore, the present system makes it impossible for practical purposes for a President to be elected from the South, from New England, or from the West. There are only a few States given consideration when the parties are looking for Presidential material. This amendment would change that situation entirely. It would give a candidate from Tennessee an equal chance with one from New York or Ohio.

Perhaps the most important reason why this amendment should be put into effect is that actually the United States is operated by its political parties. In other words, we have party government. It was not intended to be that way by those who wrote the Constitution, but the early statesmen of the country soon found that the best and most wholesome method of operating a democracy was on a party basis. That is, each party presents its platform and its candidate. The people choose between them. The party selected has the responsibility of fixing the policy and of administering the laws during the time it is in power. The minority party has the duty of criticism, of pointing out defects, of prodding the party in power when mistakes are made, and in that way trying to win control for itself.

From my years of experience in Congress I am convinced that a strong two-party system is the most logical, responsive, and satisfactory way to operate a democratic form of government. Those countries which have had multiple parties suffer from divided responsibility, and this is the cause of many of their failures. But it is not possible to have an effective two-party system under our present Constitution. In the South there is really only one party. In New England and many other States of the Union there is only one party, and both sections lose much of the benefit of criticism, of the incentive to get out the best possible candidates, and of seeing that their party is truly responsive to the needs and demands of the people.

There has been some criticism of this proposal on the ground that it would work to the disadvantage of the Democratic Party. It is true that under the system the Republican candidate for President would secure some Presidential votes from the States comprising the solid South; however, an analysis of the votes cast over a period of years shows that this loss to the Democratic Party would be made up by Presidential votes which the Democrats would secure from the so-called certain Republican States of the North and Northeast. If the system were adopted an end would be put to positions and platforms and messages by Presidents and Presidential candidates which play off one part of the Nation against another. The plan would certainly result in more consideration being given to all segments of the political parties by their candidates.

Another important result would be reducing the effectiveness of third parties. Third parties such as the pitiful effort now being made by Henry Wallace, do not expect to capture the Presidency. The result, and perhaps the hope of such abortive efforts is to change enough votes in a few pivotal States to throw the election to one or the other of the major political parties. This has happened several times in our history and it could happen in the coming Presidential election. If, under the proposal which several of us in Congress have made, a third party secured a few votes in the pivotal States, the result would not be of great importance. Each party would still receive its proportion of the Presidential votes and the third party would receive its small proportion. Even if Henry Wallace should take several hundred thousand votes away from the Democratic candidate in New York, the Presidential vote in New York would still be fairly evenly divided between the Republican and Democratic candidate. It is important, as I see it, to minimize the result of these third party movements. Certainly a minority party should not be able, by throwing a few Presidential votes one way or the other, to control the destiny of the Nation.

This amendment has been fully considered by a subcommittee of the Judiciary Committee of the House. The subcommittee has taken favorable action upon it. I hope that the House and the Senate will at this session, submit it to the States for ratification and it may well become the twenty-second amendment. The proposal deserves your study and consideration.

Under this system we can transmute the election returns into a fair and accurate common unit of expressing the will of the Nation as the votes are counted. We can give the Nation a just system of electing a President and on a plan that will operate definitely, uniformly, and accurately under all circumstances. This proposal will make the parties responsible to all sections comprising it. It will reduce the ill results of

a third party movement. By adopting this plan we will make an important contribution to clean, efficient, and progressive government.

Steel and Henry Wallace

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Thomas L. Stokes that appeared in the Washington Daily News of February 24, 1948:

STEEL AND HENRY WALLACE

(By Thomas L. Stokes)

There is a close relation of cause and effect between two recent widely publicized events in two entirely different spheres, though some persons involved apparently do not see it, which inspires this reminder.

One is the $5-a-ton increase in steel prices that will jack up prices of all sorts of essentials—for steel is a basic commodity—to whip up the already dangerous inflation.

The other is the third-party candidacy of Henry Wallace, which had its own inflationary fillip through election of an American Labor Party candidate for Congress in New York that has boosted the hope of third-party advocates all over the Nation.

Leaders of the steel industry probably are not conscious of it, but it is just such arrogant and selfish acts as this price advance in the midst of inflation that turn people to third parties and other media of protest against the established order.

The real meaning of this action, which came as so great a shock, was diagnosed by a Republican, Senator FLANDERS, of Vermont, himself a manufacturer, who said bluntly that "the steel industry apparently does not yet realize the nature of the public interest in their business policies." He declared that "in an industry as fundamental as steel there are public questions involved as well as questions of private business policy."

So there are. Steel is a great empire of its own, in effect a private state that reaches far and wide in our land, affecting the lives and welfare of all of us. For that reason it is endowed with a public character and a public responsibility, whatever the master of steel may think.

It has, at times, shown itself stronger than the political Government created ostensibly by the people to direct their affairs and protect their interests. It is one of the larger units of a number of giant industrial enterprises which, taken together, are sometimes referred to as "the invisible government" or "the private government." Their influence has weighed heavily in politics and statecraft, of which fact no proof is needed.

There are those, and not nearly so leftist as Henry Wallace, who believe that such dominant industries as steel must be brought closer under regulation in the public interest. The attitude exemplified by the steel industry will be capitalized for this purpose.

Among these are Senator O'MAHONEY (Democrat, Wyoming), who has a bill pending for Federal licensing of such giant interstate industry. Commenting on steel's price increase he said that "the supply of goods for 140,000,000 people is now controlled by a handful of industrial managers because of the tremendous concentration of economic power.

"There is no relief through competition because there really is no competition. When Big Steel acts the other companies follow in line. Six companies control approximately three-fourths of the steel production in the United States. Therefore, a basic economic decision is made for the people of the United States by a few corporate managers while Congress reluctantly assumes its duty of regulating the commerce so as to protect the people."

Address by Hon. James A. Farley

EXTENSION OF REMARKS
OF
HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to insert an address by Hon. James A. Farley, chairman of the board, the Coca-Cola Export Corp., on a program commemorating the two-hundred and ninety-fifth anniversary of the christening of the city of New York, Niew Amsterdam, under the auspices of the Citizens Committee for the Fiftieth Birthday Celebration of Greater New York and Federal Hall Memorial Associates, Inc., radio station WNYC, February 2, 1948.

The address is as follows:

Mr. Osborn, I appreciate your introduction, the gracious manner in which you have presented me to a vast listening radio audience, and before this assembled gathering of notables, here in Federal Hall Memorial Museum.

It is with reverence that I speak of the hallowed and historic ground whereon we are now standing. Here on the site of old Federal Hall, first Capitol of our country under the Constitution, General George Washington was inaugurated as President of these United States, 159 years ago this coming April 30.

Today we are here to commemorate the 295th anniversary of the christening of our city as New Amsterdam. This marked the actual struggling start of our great municipality of today, the greater city of New York, and the capital city of the world.

Director General Peter Stuyvesant of the then New Netherlands in America issued his proclamation on the eve of the Feast of Candlemas, February 2, 1653. He chose the name of the Holland seaport from which the Dutch settlers had sailed, the old Netherlands city of Amsterdam.

It is interesting at this point to note, also, that Stuyvesant, exactly 300 years ago, built part of a famous structure on this very spot in New York where we are gathered, at the corner of Wall and Nassau Streets. But more of that later.

Glancing about me here today, I am surrounded by priceless historic museum pieces, of all kinds and descriptions. They are painstakingly and well displayed, telling visually much of the thrilling story of the first years of our Nation, and of its leadership, including the famous collection of "Washingtonia" that has been assembled over the years and loaned by my friend, Messmore Kendall, past president general of the Sons of the American Revolution, and president of the Bill of Rights Commemorative Society.

That most precious document, the Bill of Rights, was finally written and enacted on this site. Here the first Presidential Cabinet was selected and met. Both the Senate and the House of Representatives convened here in 1789, and the first departments of our Government, including the Post Office Department, were created on this corner.

Around and about us today, in the museum, are priceless originals of many pertinent documents of the early days of our Republic and the authentic reproductions of many more; old prints, models of historic buildings of old New York of the revolutionary period; even the huge flagstone, saved from the floor of the balcony of old Federal Hall, whereon Washington stood when he took the oath of office as President.

Here is what might be termed a "stationary freedom train."

I am awed, and reverently so, as I stand here speaking to you.

All of you who can should visit this historic corner of our city when occasion and time permit.

In these trying days, particularly, here can be found heartening inspiration for all true Americans, for all lovers of freedom and democracy as our Government, together with that of the Netherlands, understands and interprets those frequently maligned words "freedom" and "democracy."

I believe that I am expressing the sentiments of the official representatives of the Netherlands Government who are with us today, Dr. van Kleffens, the Netherlands Ambassador, Dr. Koopmans, as consul general, in what I have said.

At the conclusion of these ceremonies, Ambassador van Kleffens will open a special exhibit of old Dutch colonial historia, dating back to the early days of New Amsterdam and the new Netherlands. This special display will continue for some weeks to come. It is a part of our citizen's committee's activities in connection with the golden anniversary celebration.

To continue with old Dutch colonial history, there is a point I had promised you all to make—that Peter Stuyvesant, too, was directly connected with this corner of Wall and Nassau Streets.

We know that he strode along on this spot in 1647, stumping along on his one good and his one copper-bound wooden leg. Walking here, he selected the site and caused to be erected a wooden palisades—a wall for the protection of the Dutch settlers from Indian marauders.

That wall, completed in 1648, just 300 years ago, crisscrossed this very land. It stretched east and west, directly across lower Manhattan Island, from the East to the North River, as they were originally named by the Dutch.

These palisades were flanked to the south by a roadway. This road came to be known as "Wall Street." The front of this structure wherein we are now assembled, the 105-year-old Subtreasury Building, faces Wall Street, as did old Federal Hall. And so Peter Stuyvesant made another historic entry on the books recording New York City's background.

This 1948 Greater New York Golden Anniversary Year presents an ideal occasion upon which to review in various ways and to impress upon the world of today our city's highlights in history. This I can say, as executive vice chairman of our citizens' committee, we are endeavoring to do. That is why we are gathered here today, believing it is vitally important that public consciousness of our traditions should be stimulated to offset the subversive, un-American propaganda now being disseminated on every hand

throughout this land and throughout the world. We must endeavor to meet and to defeat such propaganda with positive presentations of democracy, as traced back through our history and brought up to date.

Commemoration of these and other events forming the background of our city's phenomenal growth is a part of our committee program for the year 1948. When we began picking various events and dates to be singled out for special celebrations, it seemed amazing that so many historic anniversaries were available, many of national interest, and not merely local.

As a former Postmaster General of the United States, I am particularly pleased that the Post Office Department in Washington approved our issuance of a series of 15 commemorative historic postal cachets. Seven in the series already have been issued. The eighth will be issued here today, to commemorate this event of Dutch Colonial days and the naming of our city "Nieuw Amsterdam." The cachet pictures Peter Stuyvesant.

To officially issue these cachets, a temporary branch post office has been built here in the Federal Hall Memorial Museum. I am standing directly in front of its philatelic stamp and cachet window, from which already more than 100,000 cacheted covers have been mailed. Only here can each cachet be affixed and only here will the special cancellation be applied, reading "Federal Hall Station, Greater New York Golden Jubilee, 1898–1948."

May I take this opportunity to state that our citizens' committee is cooperating wholeheartedly with all in the celebration of our city's golden anniversary. A citizens' committee is always important. It keeps alive our sense of civic responsibility. The temptation is always strong to expect the Government to take care of things. But, ladies and gentlemen, we of the Citizens Committee for the Fiftieth Birthday Celebration of Greater New York feel that the good old voluntary spirit is essential and vital to a healthy democracy. Let's make it work, each and every one of us.

New York State Legislature Requests Lifting of Palestine Arms Embargo

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following resolution of the New York State Legislature:

STATE OF NEW YORK,
IN SENATE,
Albany, February 10, 1948.

Whereas the United Nations has decreed that Palestine shall be partitioned into separate Arab and Jewish states; and

Whereas the Arab nations, in defiance of the decree of the United Nations, have refused to participate in negotiations preparatory or subsequent to the vote on the partition plan; and

Whereas the Arab nations have persistently followed a course of terror and violence designed to nullify and prevent the implementation of the United Nations Palestine decision; and

Whereas the Jews of the world, in a spirit of amity and compromise born of the suffering and persecution which they have endured through the ages, have gratefully accepted and agreed to be bound by the decision of the United Nations on Palestine although it does not carry out promises made to them in the Balfour declaration; and

Whereas the public press carries daily accounts of unprovoked mass Arab raids and terroristic attacks against the Jewish people in Palestine and the toll of wounded and dead Jewish people continues to mount with unabating intensity; and

Whereas the Arab attacks on the Jews threaten to disturb the peace of the world and the Jewish people should be permitted, assisted, and encouraged to arm and defend themselves against such attacks; and

Whereas this Nation, through its embargo on arms and munitions destined for shipment to the Middle East, has prevented the Jews of Palestine from obtaining the weapons of defense sorely needed by them to resist and defend themselves against the attacks of the Arabs, while the Arabs continue to secure arms and munitions from neighboring Arab and other states; and

Whereas the Honorable William O'Dwyer has openly announced his opposition to the arms embargo and has urged the Government of the United States to cancel the same and to permit the immediate shipment of weapons and munitions to the embattled Jews of Palestine; and

Whereas the people of the State of New York are justifiably disturbed and alarmed over the plight of these defenseless Jews in Palestine and urgently implore the President and the State Department to cancel the arms embargo without further delay: Now, therefore, be it

Resolved (if the assembly concur), That the President, the State Department, and the Congress of the United States be and they are hereby respectfully memorialized to take such steps as may be necessary to cancel the present embargo on the shipment of arms and munitions to the Jewish people of Palestine who are defending the decision of the United Nations and make possible the immediate shipment of arms and munitions for the defense of the Jewish people of Palestine against the unprovoked acts of aggression and warfare of the Arabs; and be it further

Resolved (if the assembly concur), That copies of this resolution be immediately transmitted to the President of the United States, the Secretary of State of the United States, the Secretary of the Senate of the United States, the Clerk of the House of Representatives of the United States, and to each Member of Congress duly elected from the State of New York.

By order of the senate:

WILLIAM S. KING, *Clerk.*

In assembly, February 10, 1948. Concurred in without amendment.

ANSLEY B. BORKOWSKI,
Clerk.

National Science Foundation Act

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1948

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am including a copy of the reasons filed by the President on August 8, 1947, when he disapproved S. 526, the National Science Foundation Act:

NATIONAL SCIENCE FOUNDATION ACT

S. 526. I am withholding my approval of S. 526, the National Science Foundation bill.

I take this action with deep regret. On several occasions I have urged the Congress to enact legislation to establish a National Science Foundation. Our national security and welfare require that we give direct support to basic scientific research and take steps to increase the number of trained scientists. I had hoped earnestly that the Congress would enact a bill to establish a suitable agency to stimulate and correlate the activities of the Government directed toward these ends.

However, this bill contains provisions which represent such a marked departure from sound principles for the administration of public affairs that I cannot give it my approval. It would, in effect, vest the determination of vital national policies, the expenditure of large public funds, and the administration of important governmental functions in a group of individuals who would be essentially private citizens. The proposed National Science Foundation would be divorced from control by the people to an extent that implies a distinct lack of faith in democratic processes.

Moreover, the organization prescribed in the bill is so complex and unwieldy that there is grave danger that it would impede rather than promote the Government's effort to encourage scientific research. The Government's expenditures for scientific research and development activities currently amount to hundreds of millions of dollars a year. Under present world conditions this work is vital to our national welfare and security. We cannot afford to jeopardize it by imposing upon it an organization so likely to prove unworkable.

Under S. 526 the powers of the proposed foundation would be vested in 24 members appointed by the President by and with the advice and consent of the Senate. These members would be part-time officials required to meet only once each year. This group would in turn select biennially from among its 24 members an executive committee of 9 members and would exercise its powers through the executive committee. This nine-member executive committee would also be a part-time body required to meet only six times a year.

The Foundation would have a chief executive officer, known as the Director. He would be appointed by the 9-member executive committee unless the 24-member body itself chose to appoint him. The power and duties of the Director would be prescribed by the executive committee and exercised under its supervision.

There would be within the Foundation a number of divisions, each exercising such duties and performing such functions as the Foundation prescribed. There would be no limit upon the number of divisions which the Foundation could establish. For each division there would be a divisional committee. In the case of the Committee for the Division of National Defense, there would be a limit of 26 members, half of whom would be appointed by the Foundation and half of whom would be representatives of the armed services. In other cases, there would be no limit upon the number of members of each divisional committee and all of the members would be appointed by the Foundation. Not only would these part-time committees furnish advice and make recommendations concerning the Government's scientific research program, but each divisional committee would also exercise and perform the powers and duties of its division.

The Foundation would also be empowered to appoint commissions in various fields of

research. Three such commissions are specified in the bill, and the Foundation could appoint as many additional special commissions as it saw fit. Each such commission would consist of six eminent scientists and five members from the general public. After making a survey of public and private research already being carried on, each of these commissions would recommend a research program within its field and constantly review the manner in which such program was being carried out.

Apart from the conflicts and confusion which would result from this complex organization, the bill would violate basic principles which make for responsible government.

The Constitution places upon the President the responsibility for seeing that the laws are faithfully executed. In the administration of this law, however, he would be deprived of effective means for discharging his constitutional responsibility.

Full governmental authority and responsibility would be placed in 24 part-time officers whom the President could not effectively hold responsible for proper administration. Neither could the Director be held responsible by the President for he would be the appointee of the Foundation and would be insulated from the President by two layers of part-time boards. In the case of the divisions and special commissions, the lack of accountability would be even more aggravated.

The members of the Foundation would also be authorized to appoint the full-time administrative head of an important agency in the executive branch of the Government as well as more than 70 additional part-time officials in whom important governmental powers would be vested. This represents a substantial denial of the President's appointing power, as well as an impairment of his ability to see that the laws are faithfully executed.

The ability of the President to meet his constitutional responsibility would be further impaired by the provisions of the bill which would establish an Interdepartmental Committee on Science. The members of this committee would be representatives of departments and agencies who are responsible to the President, but its chairman would be the Director of the Foundation. It would be the duty of this committee to correlate data on all Federal scientific research activities and to make recommendations to the President, to the Foundation, and to the other departments and agencies of the Government concerning the performance of their functions in this field. Thus an officer who is not appointed by the President, and not responsible to him would be the man primarily charged with the performance of functions which are peculiarly within the scope of the President's duties; that is, the coordination of the work of executive agencies. This is especially unwise when the activities concerned are so intimately related to the national welfare and security.

There are other compelling reasons why control over the administration of this law should not be vested in the part-time members of the Foundation. The Foundation would make grants of Federal funds to support scientific research. The recipients of these grants would be determined in the discretion of the Foundation. The qualifications prescribed in the bill for members of the Foundation would insure that most of them would be individuals employed by institutions or organizations eligible for the grants. Thus, there is created a conflict of interests which would inevitably give rise to suspicions of favoritism, regardless of the complete integrity of the members of the Foundation.

It is unfair to individuals asked to accept public office that they should be put in such a vulnerable position. Moreover, colleges and universities and other organizations seeking aid for scientific research deserve the assurance that the manner and extent of their participation in a national program will be determined on a completely impartial and objective basis.

Adherence to the principle that responsibility for the administration of the law should be vested in full-time officers who can be held accountable will not prevent the Government from utilizing with great advantage the services of eminent scientists who are available only for part-time duty. We have ample evidence of the patriotic and unselfish contributions which such citizens can make to the success of governmental programs. The role to be played by such part-time participation, however, is more appropriately one of an advisory nature rather than of full responsibility. In other governmental programs of vast national importance this method is used to obtain advice and recommendations for impartial experts as well as from parties in interest. There is no reason why such a system cannot be incorporated in legislation establishing a National Science Foundation.

For the reasons I have indicated I believe that this bill raises basic issues of public policy. There would be no means for insuring responsible administration of the law. If the principles of this bill were extended throughout the Government, the result would be utter chaos. There is no justification in this case for not using sound principles for normal governmental operations. I cannot agree that our traditional democratic form of government is incapable of properly administering a program for encouraging scientific research and education.

It is unfortunate that this legislation cannot be approved in its present form. The withholding of my signature at this time, however, will not prevent the Government from engaging in the support of scientific research. Research activities are carried on extensively by various executive agencies under existing laws, and would continue to be carried on whether or not this bill became law. The only funds made available by the Congress for expenditure by the Foundation are funds which might be transferred from other agencies, thereby reducing the amounts which those other agencies could spend for similar purposes. No funds were made available for the scholarships and fellowships authorized in the bill. Thus, there would be no immediate gains which would justify accepting the risks involved in the approval of this legislation.

I am convinced that the long-range interests of scientific research and education will be best served by continuing our efforts to obtain a Science Foundation free from the vital defects of this bill. These defects in the structure of the proposed Foundation are so fundamental that it would not be practicable to permit its establishment in this form with the hope that the defects might be corrected at a later date. We must start with a law which is basically sound.

I hope that the Congress will reconsider this question and enact such a law early in its next session.

It will be remembered that this legislation passed in the Senate on May 20, 1947, and passed the House on July 16, 1947. Then, you will recall that the conference report was agreed to by both the Senate and the House. It will also be recalled that the bill as reported by the House Committee on Interstate and Foreign Commerce had received extensive consideration after long hearings.

I also include a memorandum prepared at my request by the Legislative Reference Service dealing with the basic objection expressed by the President to the administrative features of the legislation in that it contained "provisions which represent such a marked departure from sound principles for the administration of public affairs that I cannot give it my approval." I believe the memorandum is self-explanatory, and I think it is particularly interesting that the Hospital Construction and Survey Act furnished a clear precedent for this type of an approach to the problem of creating a very important Federal agency, and that it will be agreed that, if Congress and the President were correct in permitting that legislation to become law, they would be correct in approving the National Science Foundation Act as basically sound. The memorandum follows:

MEMORANDUM

To: Representative JOHN W. HESELTON.
Subject: Administrative provisions of S. 526, National Science Foundation bill.

This is with reference to your memorandum of January 8 requesting a report as to whether the provisions of S. 526, the National Science Foundation bill represent a marked departure from principles for the administration of public affairs.

Your memorandum also requests that the report include instances, if any, of the specific organizational features. The specific items will be dealt with first.

1. Instances where members of a commission, foundation, or other governmental agency, appointed by the President by and with the advice and consent of the Senate, have been authorized through the main body or its executive committee to appoint a director or similar officer.

It is customary for statutes establishing governmental agencies to confer upon the head or heads of such agencies a general authorization to employ such officers and employees as are necessary in the execution of agency functions. Acting under this general authority, a number of commissions and other agencies have made provision for the appointment of an official with broad administrative powers, subject to the direction of the members of the agency.

As illustrations, the Tennessee Valley Authority has a general manager; the Railroad Retirement Board a chief executive officer; the Federal Deposit Insurance Corporation an executive officer, and the Civil Service Commission an executive director and chief examiner.

In the case of the National Labor Relations Board, prior to its recent reorganization, the statute itself made provision for an executive secretary, to be appointed by the Board.

With respect to the officials designated above, great variation exists as to their duties. It would be difficult to make comparisons with the position of Director of the National Science Foundation established in S. 526. In all of the above cases the officials to whom the executive officer is responsible are full-time officials, so that the role actually played by the executive officer is probably less significant than was intended with respect to the Director of the National Science Foundation.

2. Instances "where authority has been given the foundation or main body to create divisions or small groupings and prescribe the duties of such divisions or groupings."

Such authority is possessed by practically all Federal agencies, by virtue of its very power to "administer." It is sometimes, of course, limited by statute.

(The "divisions" provided for in S. 526 were to be administered by part-time committees. It is in this respect that they appear to be unusual.)

3. Instances "where responsibility for the administration of the law has not been vested in full-time offices."

Many such instances in the Federal Government may be cited. Among them are the National Advisory Committee for Aeronautics (U. S. Government Manual, 1947, 2d ed., p. 447); the Federal Hospital Council (60 Stat. 1040); the National Capital Park and Planning Commission (Manual, p. 456); the American Battle Monuments Commission (Manual, p. 395, 60 Stat. 317); the Commission of Fine Arts (Manual, p. 400); the Textile Foundation (Manual, p. 294, 298); and the Smithsonian Institution (Manual, p. 476). Note also the Federal Power Commission as set up by the Federal Water Power Act of 1920 (41 Stat. 1063). In addition, nearly all memorial commissions, etc., are composed of persons serving on a part-time basis.

While the above bodies consist of persons serving on a part-time basis, in most instances all or a majority of the members are full-time Government officials serving ex-officio, or appointed as representatives of their agencies. Exceptions are the Federal Hospital Council, which is discussed below, the American Battle Monuments Commission, and the Commission of Fine Arts. The Battle Monuments Commission is composed of "not more than 11 members" appointed by the President. The President also appoints one officer of the Regular Army to serve as its secretary. The members and the secretary serve at the pleasure of the President. Commissioned officers of the United States may be appointed members of the Commission. Members serve without compensation, except for payment of actual expenses.

The Commission of Fine Arts is the official advisory body of the Government upon matters of art. It is composed of seven "well-qualified judges of the fine arts," appointed by the President.

Comparison of the other agencies cited above with the National Science Foundation is made below.

Does the National Science Foundation bill "represent a marked departure from principles for the administration of public affairs?"

In terms of precedent, it may be said that none of the above-mentioned agencies possess all of the essential organizational features found in S. 526. Those administered by full-time boards or commissions would not seem to be comparable. The agencies administered by persons serving on a part-time basis have some but not all of these organizational features. For example, the American Battle Monuments Commission and the Commission of Fine Arts could be composed, so far as their governing statutes are concerned, by persons none of whom were full-time Government officials, thereby resembling the Foundation. However, apart from the fact that the responsibilities of these agencies are scarcely comparable to those of the Foundation, other features of their organization are quite different. The members of both are appointed solely by the President. In the case of the Battle Monuments Commission, the President also appoints as secretary an officer of the Regular Army. The members and the secretary serve at the pleasure of the President. Neither of these agencies has need for any elaborate internal organization.

It has occasionally been stated that the National Advisory Committee for Aeronautics is constituted similarly to the proposed National Science Foundation. Its members serve on a part-time basis and appoint a director of research. The differences, however, are substantial. In the case of S. 526, there is no requirement that any of the members of the Foundation be appointed from the Government, although some of them, of course, could be. In the case of the National Advisory Committee for Aeronautics, however, the law specifies that the Committee shall consist of 15 members appointed by the President, and that it shall include two representatives each of the War and Navy Departments and the Civil Aeronautics Authority, one each of the Smithsonian Institution, the United States Weather Bureau, and the National Bureau of Standards, and six additional persons "acquainted with the needs of aeronautical science, either civil or military, or skilled in aeronautical engineering or its allied sciences." Thus, while the members serve on a part-time basis and without compensation, a majority of nine must be Government officials. Another difference is that the President is given full authority to make appointments. The position of Director of Aeronautical Research is not a statutory one, and he does not appear to have the authority of the Foundation Director, since the Committee also has an executive secretary, and an executive officer.

The situation is somewhat similar with respect to the National Capital Park and Planning Commission. The Commission is composed of 10 members, 6 of whom, however, serve ex officio, with 4 citizens appointed by the President. In the case of this agency the statute provides that the Director of the National Park Service shall be the executive officer.

The organization of the Smithsonian Institution resemb'es in some respects that of the Foundation. The Institution is legally an establishment, the members of which are the President, the Vice President, the Chief Justice, and the members of the Cabinet. It is governed, however, by a part-time Board of Regents who elect three of their own members as an executive committee. The statute also authorizes the Board of Regents to employ a Secretary, who is the actual Director of the Institution. The Secretary is removable by the Board of Regents. The composition of the Board, however, is quite different from that of the proposed Science Foundation. It is composed of the Vice President, the Chief Justice, three Members of the Senate appointed by the President thereof, three Members of the House of Representatives appointed by the Speaker, and six citizens of the United States appointed by joint resolution of Congress.

Another unusual organization is the Textile Foundation, created by act of Congress in 1930 (46 Stat. 539; 15 U. S. C. 501-503) for scientific and economic research for the benefit and development of the textile industry. The Board of Directors consists of the Secretary of Commerce and the Secretary of Agriculture, ex officio, and three persons familiar with the textile industry, appointed by the President. The Board appoints a secretary. The statute provides that the Board shall direct the exercise of all the powers of the corporation. The Foundation administers a fund of nearly $2,000,000 arising out of the disposition of German dyes after World War I (U. S. General Accounting Office, Reference Manual of Government Corporations, S. Doc. No. 86, 79th Cong., 1st sess., pp. 254-257).

Attention is called to the Federal Hospital Council, established under the Hospital Construction and Survey Act of 1946 (60 Stat. 1040). The Council consists of the Surgeon General and eight members appointed by the Federal Security Administrator. Four of the eight appointed members shall be persons who are outstanding in fields pertaining to hospital and health activities, three of whom shall be authorities in matters relating to the operation of hospitals, and the other four members shall be appointed to represent the consumers of hospital services and shall be persons familiar with the need for hospital services in urban or rural areas. The Council acts in part as an advisory body, but has in addition a very real measure of authority. For example, if the Surgeon General disapproves of any State plan as failing to conform to the requirements of the act, the Council, upon the request of the State agency, gives it a hearing. If the Council decides that the plan conforms to the requirements of the statute the Surgeon General must approve the plan (sec. 623 (b)). The statute also specifies that the general regulations prescribed by the Surgeon General must have the approval of the Federal Hospital Council as well as of the Federal Security Administrator (sec. 622).

It might be noted that a very close parallel to the organization provided in S. 526 is to be found in the original May-Johnson bill for the development and control of atomic energy (see H. R. 4566, 70th Cong., 1st sess.). This bill provided for an Atomic Energy Commission composed of nine members appointed by the President, by and with the advice and consent of the Senate. The Commission was to appoint an administrator, who, subject to the direction and supervision of the Commission, was made responsible for the administration of the act. As finally enacted, however, the statute provided for a full-time Commission.

Another parallel is to be found in S. 1239, Eightieth Congress first session, providing for a National Education Agency. This provides for a National Board of Education, consisting of 11 members, appointed by the President by and with the advice and consent of the Senate. Members are to be selected for character, ability and special interest in education. It is to meet not less than twice nor more than four times a year. The Board appoints a Commissioner of Education, through whom it administers the act.

HUGH L. ELSBREE,
Legislative Reference Service.

FEBRUARY 11, 1948.

Since practically everyone admits that our national security and welfare require, as the President indicated, that we immediately direct support to basic scientific research and take steps to increase the number of trained scientists as well as develop an agency to stimulate and correlate the activities of government directed toward those ends, I have reintroduced the bill as it was reported in the conference report, so that we may review both the consideration of the legislation in the Congress last year in terms of the reasons given for its disapproval by the President and the precedents to which reference is made in the memorandum. This bill has been numbered H. R. 5532 and has been referred to the House Committee on Interstate and Foreign Commerce.

Free Enterprise

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to insert an editorial with reference to the address of the Honorable James A. Farley before the Kingston Chamber of Commerce in Kingston, N. Y., on January 24.

This editorial appeared in the Kingston Daily Freeman on January 28, and is as follows:

FREE ENTERPRISE

Former Postmaster James A. Farley in his talk at the annual dinner of the Kingston Chamber of Commerce declared that some of the best brains that America's free-enterprise system has created should be drawn into the administration machinery to conduct our European aid.

We must look for management and direction to those who have successfully managed and directed the great productive enterprises in the United States. And these men ought to be drawn into service regardless of the party to which they owe allegiance, he said.

Free enterprise is not a political term. Some people seem to think that as soon as one begins to advance the idea that American business, industry, commerce, or agriculture was built upon free enterprise in this country, one must be a Republican. It was good to hear the former Democratic national chairman point to the free-enterprise system.

Free enterprise is a basic American principle, as free from politics as the Constitution of the United States itself. It came into being with the Constitution. It emerged from such episodes in American history as the Boston Tea Party and drew its first baptism of blood at Bunker Hill.

The implication of free enterprise is simple, straight-forward, and honorable. It derives its rights from a natural human impulse; the right of the individual to the initiative, and to enjoy the liberties guaranteed in the Constitution; liberties bought with the blood of patriots, who pledged their lives and their sacred honor to establish these liberties.

Free enterprise has financed two world wars. It has created more wealth among some 140,000,000 people than exists in the rest of the world. It has enabled us to spend approximately $400,000,000,000 to train, equip, and mechanize an army to fight for the principles of free enterprise for ourselves, and that other people may be enriched.

Therefore, free enterprise is not a selfish system as claimed by some and it is not founded upon greed. It is based on human initiative and the right to create, share, and enjoy and spend the wealth amassed by our individual and collective efforts as a people.

As Democrats and Republicans, and especially as Americans, we will not surrender free enterprise to national socialism, communism, or to any dictatorship. Such agencies have been the downfall of governments since the beginning of history, because they fail to recognize a fundamental right—the right to life, liberty, and the pursuit of happiness and the right to the wealth the individual has honestly earned by creative genius and the sweat of the brow.

Free enterprise is American democracy in action.

Address by Hon. Herbert R. O'Conor, of Maryland, to Delaware Feed Dealers' Association

---

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, February 24 (legislative day of Monday, February 2), 1948

Mr. WILLIAMS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a very able address delivered by the junior Senator from Maryland [Mr. O'CONOR] at a meeting of the Delaware Feed Dealers' Association held at Laurel, Del., February 13, last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Your business is an important factor in solving one of the most vital problems of the world today—providing an adequate supply of meat and poultry.

Efficiency in producing these vital products is more essential than ever before. It has always been important from the standpoint of the producers. It is now an important factor in the welfare of people generally that the available supplies of materials which go into this production are used most efficiently. The rehabilitation, and even the lives of millions of people, in foreign lands, are dependent upon the grains we send them. Our efficient use of the grain supplies at our disposal will determine in large measure the quantities we can send to starving populations while taking care of our people at home. I know of no group that has a more important role in the efficient use of grains than you, who supply feeds for the great livestock and poultry industries.

Scientists are constantly discovering new facts regarding nutritive requirements of various meat animals, about the value of new ingredients for feeds, and better utilization of the materials that have been in use. The feed industry is to be congratulated upon the prompt reception and welcome it has given to scientific advances, both by its own scientists and those of Federal and State agencies. Through this prompt action in the adoption of scientific principles on the part of your industry, the producers of animals, dairy and poultry products, have been enabled to increase their efficiency and profits.

It was not so many years ago that we knew absolutely nothing of the important role that vitamins play in the nutrition of all kinds of animals, as well as humans. It was not even known that such substances existed, let alone that they are essential for proper growth and health, and for the efficient utilization of other food ingredients. I wonder how long it would have been before the discoveries with respect to vitamins would have become so generally utilized in feeding animals and poultry had it not been for the services of those who have both the know-how and facilities for compounding rations containing them, such as your group possess.

The feed business of the Delmarva Peninsula is a great industry. It carries a heavy responsibility. According to the latest figures—those for 1946—Delaware broiler producers had about 55,000,000 broilers to feed, with a gross-income value of more than $51,000,000. Even that large number of broilers and gross-income value is a decided drop from the 75,000,000 produced in 1945, with a gross-income value of more than $65,000,000. I pay tribute to Delaware as the largest broiler-producing State in the Union, producing approximately 20 percent of the broilers in 1946.

The point I would make is that efficiency in production is extremely important in this great broiler industry. Major responsibility, no doubt, rests upon the producers. But I submit that the feed industry can, and does, have an important place in helping the producer to meet that responsibility. For efficient and profitable production, the producer must, of course, have the stock that can utilize feed efficiently—he must breed, or obtain in some manner the fast-growing strains of birds that produce the most meat from a given quantity of feed. At the same time, it has been demonstrated over and over again that more than half of the cost of producing broilers is represented by the feed bill. Possibly in these days of high prices feed may account for as much as 60 percent of the total cost of production. I am told that the broiler producers in Delaware spend in the neighborhood of $32,000,000 annually for feed. Certainly there is a responsibility in seeing that they get for that large sum the feeds which will enable them to provide well-balanced efficient diets for their birds.

The path of those engaged in the feed industry has been far from an easy road during the past several years. Shortages of materials and labor, abnormally fluctuating demand and costs, and the many other factors incident to wartime conditions and postwar adjustment period have all been yours in large measure. Perhaps you were too absorbed during those strenuous years in meeting the immediate problems as they arose to give a great deal of thought to the future. I believe that out of your efforts and services there have resulted lasting benefits for your industry. Ingredient scarcities and the necessity for finding substitutes for some of the commonly accepted materials has focused attention on mixed feeds to an extent that had not existed before. As someone has said, "The day of hit-or-miss and hope-for-the-best" in the rations used for poultry and livestock is past. The increased knowledge regarding the essential role of various vitamins and other ingredients in feeds has made the compounding and mixing of feeds more complex. It has made the facilities and know-how that you possess more and more necessary. The necessarily complex formula recommendations resulting from feed research are a powerful argument for the compact, time-saving value represented by the reliable, premixed, branded feed.

Since the poultry and particularly the broiler industry is so important a factor in your business, it would appear that the immediate future offers an opportunity. With the shortage of meat that exists and is predicted for months ahead, it would appear that increased supplies of poultry would help meet the shortage. While there was a recession in production of broilers in 1947, it would seem that the national situation is favorable for the industry and will lead to its stability. It is my understanding that an educational campaign has been launched in Delaware and Maryland, both private and cooperative, looking to stabilization of the business in this territory. At this particular time your industry is not only in position to render valuable service to the broiler industry in your trade territory, but at the same time will make a substantial contribution in the national food emergency.

I have referred to the poultry and broiler industry at some length because of its importance in this area. I am not unmindful that the dairy and livestock industries of the State are the source of millions of dollars in farm income and purchasers of large quantities of feeds.

Cattle and calves: 60,000 head—$1,908,000 gross income 1946.

Hogs: 34,000 head—$1,570,000 gross income 1946.

Sheep and lambs: 2,000 head—$7,000 gross income 1946.

There is one other topic about which I cannot refrain from commenting to those engaged in the feed industry. I refer to the conservation of our natural resources, particularly our soils. The wartime period placed a tremendous drain on all of the resources of this country. In the effort for maximum food production farmers were not able to give the attention to saving their basic resource that they would have given in more normal times. It is more gratifying to note, however, that the program of soil conservation launched prior to the war made substantial progress during the unsettled

years. The loss of soil fertility was much less than might have been anticipated.

With the return to peace and with the continued need for full production, there is no more vital problem than saving our soils. It is by no means a problem that affects only those who live on and cultivate the land. It affects all of us, and, it seems to me, it is a problem in which your industry has as great, if not greater, stake than any other. Your sales are to those who must derive the funds from which to buy your goods from the soil. Your product contains the concentrated fertility taken from the soil by crops which must be returned in some form. It would appear no more than logical, and, I might add, self-interest, that those of the feed industry would not only maintain active interest in and support of all sound conservation programs and measures but would even be leaders in saving the resource upon which their industry, as well as the industry of their principal clients, depends.

Developments in the past several weeks, and more particularly of the last few days, in the commodity and stock markets unquestionably must have caused dealers in feeds to ask themselves, "Is this the beginning of the long-predicted 'bust'?"

All of you have felt, I am confident, that prices of feedstuffs had risen dangerously high. It was only natural, therefore, that reports of improved expectations of food production throughout the world would tend to bring a readjustment in this particular field. The desperate need for cereals throughout the world today, however, and the certainty that, even with the increased expectations for grain production due to improved weather conditions, the world will be short of food for some time to come, argue against any catastrophic decline in basic food prices at the present time.

Farmers as a whole have benefited appreciably from the high food prices occasioned by world needs throughout the war years and up to the present time. It is only natural to expect that with the European countries getting back to some semblance of normal production, and with good weather conditions prevailing there as compared to the very unfavorable weather of last year, the present high level of return to agriculture would be decreased.

In addition to the facts of weather and world need just mentioned there is, of course, the general picture of our national economy, which now is being reflected in lower stock-market prices and a growing belief that the upswing is about at its peak, with lower prices on many items almost a certainty for the months ahead.

With American industry rolling along at a far higher level of production than ever was possible even during the critical days of the war many of the shortages that plagued both individuals and industry have been relieved, to the point where future buying will be done entirely on the basis of immediate needs, with no backlog or inventory build-up to consider. I believe it is an entirely healthy situation that America so quickly has been able to accommodate itself to the backed-up needs of its citizens and of at least some phases of industry. There are so many wants to be supplied throughout the world that, once the fear of a "bust" is relieved by such readjustments as now are in process, our country can settle down with assurance, economists generally agree, to a period of prosperity far superior to any that even this most prosperous of all nations has ever experienced.

Our envious enemies abroad, particularly in Russia, are licking their chops in expectation of their predicted chaotic recession here in America. They are enraged because they haven't been able to match our forward strides. Their controlled economy does not afford the incentive or the opportunity which the American system does to individual and to industry to achieve new records of production.

If anyone needed to be resold on America and the American system, it would be necessary merely to look around the world today and note how vastly superior America's response in increased food and commodity production has been to that of Britain's and of Russia's. Even granting the disadvantages to those two countries occasioned by their severe war losses, it is immediately apparent that there are possibilities under the American system that are not offered under any other system of government in the world today.

Rubber Legislation

EXTENSION OF REMARKS

OF

HON. WALTER B. HUBER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 23, 1948

Mr. HUBER. Mr. Speaker, as a stanch believer in the free-enterprise system and long an advocate of measures to liquidate wartime controls, I must voice vigorous objections to pending legislation which threatens to shackle the Nation's great rubber manufacturing industry to long-term controls of a type common only to the authoritarian state. I refer to H. R. 5314, reported by the Armed Services Committee of the House on February 17. Not only in my own district, which embraces Akron, Ohio, the "rubber capital of the world," but throughout the country rubber manufacturers voice grave fears over the totalitarian implications of this measure.

For this reason, I commend to the Congress a careful study of the trenchant objections raised against H. R. 5314 in the Monthly Rubber Report by Mr. Warren S. Lockwood, of Washington, who is widely recognized both in this country and internationally, as one of the outstanding, independent authorities in the rubber field.

PERMANENT (?) RUBBER LEGISLATION

Whether the Shafer bill (H. R. 5314) becomes law in approximately its present form is a matter of prime concern to the rubber manufacturing industry, the rubber reclaiming industry, the synthetic rubber industry, the rubber trade in the primary markets of the world, and the natural rubber producing industry. It is also of direct interest to the millions of Americans who ride on rubber and the even larger number of millions who should know what Congress is doing when, in the name of national security, it takes an important step down the road of governmental regimentation.

With one vital amendment, we could swallow the bitter pill H. R. 5314 contains to our fundamental belief that the future of any industry is better assured in private than in Government hands.

We do not like the bill's inroads on the freedom of international trade. We do not like the implied acknowledgment that, in rubber, in peacetime, free enterprise cannot be trusted. We do not like the extraordinary powers granted to the President, under which, in the name of national security, almost any given production of synthetic rubber would be possible by an administrative action.

But, far and away the most dominant issue is the lack of a termination date.

The theory that once a bill becomes law, when conditions change the law can be changed, is fine. But try and change it.

What the Shafer bill proposes is, in effect, permanent legislation—a minimum of 200,000 tons of synthetic rubber in forced consumption whether or not we have an ample stock pile of natural. Sale of synthetic plants to private enterprise to produce rubber becomes next to impossible, whether or not such a sale might prove eminently desirable, during the many months Congress is not in session.

Here we see, in peacetime, a compounding by legislation theory written into law—forever, until changed—which gives the administration in power the right to tell a great American industry how to make its products, and the American public what kind of rubber products it can have.

Think of the implications of such permanent legislation. When will government in peacetime, and in the name of national security, tell us, for example, how automobiles should be made from some less critical material than steel? For certainly, of all our strategic and critical materials, rubber is one for which the future supply looks brightest, for which we have a huge synthetic plant which can be put in stand-by, for which private capital wants merely complete freedom to earn the fruits of its own research to develop a constantly better substitute material.

If we adopt this "government control necessary for national security in rubber" theory, where do we head for the materials that are really critical now?

Take petroleum, for instance. For every ton of synthetic rubber made we sacrific hundreds of gallons of 100-octane gasoline. All critical material supply problems are relative. Does anyone seriously think our rubber supply, present or potential, is more critical than our petroleum supply?

If a 2-year time limit is put on this bill, however, the rest of its provisions can be tolerated. It is not a matter of debate that we must use more than 200,000 tons of GR–S in both 1948 and 1949 in order to secure our natural rubber stock-pile goals. Probably sale of plants during this period, in any event, would be slow. National-security emergencies—on a temporary basis—provide a legitimate reason for government allocation of scarce materials and control of physical facilities. The smooth acquisition of a needed stock pile is a legitimate national security emergency.

It is only when you make a national security emergency permanent that the security from government control becomes the real national security.

Salute to Censors

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, February 24 (legislative day of Monday, February 2), 1948

Mr. MORSE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Salute to Censors," from the Christian Science Monitor.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SALUTE TO CENSORS!

(By Harlan Trott)

One way to spark public curiosity about a provocative publication is to suppress it.

It is doubtful whether the speech Marshall Adams was asked to give before the Detroit Adcraft Club would be attracting half as much attention around Washington today had Mr. Adams' prospective sponsors not canceled the invitation after finding out what was in the speech.

Mr. Adams is advertising manager of the Mullins Manufacturing Co., of Warren, Ohio, makers of kitchen equipment. Apparently, he does not entirely approve of the National Association of Manufacturers' sponsorship of a plan calling for an outlay of large sums of money by the Nation's big corporations on advertising in newspapers, magazines, and house organs to sell free enterprise.

What Mr. Adams was primed to tell the Detroit admen was that the undertaking looked like an effort to conceal faults inherent in free enterprise and to propagandize against changes to improve that system.

The Ohio advertising executive believes the NAM is still influenced by out-of-date diehards who insist that the American way of life is being destroyed.

"The American way of life isn't static and never will be," he insists. "It has undergone constant change for over a hundred years and will continue to undergo changes for the next hundred."

According to Mr. Adams' thesis, Joe Doakes doesn't have to be sold on the American way of life.

"He likes it and wants to keep on living it—and his greatest hope is that free enterprise will make it possible for him to keep on living it."

Furthermore, what Doakes wants among other things is work, social security, and decent living conditions, and so long as free enterprise provides them, he'll be for the system.

Mr. Adams thought it was worth telling the Detroit group that the NAM-sponsored advertising campaign was unsound because it aimed to persuade Doakes to "forget the still existing faults of the system by telling him how it works."

"If free enterprise is in any danger," Mr. Adams argues, "it's because of the defects in it, particularly the recurrence of depressions." He believes advertisers would do better to work out a program to prevent another depression and "buckle down to work to overcome the defects of the system."

It does not take a very long memory to recall the campaign of this kind undertaken shortly before the war which had for its slogan, "What is good for business is good for you."

Mr. Adams was itching to say quite frankly that that is a false slogan, and that it typifies a point of view that is the source of the present difficulties of the free-enterprise system.

He holds that the slogan should go the other way round: "What is good for you is good for business!"

"The same words," he declares, "but what a whale of a difference a few shifts make. And until free enterprise, as a whole, recognizes what many leaders know—that its long-pull welfare is dependent on the welfare of its customers as well as stockholders—it will be in danger."

If business really wants to sell somebody something, he suggests they try their hand at selling the shortsighted elements of free enterprise on the idea that what is good for Joe Doakes is good for free enterprise.

There is no way of telling how far afield Mr. Adams' views might have traveled in print had not the Detroit "Admen" decided not to give a hearing to this businessman's unorthodox ideas.

I think they unwittingly did him and the American free-enterprise system a good service. As any witness to a Boston bookburning knows, the worst censorship is often the best salesmanship.

In Lithuania

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a very pertinent article by Dr. W. Elmer Ekblaw on Lithuania, which appeared in the Worcester (Mass.) Telegram on February 16, 1948. Dr. Ekblaw is a professor at Clark University, Worcester, Mass., and is a recognized authority on international affairs.

The article follows:

(By Dr. W. Elmer Ekblaw, Clark University)

The world does not know what is happening in Lithuania now. Once the world knows, current apologists for Russia will find their tasks more difficult than ever. Their casuistries will then fall on deaf ears, for folk will be convinced finally of Russian perfidy, tyranny, and brutality. Their false objectivity will be revealed for what it truly is—subtle promotion of Russia's willful schemes for territorial and political aggrandizement and, ultimately, domination of the world's resources and man's activities.

It is 30 years since the peace of Versailles, when Lithuania became a free and sovereign state, restored to her rightful place in the family of nations. It is 30 years since Soviet Russia was forced to relinquish her throttling hold upon the Lithuanians, and other Baltic peoples. It is a little more than 30 years since the revolution laid the foundation for a new regime of implacable tyranny, treachery, and brutality, and the ruthless course for political aggrandizement and territorial imperialism which Russia has since followed. After three decades of brutalization in Russia, the idealism and humanity that characterizes Lenin's Communist teachings have been completely lost in materialism and inhumanity that mark every step of Stalin's rise to power and imperialistic policies.

The world does not know what has happened to Lithuania behind the somber, impenetrable Iron Curtain, dark and ominous as the walls of Hell itself. There is every reason to believe that behind the iron curtain tens and hundreds of thousands of good God-fearing Lithuanians have been liquidated, martyred for their patriotism, their religious faith, their steadfast resistance to tyranny. Tens and hundreds of thousands of good Lithuanians have been wrested from their families, their homes, their native haunts, for service as slaves in Siberia. It is slave labor that Russia is using to equip herself for further expansion, for further despotism, for further persecution, even for war and further conquest, and a goodly part of the slave force comes from Lithuania.

And still we temporize. We close our eyes to the injustice, we close our ears to the calls for help, we close our hearts to the suffering we know prevails behind the iron curtain. We cannot much longer ignore the tragedy that the iron curtain conceals. We cannot much longer endure the shame we feel over our tolerance of such brutality. We cannot much longer hold up our heads in self-respect and honor if we continue to associate economically or politically with a nation so devoid of humanity and sense of justion as the iron curtain shields. We should not accept the stamp of hypocrisy, the seal of selfishness, that continued toleration imposes upon us.

It is 30 years since Lithuania regained her freedom and independence. Her people were happy and prosperous in their own sovereignty, until they were again overrun by Russia. They are now being destroyed as a nation and exterminated or enslaved as a people; all that we are doing, all that we have done, is to acquiesce. Can we not do more?

Certainly we can renounce our associations with a power that betrays every right of minority peoples, that tramples upon every group that falls under its control, that ridicules our ideals and our principles—of government, of religion, of honor and justice. Certainly we can refrain from any economic or political exchange of benefits or advantages between them and us. As a man is known by the company he keeps, so is a state known by its associates; why should we accept the disgrace of association of any kind with so perfidious a power as Russia?

We must not recognize, or accede to, Russia's claims to sovereignty over the Baltic states. We must not yield to Russia's threats, her insidious propaganda, her insatiable demand for territory and power, and permit Lithuania to become only a memory. We must not, shall not, forget Lithuania and her right to sovereignty and freedom.

Oil Troubles the International Waters

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 24 (legislative day of Monday, February 2), 1948

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Oil Troubles the International Waters," by Kirtley F. Mather, which appeared in the New York Times magazine for last Sunday.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OIL TROUBLES THE INTERNATIONAL WATERS—ITS SCARCITY HAS PRODUCED CONFLICT ABROAD AND CONCERN AT HOME, BUT RESOURCES ARE STILL VAST

(By Kirtley F. Mather)

Petroleum is in many respects strategic mineral No. 1 in world affairs. Almost everywhere we look, as we try to utilize the earth's resources for the benefit of mankind, petroleum holds a central if not dominating position. Indispensable to our civilization, it is a compelling factor in relations between the major powers.

Competition for control of the marvelously rich oil lands of the Middle East is an important element in the dangerous tension between the United States and Soviet Russia. The far-flung holdings of British oil companies are fundamental to the foreign policy and economic planning of Great Britain.

Mesopotamian and Arabian oil has significant bearing upon American interest in the future of Palestine. Not even the good-neighbor policy in the Western Hemisphere can escape the implications of the presence of vast oil reserves in several of the Latin-American republics.

One reason for all this is that in many fields there is at present no adequate substitute for oil. Regardless of any developments that now seem likely with respect to atomic energy, oil will continue for many years to be a primary source of power for industrial nations. It will also be a basic raw material for numerous chemical industries.

Another reason for rivalry over oil is that it is by no means an inexhaustible resource. Our planet must be reckoned as a storehouse of such minerals as petroleum, not as a factory which generates them year by year, or even millennium by millennium. Each year we take away a few packages of the goods that remain on the shelves of the storehouse; if we keep doing that long enough, some day the cupboard will be bare. Indeed, petroleum is now being used at such a rate in relation to its total amount in the earth's crust that its complete exhaustion, from a geological standpoint, is alarmingly imminent.

Between 1859, when the first oil well was drilled in the United States, and January 1, 1948, the world production of petroleum has totaled nearly 55,000,000,000 barrels. Of this, the United States production has been approximately 32,000,000,000 barrels. The annual output, both for the world as a whole and for the United States, has increased each year since 1938 (except 1942, when America entered the war) and there is every indication that the increases will continue for the next few years. Probably the world oil production will average more than 3,000,000,000 barrels a year during the decade 1947–56.

This is significant when we note that estimates by competent geologists give a figure of slightly less than 72,000,000,000 barrels for the world's "proved" oil reserves as of January 1, 1948. It would be erroneous, however, to make the easy arithmetical calculation that the world's oil will be exhausted in 24 years. We know from past experience that the proved reserves are only a fraction of the actual reserves. But whether the fraction is one-half or one-tenth is a matter of great moment, and one that has much to do with the international competition for oil fields.

The reason for uncertainty on this point is that although geological and geophysical surveys permit the discovery of places beneath which some of the requisites of an oil field are evident, no one can guarantee in advance of drilling that oil will be encountered at depth. Not until the drill has yielded information concerning the texture and thickness of potential reservoir rocks within a favorable structure and has demonstrated the actual presence of petroleum can one begin to calculate the quantity of proved reserves for any oil field.

This broad outline of the world picture for petroleum suggests three vital questions relating to the extent and distribution of oil reserves. They are:

(1) What is the outlook on future petroleum supplies in the United States?

(2) Can the world's remaining oil be distributed equitably and peacefully, or will big-nation rivalry for it touch off a disastrous conflict?

(3) Can an adequate substitute for petroleum be found before oil resources are exhausted?

Our most immediate problems are involved in the first two questions. Both of these concern the relation between proved reserves and the total supply of petroleum in the ground. The meaning of the relationship is best illustrated by the recent history of American oil fields, where production is now at an all-time high.

Since 1936 there has been an intensive search for new oil fields in this country. The results have made possible an increase in annual production from about 1,000,000,000 barrels in 1936 to 1,890,000,000 barrels in 1947. In spite of this vast removal of oil, the proved reserves have been greater at each year's end than at the beginning of each year—with the exception of 1943, when the wartime need for steel cut into the use of steel for well casings.

On the face of it this would seem reason for optimism. But the trouble is that the curve representing additions to proven reserves rose steeply only from 1936 through 1939. Since then it has shown a definite tendency to level off. There is little doubt that the peak will be reached about 1950 and that thereafter the United States must increasingly depend upon existing proved reserves.

This somewhat gloomy forecast is borne out by detailed studies of operations in the chief oil-producing States of the Union. There the number of new major fields discovered each year has decreased steadily since 1940. The inference is plain; nearly all the large oil pools in those areas have been located. We are spending the capital provided by nature, and spending it rapidly.

The drain on American reserves is speeding the search for additional oil sources in the submerged parts of the continent, known to geologists as the Continental Shelves. A chief center of search is the submerged part of the coastal plain of Texas and Louisiana, which continues far out beneath the waters of the Gulf of Mexico. Geologically there is no reason to doubt the presence of oil-bearing salt domes there.

Despite the special engineering problems involved in this type of drilling, two wells have been completed and a number of others are being drilled at distances of from 10 to 40 miles from shore. So far, however, there has been no production in commercial quantities.

Extension of the search for oil to such submarine areas may be expected to add a few billion barrels to American reserves, but at best it will postpone by only a few years the time when American production will lag far behind American consumption of petroleum products. It is therefore appropriate to examine the prospects for meeting American needs by importing oil from other countries.

American interests control 75 percent of the nearly 9,000,000,000 barrels of proved reserves in South America, more than 40 percent of the 26,000,000,000 barrels of proved reserves in the Middle East, and nearly 30 percent of the 1.4 billion barrels of proved reserves in the Far East. Thus, if political factors are favorable, the United States may draw upon nearly as many barrels of foreign oil reserves as are presently available within its own boundaries.

But the United States does not exist in a geographical vacuum. It is but one among many nations having petroleum needs and rights.

The chief known resources of oil based upon estimates of proved reserves at the beginning of 1947, show that although continental United States possesses only a little more than 30 percent of the proved world reserves, its production has been running well over 60 percent of the yearly output.

Moreover, a graph depicting conditions 10 years hence would in all probability show a decrease in the proved reserves of the United States and an increase for most other countries. One may venture the guess that whereas the actual reserves beneath the United States are not much more than twice the amount of present proved reserves, the actual reserves in other producing countries (except Venezuela) average at least three times the proved reserves.

Most amazing is the position of Kuwait, the tiny country at the head of the Persian Gulf, whose proved oil reserves are exceeded only by those of the United States and the Soviet Union. It is also interesting to note that Iran, Iraq, and Arabia stand fifth, sixth, and seventh in the world in respect to petroleum potentialities. These all lie in the Middle East, the chief storm center of international rivalry for oil.

If present trends continue, the obvious deduction is that the United States in 10 to 20 years will be a "have not" Nation so far as petroleum is concerned. The chief "have" nations will be Soviet Russia, Kuwait, Iran, Iraq, Arabia, and the East Indies. It is no accident that practically all the potential oil fields of the five last-named countries are under the control of American, British, and Dutch corporations.

This picture of oil reserves has vital bearing on the world situation. The United States and Soviet Russia are the only two great industrial nations which at the moment have a chance to meet their petroleum needs from their own domestic production. But for us this happy situation will change in a few years; then we will be increasingly anxious to import oil from abroad.

Furthermore, most of the major industrial nations—Britain, France, Germany, the Scandinavian countries, Belgium, Holland, and Italy—cannot possibly supply their normal demands from domestic sources. On the other hand, Venezuela, Colombia, Peru, the countries of the Middle East and the islands of the southeastern Pacific are producing or could produce petroleum far in excess of their own needs. Thus, a large fraction of the world's oil happens to be in countries which at present cannot use it, while many of the countries that need oil today do not possess it.

The temptations arising from such a situation are virtually irresistible. Petroleum is "a natural" for "power politics." The political factors fall under two heads.

Less powerful nations possessing more oil than they can use, naturally desire to profit as much as possible from the exploitation of their resources by foreign capital. At the moment, the arrangements between the South American countries and the American and European oil companies have been stabilized on a basis that seems satisfactory to all parties concerned.

Regulations concerning royalties and taxes in Venezuela, for example, are fixed in such a way as to divide the profits from all operations on approximately a 50-50 basis between the Venezuelan Government and the operating companies. Similarly, the governments of certain countries in the Middle East derive a considerable part of their income from oil royalties.

All such arrangements are, however, subject to change in the future, either by revision of tax laws or through revolutionary changes in the government, such as occurred in Mexico two decades ago. Consequently, it is not surprising that the governments of the more powerful oil-seeking nations do their best to maintain friendly administrations in the oil countries.

The second political factor is the difficulty of avoiding cutthroat competition among the stronger nations which require foreign oil. As a result of the reshuffling of the political and economic cards during World War II, there are now three outstanding players in the international oil game, Britain, the Soviet Union, and the United States. Their interests converge upon the Middle East, where racial and religious, as well as geographical and historic, factors provide abundant fuel for a world-wide conflagration.

Even in the event that a conflict can be avoided, are world supplies adequate to meet future world demands? The prospects are that the present rate of consumption (about 2,800,000,000 barrels a year) will soon be increased by larger consumption in countries which hitherto have not been heavy users of petroleum. For example, whereas the annual peacetime consumption in the United States is 450 gallons per capita, in Britain it is 80 gallons, in the Soviet Union 50 gallons, and for the world as a whole, outside the United States, only 15 gallons per capita.

Even so, it appears that the world reserves are adequate to meet world needs for half or three-quarters of a century. But to use the reserves in the most efficient way there must be almost complete freedom for distribution of the oil and its products from the regions of supply to all parts of the world, regardless of political boundaries. Probably this could best be attained by some sort of voluntary allotment or quota system.

The difficulties of allocation bring us to the third question posed by the oil situation—the likelihood of adequate substitutes before the oil pools are exhausted.

There are two reasons why alternative sources of gasoline, diesel oil, fuel oil and lubricants are now being sought in this country. One is the fear of political or economic barriers against the free flow of oil from South America and the Middle East when American production fails to meet American needs. The other is the fact that it is not too early to begin preparing for the inevitable day, which may come even before the end of the present century, when world production of oil will be inadequate for world requirements.

Already an appreciable fraction of the American requirements for petroleum products is being met by the condensation of liquid hydrocarbons from natural gas. A pilot plant for the synthesis of petroleum from oil shale is being completed and put into operation in Utah by the United States Bureau of Mines. Methods of synthesizing oil products from coal, developed by German scientists before and during the war, are being improved in our private and governmental laboratories.

There is no doubt that science and technology will have provided another source of supply long before the oil-pool resources of the world are exhausted. And these alternative sources are almost unbelievably abundant. In the United States alone there is enough oil shale and coal to provide the equivalent of 2,000,000,000 barrels of crude oil a year for at least a thousand years.

But such application of technical knowledge is not a simple matter. Processes now available are too expensive to permit competition with natural petroleum products except under extraordinary conditions.

Nevertheless, there is every reason to expect the gradual replacement of natural petroleum products by synthetic products in the more distant future. As supplies of crude oil are exhausted, this alternative source will take their place. And long before the oil shale and coal are used up, still other sources of energy, such as that released by nuclear fission, will be available to do the work.

Far more difficult than the technical problems involved in meeting the physical needs of humanity are the psychological and spiritual problems that retard the process of learning how to live properly in a world community. Perhaps knowledge that our small world is a world of potential abundance but of inescapable interdependence, as illustrated by such an inquiry as this concerning one typical, nonrenewable resource, may help to accelerate that learning process.

President Undermines Labor Law

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. DONDERO. Mr. Speaker, I would like to call to the attention of the House a flagrant misuse of executive power by the administration. The President of the United States and members of his official family are using their power over public buildings in order to circumvent and undermine the labor relations law.

To make the situation even more shocking, the administration is using its power not on behalf of a bona fide labor organization but to rescue from defeat one of the most notorious Communist-infested and Communist-dominated organizations, the so-called United Public Workers–CIO.

On January 5, 1948, a local branch of the UPW–CIO called an unwarranted strike against 42 Government cafeterias which are operated by Government Services, Inc., a nonprofit-semiofficial agency. The sole issue in dispute was the refusal of the officers of the UPW–CIO to sign statements under the Labor Relations Act that they are not Communists.

These officers seek to represent in collective-bargaining negotiations employees of the Government and employees working in Government buildings. Yet, Mr. Speaker, apparently they are not in a position to state under oath that they are not Communists.

Communist control of the UPW–CIO has been clearly and irrefutably established by the House Committee on Un-American Activities, by a subcommittee of the House Committee on Education and Labor, and by many official and unofficial organizations.

By refusing to sign the non-Communist affidavits required under the law, the UPW–CIO was automatically cut off from seeking the services of any Government agency in its strike. The National Labor Relations Board ruled specifically that the UPW–CIO was not qualified to represent any group of employees and the Federal Conciliation Service ruled that it could not lend its services unless the officers complied with the act.

These rulings were in specific compliance with the letter and spirit of the law. They were clearly contemplated by the Congress in passage of the Labor Relations Act of 1947. When that law was passed over Presidential veto, the Congress made it clear that one of the principal purposes of the act was to drive Communists from the labor movement. We had a right to expect the President to keep his promise to comply with and enforce the law.

What actually has happened is in direct violation of the Labor Relations Act. The President, the Secretary of Labor, and other officials of the Government have openly interceded on behalf of the United Public Workers–CIO, a Communist-dominated organization. They have brought pressure to bear on the trustees of GSI, all of whom are active or retired Government officials, to come to terms with the UPW–CIO, although that organization has absolutely no recourse at law.

GSI has been threatened with complete ruin by cancellation of its right to maintain cafeterias in Government buildings unless it accepted the edicts of the UPW–CIO.

To effect their purpose, Government officials have even appointed an outside mediator to assume the functions which the Federal Mediation Service was forced to decline in compliance with the law.

In his veto message on the Taft-Hartley law, the President stated that, and I quote:

> Cooperation cannot be achieved by force of law. We cannot create mutual respect and confidence by legislative fiat.

Does the President, then, think that cooperation can be achieved through the type of coercion which is being used against Government Services, Inc.? Does the President believe that cooperation can best be achieved by under-the-table threats of ruination?

Mr. Speaker, I am convinced that the Members of Congress will agree with me that the law provides machinery for settlement of disputes on an equitable cooperation basis, while illegal coercion does not.

Devaluation of the French Franc

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

JANUARY 29, 1948.

Mr. CHARLES E. BOHDEN,
Counselor, Department of State,
Washington, D. C.

DEAR CHIP: According to the reports in the papers, the recent devaluation of the franc by the French Government was opposed not only by the British Government, but also by the directors of the International Monetary Fund, to which we make a predominant contribution.

Sections 3, 4, and 5 of section IV of the Bretton Woods agreements appear to raise impediments to the devaluation of currencies by all member governments of the International Monetary Fund.

On the other hand, the Government witnesses who have testified before the Committee on Foreign Affairs of the House, as well as many Members of the House and many other distinguished citizens, have for a long time felt that the success of the European recovery program will hinge to a large extent on the measures taken by the governments of the participating nations to bridge the gap between the legal and the real value of their currencies. It has seemed to many people that such measures will allow these countries to increase their exports, thus diminish their dollar deficits,

and thereby reduce the burden on the American taxpayer. Another consequence of such devaluation might also be a lowering of the cost of living in this country because of increased United States imports from the countries devaluating their currencies.

I am well aware of the fact that the entire problem of stabilization of currency is highly complex, especially with regard to the trade and fiscal relations among the participating nations. I realize that such devaluation might better proceed not on an improvised but on a planned basis in order that such devaluation may be effected with a minimum amount of economic dislocation.

In view of the foregoing, I shall appreciate it very much if you can let me have the State Department's official view with regard to the following questions:

1. Does the State Department favor the devaluation of the currencies of the 16 participating nations so as to achieve eventually a free market in these currencies in which the legal and real value of these currencies will be identical?

2. Does the State Department believe that the Bretton Woods Agreements should be revised, with particular reference to the problem of devaluation?

3. Does the State Department believe that in order to achieve such devaluation an international monetary conference, to be attended by the United States and 16 participating nations, should be called for the purpose of coordinating such devaluation?

4. Does the State Department believe that pending such a conference it would be desirable for the State Department to reach an agreement with Great Britain and the directors of the International Monetary Fund with respect to the devaluation of the currencies of the 16 participating nations?

5. Does the State Department believe that the European recovery program will fail of its objectives unless there is a maximum amount of reciprocal self-help among the 16 participating nations and that this is impossible of achievement until there has been at least a measure of devaluation of the currencies of these nations?

I thank you in advance for your attention to this important matter, and I look forward to receiving your answer at your early convenience.

With kind personal regards,

Very sincerely yours,

JOHN DAVIS LODGE.

DEPARTMENT OF STATE,
Washington, February 10, 1948.

Hon. JOHN DAVIS LODGE,
House of Representatives.

DEAR JOHN: The specific questions contained in your letter of January 29, 1948, pertain primarily to matters which are the concern of the National Advisory Council. Accordingly, I am transmitting your letter to Secretary of the Treasury Snyder, Chairman of the National Advisory Council.

I should, however, like to comment informally on a number of the points raised in your letter. Your questions 1 and 5 refer to the role of devaluation in promoting self-help and reciprocal help among the ERP countries. An essential element of the ERP is, of course, to encourage maximum self-help by each of the participating countries and also reciprocal self-help among all the participants. If this is not achieved, an important objective of the ERP will not be met. The elimination of gaps between the real and legal value of currencies is an important step in this direction. The establishment of realistic exchange rates will assist in promoting exports, will reduce the necessity for artificial import controls, and will foster European economic recovery.

The problem, however, is not one of devaluation alone. Low production, unbalanced budgets, and excess purchasing power must be remedied if adjustment of exchange rates is to have the desired effects. A whole series of measures is, therefore, necessary if financial stabilization is to be achieved. These measures taken together are at the heart of the ERP. In the absence of such measures, devaluation can generally be expected to be merely a temporary palliative, leading to further deterioration and the need for further devaluations. The necessity for this type of approach to the problem is fully recognized in the Paris report of the CEEC countries and in the proposals of the executive branch respecting proposed United States assistance to European recovery.

Your fourth question implies that there was opposition by the International Monetary Fund and the British Government to devaluation of the franc. I believe it is important to bear in mind that the statement issued by the Fund on January 25, 1948, indicates that the opposition of the Fund to the French devaluation proposal did not apply to devaluation per se, but to certain aspects of the French proposal, particularly the provision that proceeds from exports to certain countries should be sold in a market with fluctuating rates while proceeds from exports to other countries are sold at fixed rates. Both the United States and the British Governments are in agreement with the position taken by the Fund. Responsible officials of this Government have indicated that they welcome steps by the ERP countries toward financial stabilization and, wherever appropriate, adjustment in exchange rate levels.

In view of the important position occupied by the Fund in this field, it is believed desirable to achieve coordination through the Fund. For this reason the executive branch has proposed that whenever exchange rates of ERP countries are so out of line so as to impose a burden on their balances of payments the countries concerned should be required to consult the Fund with respect to revision. Nonmember countries would consult directly with the United States Government. It is believed that coordination can be achieved without change in the Articles of Agreement of the International Monetary Fund.

Sincerely yours,

CHARLES E. BOHLEN, *Counselor.*

THE SECRETARY OF THE TREASURY,
Washington, February 10, 1948.

Hon. JOHN DAVIS LODGE,
House Office Building,
Washington, D. C.

DEAR MR. LODGE: Since your letter of January 29, 1948, addressed to Mr. Charles E. Bohlen regarding the recent devaluation of the French franc in relation to the International Monetary Fund raises questions within the competence of the National Advisory Council, he has referred your letter to the Council for reply. The State Department as one of the agencies represented in the Council associates itself with the views stated here. The Council wishes first to comment on the problem of devaluation as raised in your letter. The specific questions addressed to the Department of State are discussed below.

Sections 3, 4, and 5 of article IV of the Fund Agreement do not prevent the devaluation of member currencies or require adherence to a given par value when it has become inappropriate to the international position of the member concerned. On the contrary the agreement recognizes that adjustment of exchange rates may be necessary and desirable and provides a procedure for orderly adjustment in consultation with the Fund.

The United States Executive Director on the International Monetary Fund after consultation with the National Advisory Council fully concurred in the position of the Fund with respect to the necessity of a change in the par value of the franc. This was not the point at issue. The objections of the Fund were not to a devaluation but to the discriminatory multiple-currency practice which the French Government proposed to introduce in its exchange system. The Fund Agreement, among other things, is intended to protect the members against competitive exchange depreciation as a means of expanding the trade of one country at the expense of another country. Both the National Advisory Council and the International Monetary Fund held the view that the application by a country of a fluctuating rate on exports to one area while its rate on exports to other areas remains stable and while other countries maintain the parities agreed with the Fund would result in discriminatory depreciation. A system of this sort operating in an important trading country would encourage trade distortions and might cast unwarranted doubt on the real strength of other currencies through the apparent discount applied to them in the French system. Moreover, the widespread resort to such systems might lead to exchange instability and disorder from which all members would suffer. It was for these reasons that the proposal of the French Government was unacceptable to the Fund.

The National Advisory Council's views with regard to the specific questions raised in your letter addressed to the Department of State are as follows:

"1. Does the State Department favor the devaluation of the currencies of the 16 participating nations so as to achieve eventually a free market in these currencies in which the legal and real value of these currencies will be identical?"

The National Advisory Council believes that it will be necessary for some of the 16 countries to adjust their exchange rates. The fund agreement has as one of its objectives the maintenance of exchange stability with the minimum of control over exchange transactions for current account purposes. The market rate of exchange would then fluctuate within a narrow margin around the legal par value. Before this objective can be realized there will undoubtedly have to be devaluations of some of the currencies of the countries involved in the European recovery program. It is the opinion of the National Advisory Council that such adjustments in rates should be part of a developing program of internal and external stabilization, in conjunction with United States assistance. Mere devaluation without internal stability and without substantial equilibrium in the balances of payments of the countries concerned, would not be sufficient to realize the objectives of the European recovery program.

"2. Does the State Department believe that the Bretton Woods agreements should be revised, with particular reference to the problem of devaluation?

"3. Does the State Department believe that in order to achieve such devaluation an international monetary conference, to be attended by the United States and the 16 participating nations, should be called for the purpose of coordinating such devaluation?"

The National Advisory Council does not believe that the Bretton Woods agreements need modification in order to meet the problem of over-valued currencies, nor does it believe that this problem could be solved by calling an international conference for the specific purpose of dealing with this question. The fund mechanism, in its opinion, is entirely adequate for this purpose. The directors of the International Monetary Fund are continually in session and work in close consultation with their governments. The National Advisory Council is

satisfied that the fund is fully aware of the problem involved in over-valued exchanges and that the fund is more than ready to approve appropriate adjustments of exchange rates when they can be made with benefit to the countries concerned and to the world at large.

The conditions affecting the stability of exchange and the appropriateness of the rate structure of the countries participating in the European recovery program vary greatly. Accordingly, the proper time for devaluation will vary from country to country. Premature devaluation may have as unfortunate consequences for the economy of a country as the prolonged maintenance of an overvalued rate. It is the opinion of the Council that the method of procedure provided in the fund agreement is far more satisfactory than an attempt at dealing with the problem at an ad hoc conference would prove to be.

"4. Does the State Department believe that pending such a conference it would be desirable for the State Department to reach an agreement with Great Britain and the directors of the International Monetary Fund with respect to the devaluation of the currencies of the 16 participating countries?

For the reasons indicated above, the National Advisory Council believes that it is not desirable for the United States to enter into a particular agreement with Great Britain or the directors of the fund with respect to the prospective devaluation of the currencies of the participating nations.

"5. Does the State Department believe that the European recovery program will fail of its objectives unless there is a maximum amount of reciprocal self-help among the 16 participating nations and that this is impossible of achievement until there has been at least a measure of devaluation of the currencies of these nations?"

The executive branch has made its position clear that the extension of aid under the European-recovery program should be conditional on the maximum possible amount of reciprocal self-help among the participating countries. It recognizes that the maintenance of exchange rates which overvalue currencies can be a serious hindrance to the expansion of trade and that the expansion of European trade is essential for full European recovery. Consequently, the Council believes, as has been stated in testimony before the House Committee on Foreign Affairs, that exchange rates should be adjusted where this is an essential element in a program of stabilization. It was the opinion of the Council, however, that to make across-the-board devaluations a prerequisite to aid under the European-recovery program might interfere with the realization of its objectives.

Sincerely yours,

JOHN W. SNYDER,
Chairman, National Advisory Council on International Monetary and Financial Problems.

FEBRUARY 24, 1948.

Hon. JOHN W. SNYDER,
Chairman, National Advisory Council on International Monetary and Financial Problems, Treasury Department, Washington, D. C.

DEAR MR. SNYDER: Thank you for your letter of February 10 with respect to the question of devaluation.

I am very glad to have this statement of opinion from you as chairman of the National Advisory Council.

With respect to the question of devaluation, I might say that although I appreciate that other internal reforms are necessary in order to obtain full benefit from a devaluation, I believe that devaluation will act as a spur to production since it will have a tendency to replace the unstable conditions which are involved in a barter economy with satisfactory currency incentives. In other words, I think devaluation in itself will do more than simply help to create realistic exchange rates.

While I appreciate that the entire problem of devaluation is enormously complex, may I reiterate that I think it is vital that a concerted drive in that direction be made in order to precipitate an economic climate propitious for the operation of the European recovery program.

Very sincerely yours,

JOHN DAVIS LODGE.

Statement of Gov. Earl Warren, of California

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. KING. Mr. Speaker, in concert with my colleagues from California and other States, I have introduced a bill identical with Senate bill 1988, which is being considered by the Senate and House Judiciary Committees at this time. This demonstration manifests the vital concern of California and her sister States in a principle that transcends political or economic considerations. Yesterday the Governor of the State of California appeared before the joint committee to testify on behalf of the State of California in support of this legislation. His statement is noteworthy in many respects, and I set it forth below in full:

STATEMENT BY GOV. EARL WARREN, OF CALIFORNIA

It is generous of the governors and the attorneys general of the many States, waiting to be heard on Senate bill 1988, and others to arrange for my appearance before your distinguished committee as one of their first witnesses. It is a great accommodation to me to be able to give my testimony and return immediately to California for the annual session of our legislature, which convenes next Monday. If it were not for this necessity, I would happily give way to my colleagues in order that they might demonstrate to you early in this hearing the Nation-wide importance of this legislation.

Our State has been in a prominent position in this tidelands controversy for many years not because the title or use of our tidelands was distinguishable from the other States of the Union but because it was selected by the Government 11 years ago as the guinea pig for a new and startling doctrine concerning the relationship between the States and the Federal Government; a doctrine that ran counter to a legal principle that had been expounded by the Supreme Court more than a hundred years ago and reaffirmed by it more than fifty times in a myriad of circumstances; a principle that had been adopted without question by the executive branch of the Government in all of its administrative acts; a principle that to this day has never been abandoned by the Congress.

By force of circumstances I have been connected with the controversy almost from the beginning. Nine years ago almost to the day I appeared before your committee to testify concerning the Nye Senate resolution and the Hobbs House resolution, which were designed to accomplish the exact opposite of this resolution. At that time it was believed even by the originators of the Federal tidelands ownership theory that they could prevail only by the exercise of some sort of governmental legerdemain to make the 50 decisions of the Supreme Court of the United States on the subject disappear in thin air. They selected California as the object of their dexterity. Their resolutions declared the Federal Government to be the owner of the California tidelands and sought to quiet its title against the State. If passed, they proposed to have the Executive Department act promptly on it and thus place it beyond the power of the courts to interfere.

They would not admit that the other States would be judged by the same theory. It was insinuated that there were some special conditions which placed California tidelands in a different status than those of other States. But the other coastal States refused to be lulled into a false sense of security. Then as now, they appeared in great numbers at the hearings.

At that time, I was the attorney general of my State, and I remained here for weeks working with my colleagues in the presentation of our cause. We were sustained by both committees.

Failing to convince the Congress, the matter simmered along until 1945, when the then Attorney General filed suit in the Supreme Court to invalidate California's title to her tidelands. Almost without exception, the States again rallied to the cause, but with the result which is well known to this committee.

The Court denied that title is in California, refused to find that it vests in the Federal Government, but stated without the citation of authority that the Federal Government has paramount rights irrespective of title to the tidelands and the resources underneath them.

It is now admitted by the Department of Justice that the California case applied to every State of the Union. We now all find ourselves in the position we anticipated, with the title to our lands beneath our navigable waters clouded for all purposes to the lasting injury of practically every State in the Union unless we obtain relief from this Congress.

So far as my State is concerned, the oil issue is a minor one compared with its other fundamental rights which are infringed. We have 1,200 miles of coast line. So far as we can ascertain, oil deposits are under only 15 miles of that coast line. Half of the estimated oil in those pools has already been extracted. We receive approximately $3,000,000 a year in royalties from them. That amount can be expected to diminish progressively until depletion of the deposits. Under the proposal of the Secretary of the Interior, we would continue to directly receive at least 37½ percent of the royalties, and indirectly an additional amount from that portion of the revenues which he would have revert to the reclamation fund. So it can be seen that the amount we would lose is not great by comparison with the other revenues of the State.

Our great concern is not that we may lose some oil revenues, but that our dominion over our tidelands for every purpose is clouded. Our coast line is one of our greatest natural resources. Our people have been energetic and forward-looking in the use of them. Hundreds of millions of dollars have been expended on our harbors, our fisheries, our pleasure resorts, and many other uses that are essential to the orderly development of our State. Our cities and counties all have additional plans for the future use of our tidelands.

If they do not belong to us, of course, those plans are retarded. We are subordinated to the Federal Government in matters that we, and all other States, have for over a hundred years been told by the Supreme Court are a matter of State sovereignty.

We are not here asking for anything new. We are not seeking to extend our rights at the expense of our Government. We are asking only to retain those rights which have

been ours for the first century and three-quarters of our Nation's existence. We are asking Congress to confirm to us the fundamental States' rights which are essential to the virility of the Republic.

I am a believer in a strong central government within the limits of the Constitution, but I do not believe that the Federal Government should encroach upon the powers and rights which were reserved to the States by the tenth amendment to the Constitution.

During the first half of the existence of the Nation, the States were strong and the Federal Government was weak. It was during this time that our great leaders strove to strengthen the Central Government so that it could perform its functions as a true sovereign; but now the situation has materially changed. As so often happens, the pendulum which in our early history had swung too far toward States' rights is now swinging in the opposite direction toward Federal power, until now it has reached a point where the continuance of our States as independent, sovereign political entitles is threatened.

If we are to preserve our constitutional system of a Federal Union made up of sovereign States, it is just as important now to protect the States from excessive concentration of power in the Federal Government as it was 150 years ago to protect the Federal Government from an excessive concentration of power in the several States.

In 1819, Chief Justice Marshall said: "No political dreamer was ever wild enough to think of breaking down the lines which separate the States, and of compounding the American people into one common mass." (*McCullough* v. *Maryland*, 4 Wheat 403). Let us hope that Marshall was right. Nevertheless, it must be recognized that the constant encroachment of Federal power and the extension of the jurisdiction of Federal bureaus over every aspect of our life has tended to weaken our States to such an extent that I believe now it is the duty of everyone who believes in the American Constitution to exert his efforts to bring back to the States the political and property rights which have been taken from them and to restore the just balance as between local and national power which is indispensable to the maintenance of our constitutional system.

A great and important step in that direction could be taken by the Congress in confirming to the States their title to the lands beneath navigable waters within their boundaries, as is proposed in the legislation now before you.

And what would the Federal Government lose by the enactment of this bill? Precisely nothing. The States have never interfered in any way with the sovereign rights of the Government to impose its will over and its use upon these tidelands for the purposes of national defense, navigation, and international relations. We have never claimed nor wanted any such jurisdiction. The legislation before you expressly disclaims any such intent. The Federal Government now determines beforehand whether any proposed use by the States would be an interference with any of those national interests.

But the taking of oil drilled from the shore by slant drilling does not set up any obstructions; and if it did, the Government could restrain it. We do not engage in any practices that the Federal Government does not adopt with relation to its own naval oil reserves. We do not even exploit the pools unless they extend to the uplands and the private owners who are also over them start to drain them to the detriment of the public interest. As a conservation measure our legislature has prohibited exploitation except in such circumstances.

The Federal Government could do no more to conserve oil unless it did one of two things: either condemn the uplands ownership in eminent-domain proceedings or apply this newly conceived "paramount rights" doctrine to private property on the theory that the Government needs it and can, therefore, take it.

If the Government can take the property of the State without compensation merely because it needs it, where would that theory end? Could it not take the property of a citizen of a State?

The doctrine that natural resources can be appropriated without compensation by a power that transcends ownership to me means confiscation—taking property without due process of law.

So far as I know, no Court has ever held that the United States could acquire the natural resources of the soil in disregard of ownership, and the present Court cites no authority in support of this doctrine. The decision rests on the unsupported determination of the majority opinion.

Wrong as we believe the decision to be, we bow with all deference to the final judgment of the Supreme Court of the United States, as every American should. On the other hand, we contend that this legislation is not in conflict with that decision.

On the contrary, the closing words of the majority opinion not only contemplate some action by the Congress, but in my opinion actually suggest it. It said: "We have not overlooked California's argument, buttressed by earnest briefs on behalf of other States, that improvements have been made along and near the shores at great expense to public and private agencies. * * * But however this may be, we are faced with the issue as to whether State or Nation has paramount rights and power over this ocean belt, and that great national question is not dependent upon what expenses may have been incurred upon mistaken assumptions. * * * We cannot and do not assume that Congress, which has constitutional control over Government property, will execute its powers in such way as to bring about injustices to States, their subdivisions, or persons acting pursuant to their permission."

The Attorney General, in his argument to the Court, has stated that the Government wants to see equity done. The Secretary of the Interior has introduced a bill, Senate bill 2165, which would continue to give the States 37½ percent of their oil revenues, and retain 52½ percent for the reclamation fund, and transfer the oil leases of the State to the Federal Government, continuing to exploit the fields as in the past. In other words, he would merely change the landlords of the oil operators, with slight appeasement to the States. That is his concept of equity in this matter.

Ours is different. We believe, and I am sure I speak the mind of practically all the governors and attorneys general of the Nation, that equity calls for the confirmation of the title that has been recognized since the beginning of the Republic.

In simple justice, we respectfully ask the Congress to enact S. 1988 confirming and establishing the title of the States in and beneath the navigable waters within their boundaries. To do so will greatly strengthen the 48 States, and will in no sense diminish the sovereignty, the effectiveness, or the stature of the United States of America.

Lincoln Day Address

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered before the Lincoln Associates, Lowell, Mass., on February 12, 1948, and which was broadcast over Station WLLH:

Mr. Chairman, fellow citizens, members of the radio audience, and friends, it is surely a very happy privilege and a great honor for me to respond this evening to the kind invitation of this fine, outstanding American organization to attend this impressive celebration of the birthday of Abraham Lincoln.

It is most fitting that we should pause on this day to commemorate the name, memory, and achievements of one of our greatest Presidents, and one of our truly immortal Americans. Abraham Lincoln was a great and noble leader. He came from the common people of the Nation. Born in humblest circumstances, by virtue of his own struggles, industry, zeal, and great ability, he rose to the highest position within the gift of the American people.

The story of his life, of the difficulties that confronted him in his youth, of the dire poverty of his early days, his courageous struggle to overcome handicaps and obstacles, his brilliant career before the bar and in the public service, his unselfish work for his fellowman and his country mark him indelibly as one of the great figures of history. His career was typically American. As much perhaps as any other, it exemplified the unlimited opportunities of our country which are open to the ordinary citizen. It illustrates the truth that the poorest and humblest child born under the Stars and Stripes, if he but exercise the strength of will and the determination to develop his God-given talents and gifts, can rise surely and steadily up the ladder of success to the most exalted station in the land.

It is therefore most appropriate that the Lincoln Associates should dedicate themselves this evening on his natal day to recognition of the worth of Abraham Lincoln, his noble qualities as a man, his sterling ideals, his solid, fundamental American principles, his invincible spirit, and his great love of country, and sterling patriotism. Every community in the land should take the time today to consider the significance of the contributions made to the American way of life by the Great Emancipator.

Like every generation, we are living principally in the present. We have our own problems to face and solve. They are problems just as compelling, just as vital, and just as urgent to the cause of free democratic government as the ones which confronted Lincoln. If we are but willing to speculate upon his achievements, and the manner in which he clung to his convictions when the Nation was threatened with division and destruction, when the clamor of secession rang in his ears, when the deathknell of a united American democracy was being sounded, we may well learn from his precepts and example the way to the solution of the tremendous problems which confront us in this dark hour in the history of civilization.

Lincoln had many remarkable attributes. He was possessed of a sharp, brilliant intellect, and a ready wit. By long years of study and application, he had educated himself, and was well informed on public questions. He was a capable trial lawyer, an able debater, a brilliant writer, and an accomplished story-teller, born with a keen sense of humor.

He believed in the philosphy of the American Government, the Constitution, and the Bill of Rights. No man could possibly be more devoted to the great truths that underlie fundamental Americanism than Abraham Lincoln. No man could have served more unselfishly the cause of national unity and freedom. No man could have perceived more clearly the basic issues that confronted the country as a result of the great struggle

over slavery and secession. If he had faltered for one moment, if he had ever wavered in his fundamental beliefs, if he had perchance compromised his principles, the Nation would have been split asunder, and the Union would have been shattered.

Apart from his great faith in America and her destiny, Lincoln was always marked by a truly unique quality of humility. He was a plain and simple man. There were no pretense or adornments in his make-up. He dealt with realities, and basic problems through the exercise of common sense and sound judgment. He had the faculty of going right to the heart of an issue. He had an abiding faith in the common people because he was one of them himself, and he never forgot his origin and early struggles. He devoutly believed that, given the opportunity, given the facts, given the true picture uncolored by propaganda or misrepresentation, the people would reach the right result. We all remember his timely words, "You can fool some of the people all of the time, and all of the people some of the time. But you cannot fool all of the people all of the time." This strong unwavering faith in the ultimate judgments of the people lived with him throughout his life, and he never lost his confidence in the ordinary man and woman who stood by his side and rendered him unflinching support in the darkest hours of the great conflict between the States when the very existence of the Republic hung in the balance.

Power of mind, logic, and the ability to think straight, calmness of spirit, and ability to make decisions were his great gifts. Humility, a quality not always found in public men, was also, as I have said, an unusual quality that endeared him to the people. But the two attributes which distinguished him as a great statesman and which contributed most to his achievements were his courage and his humaneness.

Abraham Lincoln had a kind and noble heart. There was nothing mean, or small, or narrow-minded about him. His mind was as broad as humanity itself, and encompassed in a very intimate way the perplexities, the bitter struggles, the difficulties, and the problems of the average man. His courage was fortified by a devout trust in the Almighty, and he never knew fear either in his private or his public life. He was known as Honest Abe, and he had earned that name not only by fair dealing and rectitude, but by honest thinking as well. Materially, intellectually, spiritually, Lincoln was profoundly clear-sighted, direct, humble, and honest, and this but served to accentuate and sustain his courage during every crisis which he and the Nation faced. Dauntless and straightforward, he never flinched from a decision because he had the courage of a lion, and an abiding faith in his God, himself, the American people, and his country.

His profound religious faith and trust in God was illustrated by the words of an informal speech he delivered to his friends and neighbors when he left home to assume the Presidency. He said, "I now leave not knowing when or whether ever I may return"—and he never did—"with the task before me greater than that which rested upon Washington. Without the assistance of the Divine Being who attended him I cannot succeed. With that assistance I cannot fail. I hope that in your prayers you will commend me."

A commentator once said of him, "When he spoke, he was transformed; his eye kindled, his voice rang, his face shone and seemed to light up the whole assembly." His style of speech and manner of delivery were severely simple, and were characterized by Lowell as the grand simplicity of the Bible with which he was so familiar. It was marvelous to see how this untutored man, by mere self-discipline and the chastening of his own spirit had found his way to the grandeur and strength of absolute simplicity.

There are many interesting episodes and stories told of the great Lincoln which I cannot enumerate here, but one or two of them may be pertinent to demonstrate the universality and appeal of his character. This one is attested to by my able and esteemed colleague, Congressman DONDERO, of Michigan, an outstanding authority on Lincoln, who relates it substantially as follows:

In 1847 two men were elected to Congress from widely separated sections of the country, one from the North, the other from the South. One was far above average height, the other was a small or under-sized man. Both were intellectual giants. One was opposed to slavery, the other opposed secession. During their respective congressional careers they became warm, personal friends and remained so until death. One was destined to become President of the United States, the other Vice President of the Confederacy. One was to be assassinated, the other was to become a political prisoner of the Government he had once served. One was Abraham Lincoln, of Illinois, the other was Alexander H. Stephens, of Georgia.

As is always the case in life, they parted in the House of Representatives in the year 1849, and it was not for 16 years that they met again. Meanwhile the Nation was torn by civil strife. Their next meeting took place at night on board a gunboat in Hampden Roads, Va., early in February 1865. The occasion was a famous peace conference which sought, but failed, to end the Civil War. President Lincoln and his Secretary of State represented the Union; Stephens was one of the delegates representing the Confederacy.

If Abraham Lincoln had not known that his former colleague in the House and his warm intimate friend Alexander Stephens was to be one of the emissaries, it is very doubtful that he would ever have agreed to meet representatives of the Confederacy.

When the parley ended in failure, Lincoln turned to his old and beloved colleague of congressional days and asked, "Alex, is there anything I can do for you personally?" Stephens informed Lincoln that he had a nephew who was a prisoner of war at Johnsons Island in Lake Erie near Sandusky, Ohio, but his family had heard nothing from him—could Lincoln find out something about him, could he get word to him that his people at home were well. That was all. The old friends parted.

But Lincoln had his own idea. Two days later, Lt. John Stephens, of the Confederate Army, arose as usual to begin the depressing, routine, life of a prisoner of war, just as he had done for 2 years without hope of change. The thermometer registered twenty below zero, and he was standing in his barracks near the stove trying to keep warm. An orderly appeared at the door informing him to report at once to the commanding officer. His surprise was great. What did the commander want of him? He had known of other prisoners who had been called out and never were heard from again. Was he to suffer the same fate? With the orderly, he went to the commander where a still greater surprise awaited him. He was shown a telegram which read:

WASHINGTON, D. C., *February 4, 1865.*

OFFICER IN COMMAND AT JOHNSON ISLAND, OHIO:

Parole Lt. John A. Stephens, prisoner of war, to report to me here in person and send him to me. It is in pursuance of an arrangement I made yesterday with his uncle, Hon. A. H. Stephens.

A. LINCOLN.

The boy was fairly stunned when he read this message, but the great drama proceeded. Wrapped in buffalo robes, placed on board a bobsled drawn by two mules across Lake Erie, was an experience undreamed of by this Confederate soldier. To be ordered to report to the President of the United States in person at the Nation's Capital was beyond the imagination of a son of the South in the Confederate Army.

In due time he was ushered into the presence of Abraham Lincoln. The President was lying full length on a long office table with his elbow on the table, and his face resting on his hand talking to Secretary of State Seward, who was seated in a nearby chair. He was cordially received and introduced to the Secretary of State. Lincoln suggested that if he had friends in Washington he could pay them a visit, then report back to him. No guard was necessary. He was under the parole to the President of the United States. Five days later the young lieutenant reported back to the White House and found the President alone. Lincoln talked about his uncle, their association in Congress, and their friendship. He handed the young Confederate officer a short letter for his uncle which read as follows:

"DEAR ALEC: According to our agreement, your nephew, Lieutenant Stephens, goes to you bearing this note. Please, in return, select and send to me that officer of same rank imprisoned at Richmond whose physical condition most urgently requires his release.

"Respectfully,

"A. LINCOLN."

Returning to his desk, he autographed a small photo of himself, and handed it to Stephens, saying, "Young man, suppose you take this along with you. I don't expect there are many of them down South."

Young Stephens was carried through the lines, arriving at his Georgia home during the first week in May 1865, and delivered Lincoln's letter to his uncle. By then the war was over. Lincoln was in his grave. Alexander Stephens became a fugitive, was arrested, and carried a political prisoner to Fort Warren in Boston Harbor.

One of the most touching incidents in all our history is the scene in the cell at Fort Warren on the morning of June 1, 1865. Alexander Stephens, Vice President of the Confederacy is awaiting his fate. This prisoner who opposed secession and loved his Nation made an entry in his diary that morning. It is the day set apart by President Johnson as a fast day in memory of Abraham Lincoln. The entry in Stephen's journal for that morning reads, "Rose early. As it is a fast day and mourning in memory of Mr. Lincoln, I requested the corporal to bring me a cup of coffee and some rolls." We can almost hear the spirit of Lincoln whispering, "This hath he done in remembrance of me."

The letter relating to the release of Lieutenant Stephens and the autographed photo handed him by President Lincoln were framed and hung on the wall of Stephens' home in Georgia for over 70 years, as a silent reminder of one of the most unusual events in the history of the United States. This little-known story of the generosity and kindly impulses of Lincoln has a sequel.

Thirteen years later on February 12, 1878, the famous oil painting of the signing of the Emancipation Proclamation, in which Lincoln is the central figure, was presented to the United States Government. This picture now hangs in the old Supreme Court Chamber in the Capitol Building in Washington. On this occasion, Alexander H. Stephens, who had been reelected to Congress from Georgia, was chosen to deliver the acceptance speech on the part of the Government. In that address will be found this tribute by Stephens to his old friend Lincoln. I quote: "He was warm-hearted, he was generous, he was magnanimous. Every fountain of his heart was overflowing with the milk of human kindness."

That was the tribute of Alexander H. Stephens, one time Vice President of the Confederacy, to the President whom even the rancors of Civil War could not turn against an old friend.

I could go on indefinitely, if time permitted, to recite incidents in the life of this great man which illustrated his kindness, his generosity, his humaneness, and his courage. It is most fitting tonight that we should pause reverently to pay tribute to his sterling qualities of Americanism, and to his magnificent service to our country.

But we would be truly remiss on this occasion if we were not solemnly to resolve here and now to be inspired and guided henceforth during the crisis which now confronts us, during the threats to democracy which now face us, by the principles, the ideals, and the example of the immortal Lincoln.

We have just victoriously ended the greatest armed conflict in history. We waged bitter war against powerful and tyrannical enemies to defend our democracy, to preserve human freedom, and to achieve an enduring peace for our own Nation and for mankind. In that great conflict we sacrificed the flower of American youth and spent untold billions of American wealth. Millions of American boys interrupted their careers and left their homes to achieve victory and thus insure freedom and peace. Incalculable sacrifices were made by these gallant boys and by the entire American people.

How ironical the present situation is. Instead of the freedom, democracy, and peace which our boys fought and died for, we are now faced with continued turmoil, strife, contention, oppression, and the threats of war. We have defeated and smashed one set of tyrants only to find new tyrannies confronting us almost everywhere. Small nations continue to be enslaved, self-government and freedom continue to be denied, oppression of traditionally free peoples afflicts a sizable portion of Europe and the Orient. Our war aims are notoriously violated, our peace objectives scorned and repudiated, the United Nations hamstrung and checkmated. The officials of our Government are condemned and insulted. Vicious propaganda is directed against our Government and people on a world-wide front even within the confines of our own country. Age-old and sacred religious, governmental, social, and economic institutions are brazenly attacked and ridiculed. A new type of war—ideological war, a cold war, a war of nerves—is waged against democracy and freedom and everything they stand for in behalf of a superstate led by fanatical despots who are intent upon wrecking the civilzation built upon free institutions.

These apostles of Marx, well organized, well financed, ably led are spreading poisonous hatred between nations, groups, and classes. They are seeking to divide and disrupt the forces of democracy, liberty, and Christianity. They openly seek the destruction of religion and private property. They are aiming at the enslavement of all mankind. They would superimpose upon us all, the will of the great Red colossus, which already stands astride of most of Europe and much of the Orient threatening western civilization and the spirit of liberty itself.

What would Abraham Lincoln's reaction be to this incredible situation? How would his stalwart Americanism judge these outrages? Would he be willing to appease these enemies of democracy and freedom? Would he remain silent and unprotesting in the face of their insults and threats, in the presence of their vilification and propaganda, in the midst of the steady expansion of their dominion over the lives and affairs of countless millions of helpless, defenseless peoples? I am sure that he would not. I am sure that he would insist on the carrying out of our war aims and objectives; our promises and pledges of freedom and self-determination for small nations, the right of human beings everywhere to choose their own way of life.

If we honestly and courageously apply the principles of Abraham Lincoln to the present international situation, we should inform the Soviet Government and her puppets that we seek honorable peace with all nations, but that we cannot tolerate continued violations of our war aims, that propaganda directed against us must cease, that aggression and infiltration against helpless free peoples must cease, that organized campaigns to promote world-wide bloody revolution must cease, that the rights, interests and ideals of this great Nation must be respected.

If we still believe in the principles of Lincoln, we cannot afford to be indifferent or spineless in this great contingency that faces the world. It is time to determine whether we and other democratic-minded peoples shall live in the free world of the Atlantic Charter or the slave world of communism.

Our country cannot compromise on this great issue. We do not seek war and we hope and trust that Russia does not seek war. We earnestly seek peace and harmonious relations for ourselves and all peoples. We will not tolerate unbridled militarism or warmongering in the Nation. But we are determined that the sacrifices which the American people have made since the inception of this Government and particularly the sacrifices which our gallant heroes, both living and dead have made in the name of freedom and democracy, shall not be in vain. We will not tolerate that any nation or group of nations set up with the avowed purpose of destroying free institutions, and inaugurating the radical, totalitarian state of serfdom and slavery, will be permitted to stand in the way of a just, lasting peace. We will not tolerate that any power shall conspire to undermine and destroy the great free Nation of Washington, Jefferson, and Lincoln which we have established here to guarantee the rights of our citizens and the free way of life.

It is most regrettable that such obstacles have been placed across the path to universal peace, but, like Lincoln, we must deal with the realities. Let us work to strengthen the United Nations and every other agency designed to preserve the peace. Let us cooperate wholeheartedly with other nations to check the outrages and aggressions, both physical and ideological, which are directed against free, democratic government. Let us use the economic weapons that we have at hand to bring Marxian zealots everywhere to their senses. Let us leave nothing undone to promote good will, friendship, confidence, and trust between the nations of the earth. Let us keep our own Nation strong, vigorous, free, and democratic, and uncorrupted by the poisons of radicalism and disruption. Let us check the enemies within our gates who are joining with their Moscow advisers to destroy our economy, our business system, and our free institutions which have not only brought salvation to the world, and hope and inspiration and assistance to the helpless, the suffering, the afflicted, and the oppressed, but which have also made possible for our own people the greatest, the happiest, and the most prosperous nation in the annals of history. Until international agencies possess the will, strength, and the capacity to check international outlaws and to maintain order and peace in the world, let us maintain a strong, impregnable national defense, an Army, Navy, and overwhelming Air Force comprised of mature, professionally trained, scientifically devised, armed forces—not 18-year-old boys—able to keep our Nation safe and secure against every attack and contingency.

And in our own broad land where liberty was nurtured, let us remember that eternal vigilance is the price of liberty, that it can be lost far more easily than it was won, that once it is lost, it is difficult, if not impossible, to regain. In the spirit of Lincoln, the Great Emancipator, with his sense of fairness, justice, and humanity let us zealously protect all our civil liberties, and the great truths and doctrines upon which our Government was founded.

This is a Nation of opportunity for all, and let us keep it so. Let us relieve our people of burdensome taxes and inflated prices. Let us care and provide for our disabled veterans, and assist all our veterans who were the defenders of the Nation in time of greatest peril. Let us keep the doors of opportunity open so that every man, woman, and child can seek and find the chance, by virtue of industry, hard work, thrift, and ability, to rise to the top of the ladder of success. Let us banish the hatreds and passions of intolerance from our Nation because they are un-American, offensive to our faith in God and our Constitution and way of life, and provocative of distrust and antagonism among our people.

In brief, as we again receive inspiration, strength, and courage and guidance from the immortal Lincoln, let us resolve, each and every one of us, to make our own contribution which is so necessary at this time to the perpetuation of the Nation.

As John Macy said, he was finely sensitive, highly intellectual, meditative, uncommonly gifted with that rare thing called common sense to which was added great prophetic vision. That is why Lincoln is not only a statesman who belongs to history, but a man of letters who belongs to literature. His Gettysburg Address—and you all recall how on the occasion of its delivery he was matched against Edward Everett, of Boston, one of the great orators of the day—was a remarkable, historic document and a work of art. In a few words he expresses the essential emotion of the moment without flourish, without bombast, and in a quiet and calm style, in words that will live forever. Let me recall them to you:

"From these honored dead we take increased devotion to that cause for which they gave their last full measure of devotion; that we here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; and that the government of the people, by the people, and for the people shall not perish from the earth."

And as we face the problems of the hour, let us display the same patriotism, the same courage, the same fortitude, the same generosity, the same spirit of kindliness, tolerance, and charity which the immortal Lincoln displayed during a life of service to his country and fellow man. Let us remember:

"With malice toward none; with charity for all; with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in: To bind up the Nation's wounds, to care for him who shall have borne the battle, and for his widow, and for his orphan, to do all which may achieve and cherish a just and lasting peace among ourselves and with all the nations."

Thank you for listening and good night.

United States Hears of Russian-Polish Treaty as World Bank Considers Warsaw Loan

---

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I

include the following article of Constantine Brown, from the Washington Star of February 23, 1948:

UNITED STATES HEARS OF RUSSIAN-POLISH TREATY AS WORLD BANK CONSIDERS WARSAW LOAN

(By Constantine Brown)

Reports are being received in Washington on some of the main terms of the new secret military agreement betwen Poland and the U. S. S. R. last month. These come at a time when the World Bank is waiting for a favorable moment to announce a $60,000,000 loan to Warsaw.

According to information which has reached high Government quarters, the agreement was signed in Moscow by Foreign Minister Molotov for Russia and by the following Polish officials: Jacob Berman, Minister of State attached to the Office of the Polish Premier as a watchdog for the Politburo; Hilary Minc, Minister of National Economy; Field Marshal Zmierski, commander in chief of the Polish Army, and General Kieniewisz, a Russian attached to the Office of Marshal Zmierski.

The following terms of the Moscow agreement are known:

1. The Polish steel and armaments industries are to be integrated with those of Czechoslovakia and Russia. This may explain the pressure which is being exercised on the World Bank by friends of Poland for a $60,000,000 loan for modernization of the Polish mining industry.

DISCARD LEND-LEASE EQUIPMENT

2. All lend-lease and captured German equipment which is being used by the Polish Army at the end of 1949 is to be discarded. After that time Polish armaments will be standardized with those of the U. S. S. R.

3. Five infantry divisions are to be converted into motorized units, on the pattern of the Soviet Army. One new parachute division and two armored divisions are to be created.

4. Because of the difficulty of indoctrinating the prewar officers and noncommissioned officers in the new ideology, the new agreement provides that all these shall be retired by the end of 1949 and new personnel put in their places. Fifty percent of the new officers and noncoms will be trained beginning March 1, 1948, at the Central Soviet Armored Warfare School at Irkutsk, Siberia.

This school was organized in November 1947 for the purpose of training future officers and noncoms of the satellite states. The instructors have been carefully selected from the ranks of Soviet Army specialists and officers of former German panzer divisions.

DRAWN FROM VON PAULUS GROUP

The latter are drawn from those who were captured at Stalingrad and later joined the "liberation" army of Field Marshal Friedrich von Paulus and from among those who surrendered later. These men are reported to be reliable not only because they have become convinced that the future of the fatherland henceforth is tied up closely with that of Russia, but also because their families are hostages in Russian hands.

The agreement further provides that the Polish steel mills, particularly those at Gleiwitz and Beuten, will increase their production to 1,050,000 tons per week in 1948 and 1949 and to 2,060,000 tons by 1950. A part of this production will be used for construction of three new shipping yards in Yugoslavia. The Skoda works in Czechoslovakia are earmarked exclusively for the production of armaments.

American military officials are particularly interested in the fact that rejuvenation of the Polish army, according to the terms of the Moscow agreement in January, must be completed by the end of next year or the beginning of 1950.

This is interpreted to mean that by that time the war plans section of the Red Army wants to be prepared for any task the Politburo may consider necessary for the prosecution and implementation of its expansionist policies.

What Part Should We Play in Europe's Recovery?

EXTENSION OF REMARKS

OF

HON. MAX SCHWABE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. SCHWABE of Missouri. Mr. Speaker, under leave to extend my remarks, I include a short radio address given by me on Washington's Birthday and carried by a national network of the Mutual Broadcasting System:

Today is Washington's birthday. One of the great documents of American history is Washington's farewell address, wherein he warned us in no uncertain terms to mind our own business and not meddle in the affairs of foreign countries. But the men who would now load on your back the Marshall plan, sneer at George Washington's advice. Yet these Marshall plan promoters have played into Stalin's hands again and again.

While they claim to be too smart for Washington, how smart were they on the United States Morgenthau vengeance plan, Tehran, Yalta, and Potsdam. On all these situations the Marshall plan advocates played squarely into the hands of communism. Does that kind of performance justify giving them another chance to pay into Stalin's hands? Their mistakes to date are largely responsible for the present chaos in Europe.

The people in high places in this country who are destroying your savings through inflation are apparently the popular favorites at the moment. They come to you and say that we must bring about European recovery. Certainly, we should help Europe, but neither according to their demands nor our desires, but instead according to our capacity. On this point—"our capacity"— we have now reached the place where further gigantic hand-outs like the Marshall plan mean unlimited inflation in America. That means that prices are low in comparison with what prices will be if the Marshall plan goes through.

Prices in France are about 75 times as high—75 times as high—get that percentage—as they were when World War I started. If the Marshall plan goes through, prices here will double, treble, or quadruple, and who will that help? Only those who know what inflation is and put their savings into real property and tangibles, while trusting folks like my listeners put theirs into bonds and life insurance. But that is not all—not only will this handout program to Europe destroy what is left of sound currency in this country but the hand-out program itself is the greatest instrument today for world communism. Why do I say that? Because the money from the Marshall plan is going in a majority of cases to those governments run by Socialists. And socialism and communism according to an Army official statement, are blood brothers. And so, now then, let's make this plain—the so-called European recovery program is not a recovery program at all; it is a scheme to finance and entrench the power of Socialist politicians in various lands and enable them to maintain their stranglehold over people who are trying to regain freedom. It is being sold to the American people as a humanitarian project, just as a year ago they told you that the "aid to Greece" program was a humanitarian project, and now we learn that it was only a great bloody adventure.

The European people are entitled to relief from America from those who are willing through the practice of Christian charity to help the distressed of Europe. Actually, your Government has strangled and crippled Christian charity to Europe in many different ways. They have substituted a global WPA for Christian charity. A New Deal WPA is no better in Europe than it was in America.

Our global bleeding hearts—and some of them are well-meaning people—have the fantastic notion that we can interfere all over the world. Do you want to know how that will work out? Try going around your block, going up to each neighbor, and tell them you would like to help them run their personal affairs. I don't know how that would work where you live, but I know that where I live everything would be topsy-turvy in 48 hours. The way to make my neighborhood better is to run my family better so that my family would make a better contribution to the block.

America can make her best contribution to the world by persuasion and example. Have we treated the Indians fairly in this country? They have been our wards for 60 years. Have we treated the Puerto Ricans fairly? They have been our wards for 50 years. Have we treated the colored people fairly? They have relied on their Government since 1865. American responsibility for justice and fairness begins at home. Let's be fair to those in this country and by example and persuasion help the rest of the world to justice and opportunity. The recovery program for Europe is private charity for relief and sound, economic loans for sound, economic advancement and recovery. That means that the politicians in Washington would lose a lot of the jobs for their political hacks and carpetbaggers, but that is the method that will save Europe and America, and that is the method George Washington pleaded with us to adopt in his farewell message.

More "operation rat-hole" in Europe will not help the humble people of Europe adopt hard work and freedom from political parasites as their road to salvation. Continued hand-outs from America only makes it easier for their political rulers to postpone the day of going back to work. No outsider, not even the American taxpayer, can learn to walk for them.

Address of Speaker Joseph W. Martin, Jr.

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. LECOMPTE. Mr. Speaker, on February 9 the Speaker of the House of Representatives, Hon. JOSEPH W. MARTIN, visited Iowa and addressed a great gathering of militant Republicans at the capital city at Des Moines, the occasion being a celebration of the birth of Abraham Lincoln.

This is the first occasion in many years that a Speaker of the House has visited Iowa and delivered an important address.

All good citizens of Iowa extended greetings to Speaker MARTIN.

Under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the address made by the Speaker:

Fellow citizens, I am glad to be in this agricultural section of the Midwest. We are gathered here to pay a tribute to the memory of one of America's immortals, Abraham Lincoln. He was a man of the plain people. He loved the plain people. He was fond of saying God must have loved the poor because he made so many of them. Lincoln did not mean that literally. What he meant was that money, riches, do not make men noble, or women virtuous, but that the spirit, the innate personality, is what makes men and women good and noble and virtuous.

Lincoln was himself a man of the backwoods and the soil. He was close to nature. He drew his inspiration from nature. He had the simple sense of justice, deeply tinged with mercy, which the plain people always have.

Agriculture has always been the backbone of our American economy. Farmers have been among the most independent of our religious and political thinkers. The pitchfork has always been a symbol of strength in our Nation.

In our government of, by, and for the people, independence of thought and independence of action are essential. The very essence of the kind of government for which Lincoln fought and died is the principle of proposal, disagreement, discussion, and compromise. By that method we reach the nearest approximation of good government and concrete truth.

That is one reason why our highway system has been so important. It has brought the farm nearer to the city. Together with the appliances which have been invented over the years, good roads and motor vehicles have taken much of the drudgery out of farm work and left those who labor with the soil more time for reading and meditation. Agricultural families can now live on a spacious farm, enjoy the outdoors, and all of the benefits and advantages of rural life. They can step into the automobile, and over good highways, be in the city, and at the theater, or at a concert, or at a church, in a matter of 15 or 20 or 30 minutes, at most.

American agriculture must be kept at a new high level of production and income. Of course, the farmers, like all other citizens, are concerned with high taxes, a constantly expanding government, and inflation.

The farmer is conscious of high taxes because it has not been too long ago when he realized that taxation might so impoverish him he couldn't follow his way of life. It is true that farmers are now making money. Nobody is happier about that than am I. We cannot have in America an impoverished farm class and the rest of the Nation still be prosperous. It is not possible in the United States for any great segment of the people, or for any great part of our free economy, to be broke, or poverty-stricken, without the rest of the Nation suffering in consequence.

We know the only possible answer in the United States to inflation and high prices is production and more production. The farmers of America want a fair price, a fair return on their products. To that they are richly entitled. The farmers do not want artificially inflated prices on everything they buy to be so high as to consume all they can take in and leave them nothing for a reserve. Such a condition is not a sound economy. It is the forerunner to a depression. None of the people can long stand such a condition as that.

The farmers, as well as everybody else, know the reason for the inflationary prices of today lies far back in years gone by when deficit spending was planting the seeds of today's crop of inflation.

The Republicans have warned all through those years that the practice of wild, reckless deficit spending—the policy of tax and tax, spend and spend—would bring ruin if persisted in. Following hard upon the heels of those years of waste, and extravagance, and deficit spending came the war. The war activities were inflationary because the goods and services produced for war went to the battlefields or to the bottom of the sea. The wages and salaries stayed at home unspent because there was nothing to buy in the home market. Then, following the war, came the demand for foreign aid. That constitutes a drain on our available production. The result is still another inflationary force, because again the goods and services go abroad and the wages and salaries poured out in the production of those goods and services stay at home.

All of this resulted, as the farmers and everybody else now know, in the accumulation of a great backlog of purchasing power in this country—much of it invested in Government bonds. At the same time, there accumulated a great backlog of unsatisfied desire for goods. People wanted automobiles, and ice boxes, and phonographs, and electric fans, and electric-heating stoves, and clothes—everything Americans had been accustomed to having. The only possible remedy for that condition is production and more production. But that production must be brought about under conditions which will not lead to overexpansion of either the agricultural plant or the industrial plant of America, and a consequent era of unemployment. A depression in this country would be just as disastrous, or more so, than the present condition of inflation.

The Agricultural Committee of the House of Representatives is now making a study of a long-range agricultural plan in order to prevent any recurrence of a deflation of agriculture.

We cannot contemplate with great concern, any depression in agriculture. We must maintain agriculture on a new high level of production, because not only the United States, but the world needs the products of American farms. We must preserve the soil. We must operate the farms of America efficiently. That means, farmers must have adequate, modern machinery by which to increase their production. They must have that machinery at a fair price in proportion to their income.

It is the farmer who feeds and clothes the rest of the people, as well as himself and his family. Clothing is now made from rayon, which is reprocessed cotton. Many useful things are made from milk. Even farm waste is being utilized. Incidentally, I want to say I have long been interested in farm chemurgy, which is the scientific use of farm products and farm waste, as the raw materials for factory manufacture. Ways can be found—ways are being found—to transform what formerly was waste into a revenue producer for the farmer. That is a very welcome innovation.

The farmer is concerned with expanding government, because nobody knows, better than he, the dangers of centralized power and an overgrown bureaucracy.

The veterans of the wars and all the young people on the farms and in the cities want their chance to get ahead. They deserve a chance to get ahead. They are going to get a chance to get ahead. But they do not want to spend their years snapping to attention at every command from bureaucratic "big brass." Government regulations and regimentation do not constitute a proper life for free citizens. We are determined that freedom, not governmental autocracy, shall rule in America.

Most of the farmers of Iowa, I suspect, can well remember those days when questionnaires and ration applications and gasoline permits had to be filled out. I am sure you recall the remarkable advice which once emanated from a Washington bureau to the farmers to take the horses' shoes off at night to save metal, and to change the shoes from foot to foot to equalize the wear. You have not forgotten the famous instruction which went out that there must be no more butchering of female steers. In other words, you, the farmers of Iowa, and the farmers of the rest of the country, remember very well, indeed, the way the starry-eyed theorists and temperamental tinkerers and economic quacks tried to tell the farmer how to run his farm, how to plant his seed, and how to reap his crops. I think you will agree with me when I say if there is anything that will make the farmer grab a pitchfork and use it for something besides pitching hay is for some theorist to try to tell him how to run his farm. Nevertheless, we can recall how, under governmental regulations, the farmer could not put up his fruit. He saw it spoil under the trees because his wife could not get enough sugar to preserve it. Clear across this broad land of ours, when food was of the most imperative importance, it was allowed to waste because somebody in Washington had decided how much sugar American housewives ought to use, but knew little or nothing about the fruit and berry crops.

Swollen government is always oppressive. The bigger and more concentrated government becomes, the farther it gets away from the people and the more remote the bureaucratic mazes are from the taxpayers.

The only way to prevent that is to keep government well and safely in the hands of the people themselves.

What we need in Government is more of the spirit of 1776 and less of the spirit of 76,000 administrative regulations. To get that we will have to have a Republican administration throughout.

American freedom has been pretty seriously whittled away by the New Deal and later by the war powers. The citizens' liberties have ceased to be the paramount consideration of the administration and his privileges are being taken away one by one. We intend to restore them.

Now, the farmers are quite concerned—and properly so—over the proposition for us to help the other nations of the world back on their feet. We recognize the need for us to help rehabilitate these other countries, but we must be certain the American people's money will not be thrown away.

In a broadcast recently I proposed, and I repeat here, a rule of action by which we ought to administer any aid to Europe. That rule of action can be stated in four words: economy, efficiency, common sense, and cooperation.

The only possible way in which this proposal to help Europe can be successful is for us to have the full and complete cooperation of the countries we are trying to help.

The Congress intends to examine very carefully all of the proposals for European and Asiatic help. We sent many of our own Members over to get first-hand information as to the needs and as to how the relief can best be administered.

It is time for us to begin to think of keeping America safe, sound, solvent, and strong, not only for our own sake but for the sake of civilization.

For the past 15 years anybody who spoke a good word for our own country was immediately condemned. To be for our American system is the best brand of patriotism of which our people are capable.

We spilled rivers of precious blood and turned out torrents of goods and machines

and services to fight for freedom abroad. We intend to fight for freedom at home, and to keep freedom at home regardless of how tough a fight it may be.

I want to revert to taxes again for a moment. As the farmers of Iowa and the rest of the people know, we passed a tax bill twice in the first session of the Eightieth Congress. We gave by far the greatest benefits to those in the lower income brackets. We sought to relieve entirely elderly people living on fixed incomes of a thousand dollars a year of any taxes so they might have some of the comforts of life. Twice Mr. Truman saw fit to veto those tax bills because he did not think the American people should have a reduction in taxes.

We passed another tax bill in the House the other day. This bill gives 71.1 percent of the tax relief to the people with incomes of less than $5,000; it frees 6,000,000 people from paying any tax; it gives special relief to the neediest of our people, the aged and the blind. It helps the American taxpayer to meet the high prices. It provides incentive for men and capital to work together for needed expansion and more jobs for the people.

We know full well that in order to cut taxes, we must also cut governmental squandering. The only way it is possible to cut down governmental squandering is to survey the functions the Federal Government has usurped from State and local governments, over the past 16 years. We must return to the State and local levels the functions which belong there, and return to private enandeavor the functions which belong there. A joint commission is studying that very problem. The commission will report back to what we are sure will be a Republican Congress, under a Republican President, in 1949. We will then move to separate a lot of bureaus and their functions from the Federal Government. We must cut down the size of Government. We are being asked today by the President for a peacetime budget which amounts to a thousand and twenty dollars for every family of four in the United States. The Government pay rolls have been broadened and broadened, until now there are millions of people who have a vested interest in the administration remaining in power because they, or their relatives, want to hold on to soft jobs.

The Eightieth Congress intends to cut spending. It intends to cut taxes. It intends to cut taxes most heavily in the lower brackets. But the fact still remains we must give some incentive to venture capital to go into business to aid in increasing production. As I said a while ago, only through increased production can we hope to beat the inflationary rise.

We are determined our American economy shall not be tilted off balance by extortionate taxes, nor forced into an abyss of ruin by inflation. America can be kept strong and sound and solvent and free, but that cannot be done by giving the administration new powers of rationing, regimentation, regulation and coercion over the lives and activities of the citizens. America became great by traveling the highway of freedom. America is going to stay great by continuing on the highway of freedom.

I want to direct your attention at this point to the fact that for several years there has been an intensive propaganda drive against the Congress. Those who would destroy our American system and bring us under the rule of alien despots, under a foreign concept of government, know they must first destroy the Congress before they can hope to realize their nefarious scheme. The Congress is the people's special instrument of control over their Government and their administrators. It was designed to be so by the founding fathers, who set up our system of constitutional government, free economy, and free society. So long as the people have confidence in their Congress, and stand behind it, the Congress can prevent either of the other two departments of Government from getting out of hand. But the day the people lose their confidence in the Congress, and withdraw their support from it, will mark the day our American system of freedom will have gone by the board. Personal liberty will have been destroyed.

Lincoln had a great faith in government of, by, and for the people. He knew that so long as the people were given the truth they, in the mass, had an inherent wisdom which no individual and no small group could possibly hope to equal. I should like to give you an instance of how, wittingly or unwittingly, vilification and abuse of the Congress and distortion of facts have operated to discredit the Congress in the mind of the people.

We all realize that under conditions in the world, as they are today, we must have a defense wholly adequate to meet any sort of an emergency which may arise. That means a superdefense in the air. It means we must have the most modern and the most scientific defense ever devised by man. It means such a defense is going to be superexpensive. Yet, the statement has been made in the press, over the radio, in speeches, by authoritative spokesmen of the administration, by commentators and others, that the Eightieth Congress, by a pinch-penny policy, had destroyed our national defense and had caused it to become about a fifth-rate defense. It has been said our defense in the air is but a hollow shell. Now the fact is the Eightieth Congress, in its first session, gave permission to the air services to spent $76,000,000 more than the President asked for in his budget. Also, the total budget and spending for the rest of the armed services was reduced only 1.3 percent, or $120,000,000. Now, if a reduction of $120,000,000 knocked our national defense down to fifth place, what did they do with the $9,400,000,000 the Eightieth Congress appropriated for the national defense? That is a question every citizen has a right to ask. It is a question which ought to be answered. The fact is many, many people, a lot of them unwittingly, some of them with sinister design, have repeated those distorted statements and misstatements. Those distortions all operated to cause the people to believe the Eightieth Congress was blind to the necessities of the national defense, when exactly the opposite was the case.

You remember how, when appropriation bills were pending, the bureaus declared they would have to lay off border guards and mail carriers if they didn't get all the money they demanded. When the House Appropriations Committee began to look into these matters and investigate them, the bureaucrats backed off in a hurry. They had laid off border guards, but they put them back to work again, because it was found such action was not necessary at all. It was simply the technique of long-experienced bureaucrats trying to bluff the Congress into voting more and more billions of dollars of the people's money for the bureaucrats to spend.

The situation in the United States, as well as in the world, calls for economy, efficiency, common sense, not only in our international relations, but in our relations between classes and sections in the United States. There never has been a time in the history of America when we more desperately need to make every dollar count; to pull together as a united people to save this country, to help the other nations save themselves, and to save civilization.

God give us the strength and the courage to forge ahead with a strong, sane, sound, solvent America, to lead the rest of the world back to sanity and peace and progress.

The Port of San Francisco

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. WELCH. Mr. Speaker, the geographical location of the great international seaport city of San Francisco is of tremendous strategic importance to both the peacetime economy and national security of the Nation. This has been proven in the past by the great military and naval establishments, as well as the commercial and industrial establishments, in San Francisco and the bay area. The port of San Francisco and the great San Francisco international airport form the crossroads of commerce between America and the Orient. San Francisco Harbor and Airport mark the progress in the development of the great West. I invite attention to the following editorial which recently appeared in the San Francisco Call-Bulletin:

CENTURY OF PROGRESS—PORT OF SAN FRANCISCO ON THRESHOLD OF NEW GREATNESS 100 YEARS AFTER GOLD RUSH GAVE IT START

It is a centennial coincidence that it was just about a 100 years ago that the port of San Francisco began to take its place of importance in the Nation's economic picture, under the stimulus of the discovery of gold in California, and that today it is beginning to realize fully its vast possibilities as one of the foremost centers of commerce of our times.

Since the days when the Golden Gate was a lodestar to men eager for the quick wealth to be found in the mineral veins of the Sierra Ranges, our port has always been an important one.

It has all the natural advantages—location, climate, and one of the truly splendid harbors of the world.

Prior to the gold rush, these assets were to a great extent ignored, for the reason that the West still was largely a frontier wilderness, and San Francisco not so much a capital of world trade as an outpost of that frontier, although, of course, it long had been an important community to the old California of the Dons and the Franciscans.

The discovery of gold, which came during a time when there was a general discovery of all the great resources of the West, gave San Francisco its first real start to economic greatness, and the port grew rapidly in importance, maintaining a steady increase through the years until after the First World War, when economic depression, with a consequent falling off of commerce, brought this expansion to a temporary halt.

The years of the Second World War saw a tremendous migration to California—a rediscovery of the West, as it were—and actually the great population tide which swept over the California border exceeded in volume the first migrations of the gold rush.

Now, San Francisco as a port is growing into another stage of its world importance.

This time, we have the added impetus of a general focusing of attention, both national and throughout the world, upon the region of the Pacific, and a general realization of the potentialities of the area, both sharpened by advances in communication and transportation.

Greatness will not fall into San Francisco's lap, however. There has to be some constructive action on our part.

Already, there is some; we are developing plans for a world trade center; our foreign trade zone awaits only the last word of official approval to become a reality; and the current discussion of tideland reclamation, in connection with the proposals to develop shoreline areas here for use as industrial and residential sites, illustrates the awakening interest in the city's possibilities. Next week, a California State Chamber of Commerce meeting is scheduled here at which the chief subject of discussion will be ways and means of increasing the flow of commerce through this—and other California ports.

This awakening interest is a wholesome sign. It should not be allowed to lag. We're started, but we've got quite a way to go yet, and we shouldn't slacken our pace.

M. E. Cremer, manager of the Marine Exchange, recently prepared an article on the steps which the port of New Orleans has taken to develop her maritime commerce, steps which have seen a 71.2 percent increase (during the first three quarters of last year over the same period the preceding year) in the movement of railway cars carrying export freight to that port. A foreign trade zone, diligent efforts to cultivate the good will of businessmen in Latin American countries situated to do business with the Gulf port, and zealous attention to rate structures affecting the port all have played a part in New Orleans' gains.

San Francisco can do likewise.

We've got our start. Let's keep going.

Accurate Forecast

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following article which appeared in the Lawrence Evening Tribune, Lawrence, Mass., on Friday, February 20, 1948:

ACCURATE FORECAST

In view of the widespread attention being given to the plight of thousands of wild ducks facing starvation this winter in the Parker River wildlife refuge established by the Federal Government over the opposition of numerous responsible citizens of Essex County, the interesting fact has come to light that the identical situation which exists there was predicted 5 years ago in connection with the fight against the project.

Among the foremost opponents of the plan from the time it was instituted by the United States Fish and Wildlife Service in the latter part of 1942 was the Committee on Preservation of Duck Hunting in Essex County and in accordance with its desires, Attorney Charles D. Mahoney, of Lawrence, the chairman, made an exhaustive study of the availability of the Parker River and Plum Island regions of the county for the establishment of the proposed wildlife refuge. His formal printed report to the committee in April 1943 went into great detail and in arriving at the conclusion that the project was neither necessary nor desirable and that the Federal agency should be requested to abandon its plans, one of Attorney Mahoney's outstanding contentions was the following: "The Fish and Wildlife Service claim that one of the greatest benefits of the proposed refuge will be that it will hold birds in the area for a longer period each fall. If it was established and had that effect, it would be a crime against the ducks. Having stayed too long, they would face slow starvation in a death trap."

Notwithstanding the strong objections of residents and property owners of the affected area, public officials, all the active sporting clubs in the county, and the Council of Sportsman's Clubs of Massachusetts, Inc., the United States Fish and Wildlife Service established the refuge and the situation forecast by Attorney Mahoney has become an exact reality, unfortunately for the ducks that are starving there this winter.

As evidence of its activity and versatility, the same Federal agency announced this week that the Albatross III, a converted United States Coast Guard vessel, is being made ready in East Boston to sail April 1 with a crew of 21 men to conduct the first official census of fish on Georges Bank, the Gulf of Maine, and off Nova Scotia. The operation will take several years and the United States Fish and Wildlife Service expects that it will result in a fairly accurate census of haddock, cod, flounder, halibut, and other food fish. As usual, the American taxpayers will foot the bills and it is to be hoped that they get a better return for their money than was the case in connection with the Parker River refuge; also that the fish fare better than the ducks did.

Charges on Germany Confirmed

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an article from the Times-Herald, Washington, D. C., February 23, 1948, written by John O'Donnell. It is self-explanatory.

Every loyal American and the country at large owes a debt of gratitude to men like John O'Donnell for the service they are rendering to the Nation.

Mr. O'Donnell is untiring in his efforts to expose Communists, who can only be considered in the light of traitors in their efforts to destroy our Government.

Mr. O'Donnell's article follows:

CAPITOL STUFF

(By John O'Donnell)

Pardon us for a moment while we spit on our hands, grab a handful of Old Mother Earth, take a couple of practice swings and then tee off for a sockeroo down the fairway—all without yelling any warning "Fore" into the ears of a gent right in our line of fire. The gent in this case is New York City's eminent counselor and distinguished member of the Empire State bar, Attorney Abraham L. Pomerantz, of 295 Madison Avenue, Manhattan.

Now there are between 750 and 800 accredited newspaper correspondents in this Capital. In addition, there are around 150 accredited magazine writers and another 100 or so radio commentators.

And out of this brigade, the O'Donnell is the one who has before him a plea from Counselor Pomerantz, the self-proclaimed chief United States prosecutor at the Nurnberg trial of Nazi industrialists urging a kick-in to fatten up a defense fund for the convicted Communist Leon Josephson, of Manhattan's Uptown, Downtown, and In My Lady's Chamber, and please send your check, old top, to one Raymond C. Ingersoll, of the Civil Rights Congress of 205 East Forty-second Street.

O. K. babies, you asked for it. Hold your hats and let's go. We shall take up in turn the case of Pomerantz who asks for the dough, Ingersoll who's holding it, and Josephson, who hopes it will spring him.

For eminent Counselor Pomerantiz: Last July 9, Representative GEORGE A. DONDERO, of Michigan, in the course of his attack on some of the phonies that the War Department had sent as United States spokesmen to the war trials at Nurnberg and other civilian posts in Germany read into the record that "Pomerantz was forced to resign" and then damned the New Deal Washington superiors who appointed him in the first place.

Congressman DONDERO then read Attorney Pomerantz' written declarations in which Pomerantz denounced the tardy efforts of the Truman administration to rid Federal departments of Reds and pinkos as "the most Nazi-like and terrifying law since the Alien and Sedition Act."

And, as Representative DONDERO then pointed out, Mr. Pomerantz by the way is now addressing the Communist-controlled New York State Progressive Citizens of America which is boosting the stock of Henry Wallace, leading Soviet apologist.

Later, the record shows that Pomerantz was a darling of the Daily Worker in many a clip. He wrote for Soviet Russia Today praising pinko Bill Shirer's End of a Berlin Diary, and signed an indignant letter denouncing the canning of the Reds in Hollywood.

Now for the boy who's slated to hold the swag bag to spring convicted Josephson. This is Brother Raymond C. Ingersoll.

Ingersoll we might point out first of all last year was a candidate for State senator from New York City's Harlem-dominated twenty-third assembly district.

But get this. According to the Department of Justice, such outfits as the Civil Rights Congress and the National Council of American-Soviet Friendship have been branded as Kremlin fronts, which function solely to overturn the Government of the United States by violence.

On October 10, 1947, Ingersoll filed, in accordance with the Foreign Agent and Lobby Act, a statement with the Clerk of the House of Representatives stating that he was on the pay roll of the Civil Rights Congress. On a letterhead of the National Council of American-Soviet Friendship, dated February 8, 1946, Ingersoll's name appears as a member of the board of directors.

Had enough? Well, let's go. Let's meditate on the boy they're soliciting the defense funds for, that fine outstanding American, Leon Josephson.

The Josephson racket in part was to take over the soft-headed upper crust of Manhattan's so-called cafe society and make the suckers like the idea of being slapped for a heavy tab while they lapped up, along with the booze, the all-important idea that their fathers, brothers, husbands who had earned the dough they were kicking in were really a bunch of capitalistic mobsters.

Which, all in all, was one of the smartest ways of taking suckers that we've yet met in the Red racket. The fall guys are not only taken for a ride, but they pay the fare as they go along.

Leon, according to the record, lived with his brother, Barney, down on Sixteenth Street, Manhattan, and his wife, Lucy, was a partner with Barney in the two cafe-society boob traps which were sold to the suckers as "hot spots with a social message" and where the philosophy of the proletariat could be

brought to high society without such repugnant requirements as rubbing elbows with the great unwashed.

One of Josephson's expensive Red traps was down in Greenwich Village, the second up on swankier East Fifty-eighth Street. As reporter Howard Rushmore noted a year ago these "two swanky night clubs which reaped hundreds of thousands of dollars of capitalist money while kidding patrons about the sad state of American democracy have for years been Communist Party fronts * * * Not only were Red Fascists assigned as entertainers, waiters, and captains, but Josephson was advised by high-ranking Communists to use Communist propaganda in shows for the cover charge customers."

Back in 1935 Leon Josephson, according to sworn testimony before the House un-American Activities Committee, was in cahoots with a Red fraudulent passport ring, and got nabbed in Denmark on charges of espionage.

Released from the Copenhagen jug he had a talk with Lester Maynard, American Consul General. And this American diplomat in a report to the State Department at that time gave this revealing bit of dope on the kind of a bird Josephson is:

"He explained to me his personal views in regard to the Communist movement, the pertinent part of which was that he considered the orders of his committee (Commie) superior to the laws of the United States and that he would do anything 'short of murder' to carry out the committee's orders."

The European Recovery Program and the International Trade Organization

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. FULTON. Mr. Speaker, it is becoming increasingly clear that the efforts to free world trade from artificial shackles and restrictions which diminish instead of increase it now going on at Havana through the conference to organize an International Trade Organization are essential to the success of the European recovery program. Without an enhanced opportunity for foreign trade it is difficult to see how the 16 western European nations to benefit from the European recovery program can pull out. The whole program is premised upon a greatly increased export by those countries taken up for the most in income they had before the war on overseas investments, shipping, insurance, and other similar remittances. The enhanced productivity and the vastly increased markets in the world generally make this kind of world stability distinctly practicable. The following article from the New York Herald Tribune of January 28, 1948, by my colleague, Hon. J. K. JAVITS, of New York, together with me, a delegate to the ITO Conference on Trade and Employment at Havana, explains this subject in all its practical aspects.

THE VITAL ISSUE AT HABANA—WORLD ECONOMIC RECOVERY AWAITS SUCCESSFUL LAUNCHING OF INTERNATIONAL TRADE ORGANIZATION

(By Representative J. K. JAVITS, Twenty-first Congressional District, New York)

There has been considerable misunderstanding about the proposals for an International Trade Organization (ITO) now being considered by about 60 nations of the United Nations Conference on Trade and Employment at Habana. Especially has it been charged that the ITO represents a breakdown of the protective-tariff policies of the Republican Party. Without endeavoring to defend a traditional high-tariff policy at this stage of the world's economic development, it is fair to say, first, that our concern with the ITO is due to our concern with the success of United States foreign and domestic policy; and second, that the ITO does not break down the existing United States tariff policy and does not even change it.

It should be made clear here that no such organization as the ITO has as yet been formed. It is significant that among the 60 nations at Habana negotiating to form it are the world's principal trading nations except for the U. S. S. R., but that included at Habana are two of the so-called Soviet satellites—Czechoslovakia and Poland—as well as countries newly formed as a result of the break-up of prewar empires—Burma, Pakistan, and the Indonesian Republic.

This whole idea of fairer world trade is a United States sponsored idea. It had its origin in the United States-British lend-lease agreements early in the war in which the British promised to negotiate for lifting barriers to world trade after the war. The United States held the British to their promise and came out with proposals as early as December 1945. These proposals were refined in several international conferences, culminating in the conference at Geneva, which lasted from April to August 1947. At Geneva the 18 principal trading nations of the world, other than the U. S. S. R. adopted a draft charter for the ITO consisting of 9 chapters and 100 articles. This charter, if approved by a majority vote of the nations at Habana, will come into force 60 days after at least 20 of the nations at Habana ratify it.

The ITO charter proposes to bring about agreement on the part of the principal commercial nations of the world that artificial barriers against world trade shall be given up. These, for example, are quantitative restrictions—limitations on the quantity of a certain type of goods which may be imported into a particular country; preferential arrangements on imports between two countres which discriminate against other countries; discrimination in internal commerce with regard to excise taxes or sales restrictions on imports; or subsidization of exports by governments in order to capture foreign markets. These practices grew up during the depression of the thirties, when individual countries—and even the traditionally free-trade British Empire—thought they could insulate themselves against the economic troubles of others by building Chinese walls of trade restrictions and trade discriminations.

They were refined into a science by Hjalmar Schacht and the Nazis, who victimized half of Europe with coercive barter agreements, by which they foisted unneeded harmonicas and ersatz aspirin on peoples who were breaking their backs to produce foodstuffs for them. The ITO charter proposes to bring under control these foreign trade weapons, but as to tariffs, the proposed ITO charter only obligates the countries concerned to enter into "negotiations" for the progressive reduction of tariffs.

Our national tariff policy, today, operates under the reciprocal-trade agreements program in which selective reduction of tariffs with other countries is possible on a bargaining basis; that is if other countries will reduce, we will reduce, and makes the reduction available to all with whom we have trade treaties under the most-favored nation principle.

Let no one suppose that all is sweetness and light at Habana. A Latin-American and far-eastern group, spearheaded among others by Argentina, which consider themselves industrially underdeveloped states, are fighting tooth and nail for United States agreement to their continuing various kinds of restrictive foreign-trade practices. But where the shoe pinches is that these restrictions work both ways; if we are excluded from some foreign markets we can also exclude others from our own—and ours is the richest in the world. In these differences Brazil has been our stanch ally. Other nations at Habana have other troubles. Czechoslovakia and Poland are worried about their trade relations with the U. S. S. R., likely to be a nonmember of the ITO, while others express concern with the rights the ITO charter may make them extend to foreign investors.

Yet, there is a remarkable will to succeed at Habana and clear evidence in almost all the delegations that the price of failure in terms of a new international depression is well realized. And when we consider the restrictions to international trade which exist right now there is good reason for alarm. Of the total of 87 trading nations listed by the Office of International Trade of the Department of Commerce, 55 tightly control imports and require a Government permit before anything can be brought into the country; 61 tightly control foreign exchange to be used to pay for imports, and 68, or about 80 percent, have some type of import or exchange controls.

Since VJ-day two new dramatic factors have appeared on the world trade scene: (1) The effect of the destruction of European production resources and Soviet influence giving a great impetus to state trading in Europe as contrasted with private trading; and (2) the vastly increased United States industrial production rate making it the only really big source of supply of manufactures for export in the world. The latter trend is shown dramatically by the high degree of unbalance between our exports and imports—our exports running at the rate of about $15,000,000,000 a year and our imports at about $7,000,000,000 a year. Accordingly, the other trading nations of the world are now in the position where they fear that their markets will be flooded by our manufacturers and that their resources will be drained away by our goods as soon as they are no longer the proper subjects of benefits from us such as those in the various relief bills we have passed since the war and in the proposed ERP itself.

Without an international trade organization, we would expect that these countries would erect even higher barriers against our trade and engage in more discrimination and preferential arrangements than ever; and in view of the prevalence of State trading they are in a better position than ever to do so. If we retaliated, as indeed we would, and so would other nations, it would defeat the capability of the western European nations in the ERP to recover their trade and would jeopardize our own domestic economy.

Thus a guaranty of fairer world trade is on the one hand essential to our own economy and on the other vital to the success of the ERP. This is shown very clearly by the import figures. According to our past history, and taking into consideration the overall increase of about one-third in prices generally since prewar, we should be importing not $6,000,000,000 worth of goods but $9,000,000,000. Our imports from South America, from Canada and from Central America have held up to this level, but our imports from Europe are about one-half of what they were prewar, and from Asia about 25 percent; yet it takes just about $2,000,000,000 a year in additional trade to make up for the western European nations what they have lost in income from their investments, from shipping, insurance, and other enterprises which they had prewar but which they do not have postwar.

We are now practically all agreed that hunger and despair in the world are the

perfect breeding ground for war, and yet an analysis of the world income figure shows how far we are from decent world living standards. Individuals in most countries have annual incomes which are a small fraction of that of the people in our country. Contrasted with our per capita income of $1,200 in 1946, countries like Colombia, Brazil, Guatemala, and Chile show per capita incomes of about $100 a person a year, and more industrially developed countries like France, the United Kingdom, and Argentina show incomes per capita of between $300 and $500 a year. Standards of living in the world are very low indeed, but with enormous increases in production in the United States and enormous increases in production in other countries to be logically expected as a result of the new direction of our foreign policy toward financing recovery, self-help, and mutual cooperation, great vistas of higher standards of living and general well-being are being opened up for us and other peoples.

Our whole purpose in undertaking the ERP and in our foreign policy generally is to attain a prosperous and peaceful world. This, it seems clear, is most likely to be attained if world trade can flow fairly and easily. It is the surest guaranty that programs of self-help and mutual cooperation like the ERP will realize their objective and really enable the nations that participate to continue to stand on their feet at the end. Success in organizing an ITO at Havana, therefore, will demonstrate the ability of the democratic nations to unite on economic principles which are essential to their success, while failure will be seized upon as the surest sign that the economic cataclysm is on the horizon which Soviet-inspired propagandists so insistently claim to be inescapable for the democratic world. Any such failure will be exploited to the full by those who seek to drive nations at this very moment engaged in a grim struggle for their own freedom into becoming "police states." United States leadership at Havana must be unfaltering. The democratic nations in conference there cannot—they dare not—fail.

Praise for Congressman Clifford P. Case, of New Jersey

EXTENSION OF REMARKS
OF
HON. EDWARD J. HART
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. HART. Mr. Speaker, at the annual dinner of the Lincoln Association of Jersey City, which since 1866 has never failed to commemorate the birthday of the Great Emancipator, one of the two main speakers was our colleague the gentleman from New Jersey, Hon. CLIFFORD P. CASE. I am pleased to enclose herewith a brief but complimentary appraisal of the speech he delivered on that occasion, as it appeared in the Jersey Journal of Saturday, February 14. It is as follows:

The people of Union County should be proud of CLIFFORD P. CASE, their Representative in Congress. His speech at the Lincoln Association of Jersey City was a courageous and plainly worded program of the kind of common sense which made Abraham Lincoln such a terror to his political rivals.

The Other Side of the Road

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. MULTER. Mr. Speaker, this is Brotherhood Week. It is being observed throughout the country in an endeavor to emphasize to all of the people of the country that these United States were conceived and made strong by religious men who fervently believed in practicing the brotherhood of man under the Fatherhood of God.

Permit me to direct your attention to an editorial written by the Rev. Robert W. Searle, D. D., which appeared in a recent issue of the Protestant Church Life, official weekly publication of the Protestant Council of the City of New York. It reads as follows:

THE OTHER SIDE OF THE ROAD

"The other side" of the road has been deeply grooved by the feet of the many who have passed by.

The original Priest and Levite doubtless had ecclesiastical appointments which could not be deferred, or perhaps there were traditional services in which they were expected to participate. Whatever it was that caused them to pass by on the other side may have satisfied their conscience, but it did not in the supreme judgment of Jesus equal the obligation that lay on the far side of the road in the form of a human being in immediate need.

That deep groove which they initiated has been hollowed out by the feet of countless priests and Levites who, in the generations since, have followed the original footsteps, governed in their action by similar motives.

Today it is humanity itself that lies wounded by the roadside, and, because of America's unique resources, it is we, the clergy, the officials and the members of the American churches, who are walking the Jericho Road. We have appreached the place where wounded humanity lies. We are at the moment of decision.

Is it more important for us at this moment to carry on our traditional ecclesiastical duties in the traditional and accepted pattern? Or should we, as clergy, officials, and laymen, agree to deviate our patterns so far as necessary to reach the place where wounded humanity lies, that we may do our utmost to make the will of America the will of the Good Samaritan, who not only bound up the wounds but made provision for "whatsoever more was needed"?

Also most apropos is the following verse, written by Rabbi Joseph Klein, of Temple Beth Emeth, of Brooklyn, N. Y.:

A THOUGHT FOR BROTHERHOOD MONTH

A prophet spoke this long ago
In ancient Palestine;
A simple statement of the faith
He held to be divine—
"It hath been told to thee, O man,
What to the Lord is good,
And what He doth require of thee,
Whatever be thy mood—
To do the just
And love the kind,
And humbly walk
With God in mind."

No observance of any brotherhood movement should pass without a rereading of Walter W. Van Kirk's Ten Commandments of Good Will, which follow:

TEN COMMANDMENTS OF GOOD WILL

I. I will respect all men and women regardless of their race or religion.

II. I will protect and defend my neighbor and my neighbor's children against the ravages of racial or religious bigotry.

III. I will exemplify in my own life the spirit of goodwill and understanding.

IV. I will challenge the philosophy of racial superiority by whomsoever it may be proclaimed, whether they be kings, dictators, or demagogues.

V. I will not be misled by the lying propaganda of those who seek to set race against race or nation against nation.

VI. I will refuse to support any organization that has for its purpose the spreading of anti-Semitism, anti-Catholicism, or anti-Protestanism.

VII. I will establish comradeship with those who seek to exalt the spirit of love and reconciliation throughout the world.

VIII. I will attribute to those who differ from me the same degree of sincerity that I claim for myself.

IX. I will uphold the civil rights and religious liberties of all citizens and groups whether I agree with them or not.

X. I will do more than live and let live—I will live and help live.

Mexican Trade Agreement

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. REED of New York. Mr. Speaker, the President of the United States on February 2 sent to this Congress certain recommendations for a so-called civil-rights program. In his message he listed the securing fully of all our essential human rights as the most important of all of the goals toward which we should strive in order to strengthen our democracy. He said further, and I quote:

Unfortunately there still are examples—flagrant examples—of discrimination which are utterly contrary to our ideals.

I wish to call the attention of my colleagues to one of the most flagrant of these discriminations that has come to my attention. What makes it even more flagrant and undemocratic is the fact that it stems from and is the responsibility of our own Chief Executive.

I make no bald, unsupported statement. I offer proof, and I challenge the administration to attempt to disprove it. They dare not try—their only salvation lies in keeping it from the public—just one more violation of their obligations.

In 1942 the United States and Mexico negotiated a trade agreement in which each country agreed to reciprocal tariff reductions. In that agreement, if the President and his negotiators conformed to the spirit and the letter of the Trade Agreements Act then the tariff concessions granted by each party were roughly equivalent in value. The life and meaning of the agreement hinged on the continued effectiveness of the concessions

granted by one as a quid pro quo for those granted by the other.

This agreement became effective January 30, 1943, and was for a basic period of 3 years and thereafter until terminated by either government. This basic period expired just 2 years ago, but even as early as 1945 Mexico notified the United States that the terms of the agreement could no longer be adhered to. Mexico attempted over a long period to withdraw certain concessions and to terminate the agreement. If the ultra-secret records of the President's inner-sanctum, State Department could be made public we would know for a surety that the United States tried desperately to keep the agreement alive. Such termination would have a serious effect on the whole program and prove what has long been maintained by American industry—that now is no time to force the world into a free-trade strait-jacket.

The State Department may deny that they ever received a definite, written unequivocal notice that Mexico intended to terminate the agreement. Only their secret files would reveal the truth of the matter, but we do know that about July 1947 this country was notified by Mexico of her positive intention to increase all her tariff rates and to abrogate every concession granted to the United States. Furthermore, on December 20, 1947, Mexico unconditionally and without a single reservation canceled, abrogated, and terminated every single concession granted under the terms of the agreement and increased duties and tariff rates to a point higher than those prevailing in 1942 when the agreement was negotiated.

Now the administration may claim that the agreement was merely modified by this drastic action. This would be a subterfuge so open and serious that I wonder if even the diplomatic immunity which the State Department so frequently hides behind would shield them. Yet it appears to be the President's claim.

The agreement gave either side the authority to terminate it. Mexico has taken every conceivable action designed to do so and it seems inconceivable that anyone would deny that the agreement has been ended. The President has no authority under any law, emergency or otherwise, to continue the many tariff cuts proclaimed when the agreement was made effective. He is openly and brazenly flouting the law and the rights of our laborers, producers, and of Congress itself.

I want to make one thing perfectly clear. I do not, and have not, claimed that the concessions made to Mexico have, as yet, wrecked American industry. It may be conceded that, the condition of the world being what it is, many of the concessions made to Mexico could be continued for some time without having too serious an effect on very many domestic industries. I have no intention of trying to narrow my vision in that respect. But all that is entirely beside the point.

The President has not kept the faith; he has not abided by his legal obligations. The termination of the Mexican agreement might be denied by him, but the continuation of American concessions cannot be justified in any sense of the word, under the Trade Agreements Act, his emergency powers, or in any other way. If the country of Mexico has only modified the former agreement, in the eyes of the President of the United States, then certainly every other nation with which we have agreements may properly, and many of them have already, renounce or modify their concessions to us without any feeling of having violated solemn obligations.

To show how bad the situation really is and how far the administration has gone in its ignoring of the legal rights of our citizens I call your attention to a recent announcement by the Acting Secretary of State and the Secretary of the Committee for Reciprocity Information that interested parties might file briefs and appear and be heard in connection with the renegotiation of the Mexican agreement. The public notices themselves completely transgress the first of the ideals which he urged upon Congress in his recent message, viz: to secure fully our essential civil, and human rights. These announcements specifically limited those who could appear and present their case to exporters. Domestic producers, labor organizations, importers, had no standing, had no apparent right or interest in the matter.

It is obvious to any close observer that the President does not intend to withdraw any of the concessions made to Mexico regardless of the rights of domestic labor or industry. He apparently intends to ask Mexico to revise certain of its tariffs which in some instances have been raised to the astronomical heights of over 5,000 percent. In this renegotiation of an agreement which has actually terminated but which the President claims was only "modified," the United States will have to do two things:

First. It will be necessary to prove to Mexico that reducing of duty will not injure the industries of that country. Our negotiators failed to do that in more than 2 years of attempts to dissuade the Mexican Government from terminating the agreement.

Second. They must offer the Mexicans some concessions, have everything to lose and nothing to gain unless some quid pro quo is offered.

Mr. Speaker, this situation is only typical of the mismanagement, secret negotiating, and outright violation of the authority granted to the President and the State Department to enter into foreign agreements. I wonder if the President will, after such fiascoes, ask this Congress for any extension of his authority to enter into these agreements. I wonder if he can face the producers of American goods who were denied the right to appear and present their case, and talk to them about human rights and civil liberties. I wonder if he will ever make an attempt to explain his actions to the American people.

European Recovery Program

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dorothy Thompson, from the Washington Star of February 23, 1948:

PREAMBLE TO ERP SEEN MAKING ERROR BY IGNORING PEOPLE'S DESPAIR IN EUROPE

(By Dorothy Thompson)

The preamble to the European recovery program reiterates what I believe to be a fundamental error of analysis of the European crisis. This error is that the crisis is primarily economic. I think it is not.

The economic crisis is the result of European social, political, and spiritual crises, not the other way around. That is why the crisis cannot and will not be cured by economic aid. The aid is necessary to prevent imminent collapse. But it is folly to expect that, of itself, it will result in recovery.

The social and political crisis of all Europe is not postwar. It was prewar, otherwise there would have been no war—no Mussolini, no Franco, no Hitler, no periodic and perpetual breakdowns. Since World War I, there has been no prolonged period of social stability in any major country of Europe. The reasons, I repeat, were not primarily economic.

DESPAIR LED TO NAZIS

Germany did not go into the Nazi revolution because the people were starving or money was valueless or only because of a great depression. The latter accelerated the Nazi revolution but did not create it. It was created out of that always revolutionary phenomenon, spiritual despair, and collapse of faith in existing institutions of all kinds—a feeling of rootlessness and inner chaos which expressed itself everywhere in the phrase: "It can't go on like this; something must happen."

The Nazi revolution was itself nihilistic, chaotic in its essence, but its initial power consisted in creating the illusion that it would build a new organic society in which everyone would know his place and, therefore, be at peace.

The Nazi revolution presented a quiet voluntary relinquishment of "individual freedom," the maintenance of which the preamble to the ERP bill reiterates to be our objective. The reason so many millions were willing to relinquish individual "liberty" was, first, that the whole trend of modern times—in Europe, and here too—has progressively subordinated individual liberty to what is conceived to be the social or national welfare. Thus it created a schism between rights of the individual and the rights of society as a whole. Somewhere the schism had to be breached, and the Nazi revolution seemed to many a way of breaching it. It offered, for instance, a planned economy—and furthermore it delivered one which worked, as far as Germany herself was concerned.

SIMILAR TO FRENCH CRISIS

The French crisis is not dissimilar. What we have been seeing is the liquidation of the nineteenth-century liberal era, the liquidation bringing with it immense upheavals.

Why, for instance, must France import food? France is a rich agricultural country, large in area for its population, with further rich resources in its African colonies. Wholly

situated in the temperate zone, with plentiful rainfall and excellent soil, France is one of the more favored nations of the earth.

France must import food because of the famous "scissors" between town and country. The French peasant still is living in the liberal era. The French industrial worker, however, is trying to live in a Socialist era. The French farmer expects to sell his produce for real money or real goods and at a profit to himself, while the French industrial worker wants to eat well, cheaply. If the farmer cannot get a profitable price for bread grains, he turns them into cattle food and if he cannot get a profitable price for meat, he butchers for home consumption or sells to black marketeers.

Precisely this condition in Russia in the early thirties led to the forcible collectivization of agriculture and the deportation of millions of "kulaks"—successful peasants—to Siberia.

New York State Legislature's Memorial Resolution for Lifting of Palestine Arms Embargo

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. JAVITS. Mr. Speaker, the legislature of the State of New York has passed a resolution memorializing the President, the State Department, and the Congress to take immediate steps to cancel the present embargo on the shipments of arms and munitions to the Jewish people of Palestine who are defending the decision of the United Nations, which follows. The present situation in Palestine demands prompt, realistic, and constructive action along the lines called for in the resolution:

Senate Resolution 70

Whereas the United Nations has decreed that Palestine shall be partitioned into separate Arab and Jewish states; and

Whereas the Arab nations, in defiance of the decree of the United Nations, have refused to participate in negotiations preparatory or subsequent to the vote on the partition plan; and

Whereas the Arab nations have persistently followed a course of terror and violence designed to nullify and prevent the implementation of the United Nations Palestine decision; and

Whereas the Jews of the world, in a spirit of amity and compromise born of the suffering and persecution which they have endured through the ages, have gratefully accepted and agreed to be bound by the decision of the United Nations on Palestine although it does not carry out promises made to them in the Balfour declaration; and

Whereas the public press carries daily accounts of unprovoked mass Arab raids and terroristic attacks against the Jewish people in Palestine and the toll of wounded and dead Jewish people continues to mount with unabating intensity; and

Whereas the Arab attacks on the Jews threaten to disturb the peace of the world and the Jewish people should be permitted, assisted and encouraged to arm and defend themselves against such attacks; and

Whereas this Nation, through its embargo on arms and munitions destined for shipment to the Middle East, has prevented the Jews of Palestine from obtaining the weapons of defense sorely needed by them to resist and defend themselves against the attacks of the Arabs, while the Arabs continue to secure arms and munitions from neighboring Arab and other states; and

Whereas the Honorable William O'Dwyer has openly announced his opposition to the arms embargo and has urged the Government of the United States to cancel the same and to permit the immediate shipment of weapons and munitions to the embattled Jews of Palestine; and

Whereas the people of the State of New York are justifiably disturbed and alarmed over the plight of these defenseless Jews in Palestine and urgently implore the President and the State Department to cancel the arms embargo without further delay: Now, therefore, be it

Resolved (if the assembly concur), That the President, the State Department, and the Congress of the United States be and they are hereby respectfully memorialized to take such steps as may be necessary to cancel the present embargo on the shipment of arms and munitions to the Jewish people of Palestine who are defending the decision of the United Nations and make possible the immediate shipment of arms and munitions for the defense of the Jewish people of Palestine against the unprovoked acts of aggression and warfare of the Arabs; and be it further

Resolved (if the assembly concur), That copies of this resolution be immediately transmitted to the President of the United States, the Secretary of State of the United States, the Secretary of the Senate of the United States, the Clerk of the House of Representatives of the United States and to each Member of Congress duly elected from the State of New York.

By order of the senate,
WILLIAM S. KING,
Clerk.

In assembly, February 10, 1948, concurred in without amendment.
ANSLEY B. BORKOWSKI,
Clerk.

Reserve Officers' Association Commended by Secretary of the Navy

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. VAN ZANDT. Mr. Speaker, the Reserve Officers' Association, which speaks for the Reserves of the country, is making a great contribution to our national defenses through its sponsorship of National Security Week, February 12 to February 22, inclusive.

The Reserve Officers' Association enjoys the support of all the services, and among the many commendations is one from the Department of the Navy, over the signature of the Secretary, John L. Sullivan, which is as follows:

DEPARTMENT OF THE NAVY

I am very grateful for the opportunity to express on behalf of the Department of the Navy this unqualified endorsement of the twenty-sixth annual observance of National Security Week, sponsored by the Reserve Officers' Association of the United States.

For the past 25 years your splendid association has sought diligently to overcome public apathy toward the urgent needs of the Military Establishment and the problems of national security. You are performing a splendid service and making a great contribution to our national welfare, for it is upon the people themselves that the strength of our armed forces and the safety of our Nation ultimately depend.

The need for this service is great today. Public interest in preparedness tends to reach its lowest ebb immediately following the cessation of hostilities. This is a period hazardous to our national safety, for it is difficult to maintain our armed forces at their authorized complement on a voluntary basis.

I therefore commend the Reserve Officers' Association for its distinguished service in stimulating public awareness of the need for national security and of the means for insuring it. You are fighting a good fight, and—speaking for the Navy—I encourage you to persevere in this work to the satisfactory realization of our mutual objectives.

JOHN L. SULLIVAN,
Secretary of the Navy.

Internship in Government Proposed—Our Own American Government—People Should Be Fully Acquainted With Their Own Government Here in the United States—A Knowledge of Our Own Government Will Be the Greatest Bulwark Against Any Foreign Ideologies

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. PATMAN. Mr. Speaker, I am offering today a bill which is a step in the direction of giving young men and women interested in public life the best possible on-the-job training in legislative and administrative functions of our National Government. This will open up a vast amount of potential leadership.

The bill, if enacted, will create a commission to prepare a plan to enable selected students, who are training and who desire to train for Government service, to actually serve an internship in the Federal Government.

The bill is as follows:

A bill to create a commission to prepare a plan to enable selected students who are training or who desire to train for Government service to actually serve an internship within the Federal Government

Be it enacted, etc., That there is hereby created a Commission on Internship in Federal Government, to be composed of the following members, to be appointed by the President: (1) Three officers of the executive branch of the Federal Government; (2) one representative from each of four different veterans' organizations incorporated by act of Congress; (3) such other members as the President deems advisable, also three Members of the Senate, to be selected by the President pro tempore of the Senate; three Members of the House of Representatives, to be selected by the Speaker of the House; and

three officers of the judicial branch of the Government, to be selected by the Chief Justice of the United States. The members of the Commission shall select a Chairman from among their number. Any vacancy occurring in the membership of the Commission shall be filled in the same manner as the original appointment.

SEC. 2. The Commission is authorized and directed to prepare a comprehensive plan for the establishment of an internship program to enable selected students who are training or who desire to train for Government service to serve an internship within the Federal Government, thereby gaining practical experience in the operations of all branches of the Federal Government so that they may be better fitted to perform their duties in Government service as well as their obligations as citizens of the United States. The Commission shall submit such plan to the Congress and to the President as soon as practicable after the Eighty-first Congress is convened and organized. Ten days after the submission of such plan the Commission shall cease to exist.

SEC. 3. (a) The members of the Commission shall receive no compensation for their services as such, but they shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of their duties as members of the Commission.

(b) The Commission is authorized, without regard to the civil-service laws or the Classification Act of 1923, as amended, to appoint and fix the compensation of such employees as it deems necessary to the performance of its duties.

(c) All expenditures of the Commission shall be allowed and paid upon the presentation of itemized vouchers therefor approved by the Chairman of the Commission.

SEC. 4. There is hereby authorized to be appropriated the sum of $50,000, to carry out the purposes of this act.

DISSEMINATION OF KNOWLEDGE AND INFORMATION

George Washington and Thomas Jefferson were both great believers in dissemination of knowledge and information to the people. It was their belief that if the people knew the truth, a great majority of them would do what was right, which would result in a good government, established upon the will of the people. In furtherance of that idea our Government, since its beginning, has allowed newspapers to be circulated free within the county where published, in order to encourage local newspapers that would carry current news and keep the people informed. This policy kept subscription rates to the minimum and caused wider distribution.

Another good policy was that the distribution of newspapers and magazines and all reading matter outside the county of publication should be sent through the mails at a very low postage rate; in fact, so low that the Government has made appropriations to make up for the deficit every year, but it caused a much wider distribution of reading matter.

In this day and age we are witnessing attacks upon our own American Government, which is the finest and greatest Government on the face of the earth. It is my personal belief that the best defense of our own Government will spring from our own people, who really know and understand our form of government.

When I first came to Congress—20 years ago—I made plans to prepare for my constituents each week a report in the form of a weekly letter, which has been published in most of the newspapers in the district I represent since that time. In order to properly discuss our Government, a question-and-answer method was adopted. Each week I would have in the weekly letter two or more questions and answers bringing out the important points in connection with the Federal Government. This method proved so popular that a number of the public-school superintendents asked for copies. They were reproduced in mimeographed form and distributed. Later, these questions and answers were inserted in the daily CONGRESSIONAL RECORD. Members of Congress expressed an interest in them and they were reprinted as a public document and distributed by many Members of Congress to their constituents, which aroused the interest of the citizens throughout the country. More than a million copies of these documents were sold by the Government Printing Office.

The 1946 revision of my booklet, which was a public document on Our American Government—What Is It? How Does It Function? became obsolete due to changes brought about in congressional procedure and executive policies caused by the enactment of the Maximum Employment Act, the Legislative Reorganization Act, the Atomic Energy Commission Act, the Armed Services Unification Act, and others.

Since it was not possible to have an expanded, up-to-date book printed as a public document, a private publisher—Ziff-Davis Publishing Co., of Chicago—agreed to print the book in a form that would insure wide distribution.

The present book includes 1,001 questions and answers and is now published by the Ziff-Davis Publishing Co. under the title, Our American Government—The Answers to 1,001 Questions on How It Works.

This book, I hope, is in the public interest and will make a contribution toward informing the people of our country on the virtues of our own great Government.

Permission having been granted, I am inserting herewith an editorial which appeared in the New York Times, January 25, 1948, on Schooling for Government:

SCHOOLING FOR GOVERNMENT

A number of recent developments point to the urgent necessity for reexamining the haphazard lack of system by which we staff our Government on all levels, Federal, State, and municipal. Yesterday's Times, for instance, reported some remarks made before the American Society of Civil Engineers, meeting in New York City, by the executive director of the Tax Institute, Inc. The engineers were told that leaders of today are as unprepared to plan a city functionally adapted to the needs of tomorrow as the leaders of 150 years ago were in planning a city for present needs. During the past week the Citizens' Budget Commission has been revealing some of the fantastic inefficiency and waste in New York City's sprawling government, whose expense budget runs now to more than $1,000,000,000 a year. Everywhere, in cities, States, and in the Federal Government, costs have been rising, and anxious officials are seeking ways that will make administration more businesslike. For government, our largest business, is far from being run like a business.

It is a curious fact that, as personnel numbers and Government costs have risen, as services expand and new concepts of responsibility take hold, we have paid little more attention than we did years ago to the training of young men and women specifically for careers in civil service and the higher posts in government. A young man may set his goal to be a physician and work specifically toward that end from his high-school days. He may do the same with law, with engineering, with teaching, and an infinite number of other specialties. But how rare it is to hear a young person say that he is studying for government.

As taxpayers and otherwise we are greatly the losers by the failure to see this problem whole and act upon it. President Truman commented on it some months ago at Princeton, which is one of the few institutions where a substantial attack is being made on this challenging problem. It would be a fine thing if a close partnership could be worked out between our colleges and our various governments whereby students training for government could actually serve on a part-time or vacation basis in municipal, State, and Federal offices, a form of internship not only educational for the students but helpful to government itself. There have been some experiments along this line, but no wide use of the plan. This might be arranged on a scholarship basis. It would bring fresh ideas into musty Government departments. It would also tend to make the schooling for government less theoretical and more practical. With a trained body of graduates to draw upon, the civil service would be constantly refreshed and strengthened.

Our governments have been extremely slow to recognize their needs and opportunities for college-trained staffs. Their tardiness is matched only by the lack of emphasis that our educational leaders have given to this field of possible service. Unfortunately, there is little evidence even now of any emerging program to remedy the defect.

I am also inserting herewith excerpts from President Harry Truman's talk at Princeton University recently as it appeared in the New York Times, June 18, 1947. It is as follows:

On an earlier occasion of equal significance in the history of this university, the President of the United States, Grover Cleveland, spoke in 1896 at the Princeton sesquicentennial ceremonies. President Cleveland seized that opportunity to charge our colleges and universities with the task of supplying a "constant stream of thoughtful, educated men" to the body politic—men who were eager to perform public service for the benefit of the Nation. He chided our institutions of higher learning for their lack of interest in public affairs, and held them responsible for the disdain with which many of the best-educated men of the day viewed politics and public affairs.

Happily for us, that attitude on the part of our universities vanished long ago. I am certain that no observer of the American scene in recent years has detected any reluctance on the part of our educators to enter the political arena when their services have been asked. And our schools have made much progress in supplying the "constant stream of thoughtful, educated men" for public service called for by President Cleveland half a century ago.

That task is more important today than at any previous time in our national history.

INTEGRITY NEEDED AS NEVER BEFORE

In our free society, knowledge and learning are endowed with a public purpose—a noble purpose, close to the heart of democracy. That purpose is to help men and women develop their talents for the benefit of their

fellow citizens. Our advance in the natural sciences has led to almost miraculous achievements, but we have less reason to be proud of our progress in developing the capacity among men for cooperative living. In the present critical stage of world history, we need, more than ever before, to enlist all our native integrity and industry in the conduct of our common affairs.

The role of the United States is changing more rapidly than in any previous period of our history. We have had to assume world-wide responsibilities and commitments. Our people have placed their trust in the Government as the guardian of our democratic ideals and the instrument through which we work for enduring peace.

The success of the Government's efforts in achieving these ends will depend upon the quality of citizenship of our people. It will also depend upon the extent to which our leaders in business, labor, the professions, agriculture, and every other field, appreciate the role of their Government and the greatness of its tasks.

Our schools must train future leaders in all fields to understand and concern themselves with the expanded role of government, and, equally important, to see the need for effective administration of the Government's business in the public interest.

SHORTAGE OF OFFICIALS "CRITICAL"

I call your attention particularly to the problem of effective administration within the Government, where matters of unprecedented magnitude and complexity confront the public servant. If our national policies are to succeed, they must be administered by officials with broad experience, mature outlook, and sound judgment. There is, however, a critical shortage of such men—men who possess the capacity to deal with great affairs of state.

The Government has recruited from our academic institutions many members of its professional staffs—geologists, physicists, lawyers, economists, and others with specialized training. These men are essential to the conduct of the Government and the welfare of the Nation. But we have been much less effective in obtaining persons with broad understanding and an aptitude for management. We need men who can turn a group of specialists into a working team and who can combine imagination and practicability with a sound public program.

All large organizations, public or private, depend on the teamwork of specialists. Coordination is achieved by administrators trained to assemble the fruits of specialized knowledge and to build on that foundation a sound final decision. Men trained for this kind of administrative and political leadership are rare indeed.

In the task of finding and training men and women who will add strength to the public service, universities have a particular responsibility. They should develop in their students the capacity for seeing and meeting social problems as a whole and for relating special knowledge to broad issues. They should study the needs of Government, and encourage men and women with exceptional interests and aptitudes along the necessary lines to enter the Government service.

WOODROW WILSON SCHOOL CITED

The Woodrow Wilson School of Public and International Affairs of this university was established with this purpose in mind. It seeks to prepare students for public careers. It is significant that the school bears the name of a statesman whose concept of civic duty contributed so much to the Nation and to the world.

Of course, the Government cannot and does not expect to rely entirely upon our educational institutions for its administrators. It must bring into service from business and labor and the professions the best qualified persons to fill the posts at all levels.

The Government must take several steps to make its career service more attractive to the kind of men and women it needs.

Salary limitations prevent the Government, in many instances, from securing the kind of executives required to manage its vital activities. Capable administrators are too frequently drawn away from the Government to private positions with salaries many times what they could earn in Government service. This situation can be remedied only by laws to bring salaries more nearly into line with the heavy responsibilities that executives carry at the higher levels in the public service.

The complexities of the tasks now facing our top officials force them to spend most of their time in studying matters of policy. These officials should be supported by a career group of administrators skilled in the various aspects of management. If capable men and women can look forward to holding such posts as a reward for able service, they will be more eager to accept Government employment.

TRAINING PROGRAMS HELD NEEDED

Because of the difficult tasks of Government today, we should plan a program for the systematic training of civilian employees once they have entered the public service. It is not generally possible at the present time for the Federal Government to send its employees to universities for special short-term training programs. Nor is it permissible under existing law to spend Federal funds for Government schools to develop the knowledge and techniques required by officials in their work.

This is a problem that can be solved only by the joint efforts of the Government and the universities. Training programs can be formulated both on the job and on the campus. The Government must make provision for its employees to participate. The universities will need to provide courses well adapted to increasing the effectiveness of the employee in his job. Such a plan is certain to pay substantial dividends.

I have been speaking about the important contribution which educational institutions can make in the service of the Nation through preparing men and women to administer our far-flung public enterprises.

Statement of Mr. Michael A. McGrath

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include a statement of Michael A. McGrath, national president of the Ancient Order of Hibernians and Ladies' Auxiliary in America, before the Foreign Affairs Committee, United States House of Representatives, on February 5, 1948:

STATEMENT OF MICHAEL A. M'GRATH, NATIONAL PRESIDENT OF THE ANCIENT ORDER OF HIBERNIANS AND LADIES' AUXILIARY IN AMERICA, BEFORE THE FOREIGN AFFAIRS COMMITTEE, UNITED STATES HOUSE OF REPRESENTATIVES, FEBRUARY 5, 1948

Gentlemen, my appearance before your committee is in my capacity as the national president of the Ancient Order of Hibernians and Ladies' Auxiliary in America.

The Ancient Order of Hibernians was organized in the United States in June 1836.

It affiliates itself with the American League for an Undivided Ireland, whose national president is the Honorable Joseph Scott, of California, who speaks before you, for 30,000,000 men and women of Irish blood by virtue of a mandate from the Irish Race Convention, held in the city of New York, November 22 and 23, 1947.

We are deeply concerned with the attempt of the British Empire, to receive a grant or loan from the United States under the Marshall plan, that your honorable committee now has under consideration.

Our opposition is primarily directed to a proposed allocation of money, which Sir Basil Brooke, Premier of the Ulster Government, who has stated that a minimum sum of $40,000,000 is necessary to carry on the military and some civic operations, in the northeast six counties of Ireland.

I am certain that your committee, and I believe the people of the United States, are fully aware of the weakened financial structure of the British Empire. The implication of this financial weakness was evident in 1946 when the Congress of the United States approved a loan of $3,750,000,000 to this same British Empire.

The thousands of men and women enrolled in the membership of the Ancient Order of Hibernians and Ladies Auxiliary, vigorously protest as American taxpayers, the sending of one red cent to the British Empire, for the purpose of maintaining a bridgehead in ancient Ireland, and to delay, if possible, the action of the large majority of the inhabitants of that ancient country to abolish the artificial boundary that has existed against all reason since 1920, and was set up by virtue of a shotgun treaty, reference to which has been made to your committee.

I am sure that your committee is not unmindful of the millions of Irish nationals who immigrated to these United States, who assimilated themselves and played a major part in the establishing of this Republic, and its maintenance down to this present date.

The magnificent contribution of Irish blood in every war in which our Nation has been compelled to engage, is not exceeded by any racial group, with all respect to the splendid contributions made by other groups to preserve our Union. From the time of the Continental Congress down to the present time, the halls of your National Legislature has resounded to the many tributes paid to the loyalty and valor of young Irish men and women to this country of their adoption.

Whatever emotional appeal myself or the various witnesses register in our opposition of the British grant or loan, call it what you may, is understandable from the standpoint of race pride.

The membership of the organization that I have the honor to represent, are Americans first. Their fealty has never been in question and it is as faithful and loyal American citizens and taxpayers, that we are vitally concerned with the political, social, economic, and financial welfare of the United States of America.

Men and women of the Irish race everywhere, have always followed the admonition of the Saviour, to feed the hungry, clothe the naked, and give shelter to the homeless. We join with you Members of the Congress in the extension of Christian charity to all oppressed people everywhere in the world.

This protest, that comes from the millions of men and women of Irish lineage in the United States, is one that I respectfully submit to the Congress of the United States. It should be heeded. Before any allocation of money under the Marshall plan to the British Empire, there should be a definite and positive understanding that the American taxpayers' money will not be used in any fashion to thwart or delay the unity that Ireland enjoyed for centuries and which she seeks now to maintain in fact.

I submit this statement for your consideration.

Rationing and Price Control

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. ROBERTSON. Mr. Speaker, I have received a very cogent letter from a prominent rancher in my State of North Dakota. He has very clearly set forth facts relating to price control and rationing, and I should like every Member of the House of Representatives to have the advantage of reading his letter. I should like to include the letter of Mr. Paul Schoff under unanimous consent:

ST. ANTHONY, N. DAK., *February 3, 1948.*
Hon. CHARLES R. ROBERTSON,
House of Representatives,
Washington, D. C.

DEAR MR. ROBERTSON: I want to touch a little on the subject of rationing and price controls on meat and other farm commodities. If Congress wants to impose meat rationing and price controls on meat and other farm products, it will have to go all out and include steel, farm machinery, automobiles, clothing, lumber, gas and oil, and labor. One of the best and most important things Congress could do today would be to cut out the black market on automobiles, farm trucks, and farm machinery. A $1,000 black-market premium on a $1,700 or $1,800 automobile, farm truck, or tractor is a common practice. The black-market dealers have rows of new autos, trucks, and tractors in line along the highway between Mandan and Bismarck and few can be obtained from the dealers.

The rationing of meat would drive the available supply into the hands of the black market racketeers, with huge profits to the black-market operators, at the expense of the consuming public and the farmers. There is a meat shortage because the supply is smaller than the demand. By discouraging production the problem will not be solved, on the contrary, production should be increased, and encouraged to be increased, to meet the demand. In order to bring about increased production of meat an increased supply of labor must be made available for the farms. At present no one wants to work on a farm because industrial wages are at an all-time peak, and workers are protected by a 40-hour week with time-and-a-half for overtime. As a result, no one wants to work on a farm under open-weather hazards, when in the towns many working places are even air conditioned.

The rancher has to haul six or seven loads of hay on Sunday, or Monday, or Saturday, every day of the week, whether he works 16- or 18-hour days. The pay is the same whether he works 80 or 90 hours a week, without any overtime. My boys and I have been putting in about 80 hours a week on our ranch all winter because no one wants to work on a farm. We winter about 400 head of livestock. We have cut down too much. Our ranch is capable of supporting 1,000 head of cattle on an average. We are hauling six and seven loads of hay every day, including Sundays, because we cannot catch up to bring in enough hay to last for Sunday without hauling on Sunday, because help is not available. I asked two young men at Mandan to work for me Saturday evening. I asked them what they had to have, and they replied: "I am making better than $200 per month here at 80 cents an hour and with time-and-a-half for overtime. So I would have to have about $250 per month. I know that's more than a farmer can afford to pay, but I would not even go out because in town I do not have to dig around in the snow and cold. In town I work inside all the time."

This, and only this, is the fundamental cause for the high cost of living, as the steaks and pork chops and all other cuts do not fall from the horizon ready to pick up, they still have to be worked for—and worked hard. Industrial wages, higher than ever before in history, have pushed farm wages way out of sight, where it is impossible to pay them, and further no one wants to work on a farm, or ranch any more. Farm wages in North Dakota today are higher than in any other State in the Union. Thousands of young farm couples and farm youth are drifting to the towns and cities to share in the high industrial wages and better working standards and shorter hours. For example, during and after World War I, a farmer could hire the best farm man for $500 or $600 a year. We had one man for 3 years in succession at $500 per year—the best man we ever had.

Then a good hand could be hired by the year at an average of $50 a month, in contrast to today when $150 to $250 per month is asked and the employee does not try to work, but just puts in his time to get his pay check. Twenty-five years ago one could get help that wanted to work, and knew how to work, and who did not want to put in most of the time sitting in some air-conditioned bar. (It's 27° below zero here now—not air-conditioned to haul hay.) Labor scarcity, and its unwillingness to work, is the cause for the short-meat supply, and also for the shortage of clothing, machinery, lumber, and everything else. Yes, the 40-hour week and time and a half is the cause for high prices. For example, if a bushel of apples is worth only $3, measured by the buyers ability to pay, and the labor is $1.50 per hour and it takes 3 hours to pick, crate, and ship the apples, costing $4.50 per bushel, then there just won't be any apples; that's what happens to meat, clothing, machinery, lumber, and all other items. That is why there are shortages.

I am not going on record to cut down wages, but I do go on record that the 40-hour week should be eliminated or raised to 60 hours a week. If labor would work more hours, all supplies would be plentiful * * * there would be no black market on autos, lumber, fence posts, farm machinery * * * yes, and the farmer's wife would not have to bring a nice chicken to some clerk in a clothing store to get two or three-yards of oil cloth for the farm kitchen table, or a few yards of cotton goods, and so on down the line. This has been the policy all through the war, and still is. Freight raise after freight raise is being granted, which so vitally affects the cost of farm products to the consumer, and the railroads have requested further increases in rates. These increases cannot continue on the one side, and the farmers' prices be cut down on the other side.

I will not, and the farmers as a whole will not, object to a price cut if the prices on everything else will be cut in proportion at the same time * * * on industrial products and on freight rates, and the quality of industrial products improved to a par with prewar products * * * not the price raised 500 percent and the product offered being an imitative one. These are some of the things that affect the public today, and will continue to affect all of us until remedied.

More congressional dickering with farm prices, and future farm income, can only result in a shorter supply of scarce farm products and tend to make agriculture more unstable.

This is a serious thing to do.

Very truly yours,

PAUL SCHOFF.

All Manner of Men

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. JAVITS. Mr. Speaker, Malcolm Ross' new book, All Manner of Men, just published by Harcourt, Brace—Reynol—and reviewed in the February 23, 1948, issue of the New York Herald Tribune, is a powerful documentation of the practicability of a Federal FEPC. Mr. Ross served as Chairman of the national Fair Employment Practices Commission from 1943 through 1946, and has told in this book of the broad experience he had with the actual workings of the Commission. It is a record which deserves to be read by all who are striving to take constructive action against the injustice of discrimination due to race, color, or creed in the economic structure of our country.

Lewis Gannett's review of the book follows:

BOOKS AND THINGS
(By Lewis Gannett)
(All Manner of Men, by Malcolm Ross)

Some of the southern politicians in revolt against President Truman's civil-rights program talk as if recreation of a Fair Employment Practices Commission would upset the whole southern way of life. They talked that way in wartime, too; they called the commission of which Malcolmn Ross served as chairman from 1943 to 1946 a "cancer on the body politic," "an un-American, filthy agency," and a "tentacle of a devilfish." In All Manner of Men Malcolm Ross tells what the FEPC actually did, or tried to do, and how it went about it.

WHAT THE FEPC REALLY DID

It didn't upset either the Southern or the Northern way of life half as much as it would have liked to do. It worked mostly by persuasion, and here and there it was effective. A Texas oil company gave up its practice of paying Mexican-Americans "B" wages and "Anglos" "A" wages for the same work. An Alabama shipyard began by using a few Negroes as rough painters in January 1943, in August 1944, upgraded them, and in January 1945, employed its first Negro welders. A New England manufacturer of radar equipment stopped refusing jobs to men with names like Goldberg. The FEPC obtained the cooperation of some union officials and some plant managers in infiltrating Negro manpower into plants that had been accustomed to bar Negroes. In such conspicuous cases as those of the Washington trolley lines and the cartridge plant at East Alton, Ill., it failed.

It's a little difficult, reading Mr. Ross' story, to understand what all the orating is about.

IN THE CARTRIDGE PLANTS

The Western Cartridge Co., of East Alton, Ill., is owned by the same company that owns the Winchester Repeating Arms Co., in New Haven, Conn., which, on its own initiative, accepted Negro workers in any job for which they could prove fitness. The same parent company also owns the United States Cartridge Co., in St. Louis, where some white workers said they didn't want to work alongside colored workers. At United States Cartridge the union forced the issue. At the General Cable Co., in the same city the management forced the issue. There was no

real trouble in either plant. East Alton stood pat.

East Alton, like other factory towns in wartime, was short of labor. Three miles away in Hartford, Ill., the International Shoe Co., imported Negro workers from Jamaica to help out. But East Alton, up to 25 years ago, had had a sign on its railway station: "Nigger, don't let the sun set on you in East Alton," and if the sign had gone, the spirit hadn't changed. The FEPC held hearings there; the company lawyer stated his conviction that one Negro in the plant would mean an instant stoppage of production, tough boys from the brass mill staged an invasion of the hearing—and the FEPC took no action.

What Mr. Ross' account seems to show is that in any community, North or South, where one or two decent community leaders or employers are willing to speak up firmly for equality of opportunity, equality of opportunity can be made to prevail. The commission helped; it couldn't—particularly with a local minority in Congress constantly yapping at it—force anything.

EQUALITY OF OPPORTUNITY—WHY NOT?

It seems astonishing that, South or North, many people can be found to openly to oppose the principle of equality of opportunity. It seems so plain, as Mr. Ross points out, that one contributing cause of Southern poverty is the failure of the section to use its own colored labor to maximum productive efficiency. Sometimes the commission was merely trying to restore an older Southern way of life. When Bester Steele, Negro fireman, went to work for the Louisville & Nashville Railway in 1910, some 80 percent of its firemen were colored when he was dropped in 1943, only 20 percent was colored. The role of the railway "brotherhoods" in squeezing Negroes off the Southern railways is one of the most disgraceful chapters in the history of the American labor movement. The FEPC couldn't stop that.

Malcolm Ross, obviously annoyed at all the pinpricks his commission received, tells with painful honesty some of the FEPC failures, and probes into the mixed history of racial and creedal tolerance in America. He finds enough black in the past to make him regard the gray present with considerable cheer. He still can't see why any community or section should permit a few leather-lunged loudmouths to stand in the way of its own progress, and feed propaganda material to the eager Russian Communists. And it isn't all South he's talking about. East Alton is in Illinois, Lincoln's State.

Should Our Government Be Run by Lawyers, Ministers, or Editors?

EXTENSION OF REMARKS

OF

HON. RICHARD B. VAIL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. VAIL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Whiteside County News, of Morrison, Ill., for January 26, 1948:

SHOULD OUR GOVERNMENT BE RUN BY LAWYERS, MINISTERS, OR EDITORS?

A letter from one of our readers:

"AN AMAZING EDITORIAL IN THE NEWS:

"We have no deep-seated prejudice or animosity against editors: For the most part we have found them rather likable and courteous gentlemen—some of high-grade intellectual and moral caliber; but, like all classes of professional and nonprofessionals, they sometimes get some very strange, fantastic notions in their heads.

"One conclusive proof of this fact is found in an editorial statement in the News as of January 9: 'What this Federal Government needs is more editors and fewer lawyers in charge of the United States.' Ye editor of the News speaks as one, who in a conclave of fellow editors, resolved themselves into a mutual admiration society, and decided they could do a fine job running the Government of the United States. Ye are reasonably certain that, if all the lawyers were turned out of Congress and their places filled with editors, it would make but very litte, if any difference; the editors, like the ousted lawyers, would still be joined to their idols—hog-tied by the partisan, political prejudices, and instead of bettering conditions, we would have 'confusion worse confounded.'

"We believe we have a better remedy for our national ills than the editor of the News. How about turning all the editors and the lawyers out of Congress, and filling their places with honest-to-goodness preachers? Men like Harry Emerson Fosdick, Preston Bradley, Edgar De Witte Jones, Bromley Oxnam, and many others. As a preacher of more than 56 years of experience, I have a high regard for the character and ability of my fellow preachers.

"Respectfully,

"REV. C. W. MARLOW."

What we think—

Most people, Reverend Marlow, do not like an overabundance of ego, and I well realize that we stuck our neck out in making a statement that what the country needed was more editors at the head of our Government. It was not ego that prompted the thought, but, rather, the outstanding recommendations for better government that had been made by some of the editors of the Nation. No; we don't like ego either, when it is overdone.

It is our sincere opinion that there are too many lawyers in high Government positions, and many of them lack solid business training. They work on theory in the main.

However, God forbid turning the affairs of our Nation over to a group of ministers as suggested in your letter. However good their intentions or their theories, I cannot agree with you that their professional training fits them as legislators. I have the greatest respect for men of the cloth in their chosen work, but it has been my observation that a very small percentage of them are good businessmen, and believe me when I say that Government is big business and requires the keenest type of business training.

Well, anyway, folks have different callings; some have hankerings to tote balls, some referee the game, and others just pay the bills, or write about it. Yours truly, for the purpose of this dissertation, is only an insignificant crossroad critic. But critics, even the little ones, perform a very useful service to society. In the aggregate, they finally run the Government. Often people are phlegmatic, apathetic, slow to act. But, ultimately, when sufficiently aggravated, they become articulate and, by the sheer force of public opinion, they make crooked things straight again.

So we arrogate unto ourselves, for a few paragraphs, the enviable role of spokesman for the irritated masses. We speak for the restless Republicans and the disillusioned Democrats. We speak to tell the world what we would do if we were President and had the power now allocated to the highest officer of the land.

The first thing we would do would be to get right with the Constitution; we would know the rules, all of which are written down in the laws or in the court records. We would run the Executive offices, let Congress run its own legislative business, and the judges run the courts. If we did not understand the Constitution we had taken an oath to defend, we would retain the best constitutional lawyer in the country as our Attorney General. We would not go off half-cocked. We would veto all suspicious or illegal legislation.

If we were President, we would go back to the precepts and principles of our party—we would not betray the glorious memory of its dead, nor crush beneath our heels its hallowed traditions. We would not repudiate the expressed purpose of the parties' rank and file, nor break a single sacred promise.

We would likewise stay honest—we would not fool the people into believing we could spend our way to prosperity nor waste our way to wealth—we would balance the Federal budget, live within our national income if it took the standing Army to keep the hordes of political plunderers out of the public till.

If we were President, we would fire the Postmaster General and try to make this one great communistic experiment of running our post office a huge success as a perpetual yardstick—we would end forever the practice of making Postmaster Generals distributors of political pie. We would also shoot every star gazer in the Capital City on sight, in the seat of the pants with a load of rock salt, and turn them loose on their own to make an honest living for a while.

If we were President we would stick bills under the noses of our World War debtor states often enough to keep a perpetual chill running up and down their war-crazed spines. We would also let every Red know in no uncertain terms, that we would deport him to his own blessed fatherland if he were caught red-handed plotting against either the democratic ideal or the American system.

If we were President, we would not pick on any one industry—persecute one at the expense of the others—we'd tote fair with all of the people, and we would get the Federal Government out of business competition with its own taxpayers so quickly that it would make every person's head swim: whether or not it was making mattresses, producing power or printing envelopes.

If we were President, we would deliver the Government back to the people; we would crush the centralization of power in Washington; we would not trespass on the inalienable rights of its citizens or of the States, and we would do away with a political monopoly as quickly as possible.

If we were President, we would destroy all "new instruments of power," and go back to the old weapons; and we would pledge the armed forces of the Republic to a democracy that would brook no dictatorships on these shores, whether or not it was a dictatorship of organized capital, of labor, the proletariat or the politician.

If we were President, we would work for a united people—we would not take this liberty-loving, shirt-sleeved democracy, and try to arouse the rich against the poor, or the poor against the rich—we would not try to agitate a class consciousness where equal opportunity has been the people's trust and the eternal watchword.

And if we were President, we would tell the masses of men to turn to their plows and to their looms again, and tell them to produce in abundance—and we would turn a million trained salesmen loose into the markets of the world, and we would sell our wares, if we had to blow a hole in the tariff wall as big as Boulder Dam to do it. And we would sell neutrals and combatants alike, both food and contraband, in the American tradition, whenever they put the money on the barrel head.

If we were President, we would have common sense enough to know that every log-jam in a stream is caused by a key log, and we would find that log and start the raft downstream at a lively pace. We would look far

enough into the past of this great Republic to determine what had contributed most to its success, and we would do these common-sense things that coincide with the American idea—we would do away with social and economic synthetics.

And finally, if we were President, we would begin a patriotic revival, and we would bury New Dealism upside down so deep that it would take it at least another thousand years to sprout again.

These are some of the things we would do, if we were President, and we do not even profess to be smart like the professors, the lawyers, or the ministers, for we know that the destinies of this great Republic are in the hands of Almighty God.

Yes, Rev. Marlow, we do have very pronounced ideas as to what our Government should be, and how it should be run, and we feel that it is time that America awakens to its danger of being led into or, rather, thrown into the boiling pot of destruction or eternal slavery.

Two Amendments to the Taft-Hartley Labor Act Which Should Be Approved

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. McDONOUGH. Mr. Speaker, it is now evident that some changes are necessary in the Taft-Hartley Labor Act if the intent and purposes of that legislation are to be carried out to establish greater production and less strife in the labor field and improve relations between management.

I recognized the need for some changes in this law, and on July 14, 1947, I introduced two bills, H. R. 4193 and H. R. 4194, which would amend the Taft-Hartley Labor Act and would remove what are, in my opinion, the chief objections to the act which at the present time are creating dissention in the labor front.

H. R. 4193 would protect the civil rights of labor by permitting labor unions to use funds in political campaigns provided the members of the unions had voted in favor of such use of funds.

H. R. 4194 would equalize the legal responsibilities of labor organizations and employers by requiring that the principal officers of business firms also sign affidavits stating that they are not Communists and do not belong to Communist organizations.

Adoption of these bills would have established better relationship between management and labor and would have safeguarded the rights of labor with relation to political activity. And passage of these bills would have removed the basis for legal action now pending in the courts relative to the Taft-Hartley Labor Act.

I have repeatedly urged the Education and Labor Committee to report H. R. 4193 and H. R. 4194 to the House for action. I appeared before the committee on July 25, 1947, and explained the purposes of these bills and urged immediate action by the committee. At the present time both bills are still pending awaiting committee action.

There is need for action on this legislation which would amend the Taft-Hartley Act, and the Education and Labor Committee should give immediate attention to bills which have been introduced for this purpose.

The Taft-Hartley bill was passed for the purpose of equalizing responsibility of labor and management. But the act requiring officials of labor unions to take an oath that they are not Communists or affiliated with Communist organizations did not provide any safeguard against communism within management. This has created an inequality in responsibility of labor and management which should be corrected.

H. R. 4194, requiring officials of corporations and business firms to sign the same affidavit required of labor officials, would equalize this responsibility.

The provision of the Taft-Hartley Act prohibiting the use of union funds for political purposes was intended to prevent labor leaders from using union funds for political purposes of their own, and such action was a necessary corrective measure. However, the act as it now stands infringes upon the civil rights of labor and has caused justifiable resentment in the rank and file of labor.

My bill, H. R. 4193, would correct this situation by permitting the members of each local union to decide by ballot whether or not union funds shall be used for political purposes. Under this legislation, funds would not be at the disposal of labor leaders, but would only be available for political use when the union members voted in favor of such use.

There can be no question that some correction in the Taft-Hartley Labor Act is necessary, and I personally cannot understand the reluctance of the Education and Labor Committee to hold hearings on H. R. 4193 and H. R. 4194 so that these bills may be carefully considered and passed to the House for action.

I believe that the Labor Management Relations Act was necessary to equalize responsibility of both labor and management. But I do not believe that any unjust or discriminatory restriction should be placed on labor. And where correction is needed in the present law, I believe now is the time when we should act to pass legislation which would remedy any inequality and result in improved relationship between management and labor.

George Washington and the Year 1948

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Wednesday, February 25 (legislative day of Monday, February 2), 1948

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on George Washington and the Year 1948, delivered on February 21 by Hon. Gordon Gray, Under Secretary of the Army, at the one hundred and forty-first annual banquet of the Washington Light Infantry, at Charleston, S. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am grateful to Senator MAYBANK for the original invitation to be in Charleston tonight. I think you can better understand my gratitude when I disclose to you, to my own personal shame, the fact that this is my first visit to your beautiful city. Thus, you can well understand, and I trust that Senator MAYBANK will understand, why I seemed overanxious to accept the invitation. I think that he will recall that he had hardly finished extending it before it was accepted.

Later on, when Mr. Don Gestefeld kindly issued the formal invitation to me, he indicated the wide latitude which you were willing to allow me in speaking on the topic of the significance of Washington's Birthday. He very frankly advised me that most of the speakers who have appeared each year on this occasion have developed the theme of how the principles laid down by Washington should be interpreted in the light of present-day needs and in the light of present-day situations.

With all the freedom Mr. Gestefeld gave me, I must confess that I can think of no new way of approaching the subject. My talk will probably follow the old familiar pattern: How should we interpret the principles of George Washington under present-day circumstances?

I might digress long enough to say that the inevitability of this type of approach is in itself a tribute to the strength and stature and prescience of Washington. The fact is that he was a man who saw far beyond his time, and I suspect that his writings were deliberately planned to be of future help to the Nation to whose early beginnings he contributed so much.

Now, let me be more specific about the theme of my talk tonight.

It is that unless we do what Washington wanted us to do in order to maintain our national security—and unless we do it very soon—we may never have the chance to do it at all, because we might cease to be a free nation.

I do not make this statement just for the purpose of sounding like an alarmist. I am not one who believes that war is inevitable at any time, or that war is lurking around every corner, or that the fear of war should turn our national life topsy-turvy.

However, it should be made plain that the longer we delay in putting into practice the sensible ideas for national security which Washington first offered back in 1783—and we have delayed doing this for 164 years—the more possible it is for us to come to the day upon which it might be proved to us, by some powerful enemy, that Washington was right, after all.

My talk will be upon this theme because I am convinced that present-day events make this the most important single thing which George Washington has to say to us tonight over the bridge of those 164 years, and the vision of Washington was so keen that we can phrase his advice in his own words and find it ringing just as true in our ears as if it were being spoken by him right here and now.

I quote from his Presidential message to Congress of December 1793:

"The United States ought not to indulge a persuasion that—contrary to the order of human events—they will forever keep at a distance those painful appeals to arms with which the history of every other nation

abounds. There is a rank due to the United States among nations which will be withheld—if not absolutely lost—by the reputation of weakness. * * * If we desire to avoid insult, we must be ready to repel it; if we desire to secure peace—one of the most powerful instruments of our rising prosperity—it must be known that we are at all times ready for war."

These words of Washington were not just so much rhetoric, unfortified by a practical plan. He had a practical plan which he put forth as the best means of achieving this condition of readiness in America.

What was Washington's plan? It involved two important factors:

The first was a small standing Army.

In listing his reasons for this he spoke first of the natural distaste which a democracy has for militarism—especially an ever-present militarism which might be dangerous to civil liberties.

He spoke secondly of the situation of the country in his own day—this was in 1783—of the fact that we were at a great distance from European States and, to quote him again, "from their numerous regular forces and the insults and dangers which are to be dreaded from their ambition."

And then he spoke not for his own day, but for the future, putting his finger upon one clear point which faces us today. He said, and I quote:

"But if our danger from those powers was more imminent, yet are we too poor to maintain a standing Army adequate to our defense, and was our country more populous, and more rich, still it could not be done without great oppression of the people."

In short, Washington had a healthy respect for the taxpayers' dollar. And he had a healthy pessimism regarding the strength of material wealth as such. For, rich as this country may be today—it is still too poor to stand the huge amount of expense which would be involved if we were to maintain a Regular Military Establishment large enough to deal with all the threats which might come to us.

Thus Washington set the traditional American pattern favoring a small standing Army.

Then he went on to the second point.

This was that the small Regular Army must be backed up by well-organized citizen-soldiers, uniformly trained in all the States, ready, in any emergency, to join with the Regular Army to resist any aggression against the country.

In developing this point, Washington faced the realities of his own day squarely and sensibly. There was a militia in existence at the time in which he wrote, but the greater part of it was ill-organized, lacking in uniform training—or, indeed, in any sensible training whatsoever. And Washington knew this only too well, because it was this very type of militia which had driven him wild during the Revolution—driven him to the point at which he had written that the militia—I quote: "come in you cannot tell where, consume your provisions, exhaust your stores, and leave you at last at a critical moment." He had called placing reliance upon it "resting on a broken staff" and said plainly that his experience with it had proven that "no man who regards order, regularity, and economy, or who has any regard for his own honor, character, or peace of mind, will risk them upon this issue."

But it was not this kind of untrained militia which had led him to his belief that the Nation must use the citizen-soldier as its best method of defense. He knew, also, what a trained, well-organized militia could do.

He knew that his own victorious Continental Army had been composed of ordinary citizen-soldiers who had been trained by the German Baron von Steuben. Training, to him, made all the difference between a defense establishment that could accomplish its mission of security and one which could not.

Any realistic system of security, Washington said, had to rest upon the basis, and again I quote, "That every citizen who enjoys the protection of a free government owes not only a portion of his property, but even of his personal services to the defense of it," and that, as a consequence, every citizen of America, from the age of 18 to that of 50 should be carried upon the training rolls of the country.

He then went further into detail.

All this was before he became President. During his Presidency he presented this plan, with modifications, to Congress upon two occasions. The first time it was defeated. The second time it was amended out of recognition and workability.

There was a reason. In too many locations the existing militia had become a political football. In too many sectors of American life, self-interest had begun to rear its head in the fear of loss—even temporary loss—of manpower for some project other than that of national security.

Listen to this criticism of Washington's plan which was printed in the Pennsylvania Packet and Advertiser in 1790, and judge for yourselves whether it has a familiar ring today:

"ELIZABETHTOWN, April 14, 1790.—The plan for the organization of the militia of the United States by the Secretary of War is generally execrated in this State, as pregnant with mischief both to the agricultural and mining interests, as well as having a tendency to debauch the morals of the rising generation."

Washington's plan was never put through. He pleaded for its adoption until his death to no avail.

If Washington's plan, modified or not, had been adopted in any kind of workable condition in his day, we would not now be facing any choice over whether to establish universal military training—because we would have had the equivalent of UMT.

Every citizen would have been a member of the armed forces, privileged to have served in organizations such as your own, which bears the name of the father of this idea, as he was of the country.

Because of that service, all citizens would have a more complete understanding of their armed forces and their problems.

And it has been proved by many able men that our Nation would have been able to pass by much of the military grief that has been its lot in the past century and a half, if this plan had been adopted and continually revised to meet modern conditions.

In Washington's time we had thirteen separate sovereignties, all of whom had small military organizations for their sepaarte but similar purposes. In a national emergency which arose on the Declaration of Independence, the system became the principal headache for Washington in his necessity for an integrated armed force to prosecute the war for our liberties. He needed an integrated force of trained men, who would remain on the job long enough to complete it; and which would obviate the necessity of constantly training, in the face of the emergency, new bodies of troops. The problem was further emphasized in the War of 1812.

It was not until the passage of what is known as the Dick bill in 1902 that some progress was made in training the citizen-soldier. With the passage of the National Defense Act in 1916 and its amended form in 1920 the National Guard made progress and it had taken on a name which was to mean much to it in the future. From the militia, it became the National Guard—still under the militia clause of the Constitution. This had great significance. It was to be first line troops for the defense of this country and it furnished 18 great divisions and many other troops and trained men in World War II.

The guard now faces another epoch in its evolution. With the increased velocity of war, it becomes more important in the scheme of national defense than ever before. We must have a force in being for M-day, which may well be D-day at any time in the future. This necessity points directly to the National Guard. Its future missions are more pressing and more demanding. We must have it at adequate strength, and, even more important, we must have it at a level of training where it can be expected to be ready for limited combat missions from the day of mobilization. The present time devoted to National Guard training gives it about 20 percent of the time required for combat missions. Universal military training would mean that we could raise this level of training to 60 percent of the required training. Therefore, universal military training has its greatest benefit directed toward vitalizing the National Guard. It is perhaps the only thing that will make it possible for the National Guard to become an adequate D-day force, as it has been an effective M-day force in the past.

We have reviewed Washington's views on training. If this were all he left us, he would have made a huge and significant contribution to solving one problem we face today.

But training is just that—one of many allied problems having to do with national security. Just over a year ago the Compton commission—was the body, nationally known, nonpartisan, and unbiased, appointed to make an over-all study of America's security needs—issued its report, and this report dealt with all the factors which, in the opinion of the commission, were necessary to fill those needs.

The Compton commission lists six necessities at the conclusion of its comprehensive study of security. These are a strong, healthy, educated population; a coordinated intelligence service; scientific research and development; industrial mobilization and stock piling; unified, balanced armed services, Army, Navy, and Air; and a system of universal training for security.

The report does not treat national security as a matter depending upon training alone. It stresses that the other five recommendations are of equal importance, and that all—not just one—of the recommendations must be carried out if we are to have real security.

It is amazing to compare the main points of Washington's plan, written at congressional request in 1783, with the main points of the Compton report, written in 1947. While Washington did not specifically mention the necessity of a strong, healthy, educated population in his plan, we know, from his other writings, that he firmly believed in it. Nor did he mention coordination of intelligence agencies, because this problem was not one of his time.

But the advice of Washington is highly similar to the four remaining points of the Compton commission's report.

On the need for scientific research and development he said that it would be necessary to establish—I quote—"Academies * * * for the instruction of the art military * * * also, manufactories of some kind of military stores"—in short, institutions in which the needs of warfare would be continually studied, backed by the practical machinery for national security.

This stress Washington laid upon manufacturing dovetails with the Compton report's stress upon the necessity for industrial mobilization and stock piling. Washington further stated that there should be—I quote—"Establishment of arsenals of all kinds of military stores." He saw the need

for peacetime production facilities for security and the further need for creating stock piles of essential defense materials.

When the Compton report speaks of the regular armed forces, under unified command, small in number and backed up by trained reserves, we can compare the point to Washington's emphasis upon an army just large enough—I quote—"to protect our trade, prevent the encroachment of our neighbors * * * and guard us at least from surprises." Naturally, he could not foresee an Air Force. But he had the basic common sense to know that the services are interdependent. He knew the importance of sea power, and he knew that the battle of Yorktown was won when the French fleet arrived at Yorktown in time to bottle up Cornwallis by sea, while his own forces continued the land attack. If there was ever a surplus of money for defense in America, he said it should be applied * * * in preparations for building and equipping a Navy. When Washington—a general of the Army—called for the creation of a Navy, the country took its first step towards unification.

And as I have explained at length previously in this talk, his stress in 1783 upon the importance of a plan for universal training is almost identical with the stress put upon the same idea in 1947 by the Compton report.

Much remains to be done if we are to have the truly balanced program for national security which today's world situation demands. We do have a plan, but it cannot be transformed into a real, over-all, working system of security until all of its points are put into action.

The biggest gap in the program is the need for trained manpower. At present there are many veterans of World War II within the Nation, but time is not going to stand still for them any more than it does for anyone else. Being one of them myself, I know—believe me. I'm not getting any younger, and neither is anyone else.

Time is bound to catch up with the efficiency of our veterans—nullify their physical resources and cause them to lose the skills they acquired in training. Unless these skills—which they went to so much trouble to obtain, are passed on to younger men, their replacements—and unless we constantly modernize our training, we may find ourselves engulfed by some disaster so huge that it will not permit time for mobilization or training.

Now, I know that there is always someone who will say, in effect, "All right. If Washington's plan was such a wonderful thing, how did we ever manage to survive without it, and grow to be such a great nation?"

Here's my answer to that question:

We survived without using Washington's approach to security at the cost of many lives, many billions of dollars, and much wasted work and energy. We are bearing tax burdens today which have grown and grown as a result of military unpreparedness and consequent wars. Unless and until we take some sensible action to put a stop to this vicious circle of unpreparedness, inviting war, which increases debt and causes further unpreparedness, and so on and on, we can rest assured that these burdens of blood and money and time are likely to continue to grow and grow.

And while we have had a hundred-and-sixty-odd years to indulge ourselves in the luxury of ignoring Washington's advice, we must remember that the pace of scientific development in warfare is catching up with us—that the time we have had to get ready for a war at the same time we were fighting it might, some day, run out.

In order to bridge the gap of all those years, and to set up a national-security organization which will resemble the one which Washington's plan would have evolved, we have much work to do.

This work belongs to each one of us, just as the consequences of its success or failure will belong to each one of us. It is not a matter for the Army, but for the Nation. Let's consider it fairly and unemotionally and let's do the best job we possibly can.

If the ideals for which Washington lived means so much to us, we owe at least that much to them and to his memory.

Address by Hon. C. Wayland Brooks, of Illinois, Before Pennsylvania Manufacturers' Association

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 25 (legislative day of Monday, February 2), 1948

Mr. MARTIN. Mr. President, last night the junior Senator from Illinois [Mr. BROOKS] delivered a very able address before the thirty-ninth annual meeting of the Pennsylvania Manufacturers' Association, in Philadelphia. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It was indeed a pleasure to receive and accept the kind invitation to address the thirty-ninth annual meeting of the Pennsylvania Manufacturers' Association and its casualty and fire-insurance companies. This pleasure was increased by the fact that the invitation was originally presented by Senator Mason Owlett, whom I have known and admired for a great number of years. The invitation was further extended by my dear friend and colleague, Senator EDWARD MARTIN, who honored us on February 10 by being our principal guest and speaker at the annual Lincoln Day observances in Illinois. His enthusiastic and intelligent devotion to the interests of the people of Pennsylvania and of the Nation is a constant inspiration to all of us from other States who are privileged to come in constant contact and work with him in the United States Senate.

Your delegation in Congress is one of the most faithful and forthright delegations in our Nation's Capital.

His Excellency, Governor James H. Duff, has already established for himself a reputation of leadership that brings dignity and honor to the State whose government he presently heads with real distinction.

Pennsylvania and her people hold a high position as an outstanding contributing force to the creation, development, and preservation of individual rights and human liberties. This has been true from the days when William Penn first established here an asylum for persecuted people of all lands. Through the days of the Confederacy and the signing of the Declaration of Independence; through the Revolution and the creation of a new Federal Government; through the intervening years of progress when many people settled here and others wandered westward; through the Civil War and the historic battle of Gettysburg; in fact, in every step and stage of the progress of America this State has proudly developed and maintained her position of leadership. A quick review of her contribution to liberty, the pursuit of happiness, and to the welfare of mankind generally, establishes beyond all possibility of doubt her right to the title she has worn through the years as the Keystone State.

Her present leadership in the production of petroleum, pig iron, and printed fabrics, coal, cocoa and chocolate, wool, silk and cotton textiles, leather goods and felt hats, lake, river and rail transportation, natural gas and steel, farm products and miscellaneous manufacturing, churches, libraries, and institutions of learning, all form a part of the pattern proudly called Pennsylvania. I am delighted to pay my personal tribute to the leaders and the people of this great State tonight.

Although the State of Illinois is much younger in years, we, too, are proud of our contributions to the romantic pages of history in the advancement of human rights and the preservation of the Republic.

Although his works and accomplishments belong to the ages, Illinois' greatest contribution was the presentation of Abraham Lincoln to lead and save our Republic in one of its most trying hours. He was not only the greatest citizen of Illinois, he was the founding father of the Republican Party and it was during his lifetime that the fundamental principles that have guided our destiny thus far became a living, vibrant reality.

Lincoln was born as humbly as the Son of God in a hovel; he was reared in poverty; he lived a life of struggle against adversity; he was elevated to the Presidency of the United States; he preserved the Union; he set more men free, and was crucified for his service to humanity. He hated oppression; he loved liberty. He wanted to free the slaves, but more than anything else, he wanted to preserve this, our Republic, under which liberty was established and under which it might be extended only if this form of government could survive.

That was the challenge of his day. It is no less a challenge to us in our day.

While Pennsylvania is justly proud of her industries that have grown great, we must always remember that in the United States there are over 3,650,000 small business concerns owned and operated on the average by two and one-half persons, or a total of 9,125,000 persons, constituting 92 percent of our entire economy; and that these concerns employ about 65 percent of all the commercial and industrial wage earners in America. From that fact alone, we can see at once that these small businesses constitute the backbone of our individual initiative, private enterprise, and provide the most eloquent testimony concerning the desirability of maintaining the American way of life. Adding to this figure of small businesses, the countless numbers of men and women who operate their own farms or follow the profession or vocation of their choice, we have the magnificent demonstration of the true effectiveness of private initiative and private enterprise.

This should not only bring pride to the millions engaged in it, but at the same time bring a dramatic realization that only in the United States of America is such opportunity for accomplishment even remotely possible today.

The American people have never been greedy with their freedom or their finances.

We the people of the United States have shipped more material, spent more money, and spilled more precious blood more thousands of miles from home, than any other people in the history of mankind, to protect human freedoms. Yet we are confronted with the reality that only here is that personal freedom of choice, initiative, and action still vibrantly alive today.

While those now in charge of the administration of this free Government constantly talk about preserving private enterprise and enforcing the rules against vast monopoly, the Government itself in the extension of its vast network of bureaus, agencies, and

commissions, has become the most devastating monopoly preying upon the American people today.

While our people do engage in private enterprise, every average citizen works 3 days out of 10 to pay the present mounting cost of government. The cost of government is the No. 1 contributing factor to both our high prices and high taxes at the same time. Yet we constantly hear the demand for more power, more controls, and more regulations, which in turn mean more cost of Government which will tend to wipe out the incentive and initiative to continue the small businesses that have made us the freest, the richest, and the most powerful people on the face of the earth.

Since the close of the war the unprecedented shipment of food, machinery, and material already in overdemand in the United States, has contributed greatly to the difficulties of the small businessmen, and unless we can develop a restraining effort on this unusually large shipment of American supplies abroad, it may ultimately strangle and destroy not only the opportunity for small businessmen but complete regimentation of our entire economy.

During the war and since, the small businesses of our country have been hindered and hampered by shortages and Government controls, and no committee in Congress has rendered a greater service and no Member of the Senate has devoted more intelligence and time in securing steel, fuel, and other essentials to keep small businessmen alive than has the Small Business Committee of the Senate of the United States, with the guiding direction of Senator EDWARD MARTIN, of Pennsylvania.

During the past year under the Truman administration, we exported goods and services out of the United States at the rate of $19,000,000,000. During the same period, we imported goods and services into the United States at the rate of only $8,000,000,000. This excessive export over import has added to our difficulties, our scarcities, our high prices, and will be reflected in higher taxes.

And that brings me to the discussion of the Marshall plan.

When the so-called Marshall plan was first announced, several of us immediately offered our protests because it was in reality no plan at all. It was an idea expressed in a speech delivered by Secretary Marshall on June 5, 1947, at Harvard University, suggesting that the western European nations get together, formulate a program to help themselves, and tell the taxpayers of the United States how much we should supply to carry out their ideas.

Foreign Secretary Ernest Bevin, of Great Britain grabbed the idea with enthusiasm. His Socialist government had just dissipated in a little more than 1 year almost all of the $3,750,000,000 of America's money that we provided for supposedly 5 years of their necessities. He called together the 16 nations in Paris and they presented us with their program. They estimated the imports they wished to have for 4 years, then subtracted the exports they thought they could ship, and the first bill they presented us amounted to $29,000,000,000, for the difference. This bill was subsequently reduced by them to $22,000,000,000. Our Government presented a figure of $17,000,000,000, but that did not include the $800,000,000 we must pay annually to feed the German population in the American zone, nor the $500,000,000 we must pay annually to feed those in the British zone when we take over British obligations there. Nor does it include any money to be spent in Asia, China, or South America.

This vague expenditure would mean several things:

1. It would mean that each average American family would have to increase its already heavy tax payment by $500.

2. It would mean higher prices for everything we purchase for many of these billions of dollars will be spent immediately or find their way back to compete with the American taxpayers here for wheat, food, scrap iron, farm machinery, fertilizer, transportation and mining equipment, and many other articles and raw materials already in short supply.

3. It would mean higher taxes which would cause wage increases and still higher prices.

4. It would mean greater shortages and demands for rationing, price controls, and further allocation and regimentation.

The President has already twice asked for unlimited authority to reestablish rationing and price controls in so-called "selective" forms. Make no mistake about it—if controls, rationing, and price fixing go on again in peacetime in America, it would be difficult to ever take them off, for we still live under the New Deal administration that has created and will create emergency after emergency that will call for ever greater controls over the lives of free American citizens.

While those who ardently advocated this vast expenditure constantly told the American people that it constituted only 5 percent of all our production, they were presenting a very misleading figure. Last year we exported 40 percent of our wheat, 20 percent of our steel in various forms, including machinery, etc. Last year we exported 35 percent of the boxcars produced in the United States as well as a substantial amount of our petroleum.

Every time the Government announced a larger figure of export of wheat, the price of wheat went up. This affected the price of the whole food bill in America. The same thing was true with farm and other machinery, which again increased the cost of our living.

The American people have been and still are the most charitable people on the face of the earth. A most generous people generally and individually. To be generous, even amazingly generous, is magnificent, but to be stupidly generous is akin to sin. We must remember constantly that we are only 7 percent of the world's people, we occupy only 7 percent on the earth's surface, and in our bumper years, we produce only 12 percent of the world's food supply. We are already carrying the largest national debt ever carried by any people supposed to be solvent in the history of mankind.

I repeat, that every average citizen is already working 3 days out of 10 to pay his taxes, and working the other 7 days to pay the ever-increasing cost of living. This will mean less money every year for civic, charitable, and church contributions on the part of the individual American citizen.

This heavy burden is carried not only to support our own Government, but to support socialistic governments abroad, who foster and follow policies of socialistic schemes, price fixing, rationing, regulations, restrictions, unbalanced budgets, and false values of currencies.

For instance, since the Socialist Government of Great Britain gained power it has taken the mines, the railroads, communications systems, and other industries, including over 2,500 farms, away from their owners. If you add up the total amount that they paid these owners, it will just about equal the $4,400,000,000 which we gave them in the British loan and credits a little more than a year ago. They now announce that they are instituting their socialistic health and hospital program that will guarantee Government hospitalization, medical, and health care literally from the cradle to the grave, at an annual cost of approximately $700,000,000.

No one can complain about costly socialistic schemes being instituted in any country if their economy can support it, but to adopt programs at our expense that retards private initiative while we are taxing our people to rehabilitate them is quite another matter.

Only a few days ago Reuters News Agency from London reported that as a result of a plebiscite conducted among 58,000 doctors in Great Britain, 89 percent disapproved this scheme to socialize the entire medical profession in Great Britain. Notwithstanding this fact, they insist on going forward with having their Government regulate the health and hospital facilities for all their people, and the American taxpayers will subsidize this as well as their other socialistic schemes.

Recently, in the House of Commons, in trying to explain the dissipation of the $3,750,000,000 gift—called a loan—and their future difficulties, the Chancelor of the Exchequer stated, and I quote him:

"The additional measures which the Government proposes were announced yesterday by my right honorable and learned friend the Minister for Economic Affairs, but I wish here to repeat one figure which he gave in his exposition; it is a very grave one, and needs to be underlined. Even if we succeed in achieving all that my right honorable and learned friend indicated yesterday in the program which he set forth, we shall still at the beginning of the year 1949 be facing a dollar deficit running at the rate of $1,000,000,000 a year * * *. Even if we succeed in all that we are planning to do, and even if the luck goes well, we shall still, at the beginning of 1949, be running a dollar deficit at the rate of $20,000,000 a week."

Further he stated:

"The National Insurance Act and the National Health Act, both passed last session, will come into operation in July, and will not be delayed as some people have suggested. They will come into operation in July, with all their social and financial implications; and, in spite of all the difficulties confronting us, we are not going to swerve aside from carrying through this most essential feature of the program on which the last election was fought."

Thus we see that they are engaging in vast socialistic programs at the expense of the American taxpayer, while our own Veterans' Administrator has recently announced that many of the badly needed veterans' hospitals in America could not be built because of the lack of essential materials and the ever-increasing cost.

This socialistic program in England brought forth this unusual reply from Winston Churchill who so successfully led the British people through the last tragic war, and I quote him:

"The first step to national recovery and indeed survival is to have a new parliament. Why can we not earn our own living, pay our own way, and stand on our own feet? It is because our whole living is being handled the wrong way around. The socialistic planners have miscalculated and mismanaged everything they have touched. They have tried to substitute Government control and direction for individual enterprise and skill. By their restrictions they make scarcity and when scarcity comes they call for more restrictions to carry on."

The same is true in other countries and that is why many of us objected strenuously and seriously to blindly adopting the original so-called Marshall plan. General Marshall did not outline the details of his plan nor was he present when the original bill was drawn, which was presented to Congress. It was drawn by 14 lawyers representing 14 different Government bureaus, and our contention was that if we turned $17,000,000,000 over to 16 countries following policies and practices that stifle initiative and enterprise, and to 14 different Government bureaus that have a constant lust for more power, the money would be dissipated the same as the $3,750,000,000 plus the additional credits we gave Great Britain—a sum dissipated in a little more than 1 year.

To consider their plight as temporary is the wrong approach. As long as we guarantee their constant deficits of "balance of payment" they are not going to change their course and they will not meet their own problems. Their problems are those of incentives to work and to produce to their maximum. Even that would not meet their difficulty completely, for no matter how much they produce, if they continue to take the proceeds of that production and devote it to extension of their socialistic practices they will never close the gap of their "balance of payment" and we will merely continue to pay for their trade deficit indefinitely.

During the war the American people heard great promises from our leaders that everything would be better when the war was over. That we would have one world and peace was loudly proclaimed.

Twice we went to Europe with our blood, brains, and brawn to stop Germany from being the colossus of Europe. Anyone who had studied history and especially those who sat in on the secret conferences and deals should have known that Russia had never given up her centuries-old ambition to expand, but had merely added to her desire the terrorist tactics to expand and enslave the people of the world. Certainly those in charge of our State Department and military who had in their possession the secret agreements between Stalin and Hitler to divide up and enslave the world should have protested against the vast amount of supplies and the almost criminal contributions and concessions we made constantly to Russia.

As a result of their mistakes and keeping hidden this secret information while continuing to contribute to Russian expansion, we now face another emergency and terrific problem.

Surely the people of America must know by now that this New Deal administration has neither the courage nor the capacity to properly administer either our domestic or our foreign policies.

It would be hard to conceive how a great country could win wars of such magnitude and find themselves at the end in such a deplorable condition as we find ourselves today across the face of the earth. Those who had authority and secret information were backed up by the resources of America as no other leaders were supported in all history. We the people provided the greatest Navy, Army, and Air Corps; we provided the greatest productive capacity, inventive genius, and industrial know-how to attain victory; only to find ourselves challenged anew throughout the world by one of our so-called allies.

Those of us who did oppose the initial presentation of the Marshall plan did so, first, because it was merely a trade-deficit plan on the part of 16 foreign countries; second, because the plan was written into the form of a bill by 14 Government bureau lawyers. We have already seen the transformation of that original suggestion into quite a different form.

The Foreign Relations Committee has revamped and revised it so that there may be a chance for a business management that will devote itself to the creation of incentives to work and production abroad. They have provided for the scrutiny of the program by a committee of Congress representing the people of the United States. They have indicated that emphasis should be laid on the production of food, coal, steel, and transportation equipment—the four fundamentals and basics of all needed production in western Europe.

We did then and we do now believe that neither the State Department nor the Military Department were equipped by training or experience to adequately or intelligently administer so vast a program as this one contemplates. The State Department and the military stood startled, stunned, and confused, when we were struck at Pearl Harbor, following the policies they had advocated. Then we had to call the experts of American industry, labor, and agriculture to provide the know-how, the industrial genius, the labor, and the food, to produce the essentials necessary to bring our enemies to their knees. That was a major operation.

The creation of incentives to work and produce in western Europe and to apply the proceeds of that production to support stable currencies, balanced budgets, and stable governments is another major operation and needs the leadership of the best brains in America in agriculture, industry, and labor, to administer the program.

We believed then and do believe now that American dollars will not save Europe, but production and hard work, plus the proper application of the proceeds of that work and production will constitute the only sound bulwark against the miseries of communism.

I repeat that during the war our leaders were talking about one world after the war, but at the same time they were helping make communism the colossus of Europe and Asia, and they were installing communistic-minded men and their sympathizers in the various departments of the Government of the United States.

Now we hear altogether too much talk about needing a third force in Europe, halfway between the totalitarianism of Russia and the free enterprise system of the United States. These socialistic sympathizers call this third force democratic socialism.

If we continue our unprecedented undertaking of rebuilding our former enemies and many of our former allies by constantly paying the trade deficits as they develop their so-called democratic socialism, it will mean a drain so constant and heavy upon the free-enterprise system of America, that we too will finally be drawn down to the depths of despair and will be bound by the mesh of rules, regulations, and controls, that form the chains that presently bind the energies of the countries of Europe.

None of us want to see people starve or unnecessarily go hungry anywhere, but since we are limited and cannot feed all the hungry, clothe all the naked, fire all the furnaces and hearthstones of the universe, we want to help those who will intelligently help themselves. We want to help people who will work, produce, and take steps to meet their own difficult problems. It is to our advantage to have a strong prosperous western Europe, but in our future contributions we must insist upon having intelligent, sound, and constructive management so that while helping them, we may preserve our own republic, and preserve our own American way of life to which Pennsylvania and Illinois have made such tremendous contributions.

We too, like Lincoln, hate oppression. We would like to extend human liberties, but, like Lincoln, we must remember that to preserve our own form of Government, our own solvency, and our own security, are the major challenges of this day.

Address by Most Rev. Francis P. Keough on the Occasion of His Installation as Archbishop of Baltimore

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, February 25 (legislative day of Monday, February 2), 1948

Mr. O'CONOR. Mr. President, there are so many ideologies abroad in the world today utterly opposed to every principle and belief which we cherish as free Americans, that I consider it quite in order to request insertion in the Appendix of the RECORD of a superb address delivered yesterday by the newly installed archbishop of Baltimore, the Most Reverend Francis P. Keough.

It can be read and studied with profit by everyone with an appreciation of the problems of the day, and the necessity of divine guidance for their solution. It is a noble expression of the finest conception of a way of life, and I recommend it to the consideration of every thoughtful person.

As the newly installed head of the Primal See of the Catholic Church in America, Archbishop Keough adequately voices in his installation message the deeply rooted Christian morality and the rich heritage of religious toleration which first flourished in the colonial settlement of Maryland. From there spread the seed for Nation-wide extension of religious toleration and good will which now obtain throughout our beloved land.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Through the grace of God and the favor of the Apostolic See, there has been committed to my care this day the premier See of Baltimore.

I am humbly conscious of the great dignity which has been conferred upon me and of the grave responsibilities attaching themselves to my new office. Yet I am enabled to face up to my task with a more confident heart because I feel that your prayers will be with me.

My first sentiments are those of profound gratitude to the Holy Father in appointing me to this high dignity in the church and it shall be my task to exert every power at my command that I may fulfill it to the best of my ability. I am not unmindful of the debt of gratitude which I owe to his worthy representative, his excellency, the most reverend apostolic delegate, for his official presence here this morning.

MEANING OF TOLERATION

Standing in this historic cathedral of Baltimore, which has been raised to the dignity of a basilica, I am filled with the profound sense of gratitude and appreciation such as is shared by every American Catholic, for it was here in Maryland that Catholics experienced for the first time in this country the true meaning of toleration and religious liberty.

It was in this archdiocese and in this State that there first gleamed the ray of hope giving promise to all men of our great Nation that they might serve their God according to their conscience and right reason.

And as I stand before you today I am also conscious of the fact that I must follow in the footsteps of a succession of great archbishops. There passes this morning, before our mental vision, a glorious procession of prelates who have held sway in this ecclesiastical jurisdiction.

"ILLUSTRIOUS PREDECESSOR"

It is led by the great John Carroll, whose honored name is written so large into earlier chapters of our church and our Nation. Down through Archbishop Leonard Neale; the outstanding French prelate Marechal, who dedicated this cathedral in 1821; the learned Briton, Whitfield; the Sulpician Eccleston; Francis Patrick Kenrick, who convened the first plenary council of Baltimore; the scholarly Spalding; James Roosevelt Bayley, the beloved convert, and the immortal James Cardinal Gibbons.

My illustrious predecessor, Archbishop Michael J. Curley, won the affectionate regard of his clergy and his people to a marked

degree. To win such affection, such love, manifests his amiable character, his saintly nobility. The saying, sacerdos alter Christus est, as the golden-tongued Chrysostom (St. John) declares was completely realized in his person. His prodigious accomplishments in this archdiocese will long keep his memory green in our minds while his charity, beautifully concealed on earth, is now an open book in the archives of Heaven.

These great ambassadors of Christ, my predecessors in office, are the glory of the church in the United States across all the years since the birth of this diocese in 1789. Their memory touches with a holy light the solemn ceremony of this morning.

BOUNTIFUL BLESSINGS

Such are the men I must succeed. That is not easy. Yet in a sense it is. Let me explain this apparent contradiction. My saintly predecessors have left the archdiocese the bountiful blessings of their glorious careers, every parish has felt their presence and shared the heritage they bequeathed to all. So that, as I rule and guide this archdiocese, I shall know that it is a blessed archdiocese, that its clergy and laity are blessed, for they are the children of saintly fathers who now, we trust, rest with God.

My installation comes at a time critical alike for the church and the world. The burden of modern living is pressing down upon us, the future is most uncertain. From eternal Rome comes the pleading, warning voice of the great shepherd of souls, Pius XII. Amid the roaring of voices, the mad hatred and confusion of humanity, there sounds the sweet, prophetic message of the Holy Father, calling, pleading to men and nations to return to Christ.

God grant that this world shall see the light, clear and tranquil, like the Star of Bethlehem above the manger where Christ, the King of Peace, was born, God grant that men may hear above the tumult, the song of Angels, the song of peace and hope and good will.

We may well look upon our present day as a time of historic change, for today we confront the sinister face of evil that would wipe out every vestige of Christianity, Catholic and Protestant alike.

"NIGHT OF SLAVERY"

If the enemy, inspired by satanic forces, should prove victorious, the night of slavery will fall on every land. Men can then no longer call their souls their own, but a world-wide state will wield the lash of a universal oppression that shall batter and bruise and kill the champions of truth and godliness. Justice will be no more. All the fine traditions of our forefathers, the great men who made America the land of the free, will be lost in the tragic mist which will envelop the earth and extinguish the light of Christian democracy.

Humanity has come a long road and a hard way to the precious freedoms we enjoy and accept, perhaps without thinking, just as we accept the sunlight and the air a good God has given us. From Runnymede and Magna Carta to the Atlantic Charter and the four freedoms of Roosevelt and Churchill, it has been a forward march, marked by the fall of our brave sons who gave their lives that we might live, surrounded and uplifted by the dignity of freemen in a free country. But now shadows creep over the earth, intent on extinguishing the "light that came into the world"; social revolutions have upset the traditions of the past; men have grown hopeless and despairing; children, thin and pitiful, old people as well, all are victims of the totalitarian system of government in which the state alone rules and God is excluded.

"DREADFUL SIGNIFICANCE"

A distinguished scientist has said that "the next war will be fought with atom bombs and the next with clubs." The dreadful significance of this dismal prophecy falls upon us with ominous portent, for its meaning is obvious—civilization shall perish and men return to the state of primitive man without God. This is the picture; this the prophecy we face.

The motto of my office is Maria Spes Nostra—Mary Is Our Hope. Mary gave us Jesus, born into a world of paganism and cruelty, yet that pagan world was conquered by the cross of Christ. The church came forth from the dark catacombs, and upon the ruins of paganism, there arose the glory of St. Peter's. The church has endured through every persecution, through every revolution, during the long centuries. We have the assurance of her Divine Founder, the promise of Mary's Son, that "the gates of hell shall not prevail against it." And in these troubled times, as in the past, let us place our reliance in the church. Let us go to Mary as our Holy Father counsels us to do.

Then, out of the disorder with which we are surrounded, Mary can bring peace, for many a time before she has brought peace to a civilization that has been threatened with annihilation. As she brought the Prince of Peace into this world, so through our prayers to her, may she bring Him back to a world which desperately needs Him. Hoping in Mary we may look for her Son, and may the world this time take Him as its leader, so that, molded according to His gentle teachings, filled with something of His tender spirit, inspired with His sympathetic understanding for others, it may go its way in lasting peace and charity.

HOPE OF MANKIND

Gathering together in prayer, under the protective mantle of Mary, our Mother, let us ask her to dry the tears from the face of the world, to assist us in this our time of mourning and weeping. With our beads daily in our hands, may we wage war on the greatest of all disorders, sin, so that removing it from our own lives, we shall become greater influences for good in the lives of others. And if our beads are still in our hands when we come to die we need have no fear, for we shall know that we are going to her who is our life, our sweetness, and our hope, the hope of mankind, the hope of the world. Our hope—Maria Spes Nostra.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 25 (legislative day of Monday, February 2), 1948

Mr. KILGORE. Mr. President, in the February 1948 issue of the American magazine there appeared an article entitled "We Are Cheating Our Children." The article was written by Oscar R. Ewing, the Social Security Administrator. It goes into the question of Federal aid to education, and the article is accompanied by a very illuminating table. I ask unanimous consent to have these printed in the Appendix of the RECORD, because I believe it would be wise for all Senators to read them.

There being no objection, the article, together with the table, was ordered to be printed in the RECORD, as follows:

WE ARE CHEATING OUR CHILDREN

(By Oscar R. Ewing, Federal Security Administrator)

We are cheating millions of our children, withholding from them their right to an education as good as, or better than, that of their parents.

Public-school education in America has become a lottery. If your child is lucky, you live in a community in which qualified teachers develop his aptitudes and talents and equip him to become a good provider and a good citizen. If he is unlucky, he attends a school manned by incompetents, enters the world shabbily equipped, and, through no fault of his own, has less chance to make the most of himself.

This appalling situation has deeply impressed me in the short time I have been Federal Security Administrator, charged with responsibility for the Office of Education, as well as for the Public Health Service, the Social Security Administration, the Office of Vocational Rehabilitation, the Food and Drug Administration, and related services.

When public-school education in States or school districts is bad, almost invariably the basic fault lies in the lack of money. In some cases, of course, the taxpayers could afford better teachers and better schools, but won't vote the funds, but in most instances the income of the taxpayers in the States or districts just isn't large enough.

Our children can't wait. The immediate remedy, the most practical way to distribute education fairly, is for the United States Government to give financial aid to the States for educational uses, according to their needs. The future of America depends upon the intelligence of its people. In helping to build a better America, a sounder America, dollars never will be better spent. President Truman has recommended such national action.

Surveys show that at least $300,000,000 a year should be distributed by the Government to lift the standard of education of boys and girls who, because of bad schooling—or none at all—are headed toward heartaches and handicaps. There are more than 2,000,000 who, educationally, are actually starving. Millions more are receiving an inadequate mental diet.

Smugly, we have ignored those unfortunates. We take it for granted that Americans are the best educated of all peoples. But our percentage of illiteracy ranks us down in the list. Countries that have done a better job at equipping nearly all their children with the three R's include Denmark, the British Isles, Finland, Netherlands, Norway, Sweden, and Switzerland.

In the years ahead the United States will be faced with vital problems, probably more complicated and more difficult to solve than any that ever faced our citizens before. They are problems of how to earn a good living, how to be happy; problems of local and national government, foreign affairs; problems of farmers, labor, business; problems of parents and homemakers; problems of national defense. It will be up to the boys and girls now in school to carry on, to continue to maintain the United States as the best country in the world.

But, stupidly and shamefully, we are allowing many boys and girls to receive such shoddy schooling that they may become a hindrance instead of a help in building a sound America. Good schools help to build character and competence. They help to keep children from becoming maladjusted. On the other hand, those who have had no chance at an education feed the ranks of the mentally unstable, the delinquents, the men and women who go on relief rolls. They may become recruits for the agitators who believe, sometimes with reason, that the world has treated them badly and who belligerently demand the destruction of government. If we don't invest in educating such children now, they will cost us many millions later.

States that are not giving their children even a fair education are usually in there trying, usually doing the best they can. Many of them tax their citizens more heavily

than do those States whose schools are better financed. In the school year 1944–45, for instance, Kentucky spent 1.72 percent of its residents' income (as determined by the Department of Commerce) to provide $80.94 per pupil. But Nevada had to spend only 1.43 percent of its residents' income to provide $155.88 per pupil. While Mississippi was spending 1.67 percent, which provided only $44.80 per pupil, rich Connecticut provided $159.50 per pupil with 1.36 percent of its residents' income.

Several proposals are pending in Congress now which would establish specific programs of Federal aid. Let us examine one such proposal to see what can be done—the nonpartisan Educational Finance Act, which has been approved by the Senate Committee on Labor and Public Welfare and is now on the Senate calendar. A subcommittee of the House Committee on Education and Labor has already reported favorably upon a bill with the same aims.

This Senate bill would distribute $300,000,000 a year to the States under a formula based upon the number of children 5 to 17 years of age in a State, and upon the total income of residents in the State. No State could use Government money to cut its own appropriations. In fact, the formula is arranged so as to stimulate States to appropriate an amount equal to at least 2.5 percent of the income of their citizens. They are to be rewarded for effort.

The poorer States, of course, would receive the largest per-pupil appropriations. No State would get less than $5 per pupil. Thus, according to the estimates for this bill, rich New York, with 2,402,000 children, would receive $12,010,000. Mississippi, with 595,000 children, would receive $5 per child, plus a bonus to make up for its inability to pay for good schools, and its total would be $16,985,000 a year. States with an annual per capita income of less than $4,000 for each child 5–17 years of age would receive more than $5 per child.

The average State expenditure throughout the United States in 1944–45 was $125.41 per child. Many States increased appropriations for the school year of 1946–47, but generally the ratios and the needs remain comparable. The Educational Finance Act would raise the average to $140.42.

Federal aid cannot perform miracles. The worst schools in America would not rise to be classed with the best, but additional appropriations would be an enormous stimulus. Better teachers could be employed, rattletrap buildings could be repaired. Most important would be the notice served to college men and women in every State that the teaching profession will once more offer decent pay and decent living conditions.

Plans for Federal aid provide for distribution to Negro schools in those States where segregation prevails by law, and proper audits and other reports must be made to the Government to make sure the money is used only according to the law. However, under the terms of this bill, the Government and its employees are prohibited from interfering with local and State control over the schools. No one in Washington could say who shall be employed, what shall be taught, what schools should be improved, where new ones shall be built. The State is boss.

Differences of opinion as to Federal aid to nonpublic schools are largely responsible for delay in the enactment of necessary legislation. Surely a program can be found that will resolve these differences in a manner that will be fair to the children. After all, their interests are paramount.

Most parents, taking it for granted that their children are being adequately educated, are not aware of the need for Federal aid. Your own school district may need it. You may be one of the millions who would be painfully surprised and profoundly shocked if you knew the full truth about the quality of education your school board, in spite of all its strivings, has been able to provide for your children. You do your best to give your children good, sound training at home. How can you afford to give them less when they are at school?

In at least one classroom out of eight, "education" is in the hands of men and women who are not qualified by training for their jobs. More than 100,000 teachers are substandard according to the qualifications demanded by their States. But because of the emergency, because boards of education can't get anybody else, they continued to be employed month after month and year after year. They may be well-meaning, earnest, and hard-working people. But teaching is a skilled art and needs special training and experience. Would you take your child to a doctor who was not fully licensed? Well, many of you send your children to teachers who are not fully licensed.

Boards of education that have limited funds must hire such teachers because there are not enough experienced teachers to go around. People can make more money as clerks or even by running elevators. In many cases, even the best of teachers cannot do a really good job for their pupils because classrooms are crowded, many pupils are on half-time, the equipment is out of date, and appropriations won't stretch to pay for needed improvements.

At least 50,000 children who are eager for an education are getting no schooling whatsoever because their school boards cannot get any kind of teachers for them at the miserable salaries they must offer. These usually are in the rural districts. There are probably a million more who are, in effect, truant. Every State has a compulsory education law, but in many districts it is not enforced, because there would be no room for the children if they were hauled back to school. These usually are the unfortunate boys and girls whose parents don't realize the value of an education and who let their children go to work at an early age.

This situation has been developing for years. It was aggravated, of course, by the war. From 1941 to 1945, in addition to the normal turn-over, 350,000 qualified teachers left their schools to enter the war or to take better-paying jobs. Comparatively few returned to the teaching profession, which in 60 percent of the cases pays less than $2,000 a year, and less than $1,200 a year in 16 percent. Faced with this financial situation, men and women who had been preparing themselves to teach, began to give up the idea and to take jobs in businesses in which they could meet the rising cost of living.

States and school boards have long been aware of these conditions. To their great credit, as soon as the war was over, two-thirds of the States and countless communities began trying to raise teachers' salaries. The increase comes to an average of about $300 a year, or 13 percent for this school year. Those increases help teachers meet the increased cost of living, and thus have kept on their jobs many good teachers who were being forced to consider new fields, in order to feed, clothe, and house themselves. But even in the richer States those increases do not bring many teachers' salaries up to the average paid for factory labor.

The trouble is that improvement is neither universal nor sufficient. A recent report by the Citizens Federal Committee on Education, an official group that advises the Federal Security Agency, declared, for instance, that in South Carolina college-trained new teachers are asked to work for around $1,000 a year, and experienced teachers with masters' degrees get from $1,305 to $2,286. A teacher with a bachelor's degree may receive as little as $1,700. Mississippi managed to raise its average salary from $800 to $1,200.

The National Education Association estimates that, even after raises in pay, classroom teachers receive an average of $1,850 in Iowa, $1,770 in Nebraska, and $1,500 in North Dakota. The States that make up the top class—that pay an average of more than $3,000 a year—are California, Connecticut, New York, Maryland, and Washington.

To show what a critical shortage of teachers lies ahead, the Citizens Committee points to Illinois, where the State schools will need 6,000 or 7,000 more elementary teachers in the next 5 or 6 years. Yet the six State teacher-education institutions in Illinois, which are designed to produce teachers for the State schools, graduated only 104 elementary teachers last year. And Illinois has an average salary better than many States—about $2,200 a year.

Our birth rate is increasing so rapidly that even the best-manned schools must expand quickly. In the last 5 years, 13,000,000 babies were born, when the experts had predicted the arrival of only 9,000,000. Some of these youngsters are now entering kindergarten. For their 12 school years competent teachers can do much to help parents make them good citizens. Without higher salaries and better opportunities we can't bring to all the schoolrooms that kind of teacher.

One of the objections to Federal aid comes from taxpayers in prosperous States who say, "Why should I pay to educate children in some other State?"

The answer lies in the fact that, like the world, the United States has become smaller. Migration is enormous. There is the migration from the farms and small towns to the nearby cities, and the migration from one State to another. Thus, lack of education in one part of the country can affect all of us.

Do your schools need Federal aid?

State	Expenditure per pupil in public elementary and secondary schools for 1944–45	Estimated per-pupil expenditure with proposed Federal aid [1]
United States average	$125.41	$140.42
Alabama	56.93	93.57
Arizona	127.55	146.69
Arkansas	60.26	99.50
California	163.38	169.83
Colorado	129.47	136.66
Connecticut	159.50	167.11
Delaware	123.05	140.92
District of Columbia	161.02	170.28
Florida	94.55	101.55
Georgia	64.92	97.39
Idaho	112.34	123.20
Illinois	169.32	177.20
Indiana	131.29	138.11
Iowa	124.83	131.32
Kansas	130.85	137.69
Kentucky	80.94	119.74
Louisiana	95.31	125.49
Maine	97.75	105.81

Palestine Without Politics

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1948

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Toledo Blade of February 23, 1948:

PALESTINE WITHOUT POLITICS

In two important respects the statement issued by Senator ROBERT A. TAFT Saturday on the Palestine situation differs from the pronouncements the American people have learned to expect from their politicians on the touchy subject.

In the first place, most politicians prefer to limit their remarks about Palestine to vague generalities about what should be done rather than to go into the specific details of how it is to be done. Thus, when President Truman and Gov. Thomas E. Dewey started calling for the admission of more Jews into Palestine a couple of years ago, their competition was based more on numbers than on methods. Each tried to outbid the other in proposing that the quota be raised by a good round figure, but one was no more specific than the other in suggesting the means by which this country would persuade Great Britain to accept either quota.

In the second place, most politicians prefer to issue such statements when it will do them rather than the Jews the most good. Thus, when Mr. Truman and Mr. Dewey started competing with each other with their Palestine pronouncements, no immediate decision on the issue was pending before the United Nations. New York just happened to be on the eve of an election.

But Senator TAFT, who so far as we recall has never tried to make political capital out of the Palestine controversy, was addressing himself both to the issue and to the occasion when he called on the United Nations to enforce its partition plan. Sometime this week the Security Council is expected to take up the recommendation of the Palestine Commission that the United Nations provide the troops required to do that job. And Senator TAFT says that it is now time for the United Nations to back up its decisions with force of arms.

As readers of these columns know, the Blade does not always see eye to eye with Ohio's senior Senator. We have taken issue with his views on many occasions before, and will undoubtedly do so again. Yet we have never questioned his political honesty any more than we have his personal integrity. He may be as reactionary as some of his critics say; he may be as cold-blooded as some of his opponents charge. But even on so controversial an issue as this Palestine question, he has the sense to see what should be done and the guts to say let's do it.

Lithuania Should Be Free

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1948

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address I delivered in Worcester, Mass., on February 22, 1948, at a meeting of the Lithuanian Aid Association in commemoration of the thirtieth anniversary of the independence of Lithuania:

As United States Representative from the Fourth Congressional District of Massachusetts, I was glad to receive and accept the invitation to join with you in commemoration of the thirtieth anniversary of the declaration of Lithuanian independence.

This annual program is dear to the hearts of all Lithuanians because it is held to recollect that day of February 16, 1918, which marked the end of well over a century of suffering under a hostile foreign rule. Lithuania on that day stood forth as an independent, democratic republic. There was cause for rejoicing and the future was faced with confidence. Your people were happy and prosperous in their own sovereignty.

Unfortunately, in this year of 1948, our observance here is shaded with sorrow. The bright star of Lithuania's freedom has been clouded over by the violent storms of tyranny. We gaze with sadness upon the advancing tragedy of sacrifice to ruthless imperialism that has enveloped Lithuania; she has ceased to be an independent nation.

The principle of political independence enunciated in the declaration by the United Nations and the Atlantic Charter is a hollow mockery in the present suppression of the Lithuanian people. Lithuania is undergoing a shameless conquest, the victim of as bold and cynical a diplomatic campaign as any big state has ever waged against a gallant, honorable, but weaker neighbor.

Although we mourn over her present plight, there is no cause for despair. Repeatedly, through her history, Lithuania has proved that her people can eventually overcome the temporary triumphs of oppressors. The Christian faith, which, in 1399, defeated the Tartar invasion and saved all Europe from barbarism, is still with her today. It gives her the spiritual vigor to outlive any dictatorship. From my own knowledge and experience with my fellow Americans of Lithuanian descent, I know that deep in the heart of every Lithuanian is that passion for liberty and freedom which never dies. There is no power that can forever enslave a people who are determined to be free.

All over the world, Lithuanians are gathering, at this time, to renew their vows to work for the independence of their homeland. Here in the United States I earnestly believe that most Americans are becoming increasingly more concerned about the fate of Lithuania, which stands in accusing testimony to our failure to live and act according to the principles for which our people have fought and died in two World Wars. I consider it the solemn duty of every officer of our National Government to reveal the truth of the extinguishment of self-government, that is being forced upon the smaller nations, like Lithuania, by the Russian Government policy of expansion through fraud, intimidation and coercion. World War II was fought with the clear understanding and pledged purpose that common victory should bring restoration of self-government and territorial integrity to the oppressed nations of the world.

We cannot conceive of the recent war being won until that pledge has been carried out. The major world powers, including the United States, are acquiescent parties to the disgraceful betrayal of the smaller nations while they continue to allow peaceful, freedom-loving peoples to be cruelly dominated by the Soviet rule of imperialistic terrorism—which defies every decent concept of self-determination and democracy.

The case of Lithuania, and the other small nations, is a challenge to the moral conscience of this Nation and the United Nations to establish the great, basic principles of freedom and liberty for all peoples. In simple justice, our Government must insist that the Lithuanian people be permitted their inalienable right to govern their internal existence as they themselves see fit.

You must dedicate yourselves today to the determined revelation and presentation—to the world—of the facts and truth about Lithuania so that the United Nations shall be called upon to meet the full moral and humanitarian responsibility of restoring the independence of Lithuania.

In this cause you will have the complete support of freedom-loving people throughout the world, they will join in your efforts and prayers that your homeland may be free to live again in the spirit of her ancient motto: "Be what may, Lithuania will always stay."

Poland

EXTENSION OF REMARKS
OF
HON. MITCHELL JENKINS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1948

Mr. JENKINS of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at exercises before the statue of Kosciusko at Lafayette Park, Washington, D. C., February 12, 1948:

In the course of mankind's history here in this world, many nations and many peoples have had their brief day in the sun and, as the night has fallen, have sunk into obscurity. Empires have risen and fallen, but not often have they risen again. Few there are whose names are written on history's page, who have survived conquest and dismemberment only, like that fabled bird, the phoenix, to rise again from their own ashes and stand once more among their contemporaries, free and equal. And fewer still have survived three such experiences within a short span of less than a quarter of a century followed by over a hundred years of alien rule. Such, however, has been the history of Poland, and the reason for it is not too hard to find. All through its history there has been in Polish hearts a burning, consuming love of freedom which no amount of tyranny, no hardship, no oppression could quench. From father to son to grandson to great grandson, through the generations, the ideals of liberty and freedom have been passed on. Polish boys and Polish girls drank it in with their mothers' milk, and should a man falter and forget, his women bolstered up his failing courage.

No one individual, to the world at large, more dramatically personifies the Polish spirit, with the possible exception of Paderewski, than Thaddeus Kosciusko, whose memory we honor today. For me, a Welshman, to attempt to recount to you, of Polish extraction, the events of his life would be futile. For better than I, you know them for they are part of your racial and ancestral heritage. You know them, but they are part of mine too, as an American, for a part of Thaddeus Kosciusko, and no small part, either, belongs to America. It was to America that he came as a comparatively young man of 30 years of age, to offer his services in the fight for freedom and for six long years he risked his life, far from his native land, in a cause which many people would say was not his own. But to him, and to all men like him, who have in them some of the spark of divine fire, the cause of liberty loving people striving to

throw off oppression's yoke, is always their cause. To such men there are no racial or national boundary lines, for all men, everywhere, are their brothers and those who love liberty are always spiritually next of kin.

Fifteen years after he came to America to help us to win our freedom, he participated in the signing of the new constitution of his own Poland. We here in America can, with profit to ourselves, scan that constitution which, long before we freed our own slaves, made every man who set foot on Polish soil a free citizen; which recognized the responsibility of the legislative body to the people who created it; which guaranteed religious liberty and recognized the obligation of every citizen to defend his country in time of need. We owe much, we in America, to Poland and to the Americans of Polish extraction for their contributions to America.

But a constitution, such as the one Kosciusko helped to frame and into which he breathed his own love of freedom, could not long survive in the Europe of his day, surrounded as Poland was by Russia, Austria, and Prussia. Such a document, if allowed to stand unchallenged, could have kindled a flame throughout all of central Europe, which would have consumed the Hitlers and the Stalins of that time. And so, in but a few years—three short years—came the final partition of Poland and the end of Kosciusko's dream, although like the patriot and lover of freedom that he was, he never closed the fight. He never lived to see that dream of a free Poland come true for he died in 1817.

For a brief time it did come to pass but again, today, as in the days of Catherine of Russia and the Czar Alexander, Poland, though with the outward trappings of freedom, is not free. Although its liberty is destroyed and its constitution, which Kosciusko helped to write, is but an empty mockery, yet his spirit lives on, and always will live, in the hearts of his countrymen. As it did before, Poland will rise again to take its place among the free nations of the world. A strong, freedom-loving people cannot die, for in that love of freedom are the seeds of immortality. And, we here in America, for whom he fought and who are the inheritors of his love for liberty, can and must help that day to come when Poland shall be truly free, when we can cleanse our soul of the sin against a people, whose only offense was that they were our allies, that they fought with us and for us, on the field of battle and in the underground, to the bitter end, and when we can undo the wrong that our representative, unbeknownst to us, did at Yalta.

Kosciusko still lives, and in the words of that song which expresses his own spirit—"Jescie Polska nie zginela." We salute him.

Joe Martin Came to Iowa—He Saw and He Conquered

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1948

Mr. MARTIN of Iowa. Mr. Speaker, on February 9, 1948, it was my good fortune to attend a very inspiring meeting and luncheon in Des Moines, Iowa, commemorating Lincoln's birthday. The speaker of the day was our own JOSEPH W. MARTIN, Speaker of the House of Representatives. I visited with hundreds of my friends from all over Iowa for several hours following that meeting and I have read with great interest many news reports and editorials in the newspapers of my district about the meeting and about JOE MARTIN.

The personal reports, news reports, editorial comments and letters I have received are unanimous in their praise for the inspiration JOE MARTIN gave everyone present or listening to his radio broadcast.

Typical of the editorial comment is the editorial that appeared in the Fairfield Daily Ledger of Wednesday, February 11, 1948, which I have secured permission to include in my remarks, so that Congress and the Nation may have the benefit of knowing how highly JOE MARTIN is held in the esteem of the Iowa leaders who heard him and met him and visited with him during his recent visit to that great State. It follows:

JOE MARTIN CAME TO IOWA—HE SAW AND HE CONQUERED

Sunday night, at a dinner given by the Register and Tribune in Hotel Kirkwood, Des Moines, we met a man who knows and knows why he knows. The meeting was in charge of the inimitable John Henry of the Des Moines newspapers.

He had invited a representative from each of the daily newspapers of Iowa to meet in an "off the record" conference, with JOSEPH W. MARTIN, Speaker of the National House of Representatives and heir-apparent to the Presidency of the United States, if there should be a vacancy between now and noon on January 20, 1949.

Questions were fired rapidly at the Speaker and were as rapidly, frankly, and completely answered. MARTIN'S answers were given in simple words that could not be misunderstood nor misconstrued.

Speaker MARTIN was questioned for more than 2 hours and not one of his replies was evasive. As he met the barrage of questions fired at him, we thought of the lines of Samuel Valentine Cole in his "Old Saw Reset":

"The man who knows and knows (why) he knows, to him your homage bring; he wields the power that waits and wins, and he is a rightful king."

JOE MARTIN knows and knows why he knows because he, a common man, like you and me, has been in the House of Representatives since 1925. He was elected first in 1924, the Presidential year, when Coolidge and Dawes were elected President and Vice President, respectively. At the expiration of his present term he will have served 24 years.

He was 1 of only 89 Republicans elected to the House in 1936, the great Roosevelt landslide. He had not been in Congress long till his Democratic as well as Republican colleagues discovered that he was clean, honest, and aggressive. By 1939, the Republican Members—then 169 in number—saw that he was the gentleman for the position of minority leader of the House.

He held that position till 1947 when the Republicans gained a majority in both the House and the Senate. The unassuming Congressman from the Fourteenth Massachusetts District was then elected Speaker of the House.

His Republican colleagues had learned long before, that JOE MARTIN knew and knew why he knew and he was just the lad to direct the course of the House after it had been in the hands of the New Dealers for 16 years.

Having seen the Republican membership of the House dwindle from 247 in 1925 to 89 in 1937, then with JOE MARTIN as minority leader, the Nation witnessed the greatest comeback in the history of the National House of Representatives. In 4 elections, the Republican membership had climbed back to 246—only 1 less than the membership in 1924, when JOE first entered the Congress.

What is the secret of the Speaker's success? As we view the man he is first of all a fighter for what he believes to be the right. He is a short, square-shouldered man who plants his feet on the floor, like the bulldog who intends to stand his ground against all comers.

But he is a fair fighter. No matter what the opposition does or has done, he is unalterably opposed to unfair tactics to gain a point or a victory. He is that type of a man who would rather go down in defeat in a fair fight than to win by unfair methods.

But back of it all he knows thoroughly every position he takes and knows why he knows. A fair fighter with that mental equipment rarely is defeated. He will keep on coming back for more till he does win.

He has an engaging smile that spreads all over his face and a hearty laugh that is contagious—qualities that draw to him men who are willing to listen to his words of wisdom and fairness in all dealings, even all political dealings.

He comes from a highly industrialized district. It is made up of parts of only four counties. The whole area, however, is probably no larger than Jefferson and Van Buren Counties. The population of his district is about 305,000, approximately 10 times the population of Jefferson and Van Buren. In this district are such cities as Fall River, Taunton, and Attleboro, and nearly 50 other smaller cities and towns of 10,000 and less.

There are, also a large number of truck farms in his district. He is a common man, like the rest of us, and acquainted with our problems.

MARTIN is the publisher of a daily paper in North Attleboro, a little city of approximately 10,000, 5 miles northwest of Attleboro. Our latest circulation reports places its circulation at 3,500. He has had his grief, like many other publishers, in getting print paper during and since the war.

We believe we are safe in saying that no candidate for the Presidency has ever appeared before an Iowa audience and made the friends that JOE MARTIN made in his address Monday noon.

All Monday forenoon we heard the remarks repeated again and again: "He is probably a great man, but he is too far east," "I do not believe in a dark horse. He should announce himself," "People want to know where a man stands when he seeks that office."

We milled around with the crowd in the Hotel Fort Des Moines lobby for a couple hours after the address and not once did we hear any objections. The talk then was, "I'm for that man." "I can take off my coat and work for him till the last vote is in the ballot box." "He's just the guy we need, he's not afraid to call a spade a spade." "No one can say that MARTIN tries to dodge the issues." "He's a statesman and I would like to move that nominations be closed and the fighter from Massachusetts be named by acclamation." Not one of these statements and not one of many others similar to these, was challenged.

The Increase in Steel Prices

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 25 (legislative day of Monday, February 2), 1948

Mr. SPARKMAN. Mr. President, within the last few days all of us have been

greatly disturbed by the announced increase in steel prices. Three very fine editorials on the subject have appeared in three of the Washington, D. C., newspapers—one in the Washington Evening Star, one in the Washington Daily News, and one in the Washington Post. I ask unanimous consent that these editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of February 21, 1948]

INDUSTRIAL STATESMANSHIP

The 10-percent increase in the price of semifinished steel which has been put into effect by the leading steel makers has to be appraised, both as to its wisdom and its justification, in the light of the industry's profit position. When that is done, it makes one wonder what has become of that "industrial statesmanship" about which so much has been heard.

In 1947 the net profits of United States Steel, using approximate figures, were $126,000,000, as against $88,000,000 in 1946. Bethlehem, the second biggest steel producer, had net profits of $51,000,000 in 1947; $41,000,000 in 1946. The figures for Republic Steel, third in size, are $31,000,000 last year and $16,000,000 in 1946. Taking these profits into consideration, the steel industry is not going to be able to convince the public that there was any compelling need for a price increase at this time.

Benjamin F. Fairless, president of United States Steel, attempts to minimize the significance of the price increase by pointing out that it applies to a very small proportion of total steel output. It will result, he said, in an average increase in the price of semifinished steel of only one-quarter of a cent a pound. That is $5 a ton and if the price advance stops there the actual inflationary effect might not be too serious. On the other hand, if the net effect of the price increase is as inconsequential as Mr. Fairless indicates, there would seem to have been little reason for the steel companies, considering their profit position, to have made this unsettling move at this time.

Psychologically, at least, the influence of the steel advance is almost certain to be bad. Earlier in the week Philip Murray, president of the United Steel Workers, announced that the union would demand substantial wage increases in April. The price increase unquestionably leaves the steel industry in a weaker position to resist this demand and if the steel workers get a substantial increase the much-feared third round of wage hikes will be under way. Further than this, the price action has created uneasiness among the industrial users of semifinished steel who have to buy this commodity. Most of those who have spoken say they cannot absorb the increase and will have to pass it along in higher prices.

The president of the American Bankers' Association says that the increase "sounds inflationary" to him and Democratic National Chairman McGrath, who may be suspected of some political interest in the matter, sees the increase as evidence of an irresponsible get-yours-while-the-getting-is-good policy."

All factors considered, the boost in the price of semifinished steel appears to have been unfortunate, unnecessary, and unwise. If the next step is to be an increase in the price of finished steel the over-all effect can well be disastrous.

[From the Washington Daily News of February 21, 1948]

STEEL BEGS FOR TROUBLE

Again the steel industry has taken a step which affects America's whole economy. And very badly, we fear.

It has raised a batch of prices, at an estimated total cost of $68,000,000 a year. By the time the increases are passed to the public through higher prices on thousands of items, the bill may run larger. Moreover, the rash of increases for semifinished and special steels seems to forecast a coming general steel boost.

The timing of all this is amazing. If ever an industry seemed to be begging for trouble, it is steel.

It happens just after a year in which steel made profits that often broke all records.

It comes in the face of a major decline in commodity prices.

It comes after General Electric and some other firms had cut prices in an effort to check inflation.

It comes while the industry is running at full speed, with an eager buyer for every pound it produces.

And it comes just as the steelworkers' union is opening negotiations for higher wages—with Philip Murray clamoring against exorbitant profits and high prices. Mr. Murray said there would be no strike, and made no definite demands—just substantial rises. He must be psychic—his strategy couldn't have been better had he worked it out with the companies.

Here, then, goes that inflation bubble back up again, when it seemed to be losing some of its size.

In spite of Government policies and the warnings of economists. In spite of what seemed even more effective—a sudden application of the old law of supply and demand.

Steel is so big and vital in every phase of our economic life that its deliberate action can offset all this.

As has happened before.

It was United States Steel's negotiations with Mr. Murray which set a national pattern for the first big round of wage increases.

In the second round, Big Steel repeated the performance—that time with John L. Lewis. By granting demands running to about 44 cents an hour in total pay increases and a 10-cent royalty on each ton of coal, it gave an enormous boost to inflation.

Every steel firm and coal operator had to go along—including a lot of little companies on the remote edge of the steel and iron business, and a host of small and marginal coal producers.

These wage patterns were followed by price hikes that helped set the national price pattern.

A third historic case came when top steel men decided against expanding capacity as much as Government, business, and union economists claimed was essential.

Whatever the merits of that decision—and it is a highly technical matter—it must have had some bearing on the steel shortage which has squeezed thousands of businessmen, hampered production, and caused a vast and evil gray market.

Believing passionately in free enterprise, we still can't help wondering whether this is one of those cases where freedom is being abused and restraint is in order. Just as we have felt in the case of gigantic unions.

Big business and big unionism have the power to combine in behalf of high prices and wages—at the expense of the public. We are not charging collusion—just looking at what happened and thinking that had it existed we would have got just about what we have got.

There are dangers—great dangers—in the existence of companies and unions so big that they can upset Government policies and fix national trends for all prices and all wages. That power can become bigger than Government.

The steel industry is already involved in an antitrust suit. In the midst of it, leading companies seem to have had the same thought about the same prices at the same time.

This industry badly needs friends. But its part in dictating wage and price policies and its inability to supply steel and control the gray market have been making enemies. And they are by no means confined to the left-wingers.

We frankly fear that among the patterns it has been creating there may develop one for Government operation or control which would jeopardize our free economic system.

[From the Washington Post]

STEEL GOES UP

Soaring building costs will go still higher as a result of current increases in the prices of structural steel, while advances in the prices of semifinished steel products will doubtless be reflected in a rise in prices of a wide range of manufactured goods. To be sure, a large part of the semifinished steel output is processed by big steel concerns for their own use. Hence price increases may possibly be absorbed without an increase in the prices of their own finished products. But smaller concerns that depend upon the large integrated companies for supplies of semifinished steel are expected to raise the prices of their finished products, and these increases will be passed along in varying degrees to the ultimate consumers.

Spokesmen for the steel industry say that prices of semifinished steel are out of line with prices of finished steel products—that in some cases prices are below production costs. But there is a larger issue that the leaders of the steel industry have entirely ignored. That is the effect of rising prices on the general economy.

Since coal prices were raised last summer no marked changes have occurred in production costs that necessitate upward adjustments in steel prices. The rosy profits statements of the big steel companies are proof that they are under no compulsion to increase prices. Yet they have chosen to do so at a particularly critical stage of adjustment when it seemed as if the forces of inflation were subsiding and a salutary decline in prices and living costs might be achieved. Although the inflationary elements have not been eliminated, the drop in grain and food prices encouraged new hope of arresting the spiral of rising prices, higher wages, more price increases, and still higher living costs. The possibility of achieving stability depends to a great extent upon the policies pursued by business executives who are in a position to guide price policies in important individual fields, and by so doing influence the actions and the policies of businessmen in other fields.

Steel is a basic industry. Its price policies are of vital importance to a host of more-or-less dependent steel-using industries. Nevertheless, it is giving a fillip to the forces of inflation that may result in undoing all that has been done to take some of the inflation out of the consumer's food budget. In short, steel-price increases will not only produce more price increases; they also signify to the business world that the heads of a vital industry think that the country is still in the midst of inflation and that the economy will be able to sustain still higher prices.

In view of mounting consumer resistance to high living costs, this is a dangerous belief. Carried to its logical conclusion, it can only spell an eventual price collapse of heroic and

devastating proportion. The immediate effect of such short-sighted price policies will, of course, be to intensify demands for wage increases. Although the head of Republic Steel contends that present price advances are intended to compensate for past wage increases, it is a foregone conclusion that the increases will be regarded by steelworkers and workers in other industries, too, as a new argument for higher wages. For every price increase of this kind tends to raise prices of many articles that workers buy.

We conclude, therefore, that the heads of the steel industry have displayed a deplorable lack of responsible business leadership. They are pursuing price policies that stimulate inflationary forces instead of setting an example of restraint that would assist the administration's efforts to hold back destructive inflationary tides.

Resolutions For Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1948

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolution unanimously adopted by the members of Our Lady of Vilna Parish and their guests at an assembly in Worcester, Mass., February 15, 1948, on the occasion of the commemoration of the thirtieth anniversary of the independence of Lithuania:

Whereas man has been endowed by his Creator with certain inalienable rights which no human power or authority can wrest from him; and

Whereas chief among these inalienable rights is the sovereign right of all peoples to choose for themselves the form of government under which they wish to live; and

Whereas the principles of the Atlantic Charter, which our Government signed, respect and guarantee this right of all nations, both large and small, to govern themselves without interference from any outside source; and

Whereas the Allied Nations, among these our own United States, fought World War II presumably for the assurance of peace to the entire world, a peace which cannot be if large nations are allowed against all principles of justice and charity to subject small nations to tyrannical rule; and

Whereas the Republic of Lithuania, a neutral and liberty-loving nation, has proven by her 21 years (1918–39) of advancement in all fields of endeavor that she is capable of self-rule and has ever respected this right of self-government of all peoples; and

Whereas genocide, the extermination of a cultural group, has been declared by the General Assembly of the United Nations to be an international crime; and

Whereas Soviet Russia has ruthlessly and shamelessly deprived the Republic of Lithuania of her freedom and is now following a policy of the complete annihilation of her people through merciless deportation into Siberia, through the relentless destruction of her government, industry, culture, and educational system and through the cruel plunder of her population by wholesale murder and imprisonment; and

Whereas this policy followed by Soviet Russia against the Republic of Lithuania is openly and defiantly against the principles of the Atlantic Charter and against the democratic policy of our own United States: Now, therefore, be it

Resolved, That the Government of the United States firmly evoke the principles of the Atlantic Charter and effectively use its influence upon the United Nations to apply these principles to all nations, both large and small; be it further

Resolved, That the Government of the United States maintain and uphold its present policy of nonrecognition of Russian absorption of the Baltic States and ever use its influence to bring about the immediate and positive restoration of the independence of Lithuania and the other Baltic Nations; be it further

Resolved, That our Government insist upon the immediate cessation of the atrocities and inhumane treatment now being inflicted upon the Lithuanian and the other Baltic peoples by Soviet Russia; be it further

Resolved, That proper provision be made to have protests and grievances, addressed by small nonmember countries to the United Nations, be officially acknowledged by the Secretary General and taken before the Little Assembly; be it further

Resolved, That the Republic of Lithuania be admitted as a member of the United Nations and that her official representatives be permitted to enjoy the status of duly-elected delegates to that organization; be it further

Resolved, That copies of this resolution be forwarded to the President of the United States, His Excellency Harry S. Truman; to the Secretary of State, the Honorable George C. Marshall; to the Senators of Massachusetts, the Honorable Henry Cabot Lodge, Jr., and the Honorable Leverett Saltonstall; and to the Representative from the Fourth Congressional District in Massachusetts, the Honorable Harold D. Donohue.

The Business Approach

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 25 (legislative day of Monday, February 2), 1948

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Business Approach," appearing in the February 10, 1948, issue of the Peoria (Ill.) Journal Transcript.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE BUSINESS APPROACH

There is little disposition in the United States today to refuse assistance to those nations of western Europe which show an inclination to rebuild their war-shattered economies.

There is, however, widespread disagreement over the amount of assistance that those nations need and the amount which the United States can afford to offer. There also is widespread disagreement over the form which American assistance to the democratic nations of Europe shall take.

President Truman and Secretary of State Marshall have asked for the provision of $6,800,000,000 for operation of the program for the 15 months beginning April 1 next. They have made no specific proposals, however, as to just how the money is to be expended, what portion of it is to be in the form of loans and what portion in outright grants.

There seems little doubt that the Congress will scale down the figure asked by Mr. Truman and Secretary Marshall, despite the Secretary's ill-advised "all or nothing" demand. Various amounts have been proposed by Senators and other authorities upon European and American economics and there has been a growing disposition in Congress, among Democrats as well as among Republicans to put American aid upon a more businesslike basis than the vague proposals of the administration.

Concrete proposals for the administration of aid to Europe have been few, however, despite the repeated assertions of determination to examine our economic abilities before the granting of assistance.

One of the few specific formulas for the handling of European assistance was advanced in Peoria last Saturday night by Senator Capehart of Indiana. Speaking at the annual Lincoln Day banquet of the Peoria Bar Association, the Indiana Senator made the first public announcement of what appears to be a most carefully thought-out proposal which would result in our dealings with Europe being conducted upon a common-sense, businesslike basis instead of the ethereal proposals for the scattering of American dollars which have been made by the administration.

Roughly, Senator CAPEHART's plan proposes the setting up of an international division of the Reconstruction Finance Corporation which would issue loans to private endeavors in foreign countries which could prove they were good credit risks. The plan further would require that the vast dollar holdings of the nationals of foreign countries in this Nation be tapped and that each nation benefiting from the plan would contribute to the fund dollar for dollar with the United States participation.

The Capehart plan would utilize the successful American free enterprise system instead of adopting the socialized European system which the Marshall plan contemplates. It would be private enterprise dealing with private enterprise instead of government dealing with government. It further would require the people of the needy nations to signify their faith in their country by putting up half of the capital to be used instead of requiring faith in the future of Europe only from the Americans who would foot the bill.

The placing of European relief on a sound, business basis has been proposed by many but Senator CAPEHART is the first to come forward with a plan which would seem to accomplish that purpose.

The Textile Situation

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 25 (legislative day of Monday, February 2), 1948

Mr. SPARKMAN. Mr. President, recently Mr. Douglas Comer, one of the outstanding textile men of the United States, wrote an article regarding the textile situation in this country, which was published in the New York Journal of Commerce. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Journal of Commerce, January 1948, textile edition]

The textile industry has seen the number of its spindles shrink from 37,000,000 in 1925 to a little over 22,000,000 today, and yet by efficient operation and extra shifts, production is at a high peak. Prevailing prices today are an encouragement to as near three-shift operations as possible and while there are a few textile fabrics that are unusually scarce, the general level on the whole is catching up with unfilled needs and there is every prospect for a leveling of prices as well.

Naturally goods made in foreign countries try to market themselves here in America because of our dollar value. Just a few goods coming into this country could easily result in the loss of confidence in our home values. It would not necessarily be just the few yards of cloth involved in an initial shipment. It would be that amount magnified many times in the minds of the buyer and which might be broadcast for the purpose of influencing the market.

We can spin and weave everything this country needs. The fact that American cotton may go to foreign looms does not justify the return of that cotton in goods to America. Their coming in here will only serve to displace that much cotton and that many jobs here in our American mills. We have sufficient capacity and we are tremendously competitive. Our average wage rate is over $1 per hour. Today we are spinning American cotton at the rate of 10,000,000 bales yearly—our business is prosperous as our farmers prosper. Foreign spinners encourage cotton growing in every other available part of the world.

Any speculation as to the future of the textile industry would have to take under consideration aid to Europe, whether under the Marshall plan or any other, because it involves the export of American cotton goods.

I am much cncerned about this question of aid to Europe. I have read with great interest several articles in the January Readers' Digest. One by W. T. Holliday, president of the Standard Oil Co. of Ohio; one by Henry Hazlitt; and one by Anne Morrow Lindbergh. We know Europe needs our help. The result of our help is going to depend most of all on how it is given. Anne Lindbergh says, "If we give simply out of duty, simply out of self-interest, or simply out of fear, then in the words of Saint Paul, 'it profiteth us nothing'" She quoted T. S. Elliot, "The last temptation is the greatest treason, to do the right deed for the wrong reason." What can be done individually has not yet been measured. Drew Pearson had an idea, and we saw Friendship trains gathering individual, voluntary contributions from one end of this country to the other in increasing amounts and surprising quantities.

If we should want to have two funds, one for relief and another dealing with more permanent upbuilding, I believe we would have an individual response that might amaze us. I am not suggesting a formula but I am impressed with what Mrs. Lindbergh had to say.

Many people, including those whose job it is to appraise economic conditions, continue to tell us that we are now in a period of growing inflation and that it has been building for several years past; and because in the past such periods have been followed by drastic recessions, we are being warned today of a similar happening.

Until we have settled this question of inflation and how much we need to do in order to help the fellow across the ocean, there should be no public-works spending anywhere for anything except just the barest necessities. That kind of spending should wait and any administration which declines to cut taxes and continues to ask for increased appropriations, whatever the need may be, should justify itself by economies in government, the kind which we have not seen now for many a day.

Inflation does not develop overnight; it is something that grows over a period of time. As a rule its growth is gradual. The question has been asked: Why, if inflation reaches its peak as a result of gradual ascent, the decline cannot also be gradual instead of tumbling precipitously.

Surely we would like to think such a result could be accomplished, not only for this time, but for other times as well. I believe that our antitrust laws do discourage business from attempting something on its own account in this connection. I think that planned results will have to come with both Government and business working together, and when I say business I mean all of us who have a part in the making or growing of things for sale, or performing some useful service.

The Government's and Congress' concern about present inflationary trends hasn't yet developed an acceptable remedy. No matter how much we may all agree on the need of some slowing down plan, we still seem unwilling again to adopt methods used by a police state, for which I am thankful. This gives me an opportunity of saying that I think we have been hurried into our present situation possibly because we were a little too quick in dropping war controls, and all of the excess-profits taxes. The resultant larger business earnings, with increased dividends, stimulated demands for increased wages, and the inflationary spiral was fairly started. Certainly a restoration of any part of this tax should not be for tax reduction somewhere else, but for debt reduction.

If controls came off too quickly after the war, I think it is not altogether fair to attribute this to the urging of industrial management. It surely was obvious to everybody that the administration of OPA, and all other controls as a matter of fact, became increasingly difficult with the war's end. Impatience with the continuation of controls was intensified because of bad administration, increasing black markets, as well as other reasons. Personally I favored at the time a further continuation of controls, but I coupled my position with the necessity for improvement in the administration.

Our freight charges for 1946 were approximately $6,112,000,000, on which we are at present paying 20 percent war tax, which is $1,222,000,000. In October the railroads were granted a 10-percent increase in their rates, and now there is an announcement of an additional 10 percent. After adding this 20 percent on 1946 freight charges, we get a total of $7,334,000,000, and 20 percent tax on this amount increases the tax bill from $1,222,000,000 to $1,466,000,000. We realize that taxes on freight charges is a tax on our bread and meat, on everything that we haul for our use; this, of course, includes home-building materials. We know that this tax pyramids—in some cases several times—and it is hidden from the consumer. It is a concealed sales tax of the worst sort. This increase in freight rates was approved to take care of increased wages and railroad costs, and undoubtedly is justifiable, but it is one more upturn in the spiral. Representative KNUDSON is proposing to take off over $5,000,000,000 from individual income taxes, but I hear no one proposing to take off this one and a half billion tax on railroad freight rates. Also, increased freight charges slow down railroad business. If we are to have sales taxes, they should be in the open, over the counter, and, to prevent pyramiding, at the nearest point of consumption and in full view of the taxpayer. I think such sales taxes as a part of an over-all tax program, including license taxes, income and inheritance taxes, will give us the fairest tax program. If we are going to use selected groups of businesses (railroads in this case) as tax gatherers, let's try to limit the tax to passenger travel. We have become accustomed to sales taxes on luxury services and things.

There are two factors which I think bear largely on this whole problem, and which I would like to mention here. One has to do with wages. It seems to me that since the volume of money and the velocity of its turn-over is one of the causes of inflation that there lies in the hands of business an opportunity to do something to help.

The Government permits corporate earnings up to 15 percent of employees' wages to be set aside ahead of taxes in trust for old-age or retirement benefits. This money can be put aside without individual income-tax deduction for the benefit of the employees, the result being an increase in wages, but without an increase in the volume of money for the time being. This also puts such money in trust where it may be made available for needed capital funds. The Avondale Mills and the Cowikee Mills are pursuing this course.

This same money in the hands of each individual and after income taxes could not possibly buy equal benefits. Why argue for increased production as a cure for inflation and at the same time keep supplying more money and new money?

The Government has recently suggested, in the interest of curtailing inflation, a campaign for bond sales throughout the country. Without attempting a formula, it seems to me that these two branches of the Government—one proposing to reduce the income-tax levy $5,600,000,000 and another proposing a sale of bonds to these same people—could join hands, and, instead of turning loose $5,600,000,000 of new spending money at a time like this, could give to the taxpayer $5,600,000,000 of some sort of certificate (called a bond, if you wish) that could not be spent until some future agreed-upon date.

Any of us with our business experiences of the past, with operating results running in peaks and valleys, would gladly swap booms and busts for a fair leveled-off operating result. In markets like this, it is not so much the seller who marks prices up; but the buyer bidding for scarce goods—and the speculator plays his part.

I think not only industry but communities at all levels should look forward and do some planning.

I was interested in a recent news item outlining a $1,000,000,000 program for Pittsburgh.

In times like this I think suppliers should work very closely with their customers, that we should all be honest with each other as to our future plans and the extent of our inventories, and should do our utmost to stop speculation in our particular field. I think business, as far as possible, should keep a reserve for certain capital investments and expenditures. Our companies are doing this. I think the Government itself should have similar plans. No Government spending now except for absolute necessities, and I certainly think with our experiences of the past we ought to be able to go ahead and catch up with our extra needs and then level off without having to tumble off.

As taxpayers today, our first concern should not be so much for tax reduction, but for debt reduction, coupled with economy in government and of the strictest kind. In the accomplishment of these latter two aims, we will have a continuing sense of security for our home, our farm, our business—large or small—and for our job, of our choosing and where; and a trend that way means much to us in America today.

DONALD COMER.

The March of Russia in Europe

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, February 25 (legislative day of Monday, February 2), 1948

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Stalin's Step Toward War," published in the Washington News of February 25, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STALIN'S STEP TOWARD WAR

Red seizure of Czechoslovakia has been only a matter of time ever since Yalta. One by one Stalin has picked off the nations of eastern Europe. Now only little Finland is left in the twilight zone of phony freedom.

It is the same old story of Communist treachery and betrayal, of the Soviet stab in the back. It has been repeated in so many places, Stalin's method and purpose should be known to all the world. And yet there are still a few even in America who call themselves non-Communists like Mr. Wallace, who profess to believe that democracy can be saved by appeasement.

Stalin has played it precisely like Hitler and the Japs—only with more skill. No Nazi or Jap fifth column ever operated with the insidious perfection of the Soviet agents who have taken over eastern Europe and who have bored so deeply into Italy, France, and China.

If the analogy holds, Stalin will go on until he provokes a world war; until his cheap victories over smaller nations end in his final defeat by the strong democracies he is trying to destroy.

There is one chance that he may be stopped without such a war. If the remaining free countries can transform their economic weakness into strength through the Marshall plan, and if they can combine in an effective defense pact under the United Nations, Stalin may retreat when faced by greater power.

But, whether he retreats or advances to war, the protective unity of the free nations now rests chiefly on American economic strength and military preparedness. That much at least is clear.

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. JOHN C. BUTLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1948

Mr. BUTLER. Mr. Speaker, the debate on the proposed St. Lawrence seaway continues both in Congress and in the country. I understand that on Friday of this week the other body will vote on a proposal that it has been considering for a number of weeks. There are many citizens interested in this proposal and millions will be affected by it if it should be approved by the Congress. In fact, it would permanently affect the very livelihood of millions of our people. For this reason I desire to present for the record some comments on various arguments that have been offered as reasons why the proposal should be adopted.

NATIONAL SECURITY

National security has been one of the arguments emphasized by the proponents of this measure. They point out the need for additional facilities to move our commerce out to sea in times of national emergency. They say that our railroad and other overland means of transportation are inadequate. Let me pause to remind my friends who share this view that during the war, that we believe has just ended, our railroads and trucks did a mammoth job and did it exceedingly well. Furthermore, they were greatly handicapped because of the fact that the Government took much of their equipment—equipment which was sorely needed—and gave it away to other countries under lend-lease. I am not in possession of the exact figures of just how much of our American railroad facilities were thus given away. I recall reading at one time, and this was early in the war years, where there had then been given to our ally, the Soviet Union, some 4,000 freight cars and 1,000 American locomotives. This equipment was badly needed here, Mr. Speaker, both during the war and since the war. Perhaps if that equipment were rolling over the rails in the United States we would have avoided many a bottleneck in our transportation that has handicapped us. Perhaps if we wait for a few more months until even a portion of what we gave away can be replaced by additional new freight cars, locomotives, trucks, and other factilities, we shall find that we have an abundance of transportation facilities.

Permit me also to state that railroad and truck transportation is so much faster than a narrow seaway that to think of using the inland waterway as a means of speeding up our transportation in time of war becomes little short of a joke. Certainly if additional facilities are needed we should be considering additional trunk line railroads, or additional tunneling of mountains, or modernizing our equipment including the tracks and roadbeds to actually speed up the transportation. To suggest a 10- to 14-mile per hour ship canal to take the place of our rapid overland transportation is about as feasible as suggesting that we return again to horses and wagons.

I also desire to point out that a single bomb dropped from the sky, or planted by a saboteur either on our side or somewhere along the line in Canada could easily put the entire seaway out of order.

Let us suppose the seaway were now operating. Let us suppose also that it does save the exporters and importers or the consumers in all countries where the goods are finally used a portion of the transportation cost. Then our friends would have us believe that we have really accomplished something in the service of mankind. Now, if it is such a success, what has happened to our railroads and trucking companies? The answer is obvious. Certainly they will go out of business to whatever extent that the seaway is successful. This means that their facilities will be contracted to whatever point that they are required to handle the volume that is left to them. That will mean the railroads and trucking companies operating from Duluth, Milwaukee, Chicago, Cleveland, Buffalo, and other areas to the east will only have local freight to carry. This means their capacity to transport at say 50 to 60 or more miles per hour will be reduced down to a point where they are only able to carry the local freight. Then let us imagine that a war should break. Let us also consider the possibility that saboteurs either in this country or Canada should be ready with a planted bomb at any one of the many locks along your seaway. Now, Mr. Speaker, what becomes of the argument that we need such a seaway for national security? I say it would be far better for national security for our Government to lend its encouragement and support to the further development of our more modern and faster moving overland transportation. Let us do this rather than make huge appropriations that will add to their already excessive tax burden for the purpose of developing a ship canal largely in another country for the purpose of putting them out of business.

I am not merely thinking of the companies that own the railroads and truck lines. I am thinking even more of those tens of thousands of Americans who depend on them for their livelihood and that of their families. Also, I am thinking of the thousands of small businesses along the overland trade routes who are dependent entirely upon the trade they receive because of these transportation systems. In my mind, Mr. Speaker, it simply adds up to the inevitable conclusion that if the seaway is a success, then it would be a tragic mistake. If it fails, then of course it would not be so tragic to our economy and our security, it would be merely another of those impracticable, ill-begotten, boondoggling enterprises that have plagued America for these past several years. They have also in large measure accounted for the huge and threatening national debt which darkens the future for every American citizen.

Another reason that I feel this is just another pie-in-the-sky endeavor is the fact that its proponents have resorted to the characteristic and undignified method of calling ugly names against those of us who disagree with them. This is a label that we expect to find on every boondoggling enterprise, and now that it appears in bold relief on the seaway project, Mr. Speaker, there is little doubt how this project might well be classified.

Condemning our railroads, automobile, and trucking companies, and to suggest that our Government go further and further into the power production and distribution, also have a familiar sound. They seem to fit into this familiar pattern. But, once we point out the inadvisability of the seaway for transportation, then they turn to it as a power development project.

Is it necessary to develop a ship canal in Canada at the cost of a thousand million dollars for the purpose of providing electric power for one small area in northern New York State? Why not make available funds necessary for care-

fully planned power projects in many different sections of the country? There are thousands of good sites for dams on American rivers that will both provide the power in different areas and can also be adapted to both flood control and irrigation.

I have studied every argument, Mr. Speaker, that I have heard advanced in favor of this project. I admit they come out clothed in beautiful adjectives and adorned with high and noble purposes. But, once the clear light of analysis reflects upon them they melt into something that becomes neither beautiful nor desirable. We as Congressmen are sworn to promote the general welfare of our people. We should enact legislation for the good of our constituents as a whole. We should oppose vehemently those measures, even though they are made to look and sound good, that are not in accord with the best interests of the American citizens. And, Mr. Speaker, I for one will bitterly oppose all forms of boondoggling, generally, and the St. Lawrence seaway, particularly. Let us not go back to "horse and buggy" days.

Lithuania

EXTENSION OF REMARKS
OF
HON. MITCHELL JENKINS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1948

Mr. JENKINS of Pennsylvania. Mr. Speaker, on February 16, those Americans of Lithuanian descent observed, with appropriate ceremonies, the thirtieth anniversary of the independence of the Republic of Lithuania, which came into being shortly after the First World War. It was not the first free government of Lithuania, however, for as far back as 1529 the people of Lithuania established themselves as a nation and down through the intervening years they have, although many times subjected to alien rule, preserved unquenched their love of liberty and have struggled to preserve it for themselves and their children. When the light of freedom burned low in many parts of Europe, it remained lit in the hearts and souls of the people of central Europe and not least in the hearts and souls of the people of Lithuania.

But, Mr. Speaker, today, on the anniversary of their independence, the hearts of the Americans of Lithuanian origin are sad, as are the hearts of their racial brothers in Europe, for that independence so hardly and dearly won, no longer exists. There is not today a free Republic of Lithuania, any more than there is a free Poland or a free Czechoslovakia, Lithuania, like her liberty-loving neighbors, lies prostrate under the oppressor's heel, chained to the Russian chariot like the captives of ancient Rome.

The conduct of the Moscow government in its relations with Lithuania possibly has been matched, in the past, in its cynical disregard of its pledged word and its treaty obligations, but certainly has never been surpassed. A bare narrative of what has been done should shock the conscience of all decent people. The ink was hardly dry on the treaty of 1926 and its successor of 1939, whereby Russia undertook to respect the territorial integrity and national inviolability of Lithuania when Russian troops were garrisoned in the country and its ultimate incorporation into the Soviet Republic was begun. In June 1940 Mr. Molotov, just a little over 6 months later, announced the incorporation of the country into the Russian system saying, "It would be unpardonable if the Soviet Union did not seize this opportunity, which may never recur." The next year Germany "liberated" it, and then later the Russians "liberated" it from the Germans. No one has yet liberated it for the Lithuanians.

No one, except possibly those of Lithuanian descent who still retain some contacts, tenuous though they may be, with the land of their ancestors, can have any realization of the horror that lies behind the bare recital of these facts. "Liberation," by both Germany and Russia, has meant for the people of Lithuania nothing but looting, and rape, murder, and deportation, imprisonment, and fear. Our eyes have been more sharply focused, perhaps, upon the sufferings of other peoples, because news of what has happened to them has come more readily to us. But they have been no greater than the sufferings of Lithuania.

Mr. Speaker, as a lawyer of some years practice, I look to the record to see what has been done; and there I see that at Tehran, again at Yalta, and again at Potsdam, those who conducted our foreign relations on the one-man principle, and who were willing to gamble with the destinies of free people, acquiesced, so far as the record shows, in this crime against Lithuania, acquiesced in the violation of the treaties I have mentioned, and in the complete disregard of the principles of the Atlantic Charter, of which Russia was an adherent. But the American people, Mr. Speaker, do not acquiesce and can never condone what that record shows. We still regard Lithuania as an independent state and on this anniversary of its freedom look forward with confidence to the day when the Republic of Lithuania will again take its place among the free nations of the world.

Voice of America

EXTENSION OF REMARKS
OF
HON. FRED E. BUSBEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1948

Mr. BUSBEY. Mr. Speaker, in view of the widespread interest throughout this country in the amount of money which is being spent by the Government to disseminate proper information about this Nation abroad through the State Department's "Voice of America," I ask unanimous consent to insert in the Appendix to the RECORD a letter which was cited by the noted authority on foreign policy, David J. Dallin, on February 21, 1948, in the publication, the New Leader:

A well-known French author writes me from Paris in a letter dated February 8:

"The influence of crypto-Communist intellectuals continues to be formidable in the universities, among publishers, and in the press. We don't have the collection of documents here which was published recently and appears to have made some impression in the United States. Three or four French newspapers have mentioned them—and that is all; the whole affair has passed virtually unnoticed. It is impossible to get hold of a copy at either the American Embassy, the American library, the Information Center, or at Brentano's. This illustrates American behavior only too well. Always too little or too late. They waste millions of dollars feeding Tito but save a few hundred dollars when the education of western Europe on essential points is at stake. Yet at the same time they should take a look at the publications and information agencies of the Communists. They actually overflow with all sorts of editions, on all subjects, in all formats—you wouldn't believe it unless you saw it.

"Camus' aphorism, 'Whatever happens, we get sacrificed by the Americans,' expresses only too well the attitude of those intellectuals who have neither succumbed to Soviet enticements nor lost their heads to the American mirage. The anti-American campaign of the Communists, succeeding that of de Gaulle, is extermely effective; its effects are considerable and lasting. No wonder that the movie, Grapes of Wrath, and the writings of Steinbeck, Hemingway, and Caldwell are having a terrific success, as they tend to discredit America."

Marshall Plan Must Not Scuttle Merchant Marine

EXTENSION OF REMARKS
OF
HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1948

Mr. HAVENNER. Mr. Speaker, I am in receipt of a letter from Mr. A. T. Wynn, secretary-treasurer of the Bay Cities Metal Trades Council of San Francisco, urging that the clause authorizing the transfer of 500 United States vessels to foreign governments be stricken from the Marshall plan bill. The Bay Cities Metal Trades Council represents 73,000 metal trades craftsmen in the San Francisco Bay area and Mr. A. T. Wynn is a citizen of high standing in that community.

The vital interest of his organization in the proposed amendment to the Marshall plan bill is set forth in his letter, as follows:

Our shipyard craftsmen and merchant marine men are greatly in need of the work required for the maintenance, repair, conversion, and manning of the vessels recommended for transfer under the plan. Retainment of the vessels is also vital to the national defense and the commerce of our Nation. These factors must be given first and serious consideration. Our representative will be in Washington on or about March 1 and will contact you to further our request. We will greatly appreciate your favorable consideration.

I have also received a letter from Capt. C. F. May, of San Francisco, president of the West Coast Local No. 90, National Organization of Masters, Mates and Pilots of America, in which Captain May makes the following statement:

The situation in the maritime industry on the west coast is very deplorable, and we are all wondering what will become of the west coast in case that part of the Marshall plan would be adopted which refers to marine transportation, sections VII and VIII. We surely hope that all the Congressmen from the Pacific coast will assist in eliminating this provision. Otherwise, as you know, all A. F. of L. organizations are definitely for the European recovery program, but we cannot afford to scuttle the United States merchant marine completely. We do feel the increase of foreign vessels sailing out of the Pacific coast tremendously on our unemployed list, which is getting bigger and bigger. From our organization there are approximately 1,700 unemployed licensed men on this coast, and more are being laid off daily, while the companies return the chartered vessels back to the Government.

I am submitting these letters at this time in order that all of the Members of the House of Representatives may have an opportunity to consider them.

Resolutions of Vermont Soil Conservation District Supervisors' Association

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. PLUMLEY. Mr. Speaker, under leave heretofore granted, I wish to insert in the RECORD the following resolutions adopted by the Vermont Soil Conservation District Supervisors' Association at its annual meeting in Burlington, Vt., on February 6, 1948:

Whereas the conservation job is of tremendous importance to the Nation and so big and complex as to require the full-time efforts of a technical agency to insure the accomplishment of permanent conservation; and

Whereas the entire State of Vermont is now organized in soil conservation districts and these districts have assumed the local responsibility and management of the locally adapted soil-conservation programs in accordance with the State law; and

Whereas the Secretary of Agriculture has recommended one conservation agency and one soil-conservation program for the Nation: Therefore be it

Resolved, That the State Association of District Supervisors:

1. Go on record as being ready and willing to assume the full local responsibility for the Nation's soil conservation operations program.

2. Urge that the Federal assistance made available to the districts be provided to the districts through the Soil Conservation Service, an agency that has already demonstrated its ability to work with and through such districts.

Whereas economic safeguards and assistance to farmers are in the national interest and are necessary to insure an abundance of farm products from the agricultural lands of the Nation, at the same time avoiding unwieldy surpluses of these products, and whereas such economic aids require the full-time efforts of an agency concerned with production goals, incentive payments, price supports, school-lunch programs, and the like, which agency should be armed with necessary authorities and incentive-payment resources to meet the constantly shifting economic conditions confronting farmers: Therefore be it

Resolved, That the State association of district supervisors:

1. Go on record in favor of continuing and improving the programs of economic aids to farmers.

2. Urge that elected county PMA committees be continued and made responsible for such programs of economic assistance as incentive payments, production adjustments, price supports, crop insurance, etc.

3. Favor the enactment of legislation for the use of cash payments and production aids, such as lime and fertilizer, as production-adjustment incentives.

Whereas the two types of assistance—one aimed at maintaining permanently the productive capacity of the land and the other with safeguarding the farmer's economic position—should be handled by different agencies, giving full time to their respective specialties; and

Whereas it is deemed advisable for the two agencies to work in harmony and with complete understanding of each other's objectives: Therefore be it

Resolved, That the State Association of District Supervisors—

1. Go on record as favoring the housing of personnel of all agricultural agencies operating in a county in a common building, the cost of such building to be borne jointly by Federal, State, and local governments.

2. Urge the Secretary of Agriculture to invite a representative of each of the organized farmer groups in a county to become a member of the county United States Department of Agriculture council and to instruct such councils to hold regular meetings for the exchange of program and policy information and to report on progress.

3. Urge the Secretary of Agriculture to strengthen the State United States Department of Agriculture councils by inviting representatives of each of the State-wide farmer organizations to become a member of the State council.

Whereas the soil conservation districts in Vermont are now staffed with the very minimum of personnel for efficient work; and

Whereas personnel will have to be drawn from these Vermont districts to staff new districts in other States if the appropriation is not increased to take care of the new districts: Therefore be it

Resolved, That the State Association of District Supervisors go on record as favoring an increase in appropriation for the Soil Conservation Service adequate to provide effective assistance to newly organized districts and to continue, on at least the present basis, the assistance older districts are receiving.

Inflation Comes From the Acts of Government

EXTENSION OF REMARKS
OF
HON. FRED E. BUSBEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. BUSBEY. Mr. Speaker, the cost of living is of real concern to the Congress and to all Americans. In this fateful election year it is essential that our citizens be correctly and intelligently informed about inflationary prices and where the responsibility for them lies.

The Republican, national party magazine, an outstanding publication printed in Chicago under the editorship of Mr. Richard Nowinson, carried an article of mine in the February issue entitled "Inflation Comes From the Acts of Government." Under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the text of the article, as follows:

INFLATION COMES FROM THE ACTS OF GOVERNMENT

(By Representative FRED BUSBEY)

One year ago the majority of the economists associated with the Federal Government were warning the country of an imminent recession.

Instead of that recession we have developed additional inflation until people everywhere are complaining of prices which have, in their opinion, gone too high. At present the outlook appears to favor a substantial increase in the inflation. Retail merchants going into the markets to replenish their stocks, quite uniformly, find wholesale prices higher and still increasing. Therefore it is apparent that the American public, already resentful of the general price level, will be faced by still higher prices in the near future.

How has this come about?

NO ONE WANTS INFLATION

No one wants inflation. Consumers find it difficult to meet the current prices and do not want inflation. The retailers, who must assume the risk of carrying high-cost inventories, certainly are opposed to inflation. The President of the United States has often mentioned the necessity of halting the price advances and bringing things down to a more normal level, so we may assume the President does not want inflation. An important congressional committee has been investigating the causes of high prices and the Department of Justice has undertaken a campaign to root out monopolies as a means compelling lower prices. Therefore, it seems these officials definitely are not in favor of inflation.

Who, then, wants inflation and who, or what, has caused the present situation?

To find the answer we must go back to the long depression of the thirties. It will be remembered, we suffered during that period from a deflation which most of us believed had gone too far. Prices were abnormally low, almost every business concern was losing money, unemployment increased by leaps and bounds, employees receiving cuts in pay sighed with relief because the pay-cuts seemed to make their jobs more secure.

During that period, the Federal Government deliberately encouraged a certain degree of controlled inflation. The word "inflation" always has carried fearful implications with it, so the Government did not use that word; instead, it called the process of reviving our collapsed economic balloon by the milder term "reflation."

THE NRA IS THE BEGINNING

Congress passed the National Recovery Act and immediately every industry was busy writing codes to regulate the operation of business. The Government made no secret of the fact that the only important provisions of these codes were the restrictions on working hours and the increase in pay rates which all codes must contain. The purpose was to insure the employment of more people and to increase purchasing power. It was a deliberate effort to create inflation, but the country generally favored the move.

Then the Government abandoned the gold standard and reduced the gold content of the dollar to 59 cents. It fixed the price of gold at nearly double its long-time value, which cheapened the dollar.

It may be pointed out that a deflation comes when people prefer money to things and an inflation develops when people prefer things to money. By lowering the value of money, the Government hoped to increase the value of things, raise the depressed price level, and introduce a bit of inflation to offset the deflation from which the Nation was suffering.

Government action to make work, such as the PWA and the WPA, gave many unemployed work and compensation. Apart from public amusement over some of the worthless or nearly worthless things which people were paid to do, there was no strong demonstration of objection to these activities.

THE WIND-UP: THE WAR

It is unnecessary to dwell upon all of the inflationary things, which the Government did during those recovery years. Almost all of the important actions of the Government were inflationary in character. The wind up: the greatest producer of inflation which has ever been known, participation in a world war.

It is true that, upon facing the war, the Government eventually recognized the fact that, by undertaking some control over the economy, the effects of the inevitable inflation might be retarded. Congress enacted a price control law and established the Office of Price Administration. There seemed to be no recognition of the fact that prices have a sounder basis than the mere whim of the seller. That prices are and must be based upon costs had little consideration. As a matter of fact, when Leon Henderson, the first Price Administrator, assumed his task of trying to control all prices in this huge and complex economy, he glibly said that wages had nothing to do with prices. It would not be necessary to control wages.

THE OPA SUSPECTS EVERYONE

Naturally in such a complicated and large economic system as that of the United States, there is no man or group of men sufficiently experienced to handle such work as the OPA with 100 percent efficiency. The OPA made many mistakes, but the majority of the mistakes grew from the fact that every business representative was a suspect.

The fact that there were businessmen sincerely and unselfishly interested in supporting the Nation's war effort was an assumption which was not allowed to invade the precincts of the OPA. Too frequently, therefore, businessmen's advice was rejected, or grudgingly accepted when the soundness of the business position could be demonstrated so clearly that OPA no longer could find arguments to offset it. Businessmen saw their sons go to war, they put their surplus funds into war bonds, they participated in all of the patriotic activities of their localities; but when it came to the matter of prices, supposedly, businessmen were not to be trusted even when they wanted to cooperate with OPA.

In spite of these things, price controls were effective in keeping a check on price inflation during the worst years of the war; considerable credit should go to those who labored in jobs which never could have made them popular. It must be remembered that business generally cooperated wholeheartedly in the efforts of the OPA, had that not been the case, it is apparent that no price-control system could have been effective.

ADVANCING PRICES RESULT FROM INFLATION

It should be easy to recognize, however, that advancing prices are the result of inflation and not the cause. If that were not so, then it would be extremely easy to create an inflation by merely raising prices.

The Government's persistent efforts to overcome a deflation by creating an inflation, and the years which were required to produce such an effect are perhaps the soundest evidence that inflations are not easily produced. As a matter of fact, business—even if it desired to do so—could not create an inflation. Only the policies adopted by the Government can create an inflation.

While the OPA did hold down prices, it could do nothing to check the inflationary influences which the Government was generating. As far as the Government is concerned, it must be remembered that relatively little opposition to the course followed ever was voiced during the times when these things were done.

Because prices were controlled but the causes of inflation could not be controlled, the Government's control of prices may be compared to the compressing of a great spiral spring. When such a spring is compressed and then the pressure suddenly released, the spring will react violently. This violent reaction can be prevented, however, by a gradual relaxation of the pressure. Price control compressed the inflationary forces by an embargo against their natural outlet. The sudden ending of all price controls was similar in effect to the sudden removal of the pressure on the spring, and the identical violent reaction was inevitable.

FROZEN PRICES FIGHT MISCELLANEOUS INCREASES

The OPA held prices down, but under the surface were the forces of inflation awaiting an outlet which sooner or later would no longer be denied. This condition was greatly aggravated by OPA's own operation during the later phases of its control. Effective March 1942, prices had been frozen. As time went on, it became impossible for the OPA to hold the line completely and so miscellaneous increases in some prices were permitted.

Meanwhile, costs generally increased and many long-established manufacturing firms, which had facilities for turning out merchandise that the public greately needed, found that, under the prices which OPA permitted, they could no longer produce the articles they had been providing for the public for many years. Coming at a time when the war effort created shortages in civilian supplies, this meant a tragic loss of needed production. Moreover, probably because OPA actually realized the need for more production, new manufacturers would begin producing articles which the established manufacturers, restricted by OPA ceiling based on their prewar prices, could no longer produce profitably. The newcomers found little difficulty in securing the OPA's authorization to charge prices decidedly more liberal than the experienced concerns were allowed.

The new manufacturers usually lacked the experience and the facilities of the older manufacturers. Too often they were not men who intended to remain in that particular manufacturing field indefinitely and so their products were often inferior. The OPA officials refused to face the facts realistically; as a result, there was an extreme shortage of all the lower-priced merchandise for which the public had a special demand.

When the war activities ended, the public demanded more and more merchandise; thanks mainly but not entirely to the OPA, the merchandise supplies were scarce and industries were in shackles, which made increased production difficult. Congress, recognizing these conditions, attempted to enact a modified price control measure which, while exerting a restraining influence on prices, would encourage the mass production which the country required. The President's veto put an end to all the price controls.

What happened then is common knowledge. Prices proceeded to seek their own level, and they still are seeking for that level. What the ultimate result may be, it is too early to predict.

It is natural that many Americans look back upon the price control days and sincerely believe that we need similar controls now. Prices were lower then, so they believe that if we had price control today the prices again would be lower and everything would be serene.

PRICE CONTROLS HOLD UP PRODUCTION

This point of view fails to see that price controls cannot cure the underlying condition. It may be hard to accept, but, nevertheless, it is a fact that even if price controls, as administered by the OPA, had been continued for several more years, when they finally came to an end, the inflationary influences underlying the rise in prices would be continued and increased so that, eventually, we would have a period somewhat like the present, through which we would have to live. The OPA philosophy that price controls should have been continued until production had caught up with demand, of course, completely fails to recognize the fact that price controls were preventing that needed increase in production.

Inflation has come from the policies of the Government, not from business, although it has been nourished by business and by the buying public. It would be both refreshing and beneficial if the Government would frankly inform the public of the situation.

Perhaps it is too much to expect, but how unity and understanding would be advanced if the Government would say, "Your Government has been confronted by great emergencies which have required it to follow policies resulting in inflation. The Government could do nothing else, but it is the obligation of every citizen to support the Government by using self-restraint in the presence of this great danger of inflation."

Such an official statement would help to remove the confusion and the suspicion which now exist. It would act to destroy the illusion that high prices are an unfailing proof of greed and dishonesty in the business which serves the public.

What is the outlook for the future?

It seems that we have not reached the peak. That opinion is based upon some recognition which Congress may vote in favor of the Marshall plan to aid Europe and China, which inevitably will entail more inflation.

As long as this problem is discussed in terms of "dollars" (I recommend reading Will Dollars Save the World? by Henry Hazlett), it may serve to disguise the actual situation and to prevent the public from understanding that, again, a governmental policy is inflationary in nature.

DOLLARS TO EUROPE MEAN HIGHER PRICES

Gifts of dollars to Europe would be meaningless if it were not that these dollars give the holders access to the supplies of commodities in this country. They can have no other use. Consequently, it is plain that what is under contemplation is the giving of part of our own supplies to other countries. It must be pointed out, however, that this is another inflation-producing policy and its effect will be to push American prices higher.

Politicians will argue that this will not be the case, but it is impossible to read any other result into it. Here again, the Administration should make an honest, frank statement of the situation and advise the people that the Marshall plan is inflationary and, naturally, higher prices will result.

In Washington there is the beginning recognition of the fact that one of the basic causes of the inflation is the great increase of money in circulation and the tremendous expansion of bank credit. Before the war the money in circulation was about $6,000,000,000 while now it is about $28,000,000,000. That fact alone would support a substantial inflation because the supply of available

goods has not increased sufficiently to balance it. Moreover, the huge volume of Government obligations in the hands of the bank has been a still greater influence in expanding bank credit. The banks can expand their credit six and one-half times the amount of the bonds which they hold.

By taking steps which will initiate the passing of this era of easy money, the Government could turn the inflationary tide. To do so, however, may involve hardship both to the Government and to the people. Therefore, it is to be expected that such steps will not be taken, at least until it becomes increasingly apparent that no other way out is to be found. To put an end to what both business and the public mistakenly regard as good times would not be a popular step. That is why it is easier to talk about the return of price controls and all other sorts of controls over the economy of the Nation. Such controls cannot strike at the basic causes of inflation and so they would serve only to disguise the fact that we are heading into disaster.

Here is another example of how foolish it is for the Government to omit telling the public the real causes of inflation and inviting public cooperation in overcoming the situation.

Save Your Money

EXTENSION OF REMARKS
OF

HON. FRED A. HARTLEY, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. HARTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address which I delivered recently:

I have obtained this time tonight over the Mutual Broadcasting System to talk to the workers of the Nation.

This day is of great significance to me; first, because it commemorates the anniversary of the birth of George Washington, the founder of our beloved Nation; second, because it happens to be my own birthday; and, third, because today the Taft-Hartley law is 6 months old.

While its full meaning is yet to be determined by decisions of the National Labor Relations Board and the courts, on the face of its first 6 months of trial the act refutes the hysterical and fanciful attacks made upon it by certain union leaders.

While they have toned down their adjectives in describing the Taft-Hartley law in recent months, I would like to remind you of some of the terms they employed in trying to defeat the legislation and later in condemning it after it was the law of the land.

Mr. Philip Murray, president of the CIO, called it a diabolical monstrosity. Mr. William Green, president of the American Federation of Labor, in the multi-million-dollar campaign against the bill, coined the term "slave-labor law."

The fact of the matter is that the workers of this Nation are being kidded by their own officials, their own so-called leaders. Since they don't like the law, they are trying to tell you that you don't like it. The labor barons of this Nation don't like the law for one simple reason. It breaks up their dictatorship over you. It brings democracy to the labor movement. It in no way interferes with labor's legitimate rights. It seeks only to curb the abuses of power by certain of your labor leaders, and I say with regret that it doesn't curb all of them.

I would remind the workers of this Nation that every protection you ever had in the original Wagner Act against abuses by employer bosses is retained intact in the Taft-Hartley law. What we have done in the new labor law is to give you additional protection against abuses by labor bosses. That is why the labor bosses don't like the Taft-Hartley law. That is why they are trying to make you believe it is a "diabolical monstrosity" and a "slave labor law." That is why some of them are trying to sign contracts outside the Taft-Hartley Act; not to put your employer behind the eight ball but to keep you there. The big change in the Taft-Hartley law is the new power given you as a member of the union; power which you did not have until the new law was passed.

Here are some of the new rights which you haven't had before and wouldn't ever have had if the new law had not been enacted:

You can't be fired by your union under the Taft-Hartley Act. So long as you pay your initiation fees and your dues regularly you job is safe. The union can't have you laid off because they don't like your race or religion or you personally. There will be no more special assessments for political parties or candidates you don't want to support. If you don't want to pay them you don't have to and your union can't do anything about it. If perchance you are laid off for any such reason you can apply to the Government for reinstatement and make the union pay you for the time you lost.

Strong-arm and muscle-men methods by unions against its members are out under the Taft-Hartley law. If force is used in a union election or if it is used against a man who doesn't want to go along with something the union officials have decided to do that is an unfair labor practice under the Taft-Hartley Act. The union can lose its bargaining rights with the employer and its right of appeal to the Government. I am frank to say to you that in my judgment that provision in the law is not adequate. The strong arm methods I have observed in various parts of the Nation during industrial disputes can lead to but one thing and that is to strengthen that provision in the law.

I would not deny to any worker his fundamental right to strike. But there is an equally fundamental right, one which has been overlooked far too long, and that is the right of a worker to work if he wants to work free from any harm or threat of harm to himself or members of his family.

I propose to make it a Federal offense to interfere with the civil rights of any worker to go to his job, not only to preserve his right to work but to restore respect for law and order even in the conduct of an industrial dispute.

Here are some more of the things about the Taft-Hartley law which your labor bosses don't like but perhaps you will. You can now go straight to your employer if you have a grievance which your union wouldn't handle.

Check-offs can't be charged against you without your written permission. Excessive initiation fees and fines are outlawed. Jurisdictional strikes and secondary boycotts which have lost so much working time for union members are now illegal. Featherbedding, which means a loafer being put on the pay roll while someone else does the work, has been outlawed.

If your union is sued and a fine imposed the money can only be taken from the union as a whole; it can't be taken from you as an individual member. You have a right to a full financial report so that you can find out what the labor bosses are doing with your money they collect from you in dues and assessments.

You have the right to petition to get rid of the union if you have it where you work and don't want it any more.

The Taft-Hartley law also helps you rid yourself of the yoke of communistic leadership. Before the union can appeal to the Government for collective-bargaining rights it must file affidavits that no officer of the local is a member of the Communist Party or any other group which plans to overthrow the United States Government. There has been much to do about this provision in the law. I have been asked why should the head of a union declare he is not a Communist and, if we are going to make labor union leaders register as non-Communists why not have the same requirement for the heads of business groups? I see no objection to the latter suggestion and welcome such a proposal. But as to the reason for this provision in the law, may I say that most people recognize there is an international conspiracy intended to break down democratic government wherever it exists, especially in America, and replace it with a communistic dictatorship. Communists in all countries, including the United States, are part of this conspiracy. One of the main objectives of this program is to obtain control of the labor movement in every country.

In recent weeks and months we have witnessed the effect of communistic infiltration in the labor movement in France, Italy, and the Ruhr Valley in Germany. Already in the United States they have succeeded to the extent that the heads of several big unions are known Communists.

The American people well know that in communistic-controlled unions the purpose is to instill civil strife and prepare to destroy industrial machinery which would be our mainstay in the event of war.

Under the Taft-Hartley Act we endeavor to withdraw the protection of the Government from unions dominated by persons whose purpose is to break down our Government. In this particular, the Taft-Hartley Act is a necessary protection for America as well as for union members.

The Taft-Hartley law makes you free Americans. As I mentioned earlier, William Green, the president of the American Federation of Labor, has tried to make you believe this is a slave-labor law. There are supposed to be 16,000,000 workers in the organized-labor movement, A. F. of L., CIO, and independent unions. I challenge Mr. Green or anyone else in the labor movement to give me the name of a single one of the 16,000,000 organized workers in this Nation who has been made a slave laborer under this law. The fact is that some of the most favorable contracts ever written, from the union point of view, have been signed since the Taft-Hartley Act was passed.

It is interesting to note the results of various polls that have been taken among the workers of this Nation to find out what you think of the law and its provisions. These surveys uncovered a strange paradox, that notwithstanding their declared disapproval of the law, a majority of the workers favored every individual provision on which they were questioned. The accuracy of these polls has not been challenged by the labor leadership.

While I am attempting to answer the hundreds of attacks that have been made on this law, I am not asking you to accept my word for it. The law speaks for itself. It is easy to get a copy. I will send a copy to anyone listening to this broadcast. Read it for yourself. Every single point that I have mentioned as giving you new rights and powers is down in black and white in the law. I want you to have the facts, because you are being called on now to contribute millions of dollars into a fund to be spent by the labor bosses of this Nation, in an effort to purge from Congress the 331 Members of the House and the 68 Members of the Senate who voted to make the Taft-Hartley bill the law of the land.

I want to advise you not to give this money to your leaders. It will constitute a fund that in itself will accomplish nothing. You, as workers, must abhor this waste of your money.

I would like to remind you that 331 Members of the House who voted to override the President's veto, constituted an overwhelming majority of both political parties. Incidentally, that vote was the greatest vote ever to override a Presidential veto. This effort to purge the Members of Congress who voted to make this the law of the land is doomed to fail.

But even should the complexion of Congress revert to that of the Seventy-ninth, the Seventy-eighth, or even the Seventy-seventh Congress, there will still be enough Members in the House to protect the integrity of the Taft-Hartley law. In fact, fully 60 percent of the present law passed the House as far back as 1940. So I say to you that this law will not be emasculated nor repealed. This campaign by the leaders of organized labor of this Nation is hardly the way to win friends and influence people in or out of Congress.

On the other hand, if there is any provision of the new law which proves to be punitive, drastic, or unworkable, those of us who sponsored this measure will be the first to want to correct any defect. As evidence of our good faith, let me call your attention to the provision in the law setting up a joint committee composed of seven Members of the House and seven Members of the Senate to study the effect of this law and to recommend to the Congress any amendments that might prove desirable. I happen to be vice chairman of this committee. I can assure you that we have been making a thorough study of this law and how it is operating in all its particulars. On December 17 last, more than 2 months ago, this committee publicly invited anyone, including the labor leaders of this Nation, who had any fault to find with this law, or who had been injured by its operation, to tell us about it. Up to this moment not a single representative of organized labor has taken us up on this invitation. And let me repeat that the invitation is still open.

In other words, all we are asking the labor leadership to do is stop crying and tell us where the pain is. The fact is that they cannot give us a bill of particulars against this law and they know it.

The new labor law is a good law—for you, the workers, and for the American people. Those of us in Congress who contributed to its passage are proud of what we have done. If anyone who is now listening to me would like a copy of this speech or of the law, or of any of the material that we used in preparing this law, I would be glad to send it to you.

I thank you for having listened and bid you a cordial goodnight.

Port of Portland and Far Eastern Trade

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1948

Mr. ANGELL. Mr. Speaker, by leave heretofore granted, I include the following article on Far Eastern trade which appeared in the Portland (Oreg.) Journal on February 11, 1948:

FAR EASTERN TRADE

(By L. W. Harris, Jr., Ames, Harris, Neville Co.)

The port of Portland, the Columbia River basin and the State of Oregon, located as they are and constituting part of the western-seaboard community of the United States, all have a definite right to look in the direction of the Far East and the Middle East with the objective of forming and preserving trade and cultural ties. On August 15, 1947, the new dominion of India and the new dominion of Pakistan formally assumed their own responsibilities, each with dominion status, together comprising the territory which was formerly British India.

From a trade standpoint and of importance to all of us in this community are records of this port, which show that Portland is surpassed only by San Francisco in value of imports from British India to the Pacific coast. This is particularly notable, since from a general average of all imported products from all sources, Portland ranks fourth on the Pacific coast, but on cargo originating from British India our record puts us considerably ahead of Los Angeles and Seattle, principally because of the tonnage of jute burlap brought in through our port.

Burlap is the commercial designation for that cloth made from the fiber of the jute plant, which is successfully grown on a commercial basis only in certain provinces of India. The burlap is brought to this country in pressed bales via steamer, discharged over our own dock facilities, and is processed principally into burlap bags for shipment of agricultural products.

Approximately 600 people receive employment in Portland factories directly connected with the cutting, sewing, and printing of the burlap as it is manufactured into bags for such a variety of products as wheat, flour, sugar, seeds, poultry, dairy and animal foods, wool, potatoes, nuts, salt, beans, and fertilizer. Burlap bags thus manufactured in Portland are shipped into the great agricultural areas of the Pacific Northwest and Intermountain States of Oregon, Washington, Idaho, Utah, Montana, Wyoming, and northern California.

The factories actually producing burlap bags are in turn continually using manufacturing materials and supplies which are furnished from other factories of the community.

The bags used in the transportation and handling of these bulk commodities become part and parcel of the industrial and agricultural output of the Pacific Northwest. From the above, it can be seen how a product of a very distant country becomes part of our everyday life. Approximately 100 years ago President Fillmore was even then cognizant of the prospects of trade between Asia and the west coast of North America. Today 400,000,000 people who constitute the population of Pakistan and the Dominion of India are seeking opportunities to produce items which we can use in this country, and are equally anxious to obtain many items made in the United States. Recently more than the usual number of visitors have come to the United States as observers and investigators to bring their manufactures to a point of greater acceptability by us, while others endeavor to secure American products which can be used by their people.

There are other commodities, produced overseas, which can be imported with resultant advantage to our port and our industries. It is a two-way proposition which can well be cultivated with other countries, as well as with India.

Increase of Pay of Postal Employees

EXTENSION OF REMARKS
OF
HON. ROBERT CROSSER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1948

Mr. CROSSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by William C. Doherty, president, National Association of Letter Carriers, before House Committee on Post Office and Civil Service:

Mr. Chairman and members of the House Committee on Post Office and Civil Service, my name is William C. Doherty. I am president of the National Association of Letter Carriers. Our organization represents 79,364 city, rural, and vilage letter carriers in the United States Postal Service. The NALC was founded in 1889, and has devoted nearly 60 years to the improvement of the postal service and the betterment of conditions affecting the welfare of letter carriers. I want to add that each of our 79,364 members is a classified civil-service employee. I should also tell you that we have local branches of our organization in more than 4,000 cities and villages throughout the 48 States, the Hawaiian Islands, and Puerto Rico.

In behalf of our entire membership, I desire to compliment the chairman and members of this committee for their presence here today to consider this very important subject of postal wages. Speaking for myself and every letter carrier in the Nation, I want to express deep appreciation for your prompt and friendly consideration of what I consider the paramount issue in each letter carrier's life, namely, the problem of stretching his postal-wage dollars to meet present high-living costs.

With respect to an upward wage adjustment for letter carriers, it might well be asked: Is there need of it? Is there need of it in the first place from the standpoint of the employees? Secondly, is there need of it from the viewpoint of the postal service? These are the questions which I wish to submit for the candid consideration of you gentlemen. If our respectful request to you is unjust or unreasonable, it should be rejected without apology. But if you find validity in our claim that letter carriers cannot live on their present postal wages, then we are satisfied that you are fair enough and wise enough to make possible the proper means for solving our economic problem.

Perhaps the best answer to the question of the need for a wage adjustment is to be found in the numerous bills anent the subject introduced in this session, both in the House and the Senate. In this connection, I am mindful that you, Mr. Chairman, very recently introduced your own bill, H. R. 5472, which provides for a temporary increase in the compensation of all Federal employees, including postal employees. You are to be complimented for the friendly consideration which prompted your action. Those same sentiments of appreciation go out to the several other members of your committee that have sponsored postal pay bills in the present session of the Congress.

While I have no ready reference at hand, I believe it is a fact that approximately 35 postal pay bills are now pending before the appropriate committee in each House. The fact that 35 different postal pay bills have been introduced can be interpreted as meaning but one thing, and one thing only, namely, a general acceptance of the fact that postal workers are not now receiving an adequate salary.

From a statistical standpoint, that is, figures based on accepted cost of living indices, it can be readily shown that an urgent need exists for an upward wage adjustment for letter carriers. According to the Bureau of Labor Statistics, the over-all cost of living on December 15, 1945, stood at 129.9 points—with 1935–39 equaling 100 points. That same source shows that as of January 15, 1948, the index for the cost of all items had risen to 168.8 points. This rise represents an almost unbelievable jump of 29.9 percent in the over-all cost of living in the period involved.

For purposes of clarification I should say that the period from December 15, 1945, to

January 15, 1948, is used herein because the first-named date most nearly coincides with the date on which letter carriers last received a pay increase—that is, January 1, 1946, or 15 days subsequent to the example date used. The January 15, 1948, date is employed because it represents the last available period for which complete cost-of-living data have been compiled.

In other words, since Public Law 386 became effective on January 1, 1946, which gave letter carriers and most other postal personnel a horizontal pay increase of $400, the period of December 15, 1945, to January 15, 1948, is being utilized in this justification for an immediate wage increase.

Because food costs comprise approximately one-half of the average worker's personal budget I should like to invite your attention to the spectacular rise in the cost of food during the same period described above.

The Bureau of Labor Statistics on December 15, 1945, noted the food cost index as being 141.4. On January 15, 1948, it had soared to the astronomical figure of 209.7, a rise of 48.3 percent for the period involved. This rise in the cost of food has had and continues to have a crushing impact on the personal budget of letter carriers. He simply has not been able to match food prices with his sadly deflated purchasable dollar. In many instances he has not been able to put on his family table the basic foods that are so necessary to sustain him in the arduous duties of a letter carrier.

I am sure that most of you will recall the item which appeared in all the local newspapers a few weeks ago, concerning the testimony given a Senate subcommittee on postal wages by the wife of a local letter carrier. This lady very convincingly demonstrated that she could not provide butter for her family, which included three growing boys, on her husband's salary. I do not wish to intimate that letter carriers are starving to death in the streets. They are not. But at the same time their present woefully inadequate salary denies them their rightful participation in the ideals and bounty of the world's greatest democracy. This same totally inadequate salary excludes letter carriers from an equitable share in the material, social, intellectual, and moral prosperity of our day and age. Letter carriers do not want merely a living wage. We feel that we are entitled to no less than a saving wage. A saving wage and the American way of life are indivisible.

In other words, due to the inflation of our money, which affects everybody, the purchasing power of our dollar has decreased approximately one-half. In addition, we have nearly 30 percent less take-home pay. This situation has created chaos in the personal lives of our people. They are at their wit's end trying to make their salary stand up to present-day costs. Not only is there a glaring deficiency in their take-home pay, but not a single penny they sepend does its full duty. We lose in every transaction affecting our food, clothing, shelter, hygiene, schooling, amusements, and all the other necessities that go to make up our accepted American standard of living. I feel very strongly that the time has long since passed when the letter carriers' value should be assessed at the poverty line.

Admittedly, there was a break in grain prices beginning the first of the month. Perhaps I should admit further that it was the sharpest break in recent years. But I also contend that the break has had very little effect, if any, on the prices you and I pay at retail. As a matter of record, during the past week the BLS officials conducted a sample test of retail food prices. The results showed a decline of 3 to 4 percent—an infinitesimal decrease, to say the least. Moreover, there is sufficient evidence to justify the opinion held by those economists who say the food-price declines appear to be leveling off. If that turns out to be a correct estimate of the situation, the average letter carrier will be just as perplexed as he was before the price break.

On the other hand, the slight decrease in food prices has been more than offset by the continuing rise in consumer items, such as household products, clothing, fuel, and rents. It cost 31 percent more to wear shoes these days; fuel is up 20 percent; clothing approximately 19 percent. And there is no reason to be optimistic that a break will occur in the prices for these items, especially in view of the recently announced increase of 10 percent in certain types of steel products.

Actually, it is a case of one hand washing the other; bread and milk come down a penny or two, while consumer products go up in an equal amount. As far as the individual letter carrier is concerned, no downward trend in prices is reflected in his personal budget, and something more tangible is necessary than a 3-percent decline in food prices to convince him that his present postal salary is now adequate, or that it will become adequate in the immediate days ahead.

I should like to inject another point which is too often overlooked in considering wages for letter carriers. Reference is made to the fact that letter carriers are obliged to furnish their own uniforms for the proper performance of their duties. The cost of these uniforms constitutes no small item in his yearly budget. I say "uniforms" advisedly, because each letter carrier is obliged to furnish himself with two complete uniforms—one for winter wear and another for the summer period. I might also say that to the best of my knowledge no other department of the Government demands employees to furnish their own uniforms or other distinctive garb where required.

Let me quote some of the prices advertised for letter-carrier uniforms taken from advertisements appearing in the Postal Record, a monthly journal published by our organization.

One firm (and it is a typical firm as to prices) offers serge trousers at $15.75 each; 14-ounce gabardine trousers cost the letter carrier $16.

The same firm offers a summer-cloth suit, consisting of three pieces, for a total of $54.45; a medium-weight uniform suitable for mild winter weather costs $61.35.

A letter carrier's cap costs him a minimum of $2.50—and he must have at least two caps, one for winter and another for summer.

Shoes. There is hardly any need for me to impress upon you the fact that letter carriers in the daily performance of their duties are on their feet in all kinds of weather from 8 to 10 hours a day. The wear and tear on their shoes is terrific. A very conservative estimate for the cost of a year's supply of shoes for the average letter carrier would be $50, including the cost of repairs.

Shirts. The special accessories required on our work shirts, such as shoulder reinforcements, etc., increases the cost. It is impossible to get a quality letter carrier's shirt for less than $3.50 each, and because of the constant wear and tear on our clothing, a minimum of six shirts each is required for summer and winter wear.

All this adds up in a year's time. In fact, it costs a letter carrier no small portion of his salary each year to dress himself in the uniform required by the Post Office Department. As I mentioned previously, we are probably the only Federal employees required to furnish our own uniforms. It is a ridiculous situation. I sometimes wonder what would happen if an employer in outside industry hired a bookkeeper and then required the employee to furnish his own adding machine and all the other tools of his trade. Imagine yourselves hiring a secretary and then telling her to bring her own typewriter and file cabinets when she reported for work.

Again referring to the 29.9-percent rise in the over-all cost of living since last letter carriers received a wage adjustment, I want to point out the method used to justify the amount of increase we now feel is necessary to bring letter carriers up to par, so to speak.

On December 3, 1947, the legislative reference service of the Congressional Library stated that on July 1, 1946, the average salary paid postal workers in the field service was $2,708 per annum. If we multiply $2,708 by 29.9 percent, the result is $809.69. That figure represents the amount required to meet the average deficiency in postal salaries.

Now let me refer to another phase which must always be borne in mind in the consideration of postal salaries. Letter carriers are paid out of public funds—that is, Treasury Department funds—and I might use this occasion to insert in the record a correction of an erroneous impression that is becoming prevalent relative to the source of payments for postal salaries. There is an impression in some quarters that postal salaries are paid from postal revenues; moreover, there is a further interpretation put on this impression which would have postal salaries totally dependent upon postal revenues. I merely want the record to show that postal salaries are in no manner dependent upon postal revenues. By the same token, there is no connection between postal revenues and postal expenditures. If the Congress should, for example, appropriate $1,000,000,000 during any fiscal year for the operation of the Post Office Department, that is all the Department could use legally for the operation of the postal service, regardless of the fact that postal revenues during that period might be double or triple postal expenditures. Because letter carriers are paid out of public funds, there is always present a certain sensitivity as to the public reaction to any increase in public expenditures, be they for salaries or any other legitimate public expenses. The spokesman for the letter carriers is aware of that condition; letter carriers in general are also aware of the necessity of always presenting a reasonable request in the matter of wage advancements—after all, letter carriers are also taxpayers.

Along that line of thought, I want to quote at random some of the favorable reaction of the public press to our request for an upward wage adjustment. This is not a complete file on the subject, but it does indicate the attitude of the American people toward the request of the letter carrier for a decent salary. I might add these are all editorial comments:

From the Peoria Star, February 7:

"The request of the postal employees has our sympathy. Employees of the Post Office Department work for their salaries. They form a large group of our most reliable public servants. The service they render is essential to the Nation. The security they enjoy they pay for themselves. There is no featherbedding in the postal service. There are many places in the administration of our Federal Government where economy might be practiced before squeezing the purses of such a loyal and essential group of Government employees as those who operate the postal service."

A second comment from a paper in Illinois, the Peoria Journal, under date of February 11, stated: "Whenever the cost of living rises, as it has been doing for the past few years in the United States, persons with fixed incomes suffer the most. Some workers can get raised to offset at least a portion of the increased cost of living, but those whose incomes are stationary or whose salaries are set by law have a great deal of trouble keeping up with rising prices. Included in this category are the employees of the Post Office Department. Their salaries are set by law and it takes action by Congress to obtain an increase for them."

Taking a realistic view of the cost aspect involved in Federal salaries, the Journal continued: "There seems little doubt that the

postal employees are entitled to the raise they are seeking. Few Government employees work as hard as the post-office employees and few give as faithful service as they. While we dislike to see any increase in the cost of Government, certainly the postal workers have earned what they are asking, and we are hopeful that their request will be granted."

On February 3, the editor of the Altoona Mirror, in Pennsylvania, said: "The letter carriers contend they can no longer meet current living costs on their pay scale * * * they maintain that, on their present pay scale, the average letter carrier is going in the hole at the rate of $35 a month. It is up to all of us to consider the facts and act accordingly. The carriers have done, and are doing a good job. Let's give them a pat on the back in the way it will do the most good. Write your Congressman."

The Jackson (Miss.) Daily News, on January 29, said: "Among the 10,000,000 or more Americans of fixed or relatively fixed incomes who find their purchasing power dwindling in the present inflationary period, few groups are more worthy of relief than the Nation's postal employees. Letter carriers and other postal workers are by no means the only ones suffering from rising prices. But in their case the remedy is at hand."

Advancing the thought that the well-known fair-mindedness of the American taxpayer would prompt him to see the justification of a pay raise for letter carriers, the editor of the St. Joseph (Mo.) Gazette, on February 3, stated: "Few American taxpayers are likely to object to a reasonable increase in the pay of the country's postal workers. Like everybody else, they have been squeezed by inflation, but no relief is in sight for them unless Congress approves raises in their pay. Congress, who believes in fair play, and expect the postman always to ring twice, should take steps for giving them a raise in pay."

The editor of the Macon (Ga.) Telegraph, February 6 edition, makes a point that should be given unusual consideration in dealing with the question of letter-carrier wages. The editorial referred to states, in part: "It is generally agreed that our postal employees are among the most faithful and deserving of all our public servants, but it is equally true that they have been greatly neglected." The editorial continues:

"An important consideration in this connection is that, while postal employees are organized, they are not allowed to strike, and, to be perfectly fair, they have shown no disposition to strike. They are content to rely upon a sense of fair play on the part of Congress and of the general public. There were weary years during which this reliance seemed misplaced."

I am not going to take up any more of your valuable time to read additional editorial excerpts in favor of a salary raise for letter carriers. There are a great many more on file in my office—among them comments from Milwaukee, Wis.; Atlanta, Ga.; Philadelphia, Pa., and others. I do want to mention, however, that the AFL executive council, of which I am privileged to be a member, in their recent winter session, voted unanimously to endorse our pay-raise request. Describing postal workers as being victimized by inflation, the statement accompanying the AFL endorsement added: "It is up to Congress to correct this mass injustice without delay. Government workers who cannot bargain collectively for wages or strike must depend upon the mercies of Congress."

In the forepart of my statement I propounded the question of the need for a salary raise from the viewpoint of the postal service. I also pointed out earlier in my testimony that the organization which I have the honor to represent has been engaged for the past 60 years not only in bettering the welfare of its membership, but doing everything within its power to advance the postal service. We, as postal employees, have a natural and abiding interest in the advancement of the service. We want to see it expanded; we want to see it give more and better service to the American people. To do these things it is absolutely necessary that modern equipment be furnished the postal service in sufficient quantities to do the job. It is imperative that the planning of the Department be harmonized with the technological advancements of our era. No less important is it that the Department secure and retain the high caliber of personnel which has brought the United States postal service to the high position which it now enjoys in its field. That point alone is sufficient justification to increase the wage of letter carriers and other postal workers.

Postal authorities will no doubt testify to the fact that it is no longer possible to recruit new employees on the present $2,100 entrance salary. New entrants who, for the most part, are veterans of World War II are required to serve 11 years before reaching the maximum pay grade of $3,100. As I have pointed out, the gap between the fixed salary of the top-grade letter carrier at $3,100 cannot be closed. How, then, can we expect the $2,100 letter carrier to cope with his economic problems? I can tell you he is not successfully coping with those problems.

In many instances these men are attempting to augment their postal wages with income from outside employment. There is little need for me to tell you that in so doing it is at the expense of a diminishing interest in the postal service. If these men stopped at part-time work it would be bad enough; but in altogether too many instances they are leaving the postal service for more lucrative positions in outside industry. That sort of situation is very costly to the Government. Considerable money is spent to train a postal recruit, and before there is time to collect on the investment the new man becomes disillusioned. He gives up any idea he might have had about a postal career and sells his labor elsewhere.

Most of us knew when we entered the postal service that we would never become wealthy men; we forfeited all thought of ever owning productive capital. But as matters now stand the job of carrying the mails is no longer attractive enough to induce young men to enter the service. Potential career men apply for an examination; they qualify in competition with other like-minded men, but as soon as they learn of the salary grades they turn their back on the service.

In this connection, let me quote a portion of an editorial recently appearing in the Wyoming Eagle, published at Cheyenne, Wyo. It points up the absolute need for making the job of carrying the mails attractive from a financial standpoint, if the historical efficiency of the service is to be maintained. The article is dated February 5, and reads in part: "As a result of the low beginning wage and the limitations placed upon these people, it is becoming increasingly difficult to secure capable young men for the postal service. And the volume of mail now being handled is considered to be at an all-time high. If the Government is to uphold the traditions of its efficient postal service and staff it with capable young men, it must offer them at least the inducements of other occupations. Among these a comfortable living wage."

This unwholesome condition is not something that has been conjured in our minds. It is real. Moreover, it will become progressively harder to rectify if allowed to continue unchecked. It is something that can be overcome only by thoughtful consideration and forceful action. There must be an immediate consideration given the underlying cause for its existence, namely the wage consideration.

I want to quote an announcement dated February 13, 1948, from the United States Civil Service Commission, Office of the Director, Eleventh United States Civil Service Region, with headquarters in Seattle, Wash.: The purpose of the announcement is to advertise a forthcoming civil-service examination for probational appointment to the positions of substitute clerk-carriers in the post office service. The interesting part about this announcement is that it is the third such amendment to the original call for the examination described. The reason for this third notice—and it is printed very plainly on the copy—is "because of insufficient applications." In other words, there is a third attempt being made to secure sufficient applications to warrant holding a civil-service examination to establish eligible rosters for the entire eleventh civil service region.

Getting a little closer to home, permit me to quote a news item which appeared in the Washington, D. C., Times-Herald on February 16. The caption of the story reads: "Postal Jobs Go Begging." The item reads in part: "The Civil Service Commission reported today that it has not received enough applications for substitute clerk and carrier jobs in the Washington post office—jobs for which it used to be deluged with applications." The remainder of the item is irrelevant to the point under consideration, as it merely outlines the place, time, et cetera, where applications may be secured for the examination.

The point I wish to bring to your attention is that no longer is there any financial reason why a young man should enter upon the postal service as a career.

Because of the acute situation within the Postal Service, a conference of letter carrier representatives was held in Washington, D. C., January 12 and 13. Approximately 700 letter carriers from 44 different States were on hand for that conference. Among other things, the group recorded itself in favor of an immediate $800 upward wage adjustment on a permanent basis, to be effective January 1, 1948.

This action taken by the National Association of Letter Carriers parallels that taken by the Government Employees' Council, American Federation of Labor, on December 9, 1947, when it endorsed a proposal seeking an immediate wage adjustment of not less than $800 per annum. This also carried the stipulation that such legislation would be permanent in nature and would become effective January 1, 1948. This last named group represents 21 unions whose membership in whole or in part are employed by the Federal Government. The Council has a membership of approximately 500,000 Government employees.

I have one more thought before I finish my testimony; along with millions of other American workers, letter carriers would much prefer a substantial reduction in the over-all cost of living in lieu of a wage boost. But the situation is one over which letter carriers have no control. It is a very critical situation both for the Postal Service and the employees. Simple justice demands that letter carriers be given an immediate wage increase.

Therefore, the National Association of Letter Carriers endorses the principle contained in the various pay raise bills pending before this distinguished committee. We are of the firm opinion, in fact, it is a deep-rooted conviction with us, that a permanent wage increase of not less than $800 per annum, effective January 1, 1948, is not only warranted but wholly justified.

Thank you for your kind attention.

Synthetic Rubber for War

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include an editorial from the February 24 issue of the Washington Star:

SYNTHETIC RUBBER FOR WAR

The House Armed Services Committee has recommended unanimously to the House a peacetime synthetic-rubber program that, if adopted without substantial change, should assure the Nation of an adequate supply of the critical material in any foreseeable emergency. World War II showed how risky it can be to rely on imported natural rubber to keep the war machine going. But for the amazing production feats of a war-born synthetic-rubber industry an Allied victory in that war might well have been impossible.

Congress now faces the problem of deciding what to do with this industry when the wartime synthetic rubber law expires on March 31 of this year. There is not much time left for deliberation. But the House committee, after 9 months of intensive study of the problem, has presented a series of proposals which should simplify the task of the House and the Senate. The program represents a number of compromises of prevailing views on the difficult subject and hence will provoke some debate on the floor.

Briefly, the measure calls for preservation of sufficient synthetic-rubber plants in operating or standby condition to produce 675,000 tons of the product annually, if necessary. The plants would remain under Government ownership, but they could be leased to private interests for rubber production under an arrangement requiring a total output of at least 225,000 tons each year. Sale of any of the fifty-odd Government plants would be prohibited except by special authority of Congress. Private interests would be encouraged, however, to build their own plants, to add to the potential productive capacity of the country.

The leasing of these Government plants, of course, should be surrounded by every safeguard necessary to protect the public's vital interest in the industry. Maintenance in efficient operating condition of adequate facilities for synthetic-rubber production is no less important to national security than availability of aircraft production facilities. Fortunately, synthetic rubber has become a valuable peacetime commodity, the demand for which is such as to assure a continued interest by private industry in its production. The cooperation of private industry should help to put the Government's proposed program on a self-liquidating basis.

New National Service Life Insurance Program in the Making

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. SHAFER. Mr. Speaker, as the chairman of a subcommittee of the House Committee on Armed Services, I have received several letters from interested insurance executives relating to an insurance program that I understand will be inaugurated to take the place of the national service life insurance in the Army, Navy, and Air Force.

As is generally known, the present method of insurance used by the Government is both unduly expensive to taxpayers and socialistic in implication. Even more important, it is about as inefficiently handled as it possibly could be.

Insurance men who have had a chance to observe the workings of the Veterans' Administration are impressed, more than anything else, with the inefficiency of the present set-up. The service rendered policyholders is terrible.

One insurance friend of mine said recently:

It would be more economical and far more efficient if the Government would give the insurance to the veteran rather than charge him for it each month.

There is a great deal of interest in insurance circles, of course, as to the kind of legislation the armed services themselves will recommend in regard to a future mode of insuring service personnel. I am happy to be able to say that such a recommendation will be forthcoming soon, and I am serving notice now that my subcommittee will get busy on the legislation just as soon as the wishes of the armed services are made known.

In this connection, I ask unanimous consent that there be carried in the RECORD at this point a letter which I received recently from James V. Forrestal, Secretary of Defense, relating to forthcoming action along this line:

THE SECRETARY OF DEFENSE,
Washington, January 20, 1948.

Hon. PAUL SHAFER,
House of Representatives,
Washington, D. C.

DEAR MR. SHAFER: The following is in amplification of my previous acknowledgment of your letter of December 31, with which you forwarded a letter from Mr. H. Loree Harvey, of the Equitable Life Insurance Co. of Iowa, relative to the report of a committee of the Joint Army-Navy Personnel Board on national service life insurance.

I find that the report to which Mr. Harvey refers has not been pigeonholed but that recommendations in the premises will be forthcoming in due course. Its status is as follows:

A committee, headed by Lt. Col. A. F. Penzold, Jr., USMC, appointed by the Joint Army-Navy Personnel Board, made a study of national service life insurance and made certain recommendations in its report to the board which included the granting of gratuitous life insurance to persons on active duty. The report of this committee has been approved by the Joint Army-Navy Personnel Board, but has been held in abeyance by that board pending completion of a study of the whole problem of pay, physical-disability benefits, and death gratuities, to which matters the subject is closely related, and with which it should be integrated.

The recommendations of the board when completed will be forwarded to the Secretaries of the Army, Navy, and Air Force for comment and further recommendation prior to the initiation of legislation on this subject.

The enclosure forwarded with your letter is returned herewith as requested.

Sincerely yours,

JAMES FORRESTAL.

Cadets Want No Foreign Sales

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. WEICHEL. Mr. Speaker, with reference to the proposed sale and transfer of some 500 ships to foreign nations under the relief program, I am including a statement from the Alumni Association of the United States Merchant Marine Cadet Corps, who substantiate the position taken by the Committee on Merchant Marine and Fisheries in which the committee took action to stop charter and sales to foreigners as well as recommending there being no free transfer of ships:

The Alumni Association of the United States Merchant Marine Cadet Corps, representing more than 8,000 deck and engine officers graduated from the United States Merchant Marine Academy at Kings Point, Long Island, N. Y., wishes to state before this committee, that it opposes the sale or transfer of approximately 500 American ships to foreign nations under the emergency relief program.

At the same time, we wish to make it clear that since we sail our ships to most of the destitute countries in Europe, we are probably more familiar with the needs of those war-stricken nations than are most Americans. We will therefore, support very strongly the efforts of those interested in supplying the necessary aid to these countries. But aside from the humanitarian aspects of such a plan, we believe in the development of healthy trading between Americans and citizens of foreign countries. Stimulation of such trading at this time especially, is of utmost importance for the recovery and prosperity of the European nations, as well as the continuance of our own.

This committee has already been provided with statistical break-downs proving there will be little immediate saving and no long-range saving by using foreign crews and American ships in transporting American goods to nations in Europe. It is not our purpose then, to duplicate these figures but we do wish to point out a few other important aspects of the problem as it affects the American merchant marine, the American public, and in particular the American citizen who is also an American seaman.

In two World Wars the United States was caught with a pitifully inadequate peacetime merchant fleet. Since an abundance of merchant ships and well-trained crews is always the very first requirement in meeting such national emergencies, we, not having a healthy merchant marine, had to hastily build merchant ships during two world wars. Added to this, is the unestimated cost to the United States of the war due to delay in building ships and the many lives lost due to this same delay.

At the beginning of World Wars I and II, the percentage of goods transported to and from this country was 13 percent and 25 percent, respectively. At present, it is less than 50 percent with this figure decreasing steadily. Shouldn't it be the policy of the United States Government to maintain the American merchant marine at its highest possible level, especially when it can do this at such a relatively low cost? Shouldn't the Congress take the long-range view and endeavor to avoid the possibility of a recurrence of the extravagant spending concurrent with the last two wars? I am sure that if more

American citizens were aware of the cost of unpreparedness, they would want the Congress to take steps to prevent recurrence of this cost.

During the height of battle, the American seaman was praised from the President on down for his courage and willingness to sacrifice life and limb for his country. Since the cessation of hostilities, he has been almost completely forgotten. Now, more than 25,000 American seamen are facing replacement by foreign seamen on American ships.

The use of cheaper foreign labor which will directly put American citizens out of work in an industry vital to national defense just doesn't seem to be real Americanism.

It is the sincere hope of our association that the Congress will continue the 500 ships on an active status with American crews in the American merchant marine.

Life of Margaret Bondurant Devoted to Social Service in City and State

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1948

Mr. ANGELL. Mr. Speaker, on February 11, 1948, I called attention to the outstanding record of one of Oregon's distinguished public-spirited citizens, Margaret Bondurant. In these remarks I emphasized the remarkable work performed by Mrs. Bondurant in behalf of handicapped citizens. In the Portland Oregonian of February 22, 1948, M. Leona Nichols gave a brief review of the social service performed by Mrs. Bondurant in her long career in my State in her free-will service for the handicapped and the underprivileged. The article follows:

LIFE OF MARGARET BONDURANT DEVOTED TO SOCIAL SERVICE IN CITY AND STATE

(By M. Leona Nichols)

"Keep your face to the light and never turn back," was the advice given Margaret Bondurant when she began her first social service work in 1909. Her interest awakened, the underprivileged and their problems, continued to absorb her attention until now she devotes her full time to assisting the handicapped in find a self-supporting vocation.

Margaret Zwickel was born in Pittsburgh, Pa., the daughter of C. C. and Margaret Zwickel. Miss Zwickel came to Oregon in 1889 and later was married to Royal Edward Bondurant.

The duties of homemaking were deeply engrossing to Mrs. Bondurant, yet she did not allow her own security to crowd out her interest in those who experienced the seamy side of existence.

The story of a deserted family drew deeply upon her sympathies. After investigating the case, Mrs. Bondurant found the distress of these homeless ones deplorable and she went among her friends to collect enough funds to relieve the wife and her little ones. Her success astonished her for the response was liberal. Enough money was donated to clothe the entire family and to buy a small house for them. From this substantial start they were able to become self-supporting and new courage lifted them out of despondency.

Mrs. Bondurant now launched other projects to aid the needy and found much satisfaction in social-service work.

MANY PROJECTS SUPPORTED

Allying herself with other women who had the same objectives, she supported many projects for the benefit of women and children. Laws were lacking whereby State help might be secured for orphaned or deserted children, and mothers were obliged to leave their little ones to the care of older children while they became bread winners. In order to secure help for these dependents, Mrs. Bondurant sought the cooperation of the Oregon Congress of Mothers.

As chairman of the legislative council, she and her associates in 1912 formulated data for the passage of a widow's pension law. This and other remedial legislation was passed in 1913.

With this matter accomplished Mrs. Bondurant turned her attention to the Oregon Prisoners Aid Society Board and labored with that group from 1913 to 1936.

The years presented other problems needing solution, and since Mrs. Bondurant's sympathies were inclusive of all underprivileged, she served as a member of the board of the Children's Farm Home at Corvallis for 6 years, beginning in 1922. She was also president of the Albertina Kerr Nursery from 1919 to 1927 and was active in the affairs of the Louise Home.

Capacity to work for others made Mrs. Bondurant a prominent figure in social welfare, and her affiliations were many and varied. She was chairman of the State advisory board for the blind from 1930 to 1936 and treasurer for the Blind Relief Fund, Inc. It was under her supervision that a survey of the blind in the State was made. In this work Mrs. Sidney Teiser, representative of the blind commission for the Council of Jewish Women, was a valuable assistant, for it was a full-time job that required the careful investigation of those handicapped by partial or complete loss of sight.

Mrs. Bondurant also was instrumental in obtaining money from the State legislature for the first school to be held at the Louise home for the juvenile hospital at that institution. She also was active, together with Oscar W. Horne, in securing an initiative measure for creating the Oregon Blind Trade School.

HANDICAPPED PERSONS AIDED

Mrs. Bondurant was active in raising the standard of the court of domestic relations. Her latest efforts were promoting the sale of articles made by handicapped persons. This store at 1325 Southwest Washington Street is sponsored by National Crippled Children and Adults, Inc. Mrs. Bondurant is keenly alert to the needs of those who are handicapped by physical affliction and her services are gratuitous in all of her activities.

Aside from her many charities, she is honorary president of the Holladay Park Hospital and has acted as treasurer of the Republican Woman's Club, Inc., of Oregon since 1937. She is also a member of the Eastern Star, the Daughters of the Nile, and Portland Woman's Club.

A daughter, Pauline, now Mrs. Hedley Hill, was born to Mr. and Mrs. Bondurant. Since the death of her husband in 1935, Mrs. Bondurant has found a renewal of interest in life in the arrival of her two grandchildren.

Equality for Aliens

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 19, 1948

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Washington Post of January 29, 1948, dealing with a bill, H. R. 5004, I have introduced to remedy a long-existing injustice, and to correct various technical difficulties, in our immigration and naturalization laws. I do not know any place where we can do more good to others and can get more benefits for our own country at so small a cost.

EQUALITY FOR ALIENS

The immigration and naturalization laws of the United States still contain a considerable element of racial discrimination which is at once an irritant to our relations in the Far East and a denial of our own vital principle that all men are created equal. The exclusionary features of the Immigration Act of 1924, directed against persons of oriental origin, were modified with respect to the Chinese in 1943 and with respect to the Filipinos and East Indians in 1946. However, persons from Burma, Japan, Siam, Indonesia, Korea, Indochina, the Malay States, and the Pacific islands are still barred from becoming naturalized as citizens of the United States and are, therefore, in general, ineligible even to enter this country as immigrants.

Representative WALTER H. JUDD has introduced a bill designed to cure this inequity. Its effect would be to do for other orientals what has already been done for Chinese, Filipinos, and East Indians—that is, to erase from our nationality and immigration policy any discrimination on racial grounds and treat them as we treat Europeans seeking to ente the United States. In practice, because stringent quotas are applicable to the peoples in question, no more than a few hundred Asiatics now ineligible to enter the United States would be granted admittance. Mr. JUDD's proposal would not change the quota law in any respect; it would merely extend it.

The most important effect of his bill would be to make eligible for naturalization an estimated 88,000 persons now in the United States and Hawaii who are barred from becoming citizens because of racial origin. The President's Committee on Civil Rights urged that this be done. Most of those who would be affected are Japanese whose loyalty to their adopted country was amply demonstrated during the war; they produced, among other things, the One Hundredth Battalion and the Four Hundred and Forty-second Infantry Combat Team, which, as the late Gen. Joseph W. Stilwell put it, "bought an awful big hunk of America with their blood." Their present status makes them the victims of discriminatory land laws in some Western States prohibiting aliens ineligible to citizenship from buying, selling, or conveying land. In the Oyama case, the Supreme Court pointed out the other day the invidiousness of this kind of discrimination. Congress rather than the Court can furnish the most effective remedy. Americans of Japanese ancestry deserve fair pla"

The Enemy Within

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1948

Mr. GRANT of Indiana. Mr. Speaker, the following editorial from yesterday's

Wall Street Journal should be required reading for every American:

THE ENEMY WITHIN

The thing we call the American way of life—for lack of a more definitive phrase—is beset on many fronts. We have just finished a war to protect it from one enemy. We are prepared, if it be necessary, to take up arms again to repel others who envy us. But in turning our faces outward, it seems to us, we are overlooking a more insidious enemy within our gates.

That enemy is doubt. It is a suspicion that, although we have the greatest liberty, the greatest wealth, and the widest distribution of both the liberty and wealth, of any nation now or before us—that although we have all these, the system by which we achieved them is somehow all wrong.

Our economic system rests on the profit motive, the theory that the best way to achieve maximum production and distribution of material goods is to permit each man to reap his own harvest. Our political system rests on the belief in personal liberty, a conviction that the individual must not be enslaved by the majority any more than by a tyrant.

Both beliefs are under suspicion. The suspicion is that the profit motive, the desire of a man to work for himself and his family, is not only unnecessary but is even undesirable, a thing of evil. And finally, that if we cannot have perfect equality and security without sacrificing liberty, then liberty has been overvalued.

The seeds of this doubt come in many forms and are dropped in many places. They are not fathered alone by conscious propagandists for foreign ideas. They are to be found in the words of many men of good will, teachers, intellectual and artistic leaders, and high Government officials.

It is probably not surprising that some among our artists and "intellectuals" are the most prolific sowers of suspicion, for they are by nature doubters of the world, however they may find it. But there is an ironic twist there, for they have profited greatly from the civilization they censure. Under no other system, for example, have the teacher, the writer, and the artist had greater rewards or greater freedom. Even in the Golden Ages of Greece and Rome, the teacher was a slave and the singer the sort of minstrel who, like today's Shostakovich, sang as he was told.

What is dangerous is that the suspicion has worked its way, perhaps unconsciously, into high places.

Last week President Truman addressed a Jackson Day dinner. It was admittedly a political speech designed to garner votes next November. But the words he used, the fact that both he and his hearers believed them to be vote-getters, shows how strongly the seeds of doubt has grown.

Wealth (i. e., money) to the President is never a thing that is put to work and performs any useful service. It is referred to always as "selfish wealth" and "concentrated wealth." Wages for labor and income for the farmer are good things, but the very word "profit" is an epithet and a reproach. Those who acquire it, or seek it, are engaged in a reckless pursuit of privilege and power.

Business, which is simply a name for the mechanism that produces and distributes wealth, has somehow become an enemy of the people. Even when Mr. Truman speaks of one of his policies as being beneficial to business, the implication is that business is a special group apart from the rest of the citizenry and has no relation to the laborer or the farmer. Mr. Truman is not doing something beneficial for the community as a whole; he is doing something nice for business.

Anyone who read this speech, and believed all of it, would be persuaded that wealth is an evil force enslaving mankind and that all men of business wear horns and a tail.

Mr. Truman, too, despairs of our progress in conquering prejudice, in extending political liberty, in providing educational opportunity. He sees little opportunity for progress under our present laws; we must give up a little more of our liberty to new laws and new Government bureaus to achieve more real liberty.

We do not think Mr. Truman intended any such sweeping denunciation; more probably he was tilting with Henry Wallace. Surely he could not be intentionally denouncing the very productive wealth with which he wants to uplift the rest of the world. Nor do we believe that he was intentionally castigating the system that gives our individual citizens so much freedom that they are now the envy of that world.

Perhaps he meant only to say the obvious: that the millennium is not here. But it seems to us he was reflecting the suspicion fashionable among too many people in the Government, that there is something wrong with our whole system, and that it ought to be junked simply because it has not produced that millennium.

These people are seeding suspicion of the very things that have made us among all nations the richest in both material goods and in freedom simply because we have not yet abolished all prejudice, all poverty, all greed. They are, as it were, doubting justice because some judges are venal.

Certainly we need to guard against dangers from without because our life is too rich a prize not to raise envy. Equally we need to guard against doubts from within lest we grow within ourselves the seeds of our disaster.

Palestine Retreat

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. CELLER. Mr. Speaker, upon hearing Senator Austin's statement before the Security Council on the Palestine situation, I issued the following statement:

The statement of our United Nations delegate, Warren Austin, before the Security Council is outrageously hypocritical. He asked the appointment of another committee to study the Palestine situation—as if there haven't been enough committees. There have been committee reports piled on committee reports on Palestine. It is like seeing a house burn and having the fire commissioner ask for the convocation of a debating society to determine whether or not to ply the hose on the conflagration. Action, not words, is wanted. Inaction only encourages Arab incursions and more bloodshed. This is further evidence of United States fumbling and faintness of heart. As a first positive action, the United States itself should lift the arms embargo forthwith and immediately demand without reservation the setting up of a Jewish militia, the opening of a seaport to Jewish immigration and necessary supplies, and the establishment of an international constabularly. No further committee studies are needed.

In Senator Austin's statement we see the retreat of the United States from the healthy leadership it had first provided in the General Assembly debates which led to the recommendation of partition. Frankly, the newspapers state that the terms of the long-delayed statement of the United States position on Palestine was so complicated that even the UN delegates skilled in the fine art of innuendo so dear to the diplomatic heart were themselves confused and uncertain as to what Warren Austin meant.

At least this is clear. The American statement leaves all the lead questions unanswered. Secondly, its many generalities and qualifications are a pretty obvious attempt to permit the United States plenty of elbowroom to go in many directions. It can go upward, downward, north, east, south, or west. It is hardly what one would expect from a nation which took the lead in the advocacy of partition last fall. The statement is a far cry from the forthright declarations made by Herschel Johnson concerning the partition plan. In Austin's statement there was absolutely no ring of leadership. It was a spineless, blurred attempt to confuse the issue. On one hand, the United States says that force can be used only to enforce peace in the Holy Land, and, on the other hand, the United States says that force cannot be used to enforce partition. Any child can tell you there is no peace in Palestine and that the absence of peace is a threat to international peace and that the sorry conditions in Palestine are the result of the Arab refusal to accept partition. The statement makes it appear as if Senator Austin and those responsible for the statement deliberately put blinders on their eyes and plugs in their ears so that they would not see nor hear of the horrendous conditions now existing in Palestine. In a single blast in Jerusalem on Sunday, British troops or Arabs disguised as British troops murdered 52 Jews. Hundreds were maimed. The violence continues unabated.

Who is guilty? Certainly, the Jews did not start the killing. It was the intransigence of the Arabs aided by Arab sovereignties who have brought death into the Holy Land, and amidst the tragedies, the Jews are unable to arm themselves against the attacks. The finger of guilt is pointed at the United States as well as at Great Britain. Despite Britain's promise to keep law and order in Palestine, despite the 100,000 troops she has in that area in her calculated way, she permitted acts of aggression by the Arabs directed against the Jews. She openly disregarded the United Nations injunction to open a port for Jewish immigration by February 1. She refused to permit the commission of five selected by member nations to set up shop in Palestine in time to make certain that Palestine would be a going concern before the British left. I knew well enough that Britain would not retreat gracefully, but I did not know then that she would precede by intrigue and councils of war with Arab leaders to so confuse the issue, to let blood so freely, that she could go back to the UN, pleading the unworkability of partition, even before partition had been tried. It was hoped, however, that with British and United States firmness squarely and without compromise placed before the Arabs, the Arab spokesmen like the

ex-grand mufti of Jerusalem would understand fully the futility of opposition.

But the real joker in the deck was the United States. After the leadership, the earnest and affirmative and direct statements, plus Presidential pressure, which the United States gave in the partition debates, it is almost impossible to believe the evidence now spread before us, leading to the inescapable conclusion that our State Department favors the wrecking of the partition plan. We kept ominously silent when troops from Syria and Lebanon and Transjordan crossed the borders into Palestine to join in aggressive fighting against the Jews. I quote directly from the text of the UN Palestine Commission's first report to the Security Council, submitted on February 16: "Arab morale is considered to have risen steadily as a result of these reinforcements."

We did nothing to recall to the British their own responsibilities in maintaining law and order. We saw no reason to bring these acts of aggression to the attention of the UN, though we did not hesitate to carry the issues of Greece, Iran, and Korea to the UN and take leadership in the ensuing discussion. While President Truman did plead with some of the Arab leaders to use restraint, it was purely a private conversation and in no way helped to allay the deliberately inflamed passions of the Arab populations.

These are some of the things we did not do. What we did instead was to place an embargo on arms to the Middle East. That is not only adding injury to injury but irony as well. As the report to the Security Council affirms, the Arabs are receiving arms and armed men from surrounding territories. The British admit sending arms to Arab countries and defend it on the ground of "contractual obligations." Arms from the United States can go to Pakistan and Iran, countries openly favoring the Arabs. We know these arms are being routed to Palestine. But the State Department sees fit to bar the Jews from such purchases from the United States while making it possible for the Arabs to arm at will. It almost appears as if our State Department had grown two heads, one nodding ineffectually to the idea of partition and the other voicing a great big welcome to the invading Arabs. In short, we behaved as if the only way to work out the puzzle was to cut pieces that do not fit.

Now comes Austin's statement, pale, inconclusive, and shy. How will the Arabs react now with this further evidence of retreat from center? Can they not rightfully conclude that their threats and their raids and their bloodshed have borne for them the desired fruit? Had we taken positive action before as indicated in my previous remarks, the question would not have been thrown back to the UN. As is, exactly what was planned by partition opponents, has come to pass. Colombia formally proposed that the Security Council convene a special session of the General Assembly to reconsider last fall's decision on partition. Naturally, step by step, by British refusal to cooperate, by United States pussyfooting in one direction and imposing the arms embargo in another direction, by refusal to set up a militia or providing arms for the defenders of the partition plan, by deliberately encouraging bloodshed and violence, it was secretly hoped that an impasse would be reached and reconsideration asked. Can we spell out one single affirmative act on the part of the United States or any other member nation, for that matter, that pointed to a determination that partition was conclusive? Did anybody really try? It seemed that the road back was being very carefully paved so that it could be pronounced that partition had failed before anyone except the Jews of Palestine had seriously tried to put it into operation. Now the failure is pinned on partition instead of where it really belongs—on those nations which refused deliberately to give authority to the United Nations decision on Palestine.

Warren Austin is worried about the legal niceties of the protocol. He says that the General Assembly can only recommend. Of course, it can only recommend a decision, but the Security Council of which the United States is a member has a right to invoke sanctions just short of force by economic boycott, by cutting oil communications of offending nations like Syria, Lebanon, and Transjordan, radio, telegraphs, telephones, and the mails. It can oust the intransigent nations from the United Nations. If all this fails, it can invoke force. But Warren Austion was silent on all of these. He followed the protocol. The situation in Palestine is not a threat to peace; it is an actual breach of the peace of the world. It is actually such a breach of the peace that the Security Council was set up to stop, first by sanctions as aforesaid and then by a constabulary.

This is no longer only a Jewish problem. The United Nations prestige is at stake. The prestige of the United States is at stake. All peoples have a stake therein in the outcome. The press of the country is almost unanimous in their criticism of the mawkishness of our attitude. Already, the ambiguous statement of Warren Austin has been quickly followed by developments which have further muddied the waters of Palestine.

Warren Austin is most suddenly worried about strict charter constitutionality. But, mind you, the United States was not worried about any charter constitutionality last fall when Herschel Johnson formally proposed an international constabulary to keep the peace during partition. Austin stated:

> The Security Council is authorized to take forceful measures with respect to Palestine to remove a threat to international peace.

What is happening in Palestine but just such a threat to international peace? He states further:

> The charter of the UN does not empower the Security Council to enforce a political settlement whether it is pursuant to a recommendation of the General Assembly or of the Council itself.

What is any settlement emanating from the UN but a political settlement?

Austin proposes the Big Five Nations on the Council constitute a special committee to consider whether such a threat exists. Another committee. We have had committee piled upon committee until the very issue is being smothered for lack of air. Another proposal is that this thousandth and one committee negotiate with Arabs, Jews, and Britain to gain acquiescence to partition. This delaying maneuver is as obvious as a hanging petticoat. All through the debates prior to the recommendation, negotiations, the very same negotiations, were going on. If the negotiations failed then, how much more certain are their failure now with the pulpy attitude of the United States in full parade. The Arabs recognize that their bluster is on the way to success. It is more than just silly even to talk about their yielding to verbal persuasion.

One of the explanations forwarded by the State Department is the necessity for American security in terms of Middle East stability, as if Middle East stability can be obtained through permitting the Arabs to believe they can blackmail the United States at will. If there had been no prospect of a Jewish state in Palestine, the cauldron there would still seethe. The Middle East is undergoing transformation. The Arab peasant is slowly but surely awakening to the deprivations that have been forced upon him through these many decades by unscrupulous leaders. The ideologies of democracy and industrialization have crept through to the downtrodden Arab. Revolt is stirring. It has been aptly said that if there had not been zionism in Palestine, the Arab chieftans would have had to invent it. The Jewish state is used to divert the Arab peasant from contemplating his own ills. It will not take him too long to understand. The State Department with its cry for stability cannot hold back the tide. The Middle East will not remain stable even if all the wishful thinking of the State Department were woven into iron and placed around the whole Arab world. What the department overlooks is that the one stabilizing and dependable factor that can exist is the Jewish state which with its science and agriculture and industrialization can serve the United States best in that area if the need ever arises.

So it has come to this. The mighty, the moral, the superior United States refuses to stand up and be counted. The steady hand with which it pursued the General Assembly debates is palsied. Its hand has become sticky with the glue it uses to stick to the coattails of John Bull.

Finally, I am more than deeply concerned over the Palestine policy of the State Department. Everything that has been done or left undone has been kept secret. It is time to shed the light on it. It is time to draw the curtain back and expose the political intrigues, the brass hat interference, the ill-considered motives of our State Department in its delineation of the Palestine policy and its perversion of American traditional policy which since 1922 has favored the establishment in Palestine of a Jewish democratic commonwealth. To that end, I shall introduce a House resolution tomorrow calling for the investigation of the State Department in its conduct with

reference to the Middle East. The text of the resolution is as follows:

Whereas the conduct of the State Department with reference to the Middle East has been subjected to continuous criticism; and

Whereas the Office of Near Eastern and African Affairs has been charged with deliberately subverting the decision of the United Nations on Palestine; and

Whereas an arms embargo is imposed against countries of the Middle East without consultation with member nations of the United Nations; and

Whereas such unilateral conduct has been the very antithesis of neutrality although presumably based upon the Neutrality Act of 1939 and the Export-Import Controls Act of 1940; and

Whereas the activities of the Near Eastern Division have brought the State Department into disrepute; and

Whereas the activities of that division clearly indicate bad faith, ineptitude, indecision, and obscure motives; and

Whereas the Near East Division has initiated policies which are contrary to the American policy on Palestine; and

Whereas the said Division has deliberately contravened established policy by untoward instructions to our consular and diplomatic agents in the Middle East; and

Whereas the traditional American policy on Palestine has been reiterated in two congressional concurrent resolutions and by Executive declarations from President Wilson through and including President Truman, which policy has been traduced by officials of the said Division; and

Whereas the activities of this Division with reference to Palestine are contrary to stated public opinion as registered by the petitions of 40 Governors of the States and by 33 State legislatures: Now, then, be it

Resolved, That a special committee, composed of seven Members of the House of Representatives, appointed by the Speaker of the House, is hereby authorized and directed to investigate the conduct of the Near East Division of the Department of State with reference to the establishment of a Jewish state in Palestine.

For the purposes of this resolution the committee is authorized to sit and act during the present Congress at such times and places within the United States, whether or not the House is sitting, has recessed, or has adjourned, to hold such hearings, to require the attendance of such witnesses, and the production of such books, papers, and documents, and to take such testimony as it deems necessary. Subpenas may be issued under the signature of the chairman of the committee or by any member designated by such chairman, and may be served by any person designated by such chairman or member.

More on Yalta

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1948

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Washington Post of Saturday, February 21, 1948:

MORE ON YALTA

Mr. Byrnes in his book, Speaking Frankly, says that if he had been at Yalta on February 11, 1945, "it is probable" he would have learned of the Roosevelt gift of the Kuriles to Soviet Russia. Judging from Secretary Marshall's confession yesterday, we doubt it. Secretary (then General) Marshall was at Yalta, but he knew nothing about the Manchurian deal. Moscow, in return for a promise to go to war with Japan, got a reversion of the Manchurian concessions once enjoyed by the Czarists. Mr. Roosevelt, according to Mr. Byrnes, promised "to have China agree to that part affecting China's territory." And he kept his word. Under the Sino-Russian agreement of August 14, 1945, China ratified the Yalta understanding, and got as a quid pro quo a Russian pledge of friendship and support for Chiang Kai-shek's regime. The Soviet has honored the treaty by trying to turn Manchuria into a Soviet colony without regard to China's rights, especially at Dairen; and its friendship and support of Chiang have been expressed in silence and inactivity during his present travail.

Though these cessions were not known to Mr. Marshall, it must be said that it was because of his estimate of the military situation that they were made. It is said on good authority that he told Mr. Roosevelt Japan could hold out for 18 months after the collapse of Germany. Few errors in the war were more egregious than this. Actually, Japan was on the verge of disintegration while the deal on Manchuria was under discussion, and gave in within 4 months of the Allied victory in Europe. It is, we know, the fashion to give the credit to the atomic bomb, but no competent and honest observer believes it. In Navy circles, moreover, there was the utmost skepticism as to the expediency of courting the war entry of Russia, anyway. Mr. Roosevelt paid a purchase price for it which, in these days of Russian noncooperation with China or with the United States, is heavy on the American conscience, and which is one of the reasons that the conference at Yalta was the monumental blunder that we called it when the real news of what happened began to be public property.

The Fraternal Order of Eagles

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, February 25 (legislative day of Monday, February 2), 1948

Mr. MAGNUSON. Mr. President, this month marks the fiftieth anniversary of the Fraternal Order of Eagles. No doubt many Members of Congress belong to that organization. It was founded in my home town of Seattle, February 6, 1898, and is now one of the oldest fraternal organizations of the United States. Its record of social legislation and humanitarian achievement is without peer among fraternal organizations.

In the monthly magazine called the Eagle for February, the organization commemorates its fiftieth anniversary in a very fine article entitled "Fifty Years of Service," by Richard S. Davis, a well-known writer. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FIFTY YEARS OF SERVICE—EAGLEDOM'S FIRST HALF CENTURY HAS BROUGHT NEW HOPE AND SECURITY TO MANY MILLIONS OF PLAIN AMERICANS—AND A NEW KIND OF FELLOWSHIP

(By Richard S. Davis)

Since February of 1898, America has grown a half century older. The Fraternal Order of Eagles has become a half century old. Through storms and fair weather, in this era of stress, the stalwart father and the loyal son have steadily marched forward, arm in arm.

No man should speak of the Eagles apart from America, because the Eagles could not have been born and could not have become strong anywhere else on this troubled earth. No other soil and no other spirit could have been right for the lusty fellowship which in 50 years has grown from six members to more than a million. The heart, the mind, the soul, and the sinews of America are the Eagles' incomparable heritage. The Eagles are American democracy. They seek no part of anything else.

Six original members—that is the record. They were John Considine of Seattle and five of his cronies. They took a long walk together in the warm sunshine of February 6, 1898, and they sat on a lumber pile in the waterfront shipyards. There, in jovial fellowship, they founded the order which long since has come to mean not only brotherhood but infinitely more.

It is fitting that John Considine was a rugged chunk of a man, a square-jawed, broad-shouldered Irishman with twinkling blue eyes. It is fitting also that he had the dynamic, aggressive character which some years before had led him into the Klondike, where only the strong could survive. And it is further fitting that he and the other boys held their first meeting on a pile of redolent pine, which stood then for the might and beauty of the great Northwest, just as it does today.

Surely it was right for Eagles to spread their wings originally in the Northwest, and it was right for them to sweep across the continent. It was both right and inevitable, for the country had an impelling need for a brotherhood that eagerly welcomed the common man.

Then as now the Eagles welcomed men of the logging camps, the mines, and the mills. They welcomed men from the stores, and men of the professions, and men of the cloth, and men from the theater, and men from the taprooms and men who made their living in sports. In short, they welcomed all Americans who basically were clean.

The starch of social position was no requirement. High education was not asked. Mayflower ancestry meant no more than did an old man who had arrived with his straggling brood only the day before yesterday. Men whose shirts were stained by sweat, men whose hands were never quite free of grime, men who knew the dread of poverty—all these men were asked to be brothers.

No condescension was in it, nothing but deep understanding. It was understanding of the truth that all men, regardless of birth or station, hungered for the fellowship America so easily could give.

No use pretending that those early days of the order were not a lusty period. The steins were on the table—the smaller glasses and the fat bottles, too—and the good songs were ringing clear, often much later than was strictly proper.

The one and only John L. Sullivan once headed New York aerie. Sailor Tom Sharkey was the toast of many a loyal brother. It was a matter of course that James J. Jeffries, one of the truly great champions, should become an Eagle and do fine missionary work in his beloved West. And it was a certainty that the incomparable Jack Dempsey, in the not so long ago, should adopt the pin that in itself is symbolic of the heights. All through the years it has gone without saying that men who could fight were Eagles, and it's been almost equally true that, in every other branch of sport, the men who played the game to the hilt have instinctively turned to this order.

The two Roosevelts—Teddy and F. D. R.—both were proud to be Eagles. So was Warren G. Harding and so is Harry S. Truman. Senators, Representatives, Governors—man, what

a list could be stretched out here if there were point in it! But let's get on with things that have more substance.

Countless times, in the lobby of English's Opera House in Indianapolis, little old ladies on the arms of their watchful sons have paused to read a bronze tablet, which bears this inscription:

"On this site, Sunday, February 7, 1904, the first known plea for a Nation-wide observance of Mothers' Day was made by Frank E. Hering, teacher, orator, humanitarian—in commemoration of Mother's Day and in honor of its beloved founder the Fraternal Order of Eagles erects this tablet May 10, 1931."

The little old ladies unfailingly have smiled in their warmly appreciative way, and the sons have said with pride that well became them: "Know who Mr. Hering was, mother? One of our Eagles. No wonder the boys are proud of him."

Somehow it's true that in all the order's long list of accomplishments, there is nothing that stirs more satisfaction among the men of the rank and file than Frank Hering's great address in Indianapolis 44 years ago. All America knows what finally came of his appeal.

Few words should be written about Frank E. Hering without linking his name to another of equal luster—the name of Conrad H. Mann, "the mighty oak of eagledom." They were leaders, those two, and though both of them now are gone their influence is still a living force.

The scholarly Hering, writer and speaker extraordinary, will always be remembered as the silver-haired advocate of lofty causes. The robust Mann—"a man's Mann" is the phrase that fits him best—will live through the years as the exemplar of the order's simpler virtues. A giant in physique, he owned a giant's heart, a heart with the warmth and capacity for unlimited friendship. The two men strode through much of their lives together.

Unwittingly, long before he died, Frank Hering wrote the perfect epitaph for both himself and Conrad Mann. His words were these: "So live that when you die the poor, the sick, the outcast will mourn the passing of a friend."

A round and kindly man whose eyes had extra light because they had seen so many shadows—Judge Edward Everett Porterfield, his name was—is also revered over the Nation, chiefly because of the bill he fathered in Missouri. It was this way with the judge:

Tearful kids and harassed mothers were coming to him in Jackson County's juvenile court, and many times he had to separate them, because the widowed mothers simply could not carry on. Black tragedy, it seemed to him, and he determined to do something about it. He put the case before brother Eagles, and they promised all their help.

The result was America's first mother's pension law, which became part of the Missouri statutes in 1911. Since then all but a few States have adopted counterparts.

And old-age pension laws, what is the record there? This is the record: In 1921 the order thundered out a demand that men and women be treated justly when the crushing years finally forced them out of employment. The aged who were in need, the Eagles said, must no longer be treated as paupers.

In two short years, Representative Lester H. Lobie, of Montana, had drafted a bill of rights for the weary and had seen it through to passage by the State legislature. It was signed March 5, 1923, by Gov. Joseph M. Dixon, a life member of the order, who prophesied:

"You Eagles have planted this seed, and you can no more stop the progress of old-age pensions than you can stem the tide of the Pacific Ocean."

In Wisconsin, an Eagle drafted—it was Daniel Webster Hoan, for many years the mayor of Milwaukee—and Eagles supported the first workmen's compensation act passed in any State.

Nearly 20 years ago, Eagles endorsed the principle of the guaranteed annual wage and are effectively campaigning for its broader acceptance. Eagles were vigorous in the fight for the GI bill of rights. Eagles are lending their mighty support to efforts to provide medical and hospital benefits for millions who have never known the meaning of good medical care.

Eagles spent 14 years of the 50 which now are history in tenaciously working for the legislation known as the Social Security Act. If nothing else had been accomplished in this half century, the Social Security Act would fully justify the founding of the great order of the common man. America's men and women, to the number of more millions than anyone can now foresee, will bless the Eagles endlessly.

The battle for a better life, moreover, still goes on. It is the order's hope that provisions of the Social Security Act will be extended to protect many more millions now living and that eventually every American will know its benefits. Eagles have not forgotten these words of Franklin D. Roosevelt, when he signed the act on August 14, 1935, and gave the pen to the order:

"The pen I am presenting to the order is a symbol of my approval of the fraternity's vision and courage. May its possession inspire your members to rededicate their own efforts and those of the fraternity to the insuring of such economic and political conditions as will bring a greater degree of happiness to our people. Our countrymen owe the Eagles good will for their unselfish services."

Nearly 7 years have sped over the hill since another glowing entry in the record of the Eagles was written. On a clear, bright day in April 1941, the $160,000 Eagle dormitory at Boys' Town, Nebr., was presented to Father Flanagan. Frank Hering, who gave the presentatior talk, spoke from the hearts of all Eagles when he said:

"The F. O. E. and Boys' Town were destined to meet. The order that dedicates itself to keeping the family together as the unit of the social, political, and spiritual life of the Nation, and Boys' Town, which is dedicated to care for the children from families that do not stay together—these two are like streams that rise in widely separated parts of the country and flow at an angle until their confluence, their union, forms a single, powerful river that moves majestically toward the sea of usefulness and happiness."

And why was the Boys' Town dormitory so significant? Because it was a forerunner of the order's youth-guidance program and because it gave tangible expression to the Eagle credo: "A chance at a real childhood for every American child."

Another dream of the Eagles is coming into full fruition. The great Memorial Foundation, treasured project of Managing Organizer Matthew L. Brown, is already a reality and is clearly destined to become a tremendous power for greater good as its resources increase.

Simply stated, the Foundation is a huge trust fund that will be held intact through the years as a living memorial to all the Eagle servicemen who have given their lives for their country. It is a memorial prepared to offer a lift to those who need help, particularly to the children of Eagles who died in the service. Youngsters will have the chance that would have been theirs if Dad had not been called away.

A record to be proud of? Brother, you can tell the world it is, but when all is said and done it may well be true that in these 50 years the greatest accomplishment of the Eagles is after all the simplest. It may be that what has counted most with hundreds of thousands of men is nothing more pretentious than this:

A card game with the boys over a battered table. A little Kelly pool. A thunderous bowling match. A picnic and sunburn out in the country. A dance to which a man could take his best girl and have the time of his life. A sociable drink with good scouts named Tom, and Bill, and Joe, and Olaf, Emil, and Giuseppe.

What all this means, as wise men know, is merely the chance to belong, to be recognized as somebody, to be, when the day's work is done, a kindly fellow hobnobbing with broad-shouldered equals.

And who among us can even attempt to measure the priceless value of just that?

Statement of Hon. Martin L. Sweeney

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include a statement of Hon. Martin L. Sweeney, a former Representative in Congress from the State of Ohio:

Mr. Chairman and members of the committee, for the record, my name is Martin L. Sweeney. I am a former Congressman from Ohio.

With several other individuals, we appear before your committee as a result of a mandate from an Irish race convention held in New York City November 22 and 23, 1947 This convention of over 2,000 delegates from 38 States of the Union met to protest the continuation of a partitioned Ireland. The call for this convention was issued by the Honorable Michael Donohoe of Philadelphia, a former Member of Congress from Pennsylvania. Practically every Irish-American organization in the United States responded to that call and sent delegates to the assembly as a result of the deliberation of the convention.

The American League for an Undivided Ireland, Inc., was organized. The president of this league is the Honorable Joseph Scott, the distinguished attorney from the State of California, and the gentleman who has just so eloquently addressed your committee.

The brochure you have before you briefly explains how the partition of Ireland was accomplished in 1920 by a "shot-gun treaty" which brought into existence two distinct forms of a national government in a country geographically the size of the State of Ohio. The Free State Government of 26 counties in Ireland functions with its parliament in Dublin. The British-controlled Government of six counties located in northeastern Ireland functions with its parliament in Belfast. This Belfast Government has been, since 1920, a source of irritation to the civilized world. By a clever system of gerrymander, the Catholic minority in the six-county area is denied equal representation in the national and local administration of their government. Religious bigotry is rampant in this section of Ireland. Discrimination and the denial of civil liberties to large segments of the population is notorious for its boldness.

Four hundred and twenty-five thousand Catholics in the six-county area pay 33⅓ percent of the costs of government in that area without fair representation and only 4 percent are allowed to participate in the administration of government affairs. In peacetime, during the past 27 years, as many as 60,000 British soldiers have been quartered in the Belfast sector. During a period of unusual prosperity, this six-county government has sent across the Irish Sea as much as 100,000 pounds to the British Crown. Today the Belfast Parliament depends upon

subsidies from the British Empire to maintain its bridgehead in Ireland.

We present these facts to you members of the Foreign Affairs Committee of the House of Representatives as you study the so-called Marshall plan now under consideration by your committee. To say that the British Empire is defunct would be an understatement. Our recent loan of three billion five hundred million of American dollars to Great Britain confirms the fact.

The present Premier of the Ulster Parliament, Sir Basil Brook, in a budgetary request to the British Crown, states the need of $40,000,000—some reports say as high an amount as $200,000,000—to maintain a bridgehead for the British Government in Ireland. Let's be frank about the situation. It is expected that in the allocation of grants or loans under the Marshall plan, approximately 60 percent will go to the British Empire. The Empire, in turn, will siphon from the funds furnished by the American taxpayers sufficient moneys to meet the budgetary request of Premier Basil Brook. Because we believe this will happen we are here, Mr. Chairman and members of the committee, as American taxpayers to strenuously protest against a grant or loan to Great Britain. Not one red cent should go to Great Britain as long as she continues to play the role of usurper and denies to the people of Ireland the God-given right to the unity the great majority of that ancient land desire.

The British Empire has released its strangle hold on India. It is currently getting out of Palestine. It should be told by Uncle Sam to get out of Ireland before we even consider her an applicant for more American dollars.

Thirty million Irish-Americans are watching the action of your committee and the Congress. We understand these are troublesome days for not only our beloved Republic but the entire world. As Christians who believe in the corporal works of mercy, we are in accord with a policy consistent with our own safety and our own needs in feeding the hungry, in clothing the naked, and in giving shelter to the homeless.

After two World Wars in which we lavishly gave of our young blood and our treasure in an effort to make the world safe for democracy, it would be repugnant, to say the least, if we at this late date directly or indirectly lend our financial support to frustrate the legitimate aspirations of the Irish people to be free of alien domination in one section of their country.

You heard our distinguished president, Mr. Joseph Scott, quote Will Rogers' famous statement, "We never lost a war, but we never won a conference." Along with scores of Members of Congress during my public career, I frequently quoted our late beloved American humorist.

We have been a cat's paw for the British Empire long enough. Twice in a quarter of a century we have pulled her chestnut from the fire and saved her as a world power. The previous speaker, I am sure, expressed the feelings of most Americans when he said with reference to the "gimmie" attitude of our British diplomats after hostilities are over, "The buzzards always take us to the cleaners."

Mr. Chairman, if we seem somewhat emotional in our appeal, I am sure you and your committee will sympathize with us. The long struggle of Ireland through several centuries to be free from British rule is known to every schoolboy.

On last Monday, February 2, I appeared before the Foreign Relations Committee of the Senate. I recalled to the committee that 84 years ago my father, a young Irish lad, landed in New York, driven from his native land because of the unjust, cruel, and vicious social, political, and economic hardships imposed upon him and his kind by an alien government. Millions of other men, women, and children left Ireland for the same reasons. They found asylum in this great new land. They became the hewers of wood and the drawers of water. They thanked God for the blessings of America. They became loyal subjects. In every military crisis in its history, no race has ever surpassed or equaled the contribution of the Irish to the preservation of the United States of America.

I observe, with pride, the presence before your committee today of the Honorable MICHAEL A. FEIGHAN, my successor in Congress from the Twentieth Ohio District. His paternal and maternal grandparents, like my father, were born in Ireland. They came to the United States for the same reasons. Their love of Ireland is second only to their love and devotion to the United States.

Our organization extends thanks to Congressman FEIGHAN for his presence and his contribution to this committee.

In conclusion, Mr. Chairman, may I state that negotiations under way in Ireland to abolish partition are sponsored by Catholic and Protestant alike. The struggle for a unified national independence is not a religious one. It is a political struggle, led as it has been in the past in most cases by men of the Protestant faith. When and how partition in Ireland is abolished is a problem solely for the Irish people themselves. If this Congress gives any American dollars or grants a loan to Great Britain to delay the struggle, it will, in my opinion, be an indignity to the Irish-Americans of the United States and an affront to the American taxpayers.

Mr. Chairman, the national president of the Ancient Order of Hibernians, founded in 1836, Mr. Michael A. McGrath, of Cleveland, Ohio, is unavoidably detained from appearing today before your committee. I respectfully ask that he be permitted to make a statement for the record.

My personal thanks to you, Mr. Chairman, and your committee for the reception and attention you accorded our organization here today.

The Postman Deserves a Raise

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1948

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Sun-Telegraph of February 19, 1948:

THE POSTMAN DESERVES A RAISE

During the present sequence of rising prices and salary adjustments the plight of the Nation's post-office employees continues to be largely unknown to the public and consistently ignored by Congress.

The National Federation of Post Office Clerks is a union affiliated with the American Federation of Labor.

Apart from this identity, however, the post office employees' union operates under limitations which prevent it from forms of bargaining and pressure invoked by other organized workers to better themselves economically.

Thus they are prohibited from appealing to the Labor Relations Board and other facilities to compose salary grievances.

They must wait for Congress to consider their needs and be bound by the decisions of Congress.

In spite of these handicaps, the post-office employees loyally and patiently go about their vitally essential work.

Their only recourse is to enlist public opinion and hope that it will impress upon the Congress the now drastic need of better salaries.

In turn, Congress, not confronted with vigorous demands by highly organized and active pressure groups, finds it all too easy to ignore or delay the need and justice of the clerk's petitions.

This is not only unfair, but unintelligent.

Efficient and swift service of the mail is an unrelaxing and constant national necessity.

The postman is a valuable and valued servant of the public.

He too has bills to meet, a home to support, children to educate, and the maintenance of adequate savings.

While other workers have kept their accounts even with rising prices, the postman has had to tighten his belt. While other workers went on strike, the postman went his rounds with unexampled dependability.

Obviously, Congress must get busy and correct this injustice.

And quite as obviously, the public must also get busy and remind Congress that proper and prompt action on this matter is a matter that can no longer wait.

The Geneva Agreement

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1948

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the American Milk Review of January 1948:

THE GENEVA AGREEMENT

If all of the oratory and all of the writing that has been expended on tariff questions in the United States could be gathered together it is doubtful that there is a library in the country big enough to hold the material. Almost without exception, every great epoch in our history from the Colonial Wars to the Marshall plan has been directly or indirectly related to tariff considerations.

The significance of these facts is not in the rightness or wrongness of our tariff laws, but in the high and controversial position that foreign trade—the economic relationship of nation with nation—occupies in the minds of men. Although we have been slow to admit it, the tariff controversies are irrefutable evidence that what goes on in one country is important to the people of another, and—on a far more localized scale—that the welfare of a textile worker in Lyon is, for better or worse, bound up with the price of butter in Fall River.

When 23 nations can sit down at the council table and hammer out a trade agreement covering 45,000 items and over 50 percent of all international trade, it is an achievement worthy of note. When the agreements are concluded in an atmosphere of mutual satisfaction it is a triumph. Such was the result of the long discussion that terminated in the Geneva agreements on tariff and trade.

We cannot agree with those in the dairy industry who view the cuts in our duties on dairy products with alarm. We do not believe that the reductions, even in butter, will affect the domestic market in this country any more than a BB gun would affect a General Sherman. Our dairy business is a big industry. It is one of the largest, if not the largest, industry in the world. And do not get the impression that the arrived-at

pacts were all given on the part of this country and its dairy field. It reflected horse trading all down the line, and if this Nation made concessions it received offsetting concessions in return.

A great deal has been said from time to time about industrial leadership. Perhaps even more has been said about getting Government out of business and the bureaucrat out of the market place. A lowering of tariffs and the reduction of governmental fetters on international economic intercourse are steps in that direction. If the dairy industry is to take its rightful responsibility of leadership, then it must lead as a part of the whole and not as a self-centered battalion that marches alone.

Along with millions of other men, your editor has seen 2 wars in 30 years. Your editor has also seen with his own eyes the awful explosion of two atomic bombs. Your editor has, therefore, little patience with those who would cry before they are hurt—who would sacrifice one of the first concrete measures for international accord on the altar of a fancied ill.

The Massachusetts Housing Picture

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1948

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

THE MASSACHUSETTS HOUSING PICTURE—1911–47[1]

(By Harold Robinson and John I. Robinson)

Notwithstanding the general impression gained from the emphasis on veterans' housing, the housing shortage and the Federal and State attempts to remedy the situation are no recent phenomena. The World War II veteran, hardest hit of all in the rapidly growing housing crisis, thinks he discovered the problem. The debates in the legislature and newspaper stories have led the public and legislators alike to believe that the shortage is a war-born baby which will solve itself with the help of a few emergency expedients. The truth is that the housing shortage has been building up for a long time.

In 1939, even before wartime restrictions on building were invoked, New England found itself confronted with a serious housing problem. Housing construction was not only not keeping pace with increased population, but the net amount of housing (i. e., the total of all housing plus new construction, less demolished housing) was actually decreasing. Surveys show that from 1921–39, the supply of housing in New England was not sufficient for the natural increases in population and the replacement of old buildings. For 1930–37, the following figures are startling: The net change in Boston was a minus 517; in Cambridge the net change was a minus 29; Fall River, a minus 1,414; Holyoke, a minus 40, and New Bedford a minus 897. The need for replacements in the low-income brackets are even more startling. A survey of eight Massachusetts cities (Boston, Cambridge, Chelsea, Everett, Haverhill, Newton, Springfield, and Worcester) for the period 1931–38 shows that of 406,396 dwelling units surveyed, 40,000 were unfit for use or in need of major repairs. To date, the city councils and town meetings of 28 cities and towns of Massachusetts have found that there is a shortage of decent safe and sanitary dwellings for their citizens and have established local public-housing authorities empowered to undertake low-rent housing and slum-clearance projects. The Federal Public Housing Administration has on hand applications from Massachusetts localities for financial assistance for approximately 16,000 low-rent dwelling units in the amount of over $100,000,000. Other communities are expected to apply when Federal funds are available.

More recently, in December of 1947, a special recess commission of the general court estimated that conservatively more than 50,000 veterans in Massachusetts are in desperate need of housing. The commission estimated that approximately 350,000 new residential units would be needed in the Commonwealth in the next 10 years alone.

THE LEGISLATIVE HISTORY

In Massachusetts public housing has a legislative history of over 36 years.[2]

THE ADVISORY OPINION OF 1912

As far back as 1911 the Massachusetts Legislature debated the expenditure of public funds for housing for mechanics, laborers, and other wage earners. Only an adverse opinion of the supreme court in 1912 interfered with the construction of homes by the State for sale to citizens of the Commonwealth.[3] That court, maintaining a narrow view of what is conducive to the public welfare, decided that the provision of housing was not a public use for which public funds could be used.

Fortunately, the people of Massachusetts and their representatives to the constitutional convention of 1915–17 thought otherwise and adopted two amendments to the constitution.[4] One authorized the Commonwealth itself to build homes for sale in order to relieve the congestion of population and provide homes for citizens. The other empowered both the Commonwealth and the cities and towns to provide shelter during time of war, public exigency, emergency, or distress. Once the constitutional authority had been granted, the general court created a homestead commission, which built some 20 houses in the city of Lowell. That, however, constituted the extent of the Commonwealth's action until the passage of almost two decades.

ACTION IN 1933 AND 1935

Some 15 years later, in 1933, spurred on by the depression and unemployment in the building trades, as well as by the prospects of Federal aid, the general court created the State board of housing, empowered to regulate limited-dividend housing corporations and to construct housing itself. This time no funds at all were appropriated for construction. Nor, with the exception of one rehabilitation housing project in Chicopee Falls, was there any limited-dividend housing, although the Federal Government did make loans for seven limited-dividend housing projects in other parts of the country.

Shortly thereafter, in 1935, stimulated by the Housing Division of the Federal Emergency Administration of Public Works in Washington (of which one of the authors was Chief of the Opinions and Litigation Section), the General Court again adopted housing legislation. This time, the legislation provided for the establishment by the cities and towns of local public housing authorities (then a new financial and legal device)[5] empowered to borrow money and undertake the construction and operation of low cost housing projects. This time, too, it was contemplated that there would be no cost to the cities and towns since the debts of the housing authority would not be obligations of the city or towns for which it was established.

Once again, nothing came of the legislation. The Federal Government had embarked on a program of direct construction—Old Harbor Village in South Boston and New Towne Court in Cambridge were built and are still owned by the Federal Government, although leased to the Boston and Cambridge Housing Authorities for operation—and was not yet prepared to make loans and grants to local housing authorities. Until 1938, therefore, despite the increasing need for decent housing and employment in the building trades, the legislation enacted by the General Court was paper legislation only.

INTERVENING FEDERAL ACTION

In the interim, the Federal Government with its greater tax spread and program of social progress under President Roosevelt had been active.[6] In the early days of the depression, Congress established the Home Owners Loan Corporation to help distressed home owners and bail out the banks and mortgagees from bad or frozen investments. Congress too, set up the Federal Housing Administration to insure mortgages on new construction and thereby stimulate construction by that hidden subsidy to builder and bank alike. In addition, provision was made for other forms of financial assistance. Congress in 1932 had authorized loans by the Reconstruction Finance Corporation to limited dividend housing corporations. In 1933 with the creation of the Federal Emergency Administration of Public Works under Secretary of the Interior Ickes (PWA and not to be confused with Harry Hopkins' WPA) this power was transferred to the PWA. When this program bogged down with the unsatisfactory result noted above, the PWA embarked on a short-lived program of direct Federal construction and ownership of large scale housing projects, building some 51 projects, including the two in Massachusetts. Here again, court action retarded the program and forced a change in policy. For in 1935, the Court of Appeals for the Sixth Circuit, in a two to one decision, ruled that the Federal Government could not take land for housing by eminent domain.[7]

Unwilling to jeopardize the whole spending program of the Federal Government—as a matter of fact, the Government appealed to the United States Supreme Court but asked permission to withdraw its appeal on the very day set for argument—and unable to proceed adequately without the power of condemnation, the program of Federal construction slowed down. Actually, the decision served to give impetus to the growing demand for a decentralized program of local construction

and operation with financial assistance, only, by the Government, and led to the United State Housing Act of 1937.[8]

BEGINNING OF THE LOW-RENT HOUSING PROGRAM

Twenty-six years after Massachusetts first gave consideration to the housing shortage, Congress took action which restimulated housing in Massachusetts. In the United States Housing Act of 1937, Congress, linking unemployment relief with an attack upon the social evils of bad housing, provided for loans to local housing authorities, authorized by State law to undertake low-rent housing and slum-clearance projects, and annual subsidies (contributions) to make up the difference between the so-called economic rent and the rent such low-income groups can afford to pay. This led to a complete revision of the Massachusetts Housing Authority law in 1938, a revision which is the basis of the 28 local housing authorities now existing in Massachusetts and has enabled the communities of the Commonwealth to participate in a decentralized program of local construction, ownership, and operation of low-rent housing and slum-clearance projects without any cost to the Commonwealth or its communities.

Before the war, and Congress' later failure to extend the low-rent program suspended further construction, low rent housing and slum clearance projects were built in Boston, Cambridge, Fall River, Holyoke, Lawrence, Lowell, and New Bedford. As indicated above, the Federal Government has on hand applications for over $100,000,000 of projects from Massachusetts alone, with additional cities and towns eager to participate when the program is revived. In the meantime, the construction of low-rent housing projects in these cities has added 8,900 dwelling units to the supply of housing in Massachusetts. Had the shortsighted opposition been successful the housing shortage would have been aggravated by that number.[9]

This time the supreme judicial court, on a taxpayers' petition, and later on a condemnation proceeding, found that the clearance of slums and the accompanying provision of housing is a public purpose for which public funds may be used, tax exemption granted, and condemnation permitted. In the 26 years since the opinion of 1912, the Court's attitude had changed to coincide with that of almost 40 other State courts. For it relied on the general welfare rather than the express constitutional amendments.[10]

THE WAR YEARS 1942–46

During the war years, the Federal Government was alone in the housing picture. Since private capital would not, and could not be expected to risk its funds in meeting the temporary demand for housing around the booming centers of munition and shipping production, the Government itself built housing just as it had had to do in 1918.[11] In Massachusetts, war housing projects were built by the Federal Government in Ayer, Boston, Chicopee, Falmouth, Hingham, New Bedford, North Weymouth, Pittsfield, Southbridge, and Springfield. In some instances, they were temporary dwellings; in others, permanent. In a few cases, they were managed by the Federal Government, itself; in others, by local housing authorities to whom they were turned over for operation. Pittsfield, Southbridge, and Springfield established housing authorities partly for this purpose.

With the close of the war, the recurrent housing shortage showed its head again, this time aggravated by the lack of building during the war and the rapid demobilization of the armed services. The threat of veterans' pressure had its usual effect, and Congress appropriated some $453,000,000 with which to demount, transport, reerect, and convert Army and Navy barracks and quonset huts into temporary dwelling units for veterans and their families. Again the Government paid the entire cost of this program, except that this time the cities had to furnish sites and prepare them for the buildings. In this case, ownership passed to the localities.

Temporary veterans housing projects of this nature were erected in 36 communities: Athol, Barnstable, Beverly, Boston, Braintree, Cambridge, Chatham, Chelsea, Chicopee, Fall River, Fitchburg, Framingham, Garner, Gloucester, Greenfield, Hingham, Ipswich, Lowell, Lynn, Malden, Marlboro, Medford, Needham, New Bedford, Northampton, Norwood, Quincy, Revere, Southbridge, Springfield, Taunton, Waltham, Wellesley, West Springfield, Winthrop, and Worcester. In addition, both family and dormitory units were built by the Government for college veterans attending Amherst, Boston College, Harvard, Atlantic Union, Fort Devens, Massachusetts State, MIT, Springfield College, State Teachers, and Tufts. To manage these projects, additional housing authorities were established in Brockton, Chelsea, Framingham, Gardner, Greenfield, Malden, Northampton (North Adams also has an authority), Quincy, Revere, Somerville, Wellesley, Woburn, and Worcester.

VETERANS HOUSING LAW OF 1946

When it became evident that an enlarged Federal program of permanent construction was not going to materialize and that the housing shortage was rapidly approaching the disaster stage, the general court once again took action.[12] Early in 1946, it had been the first legislature to authorize its communities to cooperate with the Federal Government in its program of temporary, reuse housing. (This type of legislation, too, was tested in an opinion of the justices, using as the basis for requesting an opinion, a specially drawn bill).[13] In May of 1946, largely through the efforts of Philip Nichols, then chairman of the State board of housing, the general court enlarged the scope of the earlier 1946 legislation by the enactment of the popularly termed chapter 372 to permit cities and towns to borrow money and build permanent housing for rent and subsequent sale to veterans. Originally, as a result of the pressure of certain real-estate groups, construction was limited to single and two-family houses and a prohibition of 5 years imposed upon sale. This ban on sale, however, proved to be no deterrent, since, as it was later realized, the greatest need is for rental housing. In fact, the danger is that there will be pressure from the economy-minded taxpayer to dispose of the dwellings before the 5-year period, a possibility which is all the greater now that the act has been amended to permit such prior sale.

Despite this grant of power, few communities took action.[14] The act contemplated some annual operating loss since rents could, and were intended to be, set below the amount necessary to pay operating expenses and debt service. It also envisaged some loss on sale. Realizing this, only a scattering of localities availed themselves of the act. To induce action, therefore, the general court, in June of 1947 with considerable proddings from the veterans, and the Massachusetts Allied Veterans Housing Council in particular, and the able presentation of the new chairman of the State board of housing, Lewis H. Weinstein, further amended chapter 372 [15] to provide that the Commonwealth would reimburse any city or town, on the determination of final loss, for one-half of the loss suffered but no more than one-tenth of the outlay by the locality. This acted as a slight incentive to local action but the response has continued to be disheartening. Concord built some 20 houses, Boston has a large program, West Springfield is completing 43 single houses, Amherst has a program, Springfield and Worcester have projects in the planning stage, and several other smaller communities are contemplating action. Nevertheless, the amount built or contemplated is insignificant in view of the need.

THE 1948 BILLS

Several new bills have been introduced and are being considered by the 1948 session of the general court, as a direct result of the lack of community action and the realization that a housing crisis is here. One, in a form already ruled constitutional by the supreme judicial court,[16] would provide for construction by the State of some $250,000,000 of housing. Two others, more probable of enactment, were sponsored by the special recess commission appointed by the last session to study the problem of veterans' housing.[17] One of these would amend chapter 372, as amended, to provide for the Commonwealth bearing its portion of the cost of construction during the rental period rather than awaiting the end of the 5-year period. This would reduce the increase in local tax rates. The other, emulating the legislation in New York and New Hampshire, and, in part, Connecticut, is patterned after the United States Housing Act of 1937 and the public housing provisions of the Taft-Ellender-Wagner bill. Essentially, it provides for the Commonwealth guaranteeing the bonds of local housing authorities and making annual subsidies over a 45-year period to local housing authorities of 1½ percent of the cost of each project. These projects would be low-rent housing projects, housing veterans only, until March 31, 1953, with a preference to low-income veterans; after that date, they would house low-income families only, with a preference to low-income veterans. The $3,000,000 aggregate annual subsidy would permit some $200,000,000 of construction, or a possible 20,000 dwelling units, at no cost to the community.

Space does not permit a discussion of the advantages and mechanics of the proposed legislation. This last bill, however, will meet the greatest need, that of rental housing at sufficiently low rentals. It is, too, a proven form of financing which has been developed during the last 10 years to the satisfaction of houser, bond counsel, and bond market. It has the added advantage of permitting a transfer of the subsidy burden to the Federal Government when the public housing provisions of the Taft-Ellender-Wagner bill are passed by the Congress.

CONCLUSION

During the last few years, the general court passed a goodly number of acts pertaining to private and public housing, all aimed at increasing the housing supply of

decent, safe, and sanitary housing.[18] In some instances, the legislation entails the spending of public funds, Federal, State or local; in others, subsidies to private capital in the form of tax exemption, donation of publicly owned land, services or utilities, or the grant of the power of eminent domain. All these acts have failed of their purpose because of the reluctance of both local governments and private capital to move. Nevertheless, the passage of this legislation has evidenced the realization by the general court that the average person today cannot pay the prices or rents necessary to induce private capital to build sufficient new housing. It shows, too, that our representatives have finally come to the inevitable conclusion that a certain income group will never be able to afford decent, safe, and sanitary housing without public subsidy.

Until Congress awakens to the dangers inherent in the lack of such decent, safe, and sanitary housing, the Commonwealth must act to protect the health, welfare and moral well-being of its own citizens. The form this action should take is not emergency, but permanent legislation. The general court took cognizance of housing emergencies in 1911, 1912, 1915, 1917, 1933, 1935, 1938 and just about every year since then. We are presently in the midst of another of many housing emergencies. It is time that we cease thinking in terms of uneconomical and wasteful temporary measures and enact legislation which will relieve not only the present shortage but put an end, once and for all, to these recurrent crises.

[18] The acts passed by the general court may be classified as follows:

(1) Housing authority law providing for the creation of local housing authorities empowered.

(2) Public urban redevelopment.

(3) Private urban redevelopment corporations.

(4) Nonprofit veterans' housing corporations.

(5) Temporary and permanent housing for veterans.

(6) Domestic life insurance companies authorized to undertake housing projects.

(7) Savings banks authorized to undertake housing projects.

(8) Defense housing law.

(9) War housing law.

(10) Special emergency housing commission to waive building and zoning codes and grant variances.

Living With Lincoln—A New Impression

EXTENSION OF REMARKS

OF

HON. HOMER FERGUSON

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, February 25 (legislative day of Monday, February 2), 1948

Mr. FERGUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "'Living With Lincoln'—A New Impression," by J. G. Randall, from the New York Times magazine of December 14, 1947. The article deals with the handling of the long-sealed papers of President Lincoln.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIVING WITH LINCOLN—A NEW IMPRESSION—HANDLING THE LONG-SEALED PAPERS, A HISTORIAN SAYS, IS LIKE GOING BACK AND BEING WITH THE MAN HIMSELF

(By J. G. Randall)

In the past few weeks students have been at work among the newly opened papers of Abraham Lincoln in the Library of Congress. What they have found is a rich collection, with fresh material that is highly valuable from the historian's point of view. For these voluminous documents throw new light upon Lincoln and his associates and add greater depth to the picture of the man and the problems that beset him. It is apparent that a new phase of Lincoln studies has begun.

Appraisal of the papers, however, has required prolonged examination: meantime, certain ready-made questions have tended to create false impressions. For example, one is asked whether there is "anything sensational" in the papers. After 3 months' complete absorption in them the writer finds the query a bit off key, as if a statesman's record or the elaborate inner history of our Nation in an era of supreme crisis could be reduced to a short order of murder for breakfast or scandal for lunch.

Another question has become very familiar: "Do you find anything new in the letters?" The answer to this, contrary to a prevalent misconception, is an emphatic affirmative. What we have in the Lincoln papers is the essence of historical data. It is source material—the stuff out of which history is built. It is original, not second-hand or retrospective. It knows not of the assassination or what followed. It knows only the living Lincoln.

Before the recent opening the only writers who had access to the collection were Nicolay and Hay, but access is one thing and an adequate use is another. The newness of the collection is unimpaired in that much of it has been passed over. The papers have informal and warmly human aspects. They are especially valuable for the kind of book, or books, that Nicolay and Hay did not write.

Working with the papers week after week is like going back and living with Abraham Lincoln. Handling the letters and envelopes that he handled, one has the feeling of sitting with the man himself, sharing his irritation at a petulant missive, noting how complaint is patiently borne, hearing now and then a Presidential chuckle or hearty laugh, sensing more often the weariness of long-deferred hope, and feeling a welcome uplift, if only for a moment, when the incoming mail is friendly or favorable.

The collection comprises 194 volumes, with 41,751 "mounting numbers," each number representing a sheet of paper, one sheet consisting in many cases of two pages. Though the letters are mostly incoming, Lincoln's own autographs are very numerous—surveys, tables of election figures, tallies of appointments, fragments on various topics, memoranda, many working drafts or copies of outgoing letters, endorsements, and occasionally a copy by the President of what was received by him, as when Reverdy Johnson sent such an illegible letter that the President laboriously wrote it out so far as he could decipher it, leaving blanks for the words he missed.

Some of these writings by Lincoln himself—quite a few, indeed—are new. Nor are these new ones dull. They show the President in significant situations: giving a pardon with a statement of its conditions, declining to sponsor an inventor's interests, sending directions to the Secretary of War, and in one case copying in his own hand what Sherman wrote him from Atlanta concerning the Army view that there must be no wavering in the drafting of additional men. In one of the new items the President, when official duty required him to reprimand a captain, turned the reprimand into a handsome uplift for the young man's morale.

At times the President would request John Hay to write saying "The President desires * * * " etc., but such a letter would be signed by Hay. The papers show the falsity of the assertion sometimes made that nearly all of the letters signed by Lincoln were composed by Nicolay or Hay. Even when a letter was signed by Hay we cannot always be sure that Hay composed it; there were at least a few times when Lincoln, in his own hand, drafted a letter for the Secretary to "write" and sign.

As for the letters Lincoln signed, they were usually not only handwritten by him but worked up through his own preliminary drafts.

There is, running through the papers, a sense of urgency in the constant pressure of decision. Lincoln had to be both firm and conciliatory, staunch in upholding the Union, but friendly toward well-disposed Southerners. He had to decide what to do with Fremont (not to mention Mrs. Fremont), whether to retaliate when reports came as to the slaughter of colored Union soldiers—after surrender, it was asserted—at Fort Pillow (he did not retaliate); whether Burnside should advance in January 1863, or Meade in September of that year.

He had to decide whom to appoint, whom to remove, whether and when to make Cabinet changes, how to deal with civil versus military imbroglios such as that between General Butler at Norfolk and Governor Pierpoint, who functioned uncertainly as Union Governor of "restored Virginia." There were many such imbroglios.

To some men power is sweet. To Lincoln it was probably painful. He had the power of life and death as to men under military sentence; in political arrests he had to steer between laxity toward disloyal practices and infringement of civil liberty. To follow Lincoln's daily rounds through his problems is to understand what is meant by the executive function. It is to realize that government is largely a human art.

The collection is a mine or quarry from which, with careful study, many a chapter, book, or article could be hewn. Realities of the time were ugly and unromantic. There is enough for a volume on the Missouri muddle alone, with its feuds, civil commotion, guerrilla warfare, and pervasive terrorism. Much the same could be said for Kansas.

What we had in Lincoln's day was not only a war in the regular military sense. The irregular, criminal, chaotic, and violative aspects of the period—which Lincoln sought to cure or check—hardly appear in formal accounts of battles and campaigns. Such disturbances were always aggravated by "politics." Another book could be written on Union Sympathies in the South, of which there is abundant evidence.

Portraits of certain members of the Cabinet acquire new tints and shadings. Cameron's visage improves not at all. Chase's picture takes on unbecoming lines. Stanton's record, already darkened with arbitrariness and arrogance, receives a new tarnish.

In the letters that rolled in while Lincoln was President-elect one is impressed with what might be called the Cameron headache. So strong was the torrent of outraged indignation at the idea of the Pennsylvania politician's appointment that Lincoln, having offered him a Cabinet place, asked him to decline it; but such was Cameron's incredible persistence that Lincoln reluctantly made

him Secretary of War, which led to further headaches.

It was an inharmonious Cabinet, Blair and Seward being close to Lincoln in nonvindictive views, while Chase and Stanton, centers of radical pressure, were a continual source of dissension.

As to Chase, it was not merely his impatience at the President that caused the trouble, nor his normal pose of being "pained and surprised" at what the President was doing. The main difficulty arose from the schemes of the Chase political machine. Samuel Galloway (from Columbus, Ohio, February 25, 1864) wrote that officials of the Treasury Department were "using every false and foul effort to suppress the voice * * * of the people."

The previous August the statement had come from Louisiana, where Treasury patronage was heavy, that "every piece of official machinery (was) in motion for one object exclusively, namely the advancement President-wise of Mr. Chase." The Chase boom collapsed by early March, 1864, but at all times a Chase crisis was just around the corner, until finally the President accepted the Secretary's resignation in June 1864.

The embarrassment of Chase's rivalry, however, was slight when compared to the difficulty of dealing with Stanton, who had few friends and whose domineering methods were a perennial source of grief. "Stanton is so irritable * * * that * * * a citizen is not safe" is a typical comment. Time and again Lincoln's orders were ignored by his Secretary of War. Thomas H. Hicks, ex-Governor of Maryland, had a pleasant interview with Lincoln, who was convinced "by examining * * * numerous letters" that a prisoner ought to be released. Lincoln ordered the release and asked Hicks to deliver the order to Secretary Stanton.

"This I did," wrote Hicks, "and received * * * a lecture as uncalled for as it was unpleasant * * * and the rough refusal * * * to execute your order was not the least uncomfortable part of the interview." Stanton refused to examine the papers in the case and accused the ex-Governor of trying "to get rebels released," a charge that was taken as an insult by a man of Hicks' Union sympathies.

One of the strangest of Civil War episodes was the movement in the summer of 1864 to oust Lincoln—to have another Republican convention, name another candidate, and force Lincoln's withdrawal. (Lincoln had been renominated at Baltimore in early June.) It has been known that this movement existed, but certain angles of it come with new force and astonishment as one examines the papers; for instance, the intrigues associated with Gen. B. F. Butler.

From Freeport, Ill., Thomas J. Turner wrote: "I saw a letter from a prominent member of General Butler's staff wherein he advised all his friends 'not to commit themselves to Lincoln' * * * that 'Lincoln was hopelessly defeated.'" This writer was convinced that there was a "well-matured plan" to bring out General Butler in Lincoln's place.

The movement seems hard to envisage now, but in July and August of 1864, military failure, financial instability, a sickening sense of war-weariness, and vigorous peace agitation combined with radical disapproval of the President to create a wave of defeatism and a feeling among Republicans that Lincoln's reelection was impossible. An attitude of despair seemed to have gripped Republican managers.

It was not until September that the party's prospects were considerably brightened by Sherman's victory at Atlanta. An influence in the same direction was the widespread resentment at the "peace platform" of the Democratic Convention, which was denounced as a Copperhead move.

Plans of the anti-Lincoln Republicans were revealed to Lincoln by his friend, J. C. Conkling, of Springfield, Ill. Enclosing a copy of a circular issued by John Austin Stevens, president of the Bank of Commerce of New York City, Conkling wrote:

"The circular calls for a convention to be held at Cincinnati on the 28th inst. [September]—I understand the movement is made in favor of General Butler. His Chief of Staff has written in favor of such a convention. * * * It is said that a strong pressure is to be made, to induce you to resign * * * as a candidate in favor of the Cincinnati nominee * * * and that John Wentworth [of Chicago] has said that you had already written out a letter with reference to resignation."

We know that on August 23, 1864 (when Republican skies were thick with gloom), Lincoln wrote, not a letter with reference to his resignation, but a paper, something like a memorandum to himself, indicating that he considered his defeat "exceedingly probable."

A study of this whole movement shows Lincoln's wisdom in not letting anyone read that document till after the election. If there had been a "leak" as to this memorandum by the President, a great amount of mischief could have been done.

Nowadays a President has a battery of aides, secretaries, and assistants, with elaborate agencies to which business may be referred, but Lincoln handled a multitude of vexing and time-consuming matters himself. To enumerate the things brought to the President's attention would be to present a most diverse catalog, including many items of social history.

A United States marshal asked permission to arrest a Congressman whom he suspected of Confederate sympathies. The distinguished Negro leader, Frederick Douglass, gave advice as to bringing slaves out of the South. When General Rosecrans issued an order at St. Louis forbidding labor associations and strikes, there came a strong protest that the military had no right to intervene "in the social relations of our workingmen and the manufacturers."

Minor pleas ran into the thousands. Of course there were numerous autograph hunters. One young lady asked the President to autograph a piece of white silk for a wedding quilt. It was put up to him: without the autograph there could be no quilt, and without the quilt no wedding. A wounded soldier asked Lincoln to help collect a long-overdue note from a clerk in Washington; the clerk was getting $1,800 a year while the soldier was receiving $13 a month.

There was something coldly disagreeable about the abuse of Lincoln that was committed to writing and sent to him through the mail. It must have been disheartening to hear from his friend, Jesse Dubois in Illinois that he was ostracized because he favored Lincoln. As a way of consoling the abused President, the Shakespearean actor, James H. Hackett, sent a newspaper clipping showing how Washington had been similarly vilified.

On the other hand a larger amount of the incoming mail which has been preserved was favorable. Through the letters there runs a refrain: The people are with you; the people trust you. In a letter from the Army of the Potomac a Cabinet member was assured that the soldiers loved the President. The reason was given: the keynote to his personality as seen by the soldiers "consists mostly in his honesty, kindness of heart, and humanity." After the election of 1864 a soldier sent his reenlistment stripes to the President who had "reenlisted." Amos Tuck wrote from New Hampshire: "You have immortalized your name by one of the wisest administrations of power which any man in any country has ever exercised."

Contrary to the general impression, the collection contains a number of Lincoln and Todd family letters. A distressing story unfolds in two letters from Mrs. Lincoln's family. Her brother Levi O. Todd wrote from Lexington, Ky., September 12, 1864, telling how he was working for Lincoln's reelection and asking for a loan of $150 to $200 because of ill health and "actual necessity."

The sequel is deeply pathetic. Mrs. Lincoln's half-sister, Emily Todd Helm, widow of the Confederate general Ben H. Helm (killed at Chickamauga in September 1863), wrote to the President on October 30, 1864. She reached Lexington, she said, to find her half-brother Levi dead "from utter want and destitution." Lincoln loved Emily ("little sister") and her letter with its understandable bitterness must have hurt him deeply. "I would remind you," she wrote, "that your minnie [sic] bullets have made us what we are."

There are touching references to Lincoln's stepmother. In a letter of July 27, 1858, A. H. Chapman (who married her granddaughter) told how he read to her newspaper extracts eulogistic of Lincoln. "You can Hardly form an idea how proud it makes her," he wrote. On April 5, 1864, Dennis Hanks, Lincoln's cousin and son-in-law of Lincoln's stepmother, wrote: "Dere Abe I Received your Little Check for 50.00 I shoed it to Mother She cried like a child Abe * * *."

It is impossible in one article to cover so large and significant a collection. To see how Lincoln met his tasks day after day, and to observe how tremendous those tasks were, is to gain a new appreciation, as well as a fresh portrait, of the man. It is greatly to the credit of the Library of Congress that this unique record has been given an appropriate frame and niche.

Often in perusing these tens of thousands of handwritten pages one marvels how Lincoln lived through it all. As a gentleman from Shelbyville, Tenn., expressed it: "* * * when I think of your Incessant Labours I wonder to myself * * * as you are not Superhuman and cannot any more do without Sleeping Eating and Rest than other men nor cannot extend the day & night Beyond twenty-four hours."

The Nation's Power Supply

EXTENSION OF REMARKS
OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 25 (legislative day of Monday, February 2), 1948

Mr. HILL. Mr. President, Collier's magazine of February 28, 1948, carries an article entitled, "Our Lights Are Going Out," by Mr. A. G. Mezerik. The article states that all over the Nation power lines are carrying peak loads, and that in many cases lower voltage is endangering the electric motors on which so much of American life depends. I ask to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR LIGHTS ARE GOING OUT

(By A. G. Mezerik)

In the operating amphitheater of a hospital, a surgeon was performing an appendectomy. Suddenly the overhead cluster of lights went out, as a power failure blacked out the hospital. For 40 minutes nervous doctors and nurses kept the patient under anesthesia. Finally the overworked power station which served the hospital recovered sufficiently to restore the lights.

Quick thinking had saved that patient's life, but the staff of the hospital today breathes no easier. They know that the danger is not past. Their X-ray and other essential therapy machines are not receiving sufficient voltage to operate efficiently and sometimes cannot be used at all. News comes to the staff of blackouts in other hospitals in distant areas, and they brace themselves for the worst. Entrusted with human life which can be so endangered by lack of light and power, the doctors and nurses are more conscious than the rest of us of a new creeping epidemic—the Nation-wide power shortage.

The signs of an impending breakdown in the Nation's power supply can be seen by more than the staffs of hospitals. In Maine, power is rationed. In California, workers have lost their jobs. The plants where they were employed manufactured aluminum and chemicals which consume huge blocks of electricity, and the power company had found that it couldn't continue to serve them and everyone else too.

At first workers didn't realize the reason for their summary dismissal. They shouted for their union representatives, thinking they were being locked out. It took a good deal of explaining to drive home the point that their jobs depended on electricity. Now, in California, the power shortage is No. 1 business for labor unions. They have demanded that a "brownout" be declared to save electricity and thereby their pay checks.

On the beaches near Los Angeles bathers soon learned that the shut-downs in the California factories curtailed not only employers' profits and workers' jobs, but also the right to swim. One of the affected plants was the Dow Chemical Co., makers of chlorine, which is vital to the purification of water. With the supply of chlorine exhausted, the beaches became unsafe and were closed by the State department of public health.

Up in Maine the streets are dark, and the gay red, gold, and green neon lights of the advertising signs have been blacked out by official edict. Forest fires, topping a basic shortage of electricity, destroyed a good part of Maine's electric distribution system, including poles and lines.

A state of emergency exists, and President Truman, recognizing the need, ordered the Navy to send to South Portland Bay the destroyer escort *Maloy*. Today the *Maloy* is not a ship so much as a power plant, its generators working around the clock to create electricity, which is then taken by the power system and distributed throughout the State. But Maine's troubles are far from over, and electricity is still rationed—2 hours on and 2 hours off.

Maine's plight is bad, but it is not much worse than that of its neighbors. The new year brought to Vermont an aggravated shortage which threatened paralysis of industries employing thousands of people. The State is frantically seeking emergency power. Even earlier Vermont officials had implored the Navy to send them a ship, too, but the Navy had none available, and a ship couldn't have got through the narrow canal into Lake Champlain anyway.

The power-hungry Vermonters would probably settle gladly for half a ship, which is exactly what the inhabitants of Eureka, Calif., are using. The people of Eureka towed in a foundered Russian craft which had broken in two offshore and put it to work creating light and power. Half a ship has also come in handy way up on top of the world, at Anchorage, Alaska, where half an abandoned Victory ship is supplying power.

Expedients of every type have been tried by utility companies and public agencies to get relief in this crisis. Arizona is the lucky borrower of an Army mobile power-generating train which, while inadequate, is helping a little. The proud Pacific Gas & Electric Co., one of the Nation's biggest power systems, is scouring the byways buying electricity wherever an extra kilowatt is available. It purchases from the Navy at Mare Island, from Letterman General Hospital, and from factories with tiny power equipment known to the trade as "tea kettles." Many utilities are emulating P. G. & E., and at least one utility system, dependent on water power, has tried sending a plane into the clouds to make rain with dry ice.

Most American utility systems today are inclined to be sorry they were such excellent salesmen of appliances in years past. A power company in Florida some years ago staged a sales drive on electric house heaters. It was a high-pressure campaign, much like those put on by power companies everywhere up to a few years ago, and it was successful.

Much too successful, it now turns out, because on the first cold day when all those heaters were plugged in, a transformer blew out.

UNSELLING ELECTRIC HEATERS

Today that utility company is using the same amount of advertising pressure to tell the buyers of those heaters to please, for Pete's sake, keep the things off the line. Though heating by electricity used to be one of the things most encouraged by utility companies, new installations are entirely forbidden today in many sections.

Cooling and air-conditioning sales campaigns were just as popular. Not so now. In Texas, restaurant, hotel and department-store owners have been requested to shut down their cooling equipment for part of each day. Yet the power saved by restrictions is infinitesimal compared to the need. Overloaded generating equipment all over the country remains in danger every minute.

In Beaumont, Tex., crews ride up and down the highways, peering at small transformers along the road. These indicate when they are dangerously overheated by automatically showing a red flag. When the men spot a red flag they dash for the transformer and deposit a cache of dry ice around it to cool it off. And the story isn't much different inside generating plants in every area, where in many cases fire hoses play constantly on aged, overheated machines to keep them from going up and out in smoke.

Across the country, advertisements are appearing like a rash. "We Need Your Help!" says the Union Electric Co. of St. Louis, offering hints to its customers on how to save electricity. The Otter Tail Power Co. in North Dakota thanks its customers for cooperating, but asks for more of the same. Another company buys space to apologize for a serious power failure and concludes by saying that it anticipates more of the same.

Meanwhile utility executives sit in their offices, dreading every storm which might throw out precarious lines and create an intolerable burden on generating and power-station equipment. The great snow which blanketed New York, and the record ice storms which swept across the country in late December were just such catastrophes. The snow, the ice and the wind would have worked havoc even had equipment and maintenance been at peak efficiency. This time, the combination very nearly broke the overloaded camel's back.

The executives thank their lucky stars that the engineers who build electrical machinery are such a conservative group. The equipment provides a wide safety margin and the present demand has led utility operators to push the equipment to limits of everyday use which were never visualized by the engineers. And as they contemplate all this, they think back on how the emergency came about and wonder what the public reaction will be.

The utility companies worked hard and well during the war and there was no power shortage, despite their inability to get necessary equipment. A regimented wartime economy had helped them. The Government told manufacturers that they must work three shifts, which meant that industrial loads could be distributed around the clock. Relief also came from power pools organized by the Government, which arranged interconnections so that one company in dire need could borrow from a temporarily richer neighbor. Daylight saving and rules which barred advertising display signs, Christmas lighting, and the manufacture of appliances helped too.

With the end of the war the rules went into the discard, and the power companies relaxed, expecting a long let-down, even a postwar depression. And for 11 months after VJ-day they had reason to think they had guessed right. Demand for electricity dropped below that of any year since 1942. Then suddenly reconversion was over and every plant which could hook in one more motor was demanding more current than ever before.

Nor was that all. Farmers, grown affluent with a succession of good crops and high prices, clamored for electrification and sometimes hired lawyers in their zeal for instant action.

THE FARMERS' BEST CHORE BOY

They had found out for themselves that electricity is an unparalleled chore boy, and with farm help increasingly hard to come by, electricity could do more. It was wonderful inside the farmhouse, too. Washers, refrigerators, radio, entertainment, and blessed light all came with that line. Small wonder the farmers demand electrification, but their chances of getting it are as dim as the interiors of their kerosene-lighted houses.

One exception is in the Tennessee Valley, where publicly owned TVA is not only continuing to serve its huge industrial customers such as du Pont and Eastman but has, since the end of the war, doubled the number of its farm consumers.

Incidentally, TVA, which is largely a water-power operation, owns a big steam plant near Wilson Dam. That plant is operating at full capacity right now, and is selling every last spark of its output to its neighbor utilities, the Georgia Power Co. and the Alabama Power Co. This has its ironical side because the Alabama Power Co. is using the courts to fight the growth of farm cooperative electricity in its own State on the ground that it can readily take care of all the requirements. At the same time it is buying power from publicly owned TVA.

Desire for electricity is, of course, not limited to farmers. Along the Pacific coast 1,500 wartime factories, thought by all to be headed for the scrap pile after the war, are still doing business, and twice that number of smaller plants have set up to sell goods to the bigger fellows. That takes power, and plenty of it, and the situation is roughly the same all over.

Government and military needs are also demanding more and more power. The creation of atomic bombs already takes huge blocks of power, and when the recently announced plans of the Atomic Energy Commission have been carried out, requirements will double. The hope that atomic energy might be used to make electricity, instead of consume it, has grown dimmer, the only optimism coming from Lewis Straus,, one of the members of AEC, who suggests that atomic storage batteries may one day be practical—but that is looking a long way into the future.

Meanwhile, other military installations are also increasing their demands. The Army is in quest of a site for a supersonic wind tunnel bigger than anything hitherto dreamed up anywhere else in the world. When it is built it will use plenty of power; those who know say it will require 500,000 kilowatts or about five times the power used by the city of Denver.

Aside from military needs, which will be met or else, there is still the ordinary American, trying to plug in his new automatic

laundry, his vacuum cleaner, his refrigerator, and his new floor lamps. There are more people in the country than ever before and each is using more electricity. In Los Angeles, the population has increased by 19 percent, and each consumer is using 35 percent more current. The power systems, everywhere seeking to make a little energy go a long way, have dropped their voltage in many places. If the light bulbs look dirty, if the water doesn't boil, and if the toast won't brown, it's probably low voltage.

DAMAGE TO HOUSEHOLD MOTORS

Low voltage can be very costly to householders, as the business of electrical repair shops in many parts of the country proves. Burned-out radio condensers and bad reception are only a part of the consequences, for low voltage causes motors of vacuum cleaners and refrigerators to go up in smoke. This low-voltage trouble has already caused owners of many electrically equipped homes to buy gasoline and kerosene lamps and to install stand-by cooking facilities in the form of wood, coal, oil, or bottled gas ranges.

Events, such as Maine's forest fires and the greatest drought ever experienced in the green Northeast, are in part responsible for this national shortage. Lack of rain affected the water supply from which electricity is made at Niagara Falls and at dams all over northern New York, New England, and Pennsylvania. Drought affected the West even more. The West depends on hydroelectricity, and the fuel for hydro is falling water. No falling water, no electricity, as the Bureau of Reclamation, which operates so many of the western hydro plants, will quickly prove. They make their point with a picture of the Elephant Butte Dam in New Mexico, which has not enough water in its reservoir to turn the big water wheels.

Those events were acts of nature, but people, singly and collectively, also contributed their share. Congress only last summer cut to the bone the appropriations for the Bureau of Reclamation, despite the fact that the money was largely going into power projects, such as those in the Columbia River Basin, which are vitally necessary to the maintenance of our industrial and food production. Behind the action of Congress was the pressure of the less foresighted of the privately owned electrical systems.

The Idaho Power Co. is still resisting building of the dam and powerhouse at Hells Canyon on the Snake River, a project which would make possible the processing of the richest vein of phosphate rock in the world, at a time when fertilizer is not only short but indispensable if we are to carry out our immense plans for helping to feed the world. The president of the Utah Power & Light Co. only recently denounced the expansion of cheap electric power as political.

In many other areas the private power companies have not been oversanguine about the future of the country. The president of the national organization of the privately owned electric companies was perhaps thinking in this pattern when he said, in the face of rationed and curtailed electricity, that rumors of impending shortages were unwarranted and untrue. So also are the many utility men who speak of the present situation, not in terms of shortages and necessary expansion, but of abnormal demand.

They imply that demand will fall off, that people and industry will use less electricity. But the only foreseeable way that can happen is by a depression, and while a depression may prove a comfort to a few harassed operators of utilities, it is not the solution which the Gallup poll would find popular.

If that is the picture in the privately owned systems, neither is all sweetness, much less light, among the Government agencies which are in the business of creating and selling power. The Army Corps of Engineers and the Bureau of Reclamation build and run most of our great Government power plants. Each would like to do as much of the total job as possible. They have worked together to stop the creation of a Missouri Valley Authority, which like TVA would be under the control of neither, but their jealousy is more often directed against each other.

In California each of the agencies is trying to keep the other from building and operating Folsom Dam. At present, the engineers are out in front, though qualified experts say the dam logically belongs in the framework of the big Central Valley project run by the Bureau of Reclamation.

The same experts say that Army control of the dam will cause duplication and uneconomical operation.

Whoever and whatever is responsible, whether fires, drought, or war, whether private operators or public agencies, it is obvious it will be a long time before we catch up with our present needs. There are only three generator manufacturers in the entire country and they are sold up for years to come. It takes 3 years and sometimes more to make one of the big generating machines. And shortages of copper, poles, and transformers plague everybody.

EUROPE'S NEEDS AN ADDED PROBLEM

On top of these handicaps there is ERP, better known as the Marshall plan, which may well be "operation rathole" unless it results in setting Europe's productive capacity on its feet. That cannot be done without generators. The famous Krug report, which inventories our natural resources with Europe's need in mind, suggests that Government allocation in this field may once more become necessary.

William E. Knox, president of the gigantic Westinghouse Electric International Co., which supplies power equipment to foreign countries, takes a pessimistic view of the effects of what he calls the international "woeful shortage of basic electric power." He says, "The estimates of the amounts of electric equipment requested from Europe are very large, and the studies of these estimates made by official American groups have so far not tended to reduce them." The Marshall plan, as Mr. Knox sees it, will have an undeniable impact on our domestic economy and our capacity to produce even our basic domestic needs.

However, if everything works in our favor and if, in addition, there is no oil, coal, or water shortage, this Nation will in 5 or 10 years, be where we ought to be now—supplying the existing demand without undue strain. Only after that will come the job of freeing and flexing the economic muscles of the country, and we will arrive there only if every possible source of electrical energy, public and private, it developed meanwhile.

INDUSTRIES NEED CHEAP POWER

Manufacturers such as the Reynolds Metals and the Aluminum Co. of America will then be able to find sources of cheap power, the lack of which now keeps them from expanding and making more products and more jobs. The great power-using chemical and metallurgical industries which emerged during the war now constitute but one-half of 1 percent of industry, yet already they are using 50 percent of all the power consumed in manufacturing. Given more power, that infant will really grow.

Highway and street lighting, badly needed across the country, will be undertaken. Businesses will proceed with long-deferred expansion. Farmers will get the power they are demanding, and the people of the cities will taste some of that postwar-world stuff they heard so much about awhile back.

Meanwhile, we will all save electricity in little ways and hope—hope that the private power systems will set up more interconnecting lines so they can borrow from one another when one or another has a power surplus; hope also that the three manufacturers of generators will expand and that more manufacturers will start making the big machines. We can wish that private-utility executives will keep their eyes on our potential and that the public Government agencies will quit quarreling. For it will take everybody in the power business, whether using steam, hydro or Diesel, whether cooperative, private or public, to get behind the stalled power wagon and shove if we are to get really on our way.

Until that dream comes true, the dark shadow will hang over us and strange things will continue to happen. Letters will come to the Navy, as one recently did from a cooperative in Florida, asking them to send a battleship to Miami to supplement their supplier's needs. And in your house and mine the lights may blink three times, the way they do now in Iowa, a signal that the load is getting too heavy and that somebody better get around pronto and flip the switches before all the lights go off.

United Nations Survival Threatened!

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, the United Nations organization has gone downhill in the past year according to Mr. Constantine Brown, noted writer and world traveler. This organization is getting weaker and not stronger, as it should.

Mr. Brown has written a very interesting article on this subject which appeared in the Washington Star on February 15, 1948. I include the article as part of my remarks:

DRASTIC STEPS NECESSARY TO INSURE UN SURVIVAL—WORLD ORGANIZATION HAS GONE DOWNHILL IN PAST YEAR AND THREATENS TO EXPIRE UNLESS A CURE IS FOUND SOON

(By Constantine Brown)

The United Nations, born less than 3 years ago amid the enthusiastic cheers of hopeful bystanders and the impassioned speeches of politicians throughout the world, is sick and dying.

In fact, the illusion that world peace could be achieved by the selfless collaboration of all nations has had a far shorter life in the United Nations than in the League of Nations. The Geneva organization lasted for nearly two decades. The Lake Success (nicknamed by some cynics Lake Flop) organization—more ambitious than that at Geneva—is now so wobbly that observers have begun to believe it was still-born.

STARTED IMPRESSIVELY

Many European statesmen in the past have accused the United States of responsibility for the demise of the League, contending that if we had joined it things would have been different. Teeth, in the form of military sanctions and actual intervention, it was said, could have been written into the covenant and the dictators who appeared after World War I could have been cowed into submission before they became strong enough to use force themselves.

Heeding this criticism, the organizers of the UN inserted plenty of teeth in the charter. Not only did the UN charter provide specifically that military sanctions should be applied when all other means of enforcing peace failed, but a special United Nations Army was provided for, with a staff drawn from the five big permanent members of the Security Council.

The charter was so framed that its members actually surrendered many of their sovereign rights to that organization. All their activities—political, economic, military, and social—were to be filtered through the various component parts of the new peace organization.

Hardly had the UN been organized before it became apparent that unless all the big nations were willing to play square the ambitious program inaugurated in 1945 at San Francisco would fail.

FROM BAD TO WORSE

The first blow—a minor one—came during the Russian-Iranian conflict when the U. S. S. R. representatives refused to obey the Council's injunctions and settled their differences with the Teheran Government alone. Since the worst fears of the non-Soviet members, that Azerbaijan Province of Iran would be incorporated into the U. S. S. R., did not materialize, every one hailed it as a victory, influenced indirectly by the moral power of the UN.

The "minor ailments" of the new-born UN—described by its parents as inevitable growing pains—in the last 12 months have developed into a serious illness which may have fatal results, unless some drastic means is devised to check it. Up to now no one has devised such a means.

Far from improving, matters are going from bad to worse. Whatever cure is discovered will not be applied. One of the UN's parents—the U. S. S. R.—is using the veto power to stymie modern democratic methods.

The old League of Nations frequently was accused of being the sounding board for the selfish interests of the big powers. In those days there was still at least a semblance of international morality, and the power-politics game played by Britain, France, Italy, Germany, and Japan at least was clothed in legality.

GREEK CASE TYPICAL

The United Nations exists at a time when all international morality seems to have disappeared and the sessions at Lake Success sound more like the vituperations of Billingsgate fishmongers than discussions by representatives of the great powers.

Untruths are expressed from the rostrum of that world-peace organization without any respect for diplomatic language. According to some of the members attending the hotter sessions, if the interpreters were to translate literally many of the Yugoslav and Soviet invectives they would be unprintable.

The stalemate has become complete, except in a few cases—such as the partition of Palestine—in which the Russians want, for their own purpose, to join in settlement of the problem.

The case of Greece is typical. In accordance with the Charter and its articles dealing with aggression against a member nation, a commission was sent to the Balkans in 1946 to investigate the justice of the Greek Government's complaint against its northern neighbors.

The whole thing became a tragic farce soon after the commission reached the country. The Russian and satellite delegates openly favored the Greek rebels, while the rest of the commission attempted to make an impartial report.

KOREA ANOTHER EXAMPLE

The findings at the end of the several months of investigation were presented to the Security Council, with the Russian and his associates making a minority report. The whole report was inconclusive. The rebels supported by Russia's satellites, continued their warfare, because Moscow decided to nullify the investigating committee's report and to continue the aggression which the Kremlin leaders expect will bring Greece finally behind the iron curtain. The peace efforts of the UN thus were flaunted.

The same thing applies to Korea. That country regained only nominal independence at the end of World War II, after having been a Japanese province for many years. The ill-advised Yalta agreements between the Big Three provided that Korea would be divided into two zones immediately after her liberation. The northern portion was occupied by Russian troops, while the southern was taken over by the Americans. This occupation was to be temporary, and only until such time as free and unfettered elections could be held, giving the Koreans their own government.

Immediately after the Soviet Army entered Korea it placed a solid iron curtain between north and south.

A secret police force, composed of Russians and Koreans trained for many years in Siberia, was organized. A Korean army composed of men who had sought refuge from Japan and had been trained by the Red Army in the maritime provinces was organized under Russian commanders.

The Koreans in the south—supported by the United States—began clamoring for an election, as they had been promised. They did not want to have their country chopped up into two parts, and were anxious to reunite the north and south under a native government.

At the United Nations, where the Korean claims were considered, it was decided that an international commission should be sent immediately to investigate conditions on the spot and to supervise an election throughout the country.

RUSSIA SULKED AT RULING

Russia opposed the plan, and suggested that before an election took place American and Soviet armies of occupation should be withdrawn. The Russian suggestion seemed logical, except that it meant that south as well as north Korea would be dominated by the Russians.

While in the American zone we had trained a police force armed only with pistols and light machine guns—for the sole purpose of maintaining law and order—in the north the Russians had organized a strong force armed with artillery and tanks and trained by Red officers.

The withdrawal of both occupation forces, it was obvious to us, would mean that the north would invade the south and impose Russia's will through another satellite armed force. By no stretch of the imagination could the southern police force match the northern Korean army.

Russia sulked at the decision of the United Nations and refused to participate in the commission sent to Korea. This group was empowered, under the mandate of the UN, to go everywhere in northern and southern Korea.

The commission arrived at Seoul, headquarters of the American occupation forces in the south. Agents from the north had preceded the commission's arrival and demonstrations were trumped up. These led to major disturbances, which had to be put down by the American military police.

When the UN commission attempted to cross the border to investigate popular feeling in northern Korea, it was peremptorily halted by the Russian Army commander, who refused admission without any further explanation. Once more the UN had taken a kick from the Soviet Government.

WEST SAVED FACE

To imagine that this organization, in which we have placed all our hopes for peace, can function efficiently henceforth under such conditions is to refuse to recognize a tragic—but factual—situation.

For the sake of accepting the theory of the UN, Prime Minister Stalin received handsome payment in allotment of territories to Russia. But all those who attended the Yalta Conference, where Mr. Stalin agreed to participate in the world peace organization, admit now that he never believed in this new democratic idea.

Mr. Stalin had suggested to President Roosevelt and Prime Minister Churchill that the world be divided into three zones of influence, with Russia retaining the lion's share. When the American and British leaders refused to consider such barefaced villainy and offered the Soviet dictator important advantages in Manchuria and control of Eastern Europe, he agreed to have Russia represented at San Francisco.

The face of the western peacemakers thus was saved. They also hoped—for reasons which the ordinary citizen in this country cannot yet understand—that once Russia's thirst for territorial expansion was satisfied she would be willing to work for a stabilized peace and would become a useful member of the new society of peace-loving nations.

How Mr. Roosevelt and Mr. Churchill could have believed in this, after the experience of Prime Minister Chamberlain and Premier Daladier with Hitler, is difficult to understand. But subsequent developments since 1946 prove that Russia never intended to keep the UN alive, unless it could become a useful tool for her schemes of aggrandizement.

Now the United Nations is breathing heavily and the political doctors, while putting out optimistic bulletins, fear that the patient is in a real bad way.

United States Economic Foreign Policy and National Security

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the remarks by Norman Burns, adviser, Division of Commercial Policy, United States Department of State, before the Foreign Policy Association in Oklahoma City on February 19:

UNITED STATES ECONOMIC FOREIGN POLICY AND NATIONAL SECURITY

The Economic Foreign Policy of the United States is to promote, through cooperative action with other countries, world economic prosperity.

We believe, as a practical business matter, that economic prosperity in other countries is essential, in the long run, for the maintenance of prosperity in our own: no country can exist for long as an island of prosperity in a sea of depression. We believe in economic prosperity, also, for humanitarian reasons; it does not seem right for people to starve when the world has resources, which, if utilized, would provide food and clothing for all. We believe in economic prosperity, also, for ideological reasons: free institutions, freedom of thought, of speech and of worship do not flourish in a soil of economic desperation. All of these aspects of our economic foreign policy have been described many times in the press and in speeches. They have become familiar to, and have received the support of, the American people.

The purpose, here, is to concentrate on one aspect of our economic foreign policy, namely its implication from the point of view of our national security. National security, of course, is a function of various factors. It depends, in part, upon our own intrinsic strength, in part upon the relative strength of other countries, and in part upon the friendly or hostile nature of our relations with other countries.

UNITED STATES ECONOMIC FOREIGN POLICY

The method of our policy is one of cooperation with other countries. After World War I, we sought prosperity and peace by attempting to withdraw from world affairs—on the political front by dissociating ourselves from the League of Nations; on the economic front by attempting to isolate our economy from that of other countries through successive tariff increases in 1921, 1922, and 1930. The tragic end of that chapter we all know. After World War II we sought prosperity and peace, not through isolation but through cooperative action with other countries to solve our mutual problems. We sponsored the creation of the Economic and Social Council of the United Nations, the Food and Agriculture Organization, the International Bank, the International Fund, and the (proposed) International Trade Organization. We sponsored a European recovery program (the Marshall plan) and the multilateral trade-barrier reduction program. Our economic foreign policy has had the effect of greatly expanding the scope and area of cooperative action in international life. Since national security depends, in part, upon the friendly or hostile nature of our relations with other countries, it follows that an expansion in the scope of international cooperative action, which makes more friendly nations, is likely to contribute, in the long run, to our own national security. This, of course, is an intangible factor, but history is a record of the power of intangibles.

The extent of our cooperative action may be indicated more clearly, perhaps, by an account of two major programs of our economic foreign policy, the European recovery program and the trade-barrier reduction program.

European recovery program

The European recovery program was initiated by the European countries at the suggestion of Secretary of State George C. Marshall, June 5, 1947, to make Europe self-supporting again. Wartime dislocations had created downward spirals in the economies of western European countries which, in turn, set in motion other downward spirals until a kind of economic paralysis set in that made economic recovery a slow and difficult process. Coal production could not be increased sufficiently because mines lacked machinery and miners lacked food. Mining machinery to increase the output of coal, and agricultural machinery to increase the output of food, could not be produced in sufficient volume because machinery factories lacked coal. This is but one example of the vicious spiral. The European recovery program, if approved by Congress, would mean the expenditure by the United States of something like $17,000,000,000 within the next 4¼ years (approximately 2 percent of our total national income during that period, at the present level of business activity) to put Europe on its feet again. This plan is more than relief. If relief alone, its cost would of course be less. But relief alone would leave these countries in no better condition at the end of the 4¼ years than at the beginning. The real problem is to furnish enough economic support to ensure their full recovery. The 17 European countries participating in the plan have agreed to help each other, to the full extent of their resources, in addition to the aid from the United States. The participating countries are Austria, Belgium, Denmark, Ireland, France, Greece, Iceland, Italy, Luxemburg, the Netherlands, Norway, Portugal, Sweden, Switzerland, Turkey, the United Kingdom, and western Germany. Other war-devastated countries in Europe are free to participate if they meet the terms prescribed and adopted by the other participating countries.

Multilateral trade-barrier-reduction program

The trade-barrier-reduction program, also initiated by the United States, culminated in the general agreement signed at Geneva by 23 countries, October 30, 1947, to mutually reduce their trade barriers for the purpose of expanding world trade. These countries reduced their tariffs and bound tariff rates on products that account for one-half of the world's total foreign trade—the most comprehensive attempt ever undertaken to reduce world-trade barriers. The general agreement assumes that a reduction in trade barriers will stimulate a revival in international trade that will cause production and trade to expand in all countries. It assumes that if the 65-odd countries of the world separate themselves from each other by trade barriers that create 65 more or less watertight economic compartments there will never be world economic prosperity.

The general agreement came into effect provisionally on January 1, 1948, as regards the United States, the United Kingdom, Canada, Australia, France, Belgium, Luxemburg, the Netherlands, and Cuba. Other signatory countries are expected to put it into force by June 30.

The general agreement was followed by negotiations at Habana, among 60 countries, for the formulation of a charter that would provide a detailed set of rules to govern countries in their conduct of trade with each other and to encourage further reductions in various types of trade barriers. The charter provides, also, for the creation of an International Trade Organization, which members would join to facilitate the carrying out of their obligations under the charter. This charter, when completed, will be placed before Congress to decide whether or not the United States should adhere.

UNITED STATES PROSPERITY AND OUR NATIONAL SECURITY

The question arises now: If our economic foreign policy succeeds in promoting world prosperity, how will this affect our national security?

It is evident upon reflection that a vigorous foreign trade contributes to our own economic prosperity, partly because it creates or sustains a strong foreign market for our exports and partly because it creates a favorable climate for flourishing trade within this country. Economic prosperity is prerequisite for full production in the United States. Full production in peacetime is necessary to maintain a large industrial structure. A country without a large, well-balanced, industrial structure will lack both the plant capacity and the technological skill to produce the kind and volume of equipment required to carry on modern warfare. The United States could never have produced 60,000 planes or more per year during the last war, if we had not had a huge peacetime automobile industry. The United States could not have produced the ships necessary to carry military forces and supplies across two oceans, if we had not had factories and skilled workers to convert our resources into the ship building. The atomic bomb, synthetic rubber, penicillin, and many similar products could not have been produced in volume during the last war if this country had not possessed a reservoir of industrial capacity and technological know-how as a result of prosperous peacetime business.

A large industrial structure is necessary also to maximize food supply. A maximum food supply is essential from the point of view of national security, for no army can fight without adequate food, factories cannot produce with underfed workers, and civilian morale cannot be maintained indefinitely with hungry people. Factories are needed to make fertilizer, insecticides, and agricultural implements to produce the food, to make trucks and freight cars for transporting food and to make machinery for the processing of food that it may be utilized efficiently.

Economic depression would shrink our industrial capacity, stultify technological development and impair our national security.

The maintenance of full production in the United States will create a tremendous drain on our own natural resources. The Bureau of Mines, describing the wartime drain on our mineral resources, in the course of Senate hearings in May 1947, states that the United States has less than a 35-year peacetime commercial supply of 21 basic minerals, including petroleum, copper, lead, zinc, bauxite, antimony, tungsten, platinum, manganese, chromite, nickel. Many of these are strategic materials absolutely essential in the production of implements of war. Under our trade barrier reduction program we have reduced tariff rates on a number of these minerals, so that more of our current requirements will be supplied by imports. This will help to conserve our dwindling domestic reserves.

It is claimed, in certain instances with validity, that reductions in our tariff might operate against national security if mines or factores should be closed as a result of drastic tariff reductions (note, the Trade Agreements Act permits no more than a 50-percent cut in duty on any product). It is feared that such action might make us too dependent upon overseas sources not easily accessible during an emergency. Our experience with rubber illustrates why the synthetic rubber industry, and certain other industries, should be maintained, even although the economic cost may be great. An operating industry to provide a nucleus of management and technical skill and to stimulate technological developments, is necessary in many lines of production, from the point of view of national security. On the other hand the national security argument for tariff protection should not be carried to extremes. For example, there are many cases where our reserves of minerals are inadequate for national security and tariff protection, no matter how high, will not increase nonexistent reserves. In other cases, our competitive strength is so great that imports would not impede domestic production, even if the tariff should be cut. For example, no country can compete against American automobiles. The safest procedure is to consider each case on its individual merits and to take tariff action on the basis of the combined consideration of the Department of State, the Department of National Defense and other Departments concerned with technical or economic aspects of the problem.

FOREIGN PROSPERITY AND OUR NATIONAL SECURITY

Economic prosperity in foreign countries, also, has significant implications from the point of view of our national security.

Hunger and poverty in foreign countries make for political unrest. Poverty is a fertile soil for the sowing of Communist ideology because hungry people are desperate people. It is no exaggeration to say that persistent economic disorganization and want in any country lead directly and inevitably to the loss of individual freedom, to the breakdown of free institutions and to the loss of national independence. Economic prosperity, as Secretary Marshall said, is essential to permit the "emergence of political and social conditions in which free institutions can exist." Economic prosperity is the ally of those people within a country who believe in freedom and democracy. Countries with a strong sentiment of democracy are likely to be friendly countries.

The Eurasian continent (Europe and Asia) has an area about double and a population about 10 times that of North America. The rimland of Eurasia, from the Behring Strait through Malaya, Aden, and Gibraltar, to northern Norway is fringed with approximately 50 countries or economic units, some large such as China and India and some smaller such as Italy, France, Belgium, etc., each of which is separated from the others by trade barriers that prevent the full development of their economic resources. Hence, the rimland countries are economically

weaker than they need be, in view of their aggregate population and resources. The heartland of Eurasia, on the other hand, is in large part covered by a single, large country, with an area twice as great and a population 50 percent greater than that of the United States. Because of its size, the diversity of its resources, and the unified direction of its economy, the heartland country is far less dependent upon international trade than are the many, smaller, rimland countries. The heartland can maximize its production without a large international trade; most of the rimland countries can develop their resources and maximize their production only through a large international trade.

If world trade barriers are reduced and international trade expands, all countries will benefit, but the rim land countries will benefit relatively more than the heart land country, simply because of their relatively greater dependence on international trade. A high level of production and economic activity in the rim land countries will contribute to their security, for the same reason as in the United States, namely that a large industrial structure is an essential of military strength. For these reasons we believe that economic prosperity in foreign countries will have a stabilizing political effect in the world today, that democracy will be strengthened and that these developments will contribute, in no small measure, to our own national security.

CONCLUSION

The economic foreign policy of the United States is essentially a strategy of economic prosperity. We seek economic prosperity through cooperative action with other countries. The immediate step is the European recovery program to lay a firm foundation for a permanently self-supporting Europe. The long-run step is the trade barrier reduction program to expand international trade. We believe that economic prosperity will contribute to political stability in the world today, that economic prosperity will contribute to our own national security and that, in world economic prosperity lies hope for world peace.

A Summons to Self-Reliance

EXTENSION OF REMARKS
OF
HON. CLAUDE I. BAKEWELL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1948

Mr. BAKEWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Earl O. Shreve, president of the Chamber of Commerce of the United States:

A SUMMONS TO SELF-RELIANCE

(By Earl O. Shreve, president, Chamber of Commerce of the United States, before Chamber of Commerce, St. Louis, Mo., February 9, 1948)

The world is living through a time of great confusion and despair, in this aftermath of the most destructive war in all human history. Vast populations are homeless, which is bad enough—and also hopeless, which is worse. Hundreds of millions in Europe and Asia had counted on the glorious hour of victory to bring them political freedom and economic progress. It brought them neither the one nor the other, thus adding bitter disillusionment to their general distress.

In such a time the frightened and angered masses of the world are eager to find a convenient scapegoat. And as always, the demagogs and adventurers are there to provide one. It is all too obvious that they have selected our America, and especially the American businessman, for that sacrificial role.

They are making our system of individual enterprise the principal target for their organized lies and malice. Their shrill accusations echo through the halls of the United Nations. The airwaves are clamorous with their invective against Wall Street and American imperialism and the other familiar figments of propaganda.

What we face, in effect, is an all-out offensive against our American business civilization. It is an offensive expertly organized by great masters of the strategy and tactics of confusion. It is led and financed by men who have preempted the resources of a dozen helpless countries, including Russia itself. Let no one shrug off the seriousness of the threat, the urgency of the challenge.

You and I, as Americans and as men of business, have no remote excuse for indifference. We must utilize every chance to consult together, to clarify our thinking and to fortify our self-confidence. That is why I am grateful for this opportunity to address another group of my fellow-Americans and fellow-businessmen.

There was a time when each of us could safely mind his own business, letting nature take its course on larger matters. That time is past. Those larger matters have become very much our business. Unless we set that course and fix its direction, others will do it for us—and in directions from which there will be no easy return.

I have neither the right nor the intention to lecture. I happen to be the head of the world's largest organization of businessmen, the United States Chamber of Commerce. But that does not magically endow me with any special wisdom or insight. It merely imposes on me the obligation to call attention to looming dangers and to take counsel with you on our common duties in confronting them. And that, more or less, is the assignment I have set for myself today.

The danger as I see it, is not alone in the attacks on our system of freedom.

No, the danger also is within ourselves. It is implicit in the question which many serious-minded Americans are asking themselves: Do we have the moral stamina, the inner confidence, the resources of faith in ourselves for the great contest between liberty and slavery?

We dare not succumb to a failure of nerve. That is the one calamity which would guarantee victory for the forces of human enslavement.

America must see to its psychological defenses. It seems to me essential that all of us, and leaders of the business community especially, revive the old sense of pride in our national achievements—and a clear-headed confidence in the way of life that made those achievements possible. I believe we must return to the springheads of American inspiration; to the fundamentals of individualism; to those attitudes of mind and heart which may be summed up in the word "self-reliance." Something of the pioneer spirit still lives in every American. Look at the boy selling newspapers on a street corner. He is quite sure that he will one day be among the successful—he feels himself, in his way, an American pioneer. Look at the young man starting a little business of his own, the miner or farmer who sends his son to college, the engineer planning to build a bridge or tunnel a mountain—each of them, too, feels himself a pioneer in the noble American tradition.

There was a time, within the memory of men still quite young, when the basic concepts of individual self-reliance, in all departments of life, were taken for granted in this country. No one felt called upon to defend them, any more than he needed to defend the air he breathed. We recognized, of course, that self-reliance involved risks and responsibilities but were willing to pay that price. Indeed, we relished the risks. They gave to business its tang of adventure.

The few who proposed to limit personal liberty in the name of security or some other goal were looked upon as cranks. Even in great emergencies, like war, we relinquished our individual prerogatives with the utmost reluctance, and always with a firm determination to restore them the moment the emergency was over. In short, we had a deep-down faith in ourselves, in our capacity for general progress through individual initiative.

That faith, alas, has been badly battered in recent decades. You can hardly open a magazine or turn on a radio without hearing a discussion as to how much freedom we ought to surrender to some Government agency or some super-duper "planners." The very fact that the issue of individualism can be seriously debated is a symptom of encroaching moral flabbiness.

Too many Americans have been infected by the very ideologies they profess to be fighting. Their efforts to insure free enterprise seem to be limited to pious declarations. But the proof of free enterprise, as of religion, is in everyday conduct.

You know as well as I do the kind of business leader who defends free enterprise in principle but is inclined to weaken on the principles in practice. Some of his kind are still about. He shouts hurrah for competition as lustily as the next fellow—but is not above a little price-fixing to squeeze out inconvenient interlopers when it suits his purpose. He waves the flag of free economy—but doesn't protest a helping hand from Government bureaucracy here and there.

There are not many of them, fortunately, but enough of them to serve as a warning. They are symptoms of the growing corrosion of that sense of self-reliance to which I have alluded.

The American system of economy has just been through two periods of intensive regimentation. The first, of course, was the New Deal era. Then, without a respite, came the second: The great war.

In both those periods, though for different reasons, business became in many vital respects the word of the all-powerful State. All the mechanisms of priorities and taxation, managed currency, and bureaucratic decrees, were used to cut down the natural creative energy of private enterprise. We saw a vast centralization of power in the Executive, and a virtual abandonment of the principle of free checks and balances.

Taken together these periods added up to 14 continuous years of subjection to centralized and often arbitrary dictation of manufacture, distribution, wages, prices, and other economic factors. The initiative of the individual businessman and manager was hemmed in and sometimes substituted by directives from the ever-multiplying bureaus and agencies.

Emerging from those years of bureaucratic restraint, our economy is a good deal like a patient who has been confined to bed for a long time. After his recovery he must learn to walk again, to stand on his own feet, to do without medication and without the guiding hand of nurse or doctor. In the first flush of his restored health, in fact, he sometimes misses the snug, relaxed routine of hospitalization.

Even thus, American private enterprise economy must learn to walk again, to stand on its own feet, to do without the plaster-cast of state regimentation. It must get over the habit of looking to the doctor in Washington.

Business tended to grow soft during those regimented periods. Let's acknowledge the fact, not in blame but in a spirit of candor. It lost a lot of its wonted drive and resourcefulness. It tended to become meek and compliant under pressures from above.

During the New Deal epoch the economic areas in which individualism and the profit drive could function were so restricted that certain faculties of our economy tended to become atrophied, like body muscles which are not used for a long time. Business, of necessity, relied more and more on lawyers and lobbyists and politicians—less and less on those abilities which are native to a free economy and individual resourcefulness.

During the war, of course, American business in nearly every dimension became in effect an instrument of government. That this was unavoidable in a total war does not alter the fact that the effects on business psychology were deep and dangerous. They added to the harm already done by the New Deal which preceded.

After all, a planned economy has a good deal of temptation for some businessmen. It takes off their shoulders problems and responsibilities. While their return on investment of capital and effort may be small, they believe it is at least more certain, with the Government behind them to cushion risks and absorb losses.

War industries had ready-made markets. Costs ceased to be a problem or a challenge. Competition was a thing of the dim past—the Government took all we could produce and clamored for more. The shortage of goods turned the once powerful consumer into a supplicant who could be treated with scant consideration.

The habits engendered by those two periods—the bad habits of leaning on government—must be unlearned, and that quickly, if our American system of economy is to regain its traditional vitality and self-reliance. Perhaps some industrialists, some merchants, actually miss the "good old days" of centralized regulation. Unless they be endowed with fortitude and daring, they may find it none too easy to adjust themselves to the responsibilities of freedom, to the problems of a free market, to the challenge of pace-setting competition.

Probably you know, as I do, instances of business groups which have sought to retain the protection of government for their own fields, even while demanding an end to regimentation in general. That's the kind of thing I have in mind in warning that the danger is in the first place in ourselves. How can we hope to muster the moral power to defend our freedom unless we restore freedom to its ancient eminence in our hearts and minds?

What's left of the civilized world looks to us with desperate hope for help and guidance. For millions throughout the world we represent the last outpost of the free human spirit. The same force which assured victory during the war—namely the American economy—now holds the one great promise of victory in the peace. It is our obligation not only to ourselves but to all mankind not to dilute or weaken the system that made possible the miracle of our abundant America.

And so I plead for a return to the philosophy and practice of American individualism, whose central virtue is self-reliance.

We must eliminate that undertone of apology—a hang-over from the intoxication of the New Deal spree—which is so often audible in our very defense of free enterprise. Remember always that capitalist America at worst—even in the depths of depression—provides its people with a more ample existence than totalitarian economy at its best. Remember always that the most under-privileged groups here live on a higher level than the privileged workers in Soviet Russia. As for the average American, he enjoys material and cultural advantages never before accessible to so many so continually in all the annals of man's ordeal on this earth.

We must recapture that dynamic sense of mastery over our own destiny that used to be characteristic of the American, and especially the American in business. He never doubted his own ability to meet any situation as it arose.

Two types of defeatism have sapped our national self-confidence in recent years. Both of them must be eliminated from our thinking and feeling if we would step up our economic morale.

The first species of defeatism holds that a drift toward some form of socialism or regimentation is inevitable. The pessimists draw graphs and charts to prove it. But they prove only their own weak faith. Socialization of a national economy, samples of which are on view in Russia and in England, is inevitable in these United States only if we make it so. To assume that we cannot escape it is a fatalistic view unworthy of self-reliant Americans.

Recently, as you may have read, some 8,000 tons of West Virginia coal were shipped from Baltimore to England—destination, and there's the kicker to the story—Newcastle, coals to Newcastle. The ancient phrase that expressed absurdity now translated into real life. What a dismal commentary on the failure of socialism. We need not, we must not, succumb to the defeatism which accepts any brand of .ocialism as a kind of inescapable disease of our times.

The second variety of defeatism was packaged for us in the official New Deal contention that material progress in America had reached its limit. Our economy, it was claimed, had become mature, and there was no more scope for expansion. It remained only for the Government—meaning a lot of big and little bureaucrats—to plan our economic lives in an economy which had attained its growth.

It was not the first time in our history that such a claim was made. Again and again, at points in our climb to abundance, there were pessimists who insisted that the tallest peak had been reached and that we could climb no more. In 1886, more than 60 years ago, the United States Commissioner of Labor, Carroll D. Wright, announced with all the authority of his official position that American economy had reached its natural limits.

"Industry has been enormously developed," he wrote, "cities have been transformed, distance covered, and a new set of economic tools has been given in profusion to rich countries and in a more reasonable amount to poorer ones. What is strictly necessary has been done oftentimes to superfluity. * * * The day of large profits is probably past. There may be room for further intensive, but not extensive, development of industry in the present area of civilization."

That defeatist forecast made on the edge of the greatest industrial expansion the world has ever seen, seems utterly ludicrous in the perspective of time. Well, I am convinced that the "maturity" prophets of our day will sound no less ludicrous as time unfolds the future. We cannot foresee the full potentialities of electronics, of nuclear energy, of new developments in chemistry, of sciences still in the womb of time—any more than shortsighted Mr. Wright could foresee the consequences of the telephone which had just been invented or of the horseless carriage with which some crackpots were already tinkering. But the potentialities are still there, mysterious and alluring.

There is ample reason for believing that, despite the difficulties of this day, we Americans are on the edge of another great flowering of creative genius in our economic life—provided the incentives to effort are not shackled. That flowering, we may be sure, will not be touched off by any Government action. It will grow out of the myriad ambitions, strivings, experiments, and visions of millions of individuals. It will burgeon through a thousand failures in a few brilliant successes. It will be nurtured by the indomitable spirit of free men, who in an atmosphere of freedom depend on themselves and their own capacities.

Our American way of life is under attack. Its assumptions have been opened to question. For these very reasons we must renew our pride in the American story, our confidence in American destiny. Only in that way can we match the fervor of detractors at home and sworn enemies abroad. The answer to the world-wide offensive against America is in ourselves and the name for that answer is good old-fashioned self-reliance.

Taxation Cutting Down Owners' Cherry Trees

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include from the Boston Sunday Post of February 22, 1948, relating to home owners:

TAXATION CUTTING DOWN OWNERS' CHERRY TREES

Cutting down the cherry tree.

Property rights in Washington's day were inviolate, as the first President learned when he wielded an ax in his youth. Property rights on Washington's birthday, 1948, are insufferable, as the home owner is learning every day with tax rates mounting and real estate bearing the full burden of the cost of government. They are still cutting down the cherry trees of the home owner, and not only doing nothing about his predicament, but slowly and surely chopping his home from under him.

Regardless of the fact that Washington, our first realtor as well as our first President, recognized property and home ownership as basic, and it has been so recognized through the years since then, present-day officials in many municipalities appear to believe that property and the home are fodder for budget balancing. While the property stands on a foundation, it is now fair game for replenishing every raid on the Public Treasury. And an ax, well known in the days of Washington, is an unheard of implement when anyone suggests that it might be used to cut down waste and extravagance in municipal affairs.

Unorganized, as he is, the home owner has little chance to protest. Tears are shed for his plight around election time, and other sources of revenue are cited at the time which, when legislated, would shift the burden from his shoulders. But, when the election is over, he finds that his tax rate has advanced, the nonproperty owner has voted away more of the municipal treasury and organized forces, much more powerful, have prevented any possibility that these other sources of revenue be found. For many years now, the gradual draining of the resources of the home owner has been understood and the necessity that other sources of revenue be found has been admitted. Yet, today, the home owner stands alone, watching the tax rate mount, and impotent. His chances of relief are remote in his present unorganized state and his seeming indifference does nothing to alleviate his present condition.

TAX CUT WITH HOME OWNERS' HELP

True, not all home owners are indifferent, but too many of them sit idly by waiting for the other fellow to do battle. Whenever an opportunity is offered to help themselves they make but little effort and the measures that might aid, die aborning from lack of support. Such an opportunity is now offered in three amendments to the Internal Revenue Act

sought for home owners by the National Association of Real Estate Boards and devised by a Boston realtor, Joseph W. Lund of R. M. Bradley & Co., Inc. These amendments, if enacted by Congress, will definitely help the home owner. They were drawn up in an attempt to give owners of homes parity with owners of other property.

These amendments would provide:

1. That the home owner be allowed to take depreciation on the home which he occupies. Homes are recognized as capital assets by many other departments of Government and should, therefore, be depreciated on the same basis as other assets.

2. That when a home owner exchanges his home for another, he not be taxed on an imputed profit but only on such profit as is realized in cash.

3. That home owners be permitted to deduct losses in the case of a sale, especially since they are now taxed upon any profit realized.

In commenting on the introduction of these amendments, the Washington realtor committee declares, "If Congress will adopt this legislation immediately, it will provide added and needed incentive to home ownership, and, therefore, to increase our housing supply."

MUST STAND UP AND BE COUNTED

Unquestionably it is high time that a home owner be allowed to take depreciation on the home he occupies. He is taxed enough—and more than enough as it is. But he will continue to pay—if he lends no support to the measure. And the extent of the support will be seen in the number of letters received in Washington by the Congress—particularly the individual Congressman and both of the Senators representing the home owner there.

Unless the home owner is concerned—nobody else is going to be. It's a simple test—and up to the home owner. He can sit back and allow his representatives in Congress to assume that these amendments are not important to home owners or he can sit down and, with a letter, lend his support. He can, too, assert that the relief he would get from such a change in the revenue act wouldn't be enough to put in his right eye. Yet, it is from the little things that he may begin to get an understanding of his potential power. And what can be done in Washington can be done just as effectively in his own community—if he will stand up and be counted.

Too many cherry trees in owners' orchards are being cut down now—Washington's Birthday is a good time to start dulling the ax of excessive taxation. The odds are against the home owner—but they are no greater than those Washington surmounted.

Federal and State Aids Defeat Home Rule

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, when municipalities or States accept aid for local services they begin to defeat home rule by the people. This great truth is pungently pointed out by Mr. Claude F. Eames, editor of one of my fine weekly newspapers, the Elkhorn Independent.

Mr. Speaker, under leave to extend my remarks, I include an editorial by Mr. Eames, which appeared in his paper on February 12:

AID AND INDEPENDENCE

The insidious, hypnotic power of State and Federal aid is gradually removing home rule from the communities of the Nation in spite of the fact that everyone recognizes there is no such thing as "something for nothing."

When Elkhorn or Walworth County accepts a hand-out from above, it sells another part of its independence because along with easy money comes rules, regulations, permissions that must be granted from above, and red tape.

Plans are drawn for us in Washington and we are invited to cooperate while the aid bait is held before us. We grab it quickly, because, we reason, somebody else will. Suddenly we find that we are going through the motions of running our own business according to the formula provided by somebody we never heard of.

Somewhere along the line we have forgotten that Government's only source of revenue is us and that we are furnishing the money for Federal spending. We have lost sight of the fact that after the money is out of our hands somebody else decides how it shall be used. And only those who conform to the master pattern and regulations will benefit.

Costly governmental machinery takes money from us in the highest taxation program in American history. An expensive bureaucracy juggles our money and takes its cut for admihistration costs and then sends what is left back to the people, usually in a different distribution program than was used in the collection.

All these things are contributing factors in creating the highest peacetime budget in the history of the United States. This spendthrift, wasteful Government, which asks $37,000,000,000 has gone so hog wild that it tosses billions around like small change, knowing full well that if it runs short, that inexhaustible supply will always be handy—the people!

It is high time this Nation took stock of its future. It is time Walworth County people surveyed their own situation and discovered a few of the places where Federal money flows freely. The termites of a strong central government are busy at the foundations of democracy.

Address of Hon. Mary T. Norton, of New Jersey

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1948

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Representative MARY T. NORTON, of New Jersey, at the Jefferson-Jackson dinner, Mayflower Hotel in Washington, Thursday, February 19, 1948:

Tonight we and Democrats everywhere are honoring Thomas Jefferson and Andrew Jackson, one the founder of the Democratic Party, the other the great defender of Democratic ideals. The Democratic Party has come a long way since the days of Jefferson and Jackson and we want to see that party, which combines the ideals of these two great patriots, continued and strengthened throughout the coming years with distinction and honor. Through the years, and particularly the last 16, the Democratic Party has made a great contribution to our country. It is, and always has been, the party of the people, a progressive party that has been responsible for most of the humane laws on our statute books, laws which have as their objective prosperity for the farmer, a living wage for the working men and women of America, security for the aged, and higher standards of living and education for all of our people. These, and many more laws, have been enacted under the leadership of a great President, Franklin Delano Roosevelt, and they will be continued and improved under the able leadership of President Truman.

However, all that we have gained in the last 16 years will be lost and the welfare of the common man, who is the bulwark of this Nation, will not be improved if we do not re-elect our President and return a Democratic Congress.

That, I can promise you, and, if you need proof, I can refer you to the record of the Republican Party in the Eightieth Congress and challenge you to point to a single outstanding act of this Congress to benefit the people of America or of the world. The Republicans have had their opportunity in the 14 months that they have controlled Congress, and how miserably they have failed. Even the Marshall plan, which should be nonpartisan, and which would do so much to establish a lasting peace, is being jockeyed around and made the same kind of a political football that succeeded in destroying the League of Nations following World War I. Are we to go through that same agony again? I say that we cannot if America and Europe are to survive and, whether we realize it or not, the survival of civilization itself is at stake this time. Make no mistake about that. We are faced with a tremendous responsibility and we must meet it. I know the Democratic women will do their part, particularly those women whose sons have made the supreme sacrifice in the late war. They know the price paid for war in tears, in suffering, and in sacrifice. We know the Democratic Party is responsible for the United Nations and the Marshall plan, which we hope will go far to end war, and we know that if either or both is to survive, we must reelect President Truman and a Democratic Congress. This, I believe, will be the No. 1 reason why women will support the Democratic Party this year.

Another, and very personal reason, is that the Republicans in Congress voted 9 to 1 to destroy OPA and brought about the highest food prices in our time. This will be remembered on election day—and there are 2,000,000 more women than men eligible to vote this year. Some people claim the women helped to elect the Republicans in 1946. Well, if they did, I know they have bitterly regretted it. It is true that women were tired of restrictions, tired of standing in line to buy food, and they foolishly thought the Republicans could improve conditions. They wanted a change. Well, they got it and what a change it has been. When we had to stand in line with coupons, we were treated fairly, and, although we fed a great Army and supplied our Allies with food, we were still able to get our share of food at reasonable prices, and feed our families properly because the price of food was controlled through the entire war. We did it through OPA but the record shows that the Republicans destroyed OPA. If you need proof of that, I call to your attention a statement made on February 5, 1948, in my own State by Senator WHERRY, acting majority leader of the Senate, before the Middle Atlantic Lumbermen's Association, and I quote, "I do not need to remind the membership of this association that it was the Republican leadership in the Senate and House that was responsible for ending OPA." Now that price controls are gone, we can look longingly at the nice cuts of meat and other foods, which only the rich can afford to buy.

Yes; women have had enough, and I predict they will come back to the party that gave the workers enough to eat at fair prices, a chance to live, to educate their children, to save for their old age, and to enjoy some of the comforts of life. Mr. President, we women are going to be a great factor in your reelection this year, and we shall elect a Democratic Congress to support you in your program. This is a challenge, and we shall meet it. And it would be a good idea and strengthen our organizations, if it were suggested to the leaders of our party that women be given a greater share in the policy-making councils of our party, particularly young women. I am old in years and 28 years old in service to the Democratic Party. I humbly acknowledge a great personal debt to my party for the privilege of serving nearly 24 years in Congress. I have no axe to grind, and my time is running out, but I do want to see more qualified women recognized for what they are worth. Women are willing and anxious to work.

The mothers of this country do not propose to be again separated from their husbands, their sons and daughters, and again wait in an agony of suspense, wondering whether or not they will receive that fatal message.

They are going to vote for the party and the candidate who show by specifics that they, too, want peace.

The Democrats will win this coming election if the campaign is waged in the image of Jefferson, Jackson, and Roosevelt.

We must be courageous and forthright.

We must face issues and not evade.

We must fight and not conciliate.

We must speak the truth and not mouth a lot of platitudes.

We must draw the lines clearly. We must be the people's party in spirit as well as in word.

If we are, we will elect a Democratic President and a Democratic Congress to support him.

In Favor of Library Demonstration Bill

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1948

Mr. PATMAN. Mr. Speaker, I would like to give my views on the library demonstration bill.

I have studied the bill thoroughly and I am convinced of its merits. It seems to me to be the soundest approach to solving the problem of our 35,000,000 bookless Americans. The money required for the plan is indeed modest compared with the good it will do.

This bill would do a lot for my State of Texas, as well as for other States. There are more people in Texas without library service than in any other State. Over 3,000,000 Texans, or about half of our population, do not know what free public library service is.

Texas is first in a lot of things, but when it comes to library service we have to take thirty-eighth place among the other States. Of the 254 counties in Texas, 147 have no public library within their bounds. And only 33 counties have county-wide free library service. I would like to see this bill passed so our State library could have some help in getting libraries set up in these areas without them. I am sure there are other States who need Federal help just as much as Texas does.

One argument that has been raised about the bill is that the Federal Government will be getting involved in something the States should take care of. I think most of you will agree that Texans as a rule are pretty independent people, and will not favor any action which might take away their rightful powers.

Well, the people in my State are definitely in favor of the library demonstration bill, so at least there are a great many people who do not thing it invades States' rights.

I think one of the encouraging features of the bill is that it affords Federal aid for stimulating Nation-wide extension of free library service with initiative and full control of the movement left to State and local authorities.

I have here a collection of editorials from Texas papers which I want to submit for the RECORD. They point up the need for library service in Texas and the United States as a whole, and express the people's attitude toward the bill.

[From the San Antonio (Tex.) Express of May 8, 1946]

TEXAS' STAKE IN THE HILL-DOUGLAS LIBRARY BILL

One particularly sound feature of the Hill-Douglas bill now before Congress, is that it would afford Federal aid toward stimulating Nation-wide extension of free library facilities with complete assurance that initiative and full control of the movement would reside in State and local institutions.

With modest joint Federal-State financing, the proposed 4-year program would demonstrate—by working examples—how local initiative and resources can establish and maintain free public libraries. The effort would be concentrated in rural districts now most backward as regards library facilities to prove their worth in raising living standards, affording recreation and inspiring cultural improvement.

The bill specifically limits Federal interest to purely fiscal matters and progress reports. The State library agency—after consultation with local authorities—would design the detailed demonstration plan in each instance. The program would be entirely State operated; responsibility for selecting books and personnel, scheduling the services to be rendered, and all other related activities would be reserved to State and local officials and their advisers in the library field.

Previous experiments in some States support the theory behind the library-demonstration bill. When the 4-year program shall end, the people in the selected demonstration areas will strive independently to maintain the library facilities which they will then appreciate. The examples offered by the test areas will show State legislators and their constituencies the merits of State extension service for raising local educational levels through library service. Counties already possessing such facilities will benefit indirectly, but appreciably through resulting general improvements in the service and clearer popular understanding and support of the library movement.

Texas shares to a discreditable degree in the Nation's large number of poorly educated and relatively uninformed adults, to whom free public libraries offer the best opportunity for self-help under expert guidance. Texas is one of the 13 States with 45 percent or more of their population lacking public-library service.

[From the Wichita Falls (Tex.) Times of May 2, 1947]

UNITED STATES SENATE LIBRARY BILL VITALLY CONCERNS TEXANS

(By Leslie Carpenter)

WASHINGTON, May 2.—Texas has a big stake in the library demonstration bill which comes before the Senate Education and Labor Committee for hearings in May.

Texas has more people without library service than any other State. Almost 3,500,000 Texans do not have access to any libraries. This huge figure represents nearly half the State's population, and it represents 10 percent of the total number of people in the United States who are without libraries. The national figure is 35,000,000.

The Senate bill, co-authored by a Democrat and a Republican, Senators LISTER HILL, of Alabama, and GEORGE AIKEN, of Vermont, would take great strides toward improving library service in rural communities. It would appropriate $25,000 for each of 5 years to the State library organization in each State. The State group would then use the money in any way it determined to demonstrate better library service in rural areas. Each State could also obtain up to $75,000 in addition in Federal money for all 5 years by matching it dollar-for-dollar.

The idea behind the bill is that after rural dwellers are given a 5-year demonstration of good libraries with Federal money, they will want to continue it and will be agreeable to supporting it with their own local tax moneys.

TOWNS TOO SMALL

"Take west Texas," says Paul Howard, formerly of Fort Worth, who is director of the national relations office of the American Library Association in Washington, "You drive hundreds of miles and don't find a town large enough to support a good public library. That's the reason Texas stands out as first in having the most people without library service."

What's the solution? The American Library Association thinks the best one under such conditions is to establish one good library for a group of several counties. Enough people would live within the area to support the library. The books could be distributed throughout the area by bookmobiles—trucks carrying books right to the ranch house or farm home; general stores could distribute books for the central library, with the stores' supply of books being changed frequently by the library for variety; schoolhouses and churches could also act as distributing centers; and the library itself would be open for those who could come.

[From the San Antonio (Tex.) Evening News of June 5, 1946]

WHY FARM LEADERS APPEAL FOR RURAL FREE LIBRARY SERVICE

Farmers' Union and National Grange lately expressed strong, informed support of the public library service demonstration bill now before Congress.

Leaders of those farmers' organizations know only too well that of the 35,000,000 or more people estimated by American Library Association to be without any free library service whatsoever, the great majority are in rural areas and their small communities—such as contain the larger part of Texas' population.

Those leaders agree with Dr. Luther Evans, Librarian of Congress, that "the level of information of our people as to current problems has to be raised if we are to meet our responsibilities." With Dr. John W. Studebaker, United States Commissioner of Education, they perceive that "public library service is truly an essential factor in the educational program of the Nation."

Though the proposed measure is perhaps too modest a beginning—the farm leaders' only criticism—the plan it would finance has proved practical. The Federal-State funds to be allotted would enable demonstrations of library service in areas where the people are unfamiliar with its manifold benefits and with the relatively low cost of establishing and maintaining local libraries.

Once the demonstrations had been afforded the people in most such towns and counties, the outside financial support would terminate. The local populations themselves then would decide whether to forego library service such as they had been enjoying, or continue its maintenance on their own. Experience in several States shows that most would choose the latter course.

The Hill-Douglas bill would grant State library agencies full responsibility for planning the demonstration program within each State. Two general types of plans could be submitted—one for a basic demonstration using $25,000 a year for 4 years, financed solely by Federal funds; the other an expanded plan with an additional $25,000 to $50,000 in Federal funds, matched by the State. The plans thus could range in each State from $25,000 to $125,000 annually for 4 years.

Texas needs the maximum expenditure. More than half its population now has no public library service, and additional thousands are inadequately served. The program proposed would stimulate the continuing work of the people's library movement for Texas and the planned expansion of this State's library extension service.

Despite its obvious merit, the Hill-Douglas bill is moving too slowly toward final passage—bogged down behind more sensational issues which lately have involved Congress in wrangling. Firm expressions of support from still more individuals and organizations might speed its approval, however, and the need is urgent enough to warrant that popular appeal.

Make Meharry Medical College a Southern Regional Educational Institution

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1948

Mr. EVINS. Mr. Speaker, the meeting in Washington yesterday of southern governors in connection with the providing of regional educational institutions was a momentous one from the point of view of harmony, unanimity, and cooperation—all present favored the proposal for providing regional schools of higher learning in the South. There were no dissents or disagreements. The governors of 15 Southern States have completed action upon a compact to expand educational facilities for Negro students desiring to take advanced educational training in Southern States. There remain only two steps to be completed to bring this forward and progressive move into reality, namely, approval by Congress of House Joint Resolution 334, giving the consent of Congress to the compact of the Southern States on regional education, and two, passage by the respective legislatures of bills approving the joint compact for the purpose indicated.

Included within the plan is a specific provision for the acquisition by the States of Meharry Medical College, a class A medical and dental college for Negro students in Nashville, Tenn., to be jointly owned and operated by the Southern States. This is but a forerunner of other projects to benefit professional students throughout the South. Plans are under way for the establishment of schools of veterinary, science, forestry, agriculture, and schools providing other specialized training. The States and Federal Government should cooperate to the fullest extent in providing adequate educational opportunities. The approval by Congress of the pending resolution will facilitate this movement and certainly constitute a forward step in the right direction.

Mr. Speaker, in this connection I desire to include two editorials from leading newspapers in Tennessee, namely, the Nashville Tennessean and the Nashville Banner, concerning the acquisition of Meharry Medical College by the Southern States and its operation under the regional educational plan.

The editorials are as follows:

[From the Nashville Tennesseean of February 10, 1948]

THE NEW ERA

The signing of a compact between southern governors for the establishment and support of regional institutions of higher education for Negroes and whites marks a historic advance for this portion of the country.

Nine governors have signed the compact. Four others have signified their willingness to do so.

Enabling action by State legislatures and Congress is still necessary before the plan begins to function, but no serious opposition is expected.

Governor McCord, of Tennessee, is to be commended for the leadership he has exercised in working up the plan and promoting its adoption.

Nashville in particular is pleased that the compact will assure continuation of Meharry Medical College for Negroes here and a widening of its influence and activity.

The Southern States have long been plagued by educational headaches. Paucity of funds and the need for maintaining dual facilities have been the chief stumbling blocks in the way of educational adequacy.

The new era opening for the South has been reached by changing from sectionalism to regionalism. It is a happy and progressive step which may well lead to others.

[From the Nashville (Tenn.) Banner of February 14, 1948]

OPPORTUNITY KNOCKS VIA MEHARRY PLAN

There is every good reason for the Meharry Medical College plan—transition into a regional school, for use of all the Southern States—to be adopted. There is every good reason for it to succeed.

It was approved in substance when Gov. Jim McCord proposed it last October before the Southern Governors Conference. The idea was sound, and recognized as the ideal solution to a great present and growing need.

It received further substantiation, as a practical, worth-while, forward step, when five southern governors—meeting here as the committee on regional education—inspected the Meharry plant and went into further details of the plan. And we anticipate that when this committee makes its report to the Southern Governors Conference that body will sanction it and go to work on it immediately for full materialization.

It merits that instant treatment to clear whatever hurdles remain; as, for instance, congressional approval, which is necessary for any interstate commitments of appropriations and spending. As another instance, sanction by the State legislatures whereby the States in question can avail themselves of it.

We have said time and again that the South can solve any problem confronting it; that such problems—relating to individual States or to States regionally—belong in hands familiar with them and capable of handling them intelligently, without the handicap of kibitzing, intrusion, interference from afar. We have said that the South is not remiss on matters of duty toward its citizens. And these points bear repetition.

Institutional facilities exist to be used for this purpose. Meharry Medical College exists to train doctors, nurses, dentists, etc., as it has trained them and sent them out to work with distinction all over the United States. The record of its achievement is excellent, and used on the grand scale contemplated in this plan, the record of usefulness can be tremendously magnified.

And use of this plan with respect to Meharry, or even contemplation of the plan in the light of what it can accomplish through that institution, suggests its worth in the whole field of higher education. For the South possesses other great institutions of Negro education where a similar working plan can be devised.

The South, we are very sure, is in favor of that.

Meharry's favor of it speaks for itself. Meharry needs the support this plan would provide, enabling it to meet an economic situation so serious that it has been threatened with closing unless help can be secured. Help by the means suggested is the best that could be forthcoming.

Meharry has discharged its responsibilities as an institution, and admirably. The Southern States can discharge a like responsibility by availing themselves of the facilities at hand.

The plan is available, and the facilities are available. Let's use them. Let's speed this plan into full maturity.

European Recovery Program

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1948

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include an address given by the gentleman from New Jersey, the Honorable CLIFFORD P. CASE, at the dedication service on European recovery program at the Fifth Avenue Presbyterian Church, Sunday, February 22, 1948. The remarks of the gentleman from New Jersey [Mr. CASE] follow:

Everyone hopes that a European recovery program will succeed. Most of us believe that it can succeed. But we all know that it can fail.

For its success—for the European economy to be restored, or, more accurately, remade, so that it can maintain itself—many difficult problems must be solved, many uncertainties must be happily resolved.

I am confident that shortly Congress will authorize, and the great weight of American

opinion will support, an adequate and workable European recovery program. We shall do so soberly, with full recognition of the difficulties, with full appreciation of the uncertainties, with full awareness of the heavy cost. And because this is so, I believe that when the record of our century is written, the participation by the United States in the European recovery program will be recognized as one of the great conscious acts of faith in all history.

It is well, I think, that we should ourselves recognize that this is so. Nor does it detract from the importance of the act or lessen its significance that it is, as I am convinced it is, the most effective action we can take in the interest of our national security or for the purpose of establishing and maintaining a peaceful world. There is nothing unworthy in either of these objectives.

But even more important than the establishment and maintenance of a peaceful world is the kind of world we are able to maintain.

Peace and order, of a sort, can exist under a dictatorship. Quiet and stability can be maintained, or enforced, in a society which denies the dignity of the individual, which denies the existence of the human soul, which denies God.

It is not extravagant to believe, as I do, that the maintenance and restoration of these transcendent values in many parts, if not all, of western Europe depends upon the successful working out of the European recovery program: How much of our heritage of freedom had its origin in these very countries. How appropriate that we should now be able, in a measure, to repay that debt.

In planning and in carrying out the European recovery program, we must, of course, be concerned for the most part with cold, impersonal economic facts. Then, too, the magnitude of the problem requires that the program be essentially a relationship between governments, as opposed to relationships between the peoples of one nation and those of other nations. It is, therefore, good that we should pause from time to time, as we do today, to consider the moral aspects of the matter and the spiritual factors which are involved.

But faith without works is vain. And so I suggest that in this meeting of dedication today we should not be content with dedicating ourselves to thinking correct thoughts about the European recovery program and its high purposes and objectives. Each of us should also dedicate himself to the most effective participation of which he, as an individual, is capable in the effort to insure the success of the program.

One obvious form of such participation can be to urge and support sound action by our elected representatives in authorizing and administering the program insofar as the United States is concerned. Important as such activity is, however, we cannot stop there. It is clear beyond a question that the success or failure of the program, in the final analysis, depends not only upon what we in the United States or our Government does, but that it depends even more upon what is done in London, Paris, Rome, and the other capitals of Europe and upon what is done by the peoples of the European countries themselves.

Consider, for a moment, what must be accomplished to insure the success of the program.

Trade barriers between the nations of Europe must be broken down, internationally integrated industrial and agricultural production must be brought about, internationally integrated production of electric power and transportation and communication are vitally required. A high level of trade between eastern and western Europe—throughout the iron curtain, if you will—as well as with the rest of the world must be established. All this, in addition to the establishment within each country of sound fiscal policies and the development within each country of its own agricultural and industrial potential to a level far higher than ever before existed. And, further, conditions of political stability must be maintained.

To accomplish these results requires that the peoples of Europe rise above national aspirations, prides, and jealousies which have been nurtured for centuries. The program cannot succeed unless this is done. Many countries will want—indeed, they have already requested—independent self-sufficient basic industries; for example, a steel industry, an electric power industry, and the like. These requests cannot be granted except insofar as they fit into an integrated international program and many of them will have to be denied.

To induce the various countries and their peoples to accept such disappointments as a necessary contribution to the common effort will be a task of extraordinary difficulty. Especially is this so because the forces interested only in destroying the program will appeal to all the most selfish aspirations, to all the worst motives, to all the basest instincts of peoples whose moral and spiritual strength has already been greatly weakened by the ordeal through which they have gone and which they are still undergoing. They will be most susceptible to the suggestion that the refusal to grant to their particular countries the full measure and exact kinds of assistance which accord with their individual narrow desires represents but another attempt at imperialist dictation by the great colossus of the West.

This, I am convinced, is the very heart of the problem. Success or failure of the European recovery program, with all that it means to the peoples of Europe, to us and to the world, depends, first, upon bringing home to the peoples of Europe a clear understanding of the communal effort which is required, and, second, upon persuading them that wholehearted participation in that communal effort is in their own best interests.

It is here that the greatest service by the American private citizen is possible. Governmental efforts through the Voice of America and otherwise must be employed to the greatest possible extent. But they alone cannot succeed. Only by innumerable, direct, personal contacts between the people of America and the people of Europe can the latter be persuaded, first, of our own good intentions in the matter and, second, of the vital part which they themselves must play.

There are many ways by which the human relationships between our peoples and the peoples of the participating countries can be improved; by which we can avoid and eliminate where it exists, the natural resentment which one obliged to accept help from another feels toward his benefactor, the cynical belief that our actions are motivated essentially by self-interest which has given rise in certain quarters to the complaint that Uncle helps himself.

The Friendship Train, for example, is an outstanding instance of personal contact between the peoples of America and of Europe. It had, I am told, a most impressive effect abroad. American communities have adopted European towns and villages and have helped them to rebuild. On a less ambitious scale, American families have adopted European families or groups of European children. The rebuilding of bombed or ruined churches and synagogues in Europe, with the direct help of individual Christian and Jewish congregations in this country is another example of the manner in which the individual American can directly reach the individual European and become not only a source of material help but a moral and spiritual inspiration as well.

Activities of this sort should be continued and broadened. In addition, direct personal contacts between individual Americans and individual Europeans and between representatives of American churches, schools, the press, industrial and labor organizations, professional and scientific societies, libraries, clubs, service, fraternal, and other organizations and groups with their European counterparts are of vital importance. Everyone of us who is associated with any such organization should see that such contacts are established on every possible occasion. Through such personal communication, more effectively than through any governmental action, propaganda, or organized publicity, can the people of this country bring to the people of Europe, and especially to those in positions of leadership in private as well as in public life, an understanding of what the European recovery program requires on the part of their peoples and their governments. A suggestion to which the present occasion naturally gives rise is that there might be organized on the widest possible scale in the churches of Europe services of dedication to the principles and purposes of the European recovery program similar to this service today.

The importance of activities of this sort to the success of the program cannot, in my opinion, be exaggerated. Without the human relationships, the intellectual understanding of the problem, and the moral and spiritual lift which they alone can engender, I do not see how the program can succeed. Herein lies the responsibility of the individual American private citizen, the challenge which no one of us can fail to meet.

China Needs Military Help

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, no less an authority than General Chennault says that China must have military help if she is to survive as a free nation. He is willing to return to this country and testify before a House committee. As part of my remarks I include an article by Mr. Farnsworth which appeared in the Washington News on February 24.

AID FOR CHINESE IS UNITED STATES DEFENSE, SAYS CHENNAULT

(By Clyde A. Farnsworth)

SHANGHAI, February 24.—The question of aiding China has become a question of defending the United States, Maj. Gen. Claire Chennault said today in an interview.

"Economic assistance now planned may help, but at best it will be only a partial answer to this urgent problem unless it is preceded or accompanied by decisive military help," said the retired general who formerly was chief of the Flying Tigers.

General Chennault, who may be invited to Washington to testify on the China aid program now before Congress, said he would be happy to accept such an invitation.

General Chennault's view is that Korea, where a Sovietized state was proclaimed last week, and Manchuria, where one may be proclaimed soon unless China gets military assistance, are the eastern anchor of the strategic belt across Asia which Russia wants to control in order to have freedom of action in Europe.

For that reason he believes a strong, friendly China could be America's greatest insurance against a third world war.

"TIME FUZE"

The situation in Manchuria, where the Nationalist government has been losing to Chinese Communists armed by Russia with captured Japanese weapons caused General Chennault to write in a dispatch to the Scripps-Howard newspapers 3 weeks ago that the time fuze of World War III was burning there.

He recommended American help for China—arms and ammunition and other supplies, and a corps of air and ground technicians to provide military advice.

The Chennault dispatch preceded presentation of the State Department's program of non-military aid for China.

The State Department's subsequent disclosure of new contracts for the sale of surplus American goods to China left General Chennault of the opinion that the United States Government is still not facing the realities of the situation here.

"Surplus war goods will not save Manchuria and probably will not save China," he said, "but our surplus talent of technical, tactical and strategical advice and direction might.

"China, in a strategical sense, is a defense frontier of the United States. A defense frontier when threatened deserves more than surplus goods and token economic assistance.

"DOWN A RAT HOLE

"Without intelligent military support to insure the continuity of the Nanking Government—which is the only government presently possible in China except a Communist puppet regime—General Marshall's proposed $570,000,000 may disappear like sand down a rat hole—a Communist rat hole.

"Difficulties of the Chinese Government are almost beyond comprehension, through no fault of its own. As, for example, the situation in Manchuria. There the Central Government has been trying almost hopelessly to undo our own misstep at Yalta.

"The time has passed for Americans to quibble over helping the Chinese Government because it fails to come up to their highest expectations. It is no longer a question of whether we should help China. It has become a greater question of whether we should help ourselves—whether we can defend ourselves on the Asiatic continent."

General Chennault said it was "questionable" whether the American position in Japan could be maintained with China lost.

"The first thing Washington should do is to take the handcuffs off the American Advisory Group," the general said. "As matters stand, the advisory mission gives the false impression that the United States is trying to help China militarily. Actually they have a dozen officers with Chinese troops in one troop training camp in Formosa, hundreds of miles from China's battlegrounds."

General Chennault thought that military advice alone, even if rendered at China's battlefronts, would prove insufficient. He said the situation called for "a bold Chinese-American partnership" in both advice and direction of China's efforts in aerial and ground warfare as well as in such subsidiary services as communications and supply.

"Moreover this partnership must be backed up by unstinting shipments of war matériel and a strong program of economic rehabilitation.

"Let's quit arguing about whether Nanking is 'reactionary' or whether Chinese Communists are 'agrarian' reformers," he said.

"Facts deny both propositions, I believe, but even that doesn't matter now. What does matter is that the United States is fast losing China as a defense position against world communism."

Curb Controls

EXTENSION OF REMARKS
OF
HON. ELLSWORTH B. FOOTE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1948

Mr. FOOTE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include an editorial from the New England Homestead of February 14, 1948:

During the war the Nation was subject to controls of many kinds. We gave a sigh of relief when they were lifted and hoped that they were gone for good, but once again we are threatened with a renewal for this or that purpose. We have learned from past experience that once Washington starts on control measures, there is no end to their operations, for one measure inevitably leads to another, and each new control means an army of controlists and an anything but happy public. Remember what happened in Russia and in Germany, and what's happening in Britain today under socialistic control. It could happen here. Our past experience with Government control and its resulting racketeering and black-market operations should not be forgotten. We need more statesmen and fewer politicians down Washington way.

AMVETS Pledge

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1948

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include an address delivered over radio station WHO, Des Moines, Iowa, on January 25, 1948, by Edgar C. Corry, Jr., national commander of the AMVETS:

This is the third winter of a peace which really is not a peace. It is the third winter which finds the world tottering on the brink of uncertainty about the future. There is a growing, permeating fear almost everywhere that another war will come. It is neither a pretty nor a welcome outlook. But where and when and under what circumstances war will come again, those apparently are the only factors missing insofar as an increasingly great number of people are concerned.

With each passing moment, with each tick of the clock, more and more individuals and nations are ready to give up the ghost of our newborn, hard-won peace which began with the end of World War II. Here and now, however, let me say that AMVETS do not believe that another war is coming. We know within our hearts, because of the sacrifices already made by so many of our comrades of War II, that another war must not come. And it need not come if we will strive as hard, as sincerely, for a permanent, workable peace as we did to win the military victory in the late global conflict.

It is axiomatic that it is better to win than to lose a war—but in some ways, not much better. For no one ever really wins a war. America paid a staggering price for victory—she paid with the lives of her young men; she paid by fantastically draining her natural resources, she paid by placing an astronomical burden on her present citizenry and upon generations yet to come. Such was the price of our victory. But victory was not just an empty cause, for today the world is free of the totalitarianism of the Nazis and the Fascists. And once again we have unequivocal proof that when America fights, she fights for humanity.

We of AMVETS know, as does every straight-thinking American, that another war could—perhaps would—mean the end of our civilization. With such a prospect in the event of another conflict, the just cause (that is the human cause) does not become one for which to fight a war. The just cause now becomes the matter of securing and maintaining a peace—a peace that must work.

Before going any further, gentlemen, let us agree on a definition for the word peace. According to Webster, there are several definitions—one being freedom from war. If we accept this definition, then the United States is at peace and the world is at peace. Certainly there are racial strifes, but there has been no formal declaration of war—therefore the world must be at peace. But Webster has another definition. He says peace is spiritual content. And I think if you ask the man on the street, he will agree with this last definition according to which there is practically no peace anywhere.

The fact that the American public now accepts this second definition is enough to restore our faith in miracles for it proves that our country has come of age. It proves that the sense of responsibility which took us into the last war has developed into an adult conception of the Golden Rule. It proves that this country has discarded isolationism and has assumed her rightful place in the family of nations. I use the word "family" advisedly for we now believe in a brotherhood of man that spans national boundaries.

Maybe you are thinking—but haven't we always believed in being our brother's keeper? This country was founded on a completely new philosophy of individual liberty and personal security, which was established in our remarkable Constitution and Bill of Rights. With the Monroe Doctrine, we proceeded one step further by proclaiming national integrity and freedom from aggression for this continent and the Americas to our south. In World War I we advanced again. We had so broadened our concepts that this country was fighting to make the whole world safe for democracy. We won that war but we lost the peace. We failed to achieve our great aim because we weren't big enough to accept the rules of the game. We would not join the League of Nations, we slammed our door in the face of the world and retreated back to our ideas of 1800. So immersed were we in our own selfish problems that we ridiculed and humiliated the men in this country who tried to awaken us in the thirties to what was going on all around us. We paid no attention to our military leaders, our scientific leaders, our educators, and certainly not to our spiritual leaders. The physical fact that we were separated by two oceans led us to believe that we were chosen people and that we could remain aloof from human misery and demagogs that fattened on it. It took a bomb in our own backyard to show us what deluded fools we had been.

Within a year this country reversed its train of thought. Within a year we decided that maybe the peoples of the world were worthy of the rights we so cherished for ourselves. We proclaimed that all people everywhere were entitled to the four freedoms, and we became quite suspicious of the fact that if the peoples of the world lacked these four freedoms that we could not hang onto them ourselves for long. While the war was still being fought and its outcome unknown we

fostered and participated in the establishment of the United Nations. Now, at last, we sincerely believe we are our brother's keeper.

So the formal fighting has been terminated for more than 2 years, but America knows no spiritual content. Thank God. And why doesn't she? Because she has a world conscience now. We promised the four freedoms to the world, and we are responsible for making them available. We are disturbed because they seem further from attainment than they did in 1943. We know that two-thirds of the world is starving. We know that freedom of worship has died everywhere the Red Army has put its foot; the Arabs and Jews in the Holy Land are murdering each other with a holy war promised. The Indians are massacring each other in the name of their respective gods.

What does freedom of speech mean to a Pole, a Lithuanian, a Finn, a Czech, a Hungarian, a Bulgarian, a Yugoslavian, a Greek, an Indonesian, or a Russian for that matter—quick death if he is lucky.

As far as freedom from fear is concerned, the whole world seems to be scared stiff. There is informal war on dozens of shifting fronts. Europe is afraid of being in the middle of another giant conflict, Russia is scared of us and the atomic bomb, and we are scared of Russia and the day when she will have it.

What to do about it? We have made our decision and there is no retreat. We must have faith in the success of the United Nations. We must be ready to carry out any decisions reached by that body. AMVETS pledge their aid wherever it is needed. But the United Nations alone is not enough. The country as a whole must—systematically and dynamically—plan for peace. AMVETS believe at least three sets of blueprints are necessary. One for Asia, one for Europe, and one for America.

The plan for Asia does not seem to exist—it has been sadly neglected, and it is high time that Congress and the people of this country together remember the pledges we have made, and the Russians have made to each other and to China and Korea. Millions of other people of the Orient are crying for the rights which we take for granted.

A master plan for Europe is well under way. To the great credit of our Congress and our people, we are ready to assume our full share and more for the responsibility of the economic recovery of Europe. That the Marshall plan will cost billions of dollars is a foregone conclusion. But to spend a relatively few billions now, as compared with countless billions of dollars and millions of lives in another war is not only the wise course, it is the only course. But there is a calculated risk in the Marshall plan. It will achieve its purpose only if the money and goods are so used as to prime the economic pump of Europe to the point where the recipients can work out there own peace, their own spiritual content. Only thus can the quickening march of communism be stopped. Europeans will be glad to stop it. Let us not worry too greatly about the risk. Congress must take proper steps to insure the wise administration of these funds and we will remember that this country was built by men who took risks, pioneers who were not afraid of failure, scientists who were not afraid of the truth, thinkers who were not afraid of progress, fighting men who were not afraid to die for a faith, and people as you and I who strive to live in the image of the Son of God.

The third plan for peace pertains to America. We have never planned for peace. The President of the United States believed this to be of primary importance when he appointed an Advisory Commission headed by Karl T. Compton, president of the Massachusetts Institute of Technology. This Commission, in its report of May 29, 1947, said that to have national security which AMVETS interpret to mean national peace, we must have the following:

1. A strong, united, healthy, and informed Nation.
2. A coordinated intelligence service.
3. Scientific research and development.
4. Industrial mobilization.
5. A striking air force.
6. Maintenance of the regular Army, Navy, Air Forces, Marine Corps, and Merchant Marine.
7. Unification of the armed forces.
8. Universal training.

AMVETS wholeheartedly pledges its entire support to the foregoing recommendations of the Compton report. Of these 8 points, only universal military training is controversial. The big cry against it is that the need for universal military training implies the belief that war is inevitable. Surely the veterans of this war would be the last to accept the concept of the inevitability of armed conflict. We don't want to fight another war. We don't want our sons to fight another war. We just don't believe that peace is inevitable. Even at the present moment, those allies who cooperate so closely just a couple of years ago are now stalemated in trying to work out a just peace. It is not inevitable that men will agree unanimously. The United Nations is still blocked by the veto power, there is no world police force, there is still no universal control of atomic energy. AMVETS agree with the Compton report which says "It is apparent from the lessons of history and from the experience of the postwar period that the only way in which we can lend authority to our voice in international affairs and inspire confidence in the ability of the United Nations to enforce peace is to maintain our armed forces at a level of efficiency and comprehensiveness that will defy challenge by any would-be aggressor."

Universal military training as conceived by the Compton report is not conscription, it is not training for militarism, it is not training for aggression. On the contrary, it introduces a completely new concept to the world because it is training for defense, it is training for responsibility, it is training for world peace.

History has taught us the hard way that weakness invites attack. England and France practically invited Hitler to march into the Ruhr, Austria, the Sudeten Land, and Czechoslovakia because they were in no position to enforce a command to halt. Hitler's eagerness for war increased as his estimate of the military strength of the democracies decreased.

It was this same logic that guided the Japanese war lords when they decided to attack Pearl Harbor. We know now that the democracies could have prevented this past war had they not been compelled to compromise, compromise, compromise with totalitarian aggressors because of their military impotency. Without the strength to back up our moral position or discharge our international commitments, we are impotent in a world where force is still, unfortunately, a determinant of the right.

Yet all of these plans and blueprints are futile if America does not have a rededication of faith. For faith, not fear must move us. At no other time of the year is the story of faith more graphically told than during the Christmas season. At no time in history has the need of faith, and the absence of fear been more great.

I would like to quote from Judge Learned Hand:

"The spirit of liberty is the spirit which is not too sure that it is right. The spirit of liberty is the spirit which seeks to understand the minds of other men and women. The spirit of liberty is the spirit which weighs their interests alongside its own without bias. The spirit of liberty remembers that not even a sparrow falls to earth unheeded. The spirit of liberty is the spirit of Him who, near 2,000 years ago, taught mankind that lesson it has never learned, but has never quite forgotten; that there may be a kingdom where the least shall be heard and considered side by side with the greatest."

Palestine Partition

EXTENSION OF REMARKS
OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1948

Mr. GOSSETT. Mr. Speaker, we are about to muddle into world war III meddling in other people's business. American leadership in the partition of Palestine was a shameful betrayal of the best interests of the American people. It is sincerely hoped by most Americans that the Security Council of the United Nations will not follow the recommendation of the United Nations Assembly and will not adopt or implement their recommendation for a partition of Palestine.

Our action in this matter has been motivated by cheap political considerations. Mr. Ernest Lindley, a leading New Deal columnist, writing in a leading New Deal paper, the Washington Post, on last December 12 made this damaging admission:

> The policy and tactics of the United States in the Palestine controversy were, of course, influenced greatly by American Zionists. Domestic politics rather than a considered analysis of the interests of the United States has been the predominant factor in our policy concerning Palestine.

In the Evening Star of yesterday appeared a sound, thought-provoking editorial on this subject as follows:

DANGEROUS POLITICS

With the Security Council scheduled to take up the Palestine partition question tomorrow, current news reports reveal the extent of the political pressure which is being brought to bear against President Truman to make him approach this problem from a partisan political point of view.

The President is being told by his New York advisers that he cannot hope to keep that State with its 47 electoral votes in the Democratic column this November unless he acts decisively and promptly to lift the embargo on the shipment of arms to the Jews in Palestine and to bring about the sending of a United Nations police force to enforce partition. This is simply another way of saying that the President will lose the Jewish vote unless he meets this condition.

It seems quite likely that these warnings are well founded, for the Jewish vote in New York is big enough to affect the outcome of an election, and the result of the recent special election in the Bronx indicates that the Jews will vote for Henry Wallace instead of the President if their demands with respect to Palestine are not satisfied. If that should happen, it is a virtual certainty that the Republican Presidential candidate will carry New York State.

There is nothing new about this situation, of course, for minority groups in this country have often used their strategically placed

political power to achieve special ends. But it becomes an especially serious matter in this instance because of the very real danger that the interest of the Jews in the partition of Palestine may cut across other interests that are vital to the security of the United States.

As yet there has been no adequate public examination of this aspect of the problem. Presumably all of the ramifications have been explored during the course of the soul-searching which has been going on within the administration. But the final conclusions and the reasons for them have not yet been brought into the open for public scrutiny.

It should be perfectly evident that there is a national risk in lifting the embargo, in sending an armed force to fight the Arabs or in pursuing any course that might come to mind in this exceedingly difficult situation. And in making our final decision this element of risk should not be underestimated.

It would be compounding the danger to proceed on the assumption apparently entertained by Senator TAFT that a "moderate force" would be adequate to cope with the Arabs. If the British experience means anything, a very substantial force would be needed. We will also be compounding the danger if the decision as to our stand in the Security Council, which must finally be made by the President, is dictated by the question of whether the Democrats are to win or lose New York State this fall. If ever there was a problem which ought to be decided on the most careful appraisal of where our national interests lie—and that, in the long run, includes the interests of the Jews—this is it.

Mr. Speaker, aside from the principles involved in this controversy, America is going to suffer a tremendous economic loss. Leading Arabian statesmen from several of the Arabic nations in the Palestine area have assured me that when America moves into this area to enforce partition, all of our oil concessions will immediately be canceled.

On February 22, 1948, in the Wichita Daily Times, of my home city of Wichita Falls, appeared the following article based on reports of Mr. Oscar Burden:

BLACK DYNAMITE IN ARABIA COULD ROCK WORLD INTO NEW WAR, SAYS WICHITAN

(By Jack Harmon)

Black liquid dynamite coursing through Arabian subterranean shelves could rock the world again in war, according to Oscar R. Burden, 2201 Berkeley, who has the ticklish job of harnessing that oil for its ride to market.

Burden recently returned from almost 8 months in Beirut, Lebanon, where he has headquarters as manager of the western division of the Trans-Arabia Pipe Line Co.

In a land where the are only the rich and the poor, with no middle class—and Russia is pushing her quiet fight for a toehold against England, the United States, and other independent countries—it is Burden's job to lay pipe that will carry oil to market.

But in all the time he was there—from July 1947 until February 11, 1948—no pipe was laid in his western division.

The tap line, as he calls it, is to run from the Persian Gulf in Arabia to the Mediterranean, with the terminal point in Lebanon.

BUILT AIRPORTS

"But we hardly began to complete our objectives," he explained. During the time spent there, Burden said his men "worked on a couple of airports for the Government of Lebanon," did right-of-way work and constructed roads.

Currently their pipe-laying job is stalemated.

"We have considerable equipment stored out in the desert, guarded by the Arab Legion, a group of soldiers from Transjordan that is very well organized and competent," he explained. "The balance of our equipment is stored in Beirut in readiness to take to the line when we have permission to do so."

Burden is hopeful permission may be granted within the 60 days he plans to remain in the United States and confer with Trans-Arabia Pipe Line officials in San Francisco, Houston, or Tulsa.

Syria is holding out on permission to lay pipe, said Burden, a development which came only with the United States' move to have Palestine partitioned. "My opinion might not be in accord with the Government (of the United States)," he said, "but I speak as I see it there."

Then he brought out that Syria never ratified the convention—as they call a contract—made by the Government heads with the pipe line company. The convention was agreed upon by the President and Prime Minister, but not by the Parliament.

Thus efforts to lay pipe across Syria were halted.

APPROVAL PROBABLE

Now in session is the Arab League, composed of representatives from all Arabian countries, he said. Permission already had been granted by the countries of Lebanon, Transjordan, and Arabia. At the meeting in Cairo, it is very likely approval of the line construction will be given, Burden prophesied.

"Right now, we're concentrating effort on the east end in Arabia near the Persian Gulf until we see the results of the meeting in Cairo and what Syria does in the next parliament convening in March," he said.

Burden believes Syria balked because of a belief that "the United States put pressure on smaller nations, influencing them to approve partitioning of Palestine."

"While they (Syria) were very friendly and cooperative when we first went there, they are now just the reverse," he added and said the change of attitude occurred about the time the United States expressed itself on the Palestine partition.

"If Syria doesn't ratify the convention," he offered, "it is very possible the route will go to Alexandria or Port Said in Egypt; that would lengthen the line by considerable miles and involve crossing the Suez Canal."

Then there would be only two countries to deal with—Arabia and Egypt. But the Lebanese, "who will benefit from two large refineries and terminals, are very anxious for us to construct the line, it means so much to them," Burden explained.

OIL MEANS A LOT

Oil means a lot to that country, he pointed out. "If you shut off oil for 1 day there, everything stops. If they stop the sale of petrol, as they call gasoline, business comes almost to a standstill, for they depend on it for transportation."

"When I left there they already were rationing gasoline," Burden said. He reported passing service stations where people were lined up for blocks waiting to get their petrol.

Countries affected by the pipe line are two kingdoms, Arabia and Transjordan; two republics, Syria and Lebanon; and Palestine.

"If a war starts," he predicts, "it will begin there in the Middle East. Russia would like to have that oil."

In Beirut, the temperature is ideal. According to official government figures that cover the last 30 years, the temperature has never been as low as freezing there and seldom much over 100 degrees.

Right now, Burden said, bananas and oranges are plentiful and in full fruit. Gorgeous flowers are prolific and the climate of that section attracts many persons to seashore beaches to lounge and soak up the sun or swim in tepid waters.

Thirty minutes away are snow-covered mountains. In a half hour the vacationist can change from a mild climate to one of ice and snow. After climbing mountain roads which snowplows keep open, there is skiing or bobsledding while looking down on beaches left shortly before.

Mr. Burden is an outstanding businessman who writes from his experiences in Beirut.

Mr. Speaker, it is high time that America should admit she has made a mistake. For the sake of American lives and of American principles, it is hoped that the Security Council, now debating this question, will not accept the fallacious and revolutionary recommendation of the United Nations Assembly. In the sentiments expressed herein I am satisfied the vast majority of the American people concur.

The Socialist's Dilemma

EXTENSION OF REMARKS
OF

HON. GEORGE MacKINNON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1948

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks, I enclose an editorial entitled "Czechoslovakia," appearing in today's Washington Post which I feel would be better entitled "The Socialist Dilemma." It shows the fifth-column position in which the socialists find themselves and illustrates the fact that these Socialists are in reality what might be termed "50-percent Communists."

CZECHOSLOVAKIA

At this writing it appears likely that the Communist coup in Czechoslovakia will be consummated without direct intervention by the Red army, despite the courageous resistance by Dr. Benes and the apparent determination of the elements represented by the National Socialist Party to resist to the end. In Slovakia the Communists, through their control of the police and various important labor unions, appear to have obtained full control of the provincial administration and of the municipal government of Bratislava, the provincial capital. In Bohemia the situation is still confused, although there, too, the Communists through their control of the police seem to have gained the upper hand and to have arrested several National Socialist leaders, including Vladimir Krajina, secretary-general of the party.

The parliamentary situation, which is important only to the extent that Communist control of Parliament would give some pretense of legality to their seizure of power, is even more confused. President Benes remains firm in his refusal to accept the resignations of the non-Communist members of the cabinet and to accept the hand-picked ministry of the Communist Premier Gottwald. The tactics of the (Social Socialist Democratic) party in the crisis are extremely ambiguous and suggestive of a deep fission within the party itself. The Socialist ministers have declined to join the other non-Communist members in resigning from the Government, but the executive committee has called for a Government representative of all parties. The point is, of course, that a combination of Communists and Socialists could command a majority, which

would make possible Communist government by constitutional means which Dr. Benes would be legally obliged to accept.

Elsewhere, within the orbit of Russian power, and in many places outside it, the Communists have shown themselves extremely skillful either in retaining the support of the Socialists until the other parties had been eliminated or in reducing the Socialists to impotence by splitting their ranks. The reasons for this are not entirely clear, but they cannot be ascribed entirely to Communist intimidation. Part of it no doubt arises from a fear of reaction, and part of it from the fact that a party which must compete with the Communists for radical support cannot put itself in the position of seeming to be less radical than its rival.

It appears that, when confronted with the necessity, the Socialists find themselves unable or reluctant to choose between their much-affirmed devotion to parliamentary methods and their eagerness to hasten the advent of socialism. Or rather they have tended to delay the decision until a choice was no longer possible.

District of Columbia Home Rule Bill

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1948

Mr. AUCHINCLOSS. Mr. Speaker, in accordance with the permission granted me to extend my remarks in the RECORD, I take great pleasure in including therein a broadcast presented by the Evening Star, of Washington, over WMAL, entitled "News for Schools With Bill Coyle." This broadcast is brought right to the schoolrooms and is an effort to interest the young students in reviews of current events.

Recently this program was dedicated to a discussion of the proposed home-rule bill for the District of Columbia, H. R. 4902, and it was participated in by various young students 9 years of age.

I consider this a very interesting and constructive work because if the young people of the country become interested in the affairs of their city and Nation and are taught the principles of democracy, we need have little fear of the attacks of any other ideology.

I think that Bill Coyle and the Evening Star are to be highly commended for this constructive work and I am sure that my colleagues will be edified in reading this transcript of the broadcast concerning H. R. 4902.

The broadcast follows:

BILL COYLE. Good afternoon everyone, and welcome to another edition of News for Schools.

You'll certainly remember how the first part of this month the local headlines in the newspaper and on the radio were given over to hearings on the District of Columbia home rule bill that was proposed by Congressman AUCHINCLOSS, of New Jersey.

The hearings were held on Capitol Hill and have now been completed. But while they were going on it seemed that everyone in the District had a chance to say something about this home rule plan—either for it or against it.

And what could you expect? It has been 74 years since the people of the District of Columbia have had a chance to vote. No wonder there was so much interest in this bill.

But those hearings were devoted to the views of the grown-up leaders in the great community of our Nation's Capital. These grown-ups were businessmen, members of the Board of Education—the District Commissioners themselves, heads of civic clubs and many others. What isn't generally known is the fact that this whole business of home rule also was a big topic among the school students of the Nation's Capital. To them home rule is an important thing, too; because if home rule should come to the District these young people in a few years would find themselves the citizens doing the voting, who would be the citizens whom thousands of District residents might even some day elect to an office in the District of Columbia.

So why not give the school students an opportunity to be heard? Well, today we have that special hearing, all for their benefit. And now we are ready for that special hearing—just as if we were conducting it up on Capitol Hill with the subcommittee.

One of the most active groups in discussing the home rule bill and plans for a vote for the District of Columbia has been one made up of several young students at the Truesdell School. They represent the 4-A-B class at Truesdell, and their teachers, Miss Mandras and Mr. Israel. Miss Brown, principal of Truesdell, gave them permission to journey down to the radio station today to present their views.

So we have an important delegation on hand, and we're going to conduct this thing just as if it were a regular hearing, so that the voice of the 9-year older in the District of Columbia can be heard all around the town.

And now, for a little background on the discussion of news in the classroom. First of all, here is our first witness.

ELLEN ANTHOLIS. My name is Ellen Antholis, 9 years old, of 5201 Illinois Avenue NW. Since we've been in the fourth grade, we have been having news discussions twice or three times a week, besides listening to News for Schools each Thursday. We talk about events which take place at home, in the United States, and throughout the world.

One day a few weeks ago, as our class was looking over page 1 of a Washington newspaper, one of our classmates read a line about home rule. When our teacher asked us about it, most of us thought it referred to rules for each of our homes. Our teacher told us to check on it; so we decided to bring in news articles about it. As we brought in the clippings and discussed them, we learned that the plan referred to self-government for the people of Washington. Then we started a news booklet, in which we pasted each clipping.

In each discussion we began to express our opinion about the Auchincloss-Ball home-rule plan. It was quite difficult to understand.

BILL COYLE. Thank you, Ellen. That was very nicely presented. It certainly looks like people in the fourth grade are interested in the home rule along with everybody else.

And now for a few important points of the bill to be discussed by our next witness.

JUDY REDDING. My name is Judy Redding, 9 years old, of 713 Ingraham Street NW.

We knew that as fourth graders it would be impossible for us to learn about every detail of the bill. But we got help from news programs on the radio, news articles from the newspaper, our class discussions, and facts our parents and teachers told us. These are the main points of the Auchincloss-Ball bill we learned about:

1. All adults over 21, except for persons in prison or mental hospitals, who have lived in Washington at least 1 year, would have the right to elect a council of 12.

2. Legal residents of other States who live here would be voters, too.

3. The council of 12 would choose a city manager.

4. The city manager would have 12 departments to help in running the District government.

5. The Auchincloss-Ball bill would not give District of Columbia residents the right to vote for Senators, Representatives, or the President of the United States.

6. When the council and city manager wanted to pass a law, it would go to the House, Senate, and to the President of the United States.

7. If the President, Senate, and House didn't veto the plan, then it would become a District law.

BILL COYLE. Judy, that's very fine, and we are very much impressed by the fact that you have such a fine understanding of what this bill is all about. And now, for some information as to what the class has been doing, we turn to our third witness.

ROBERT MERIWETHER. My name is Robert Meriwether, 9 years old, of 5216 Fourth Street NW.

One day, after we had several news discussions, one of our classmates suggested we vote in our class to see if we favored the Auchincloss-Ball home-rule bill. Of 35 classmates, 32 of us voted, and we all favored the bill. Then another classmate suggested we write to Representative AUCHINCLOSS telling him about our vote. We decided to write to Bill Coyle, too, telling him about it.

When we wrote to Representative AUCHINCLOSS we told him that when we reached the age of 21 we would like to have the right to vote. One classmate told Mr. AUCHINCLOSS that we may seem quite young to decide now, but we hoped to know more about voting by the time we are 21.

Even though we voted unanimously for this home-rule bill, many of the fourth graders had different opinions about each part of the home-rule bill. These are some of the opinions we had.

BILL COYLE. All right, well, we certainly thank that fine witness for having presented us with some of the views of the class, and for informing us on some of the things the classmates have been doing in regard to the home-rule plan.

And now for the No. 4 witness; I wonder if he'll give his name and address.

MARTIN DILLON. I am Martin Dillon, aged 9, of 900 Longfellow Street NW.

The Constitution of the United States gives citizens the privilege of voting. This bill gives this right to Washington citizens. Some of us did feel that only legal residents should really be able to vote for District officials. People who live here but who vote in other States should vote in only their own States.

Our classmates favored having a council of 12. But a few of them favored perhaps 11 or an odd number, so whenever they had to vote, the vote would not come out even.

Most of our classmates hoped that perhaps the bill would include the right to vote for President of the United States, the Senators and Representatives, as well as city officials. Our classmates did favor this bill though, and hoped that later on District residents would get the vote for President, too.

BILL COYLE. Martin, we're much obliged to you. That was very nicely presented, and you had a lot of complicated opinions to report on the part of your classmates, and you did it very nicely.

Our poll of opinion continues on the Auchincloss home-rule bill, and we have witness No. 6 here now. I wonder what her name is.

JOAN YATES. My name is Joan Yates, age 9. of 5024 Seventh Place NW.

Some of the fourth graders suggested that instead of the council of 12 choosing the city manager, the council might suggest five candidates for city manager, then let the people elect the manager. One classmate favored having the people nominate five candidates for city manager, and have the council make the final choice. In regard to the

passing of laws, our classmates thought it might be a good idea if a bill was signed by the President, Senate, and House of Representatives, if they favored it. Then the council would know that their plan for a bill was given an O. K.

BILL COYLE. All right. Now we're getting a very interesting story from our next witness. Thank you, Joan. And now, this is Kate, I believe.

All right, Kate, you just go right ahead. We're all set for you.

KATE BAIR. My name is Kate Bair. I live at 1106 Jefferson Street NW.

We certainly learned much about plans for home rule. And all of our classmates felt that Senator BALL and Representative AUCHINCLOSS were very thoughtful to give so much time working out a plan, and very clever for making it. The children in our class were so proud when we received personal letters from Mr. AUCHINCLOSS. We knew he was a kind person to take extra time to write to us. Here are some of letters we received.

BILL COYLE. Well, that's fine. And now, look who we have here. We have Paul Sandoe, who is going to read a couple of letters for us that came from Mr. AUCHINCLOSS.

You go right ahead, Paul.

PAUL SANDOE. I am Paul Sandoe, age 9, of 5305 Seventh Street, NW.

This is Judy Redding's letter:

"Miss JUDY REDDING,

"Care of Mr. Israel's Class, Truesdell School, Ninth and Ingraham Streets NW., Washington, D. C.

"DEAR JUDY: Your letter of February 6 has reached me.

"I want you to know that I will do everything I can so that you will be able to vote when you grow up.

"Sincerely yours,

"JAMES C. AUCHINCLOSS."

BILL COYLE. All right, now, let's have another letter, Paul.

PAUL SANDOE. This is Joan Yates' letter:

"Miss JOAN YATES,

"Care of Mr. Israel's Class, Truesdell School, Ninth and Ingraham Streets NW., Washington, D. C.

"DEAR JOAN: I have received your letter of February 6, in which you say you want to vote when you get to be 21.

"I will do everything within my power to have a bill passed by the Congress of the United States so that it will be possible for you.

"Sincerely yours,

"JAMES C. AUCHINCLOSS."

BILL COYLE. All right, now let's have a final statement from you, Paul.

PAUL SANDOE. We hope all the boys and girls and their mothers and fathers will think about the home-rule plan.

BILL COYLE. We certainly thank all these fine witnesses for coming down here. I invited them to come and to present their views so that you could know and understand the amount of interest there is in home rule and a vote for the District of Columbia among the school children in our Nation's Capital.

Thank you, members of the 4–A–B class at the Truesdell School at Eighth and Ingraham Streets NW.

Washington Scene

EXTENSION OF REMARKS

OF

HON. ELLSWORTH B. FOOTE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1948

Mr. FOOTE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include a column entitled "Washington Scene," by George Dixon, published in the Washington Times-Herald on Tuesday, February 24, 1948, and syndicated by King Features Syndicate, Inc., of New York Cty:

Even the Jeffersonian-Jacksonian Democrats—I mean Democrats—are pretty well convinced, after the other night's fabulous fiasco, that they can't win with Harry S. Truman.

It cost them a C note per sucker, five cigarettes each thrown in free, to have this conviction pounded home. Mr. Big, as we call him for short, was pathetic.

"Sweetest little feller, everybody knows, doan know what to call him, but he's mighty lak' a rose." He's a sweet little feller, no denying, but they doan know what ta call him—except out on strikes.

The Jefferson-Jackson dough-raising dinner which was spread out over two hotels like a rooming-house tenant, bath convenient, aroused no enthusiasm except as spuriously manufactured. The only spontaneous applause all evening was for poker-faced James A. Farley, who is doing a better imitation of Ol' Man River this season than Jimmy Savo, not sayin' nothin'.

Incidentally, I grabbed J. Aloysius in the barber shop while he was having his kisser simonized for the party and asked if he still had any idea of running for Vice President. He gave me the bland Farley stare and said, "On what ticket?"

It was really sort of heartachy to hear the worthy Democrats, who had just been parading the banquet room with placards proclaiming Truman's reelection in a landslide, putting the slug on him the minute they escaped to the lobby. They should have been singing, "There'll be a two-time in the old town tonight."

Mostly, they didn't care whom they were talking to, either; they were so depressed by the events of the evening their usual political caution had fled. They told each other and anybody else listening they were dead. unless they could find some way of ditching their titular leader—no mean chore, as any patronage seeker can tell you.

"He's a sweet guy," they kept repeating as they wandered from room to room trying to revive themselves with fast snorts. "But he can't open his mouth, even at the party's biggest dinner, without putting his foot in it."

They weren't referring only to the President's sad boner in paying tribute to Theodore Roosevelt when he meant Franklin. They felt he could have picked a more appropriate spot than this $100-a-plate champagne and terrapin feast to proclaim that the Democratic Party was the party of the common man, pledged to the undoing of the "statesmen of the stock exchange" and the forces of wealth and privilege.

All he had to do was look around to see such horny-handed and underprivileged tillers of the soil as James H. R. Cromwell, Cornelius Vanderbilt Whitney, Ed (I'm Going to Keep on Speculating) Pauley, Tommy (The Cork) Corcoran, and the poor little kiddie from the oil tenements of Oklahoma, Perle (of Great Price) Mesta.

Incidentally I am afraid the privilege of feeding the Trumans on the cuff has swayed Mrs. Mesta. I seem to have the distinct recollection that she was a rip-snorting Republican when I met her at the Republican National Convention in Chicago 4 years ago.

But there she was at the Democrats' head table, one hand resting possessively on the shoulder of Margaret Truman. Toastmaster Barkley even called upon her to make a big bow for her splendid work in raising dough for the coffers of democracy.

Parenthetically the money men of the Democratic National Committee have been having a little trouble wth Perle. The lady has been after certain big contributors to kick in with checks.

The money men, however, want these prize contributors to slip it to them in cash under the table because cash does not have to be accounted for and can be used advantageously wherever peculiar or ticklish political situations arise.

Every practical politician on both sides is hep to all this, but not Perle. And the money men feel she is too innocent, or anyway too talkative, to be told these political facts of life.

The lady, as honest as the day is long, is getting to be quite a problem in this respect. as one party stalwart observed wryly:

"She's the Republican Perle in the Democratic oyster."

I really felt sorry for Truman, the way they were conning him at both dinners, in the Statler and the Mayflower. I don't suppose he had a suspicion what they were saying behind his back.

I was glad I was at a table where we were just having fun, although I think I may have detected a note of sarcasm on the part of the blond and beautiful Mrs. Edward D. Madden, of New York.

Lifting a glass of champagne she nodded toward the orchestra, murmuring: "Dear me, how appropriate for here!"

The orchestra was playing: "The best things in life are free."

Fair Employment Practices and Anti-Lynching Bills

EXTENSION OF REMARKS

OF

HON. JOHN J. RILEY

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1948

Mr. RILEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas there have been recently proposed in the Congress of the United States certain measures designed to curb unfair employment practices and to make lynching of persons a high Federal crime; and

Whereas the proponents of these measures do not take into consideration the great progress made by citizens of our Nation, individually and as States, toward achieving the harmony which these acts are intended to promote; and

Whereas the proposed measures seem impracticable and designed to thwart the sincere efforts of our people to settle these matters locally and amicably: Now, therefore, be it

Resolved by the Euphradian Literary Society, a representative student organization at the University of South Carolina, That we are strongly opposed to the fair employment practices acts now pending before Congress, and the antilynching acts.

Brotherhood in Action

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, February 26 (legislative day of Monday, February 2), 1948

Mr. MAGNUSON. Mr. President, I ask unanimous consent that a very able address on the subject "Brotherhood in

Action," delivered by the Senator from West Virginia [Mr. KILGORE], in Washington, D. C., on February 20, 1948, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

When I received your welcome invitation to speak here on brotherhood and began to prepare my remarks I tried to think of the most effective and forceful manner to present to you the real meaning of one of the great truths of American life—a truth that gives invincible strength and resiliency to our Nation and our people; the truth that we are of many races and creeds, but with loyalty to one Nation, one world, and one God.

What I shall say here tonight grows out of my deepest convictions as a believer in Christianity and American democracy. My remarks were prepared for this Sabbath and this house of worship, but they could be delivered in almost any church or cathedral in the land, for they express the ethical ideals and aspirations of all the great religions in our country. They could be made in almost any American town hall or legislature, for they conform to the self-evident truths about democracy which animate all the great parties and statesmen in our land. This unity behind our political and ethical aspirations—freedom and equality for all men—is our strength. The diversity and variety of American life does not weaken that unity; they enrich and enhance it. We represent all faiths, and we are Americans all, united by our belief in the brotherhood of man and the fatherhood of God. It could not, and should not, be otherwise.

Every single American is here because he personally or his fathers before him sought escape from some type of oppression or intolerance in another land. All of us are descended from minority groups that have at some time deliberately sought to breathe the fresh air of freedom and decency in this new land. We are all human and fallible; we all have our quirks and prejudices—but deep down each of us who understands the web of history from which our country grew will check his intolerant impulses and whims.

Even before the Revolutionary War, the distinctive quality of the people in this new country was apparent to visitors from other shores. One of the earliest writers to report on America recounted his amazement at the way the new immigrants from England, France, Sweden, Germany—Anglicans, Methodists, Baptists, Catholics, and Jews—lived and worked in peace. "The American," he said, "is a new man who acts on new principles."

The qualities we cherish—boldness of mind, adventurousness of spirit, respect for the inherent dignity of all men regardless of status, the passion for fair play and a square deal for all, the devotion to living principles as against the dead hand of archaic custom—are not, of course, the monopoly of America or Americans, but I think it fair to say that they are here in fuller measure than they are in the lands from which our fathers came. We have only to recite the names of any representative list of contemporary great Americans—Roosevelt, Eisenhower, Nimitz, Murray, Baruch, Vandenberg, Wagner, LaGuardia, to mention only a few—to realize that no country but America could have produced them, no country but America could have developed and used so completely their great talents.

I say it is no accident that the greatest city in the world today is the one located on that little island in the Hudson where every nationality strain and religious faith, every shade of political coloration, is represented among its people. I think we will agree that New York's greatest mayor was LaGuardia and that he was the most typical of New Yorkers; typical even though he spent his first 25 years in Army posts among the mountain ranges of the West; typical even though his father was an Italian bandmaster and his mother a Jewess from Austria. Diversity is not a handicap to New York. It became one of the sources of New York's strength and greatness.

There are still too many among us who think that they own a copyright on Americanism, who think they can prescribe what shall be orthodox in politics, nationalism, religion, or other matters of opinion. They would establish first- and second-class citizenships. They would stigmatize as inferior Americans those who do not think like them, pray like them, or look like them.

They have forgotten that what the world respects and admires in America—what we here value and cherish as true Americanism—has grown out of the labor and creative effort of all Americans; that it was distilled out of the blood and sweat of the humble and the mighty, the heroes in our Hall of Fame and the forgotten men, the recent immigrants and the Mayflower descendants, those who built the railroads and dug our coal, as well as those who graced our White House and led our armies. They have forgotten that the genius of America's supremacy in the family of nations has been her leadership in releasing the creative energy of all her people, so that none would be denied the opportunity to contribute his strength and thought to the national welfare.

Ignorance, intolerance, and greed dissipate too much of the Nation's real strength. Prejudice rather than reason motivates too many actions. On this brotherhood observance I think it is axiomatic that we should seek out and endeavor to remove the fallacies that have led to the erection of barriers between people of different races, religions, and creeds.

I have said many times, and I wish to reiterate tonight, that racial and religious problems can never be solved by any one segment of our American life. Satisfactory solutions can be achieved only through moral cooperation of all men of good will.

The spirit of brotherhood can become a reality only through the cooperation of all peoples.

Anti-Semitism, one of our gravest problems, is a real challenge to our democratic society. I think there is more than a grain of truth in the assertion that anti-Semitism is a Christian problem, not a Jewish problem. But I believe the answer lies not in separate actions by Jews and Christians, but through the coordinated efforts of both. Anti-Semitism is an American problem, and Jews and Christians as Americans who are dedicated to the proposition that all men are created equal must work together to wipe out this blot on the conscience of mankind.

Recently President Truman appointed a Committee on Civil Rights. He did not take the position that the protection of civil liberties was the principal responsibility of the Protestant white American majority. He regarded the responsibility as belonging to all Americans as Americans; and that committee was a true cross-section of American races, creeds, and political beliefs. The report of the committee has been one of the bravest and most heartening developments in the field of civil liberties. The committee did not merely view with alarm or utter pious hopes for reform. It pointed directly to many areas in American life where civil liberties were grossly violated, where the freedom and equality of opportunity promised by our Constitution had become dead letters, where discrimination based on race or religion was sapping the strength of our democracy. It proposed a series of specific, hard-hitting reforms in employment practices, in education, housing, and elsewhere. I hope that report will not become a "voice crying in the wilderness."

I was glad to see President Truman's recent message to the Congress in which he adopted the recommendations of the committee. President Truman reminded us that until all Americans have equal opportunities for jobs, for homes, for education, for health, and for political expression, we fail to realize the promise of American life. Said President Truman: "We seek answers which will embody the moral and spiritual elements of tolerance, unselfishness, and brotherhood upon which true freedom and opportunity must rest." I hope that the Congress will heed the President's recommendation.

The kind of brotherhood we honor here tonight is not merely an idea or a feeling. It is not a private matter which we should keep to ourselves. It must be a philosophy of communal action. It must animate our relations with our neighbors, our conduct in the office and the factory, the thinking of our educators and legislators. There are no innocent bystanders when injustice is perpetrated for all bystanders have a moral duty to use their powers to prevent injustice. True brotherhood will not tolerate injustice merely because it has been perpetrated by another, any more than the Good Samaritan could ignore the plight of a fellow human being.

Brotherhood must be an active, dynamic principle. It is the kind of spirit that was found on the troopship *Dorchester* just about 5 years ago today as it was sailing in North Atlantic waters with thousands of American GI's aboard. Shortly after midnight three Nazi torpedoes struck the heart of the *Dorchester* and soon she began to sink. On the deck of the ship were four chaplains—two Protestant, one Catholic, one Jewish. The records of the War Department tell us that the chaplains helped to quiet the panic among the passengers. They distributed spare life belts as long as the supply lasted. Finally, when four men came along who did not have any belts, the chaplains took off their own and forced them over the heads of the unwilling men. As the survivors were pulling away in their lifeboats, they could see the four chaplains still standing on the deck, feet braced and arms locked against the ever-deepening slant of the deck, praying—each in the tradition of his faith, each loyal to the noble ethics of his faith. When last seen, just before the waves engulfed the ship, they were still standing together in prayer for the safety of the men. They had learned the fine art of living together as brothers—and in death they were not divided.

The spirit of brotherhood can illumine all the avenues of life, the simple and the quiet as well as the heroic and dramatic.

Last year an international emergency conference to combat antisemitism was held in Seelisberg, Switzerland. A commission composed of four Protestant ministers and four Catholic priests prepared an address to the churches, which was unanimously approved by the delegates. They said, "It is shocking to discover that 2,000 years of preaching of the gospel of love have not sufficed to prevent the manifestation among Christians, in various forms, of hatred and distrust toward the Jew. This would have been impossible if all Christians had been true to the teaching of Jesus Christ on the mercy of God and love of one's neighbor." They asked that school curricula and Christian publications be corrected wherever necessary to insure that they are not in conflict with the spirit of these words of St. Paul: "They are beloved for the Father's sake, for the gifts and the calling of God are without repentance." Here was true brotherhood and true religion in the churches.

I recall the story that the great war correspondent, Ernie Pyle, told about the time he was leaving Italy for a brief furlough in the United States. The day before he was

scheduled to fly back, he was sitting around with the GI's who loved him so much. One of the GI's asked him where he was going to spend his leave. "New York," Ernie said. The GI said, "You are going to a place where there are a lot of Jews." Ernie answered, "Yes, and I just came from a place where there were a lot of Jews." "Where," asked the GI. Ernie answered, "Anzio beachhead where most of the First Division lies buried." I don't think that anyone who listened to Ernie that day will ever forget that simple human lesson in brotherhood.

I would not and shall not introduce any partisan political discussion. But there are some matters that come before the Congress where the claims of conscience and brotherhood are so strong and compelling that they should drive out all partisan political consideration. I wish to speak briefly now about two such matters. Our country is preparing to spend seventeen billions to aid in the recovery of Europe. It is a great and noble undertaking, and I support it. But, at the same time, we persist in a do-nothing policy for the 800,000 displaced persons who are still being forced to live on the edge of decency in the grisly concentration camps of Germany and Austria. Surely, those who managed to escape Hitler's death chambers have a claim on America's conscience and humanity, too. Surely they should not be forced to remain in the land which has been the graveyard of their relatives, their friends, and their hopes. I say we are weakening the moral force of the Marshall plan; we are making it possible for America's enemies to attack the motives behind the Marshall plan as long as we do nothing for the DP's.

Last week I said on the floor of the Senate some things that had been troubling me about the Palestine situation. I regard it as a matter of national honor that the solemn decision of the United Nations on Palestine, a decision in which this country supported in the United Nations, should be carried out, should not become a scrap of paper. The UN is our last great hope for world peace. The UN's moral fiber will be destroyed if the threat of a few thousand invaders and the greed for oil are permitted to upset a decision which represents the first important occasion when east and west saw eye-to-eye. I think the bloodshed in Palestine is tragically unnecessary and that simple firmness on the part of the leading powers could stop it right now.

We have condemned the use of the veto in the Security Council of the UN, charging that it prevents the development of world peace and order. That veto up to now has at least been open and direct, but what we face today in Palestine is an under-the-table pocket veto that prevents the UN partition decision from being carried out. I shall never be able to understand how democratic nations will sell arms to guerrilla bands while they continue an embargo on the democratic defense forces in Judaea on forces which are fighting to uphold a decision made by the conscience of mankind.

The nations of the world who cherish freedom must take appropriate action immediately to recognize the Jewish defense army in Palestine. We are a nation blessed by God with material riches beyond all others. Our mountains, our plains, our rivers, our harbors have given us industry and commerce, agriculture, and mining resources which are the envy and despair of the rest of the world. But our richest and our greatest resource is people—people living under free and fair institutions which permit them to develop fully the talents God gave them. We shall waste this richest of our resources unless here and everywhere, now and forever, we practice and cherish brotherhood.

If there is one simple truth in all history it is that man is a lonely creature. He needs the comfort and aid of his fellow men. I recall the words Horace Mann, that great American, passed on to his pupils: "Be ashamed to die until you have achieved some victory for humanity." I also recall that Ernest Hemingway's title, For Whom the Bell Tolls, comes from the pen of that great religious poet of the early seventeenth century, John Donne. The poet had been thinking of the custom of ringing the church bells on the occasion of the death of a native. Often people came running to find out who had died, to discover for whom the bell was tolling. John Donne's answer is one of the finest passages in literature:

"No man is an island, entire of itself; every man is a piece of a continent, a part of the main; any man's death diminished me, because I am involved in mankind; and, therefore, never send to know for whom the bell tolls; it tolls for thee."

Whenever you hear the bell toll for the death of justice, brotherhood, religion, tolerance, and democracy never send to know for whom the bell tolls; it tolls for thee.

Address by Hon. Francis J. Myers, of Pennsylvania, to Atlantic States Shippers Advisory Board

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 26 (legislative day of Monday, February 2), 1948

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by me at the twenty-fourth annual meeting of the Atlantic States Shippers Advisory Board, Philadelphia, Pa., on January 15, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

From a glance at the docket of your program for this morning, I can see that although you may not have settled among yourselves all of the problems facing the shippers and the railroads, you at least have a pretty thorough idea by now of what those problems are.

Consequently, there is no need for me to go back over the ground that was covered so thoroughly this morning and give you details and statistics on the magnitude of transport difficulties sure to arise in the coming year.

I am sure that all of you gentlemen, whether or not you attended the meeting this morning and heard the reports of the experts, have known for some time that 1948 is going to be anything but an easy year in the transport field. The boxcar shortage is certain to continue, and you shippers are going to scream at the railroads for over-long turn-around time and delays and the railroads are going to scream back at some of you for not unloading promptly enough, and we in Washington are going to get blamed for everything by both of you.

But frankly, gentlemen, the record which has been made in the past year and which will be made again this year, I am sure, in the field of transportation, and particularly from the standpoint of genuine cooperation on the part of the various segments of the transportation industry, is a truly magnificent record. It's the sort of record I like to think of when I hear the defeatists say that free enterprise and free democracy can't work. It works when free enterprise is determined that it must work. I think we have had that determination demonstrated many times in the past year in the transportation field.

Here at this gathering today where you have many outstanding railroad officials present, you have two groups which one would think were inherently antagonistic, and yet you have managed over the years to resolve your differences and to work together to remove causes for conflict. The Interstate Commerce Commission is the impartial referee in many of your issues, but there are comparatively few instances in which the ICC or the Congress must step in to break up any significant quarrels. Obviously, there is a need for a referee, but at the same time, the transportation industry generally has striven to suppress its passions and to reflect true restraint.

I mentioned earlier that 1948 is going to be a tough year on the railroads and on the shippers and many times there are going to be loud wails splitting the air. The finger pointing and the accusations will continue as they have in the past year, and, as a matter of fact, as they have over a number of years. Gentlemen, this may be little consolation to you, but these annoyances and aggravations and delays and shortages constitute a price we are paying for the greatest level of economic activity this country or any country ever experienced. We didn't have a boxcar shortage in 1932. We didn't have a steel shortage. If anybody wanted to build boxcars in 1932, there was plenty of steel around to do it with. Undoubtedly, as long as we keep on at the present level of industrial activity and national income—and we all pray that we will continue a 60 million job economy—we are going to run into shortages of one kind or another, different kinds at different times, until our industrial capacity has expanded to the point where we can meet every requirement expeditiously. We are heading in that direction but it is a long process because the backlog of demand is simply incomprehensible in its volume.

And when we do reach it, when we've got the steel capacity to turn out all the steel that everybody wants at the moment, when we have enough boxcars idle on the sidings or instantly available so that every shipper can get immediate delivery on his goods by rail, then, believe me, we better be well equipped with the machinery and with a willingness to use that machinery to keep such a vast industrial colossus operating. That will take some doing. It will take a lot of imagination and it will take a lot of faith in the free enterprise system on the part of free enterprise itself.

That is one of the places where Government must enter the picture. I do not mean a paternalistic government which takes over the entire economic machine and regiments it and orders each citizen around. I do mean Government action in research and in planning to help industry find markets for its products and to develop new products, to protect our natural resources against reckless exploitation, to keep the channels of interstate commerce open, and to help industry itself coordinate—that's a word that got in bad during the war, but it's a good word nevertheless—coordinate its efforts in behalf of maintaining an ever upward level of living standards in this country and throughout the world.

That's a big order and I guess you could say that it was expressed in pretty general terms and that I didn't pin myself down too closely to any panacea but, gentlemen, I hope that I make myself clear that I think our free enterprise system in this country is the best economic system for us, just as I think democracy is the best political system for us. In our democracy, in our best of all systems, we still have nevertheless a certain amount of necessary Government interference for the purpose of preventing anarchy, and in our free enterprise system

we must also, for the protection of that system itself, have a certain degree of interference and regulation, because otherwise we would have industrial anarchy, and when we have that our democracy gets pushed onto some pretty shaky ground.

So, as I say, we're going to have our troubles in transportation this coming year and troubles are no fun. But I think it's a whole lot better to have our troubles arise out of the fact that we still have an expanding economy with more and more and more people in the market for more and more goods causing shortages and disclocations than to have our troubles arise out of a contracting economy where lack of purchasing power is about the only real trouble, but one trouble like that is enough. All business and all industry and all of us as citizens have known that trouble in our lifetimes, and it is the kind of trouble we would like to avoid.

The important thing today is to mitigate those shortages as much as possible by intelligent action on the part of all concerned. That is easy to say and hard to do. It can, however, be done, and has been done in an amazingly successful manner, all things considered, in connection with this matter of boxcar supply.

As some of you may know, I am a member of the Senate Interstate and Foreign Commerce Subcommittee which began nearly a year ago to investigate the boxcar situation. Senator REED is the chairman. We knew before we started that there was an alarming shortage of rolling equipment. Some of you came down and told us in some detail how this situation was affecting you. In the face of the shortage of boxcars, there was also, and there still is, a tremendous deficit of available steel There was also a record wheat crop which required cars in record numbers. Manufacturing was hitting its reconverted peacetime strides and the demand for cars was obviously far out of line with supply.

We could have, had we wanted to, concentrated our fire on raising cain with every shipper who held a car overly long, with every railroad that took a little extra time in moving a car and wasn't prompt enough in returning it. We did a little bit of that. But it occurred to Senator REED and myself and other members of the subcommittee that the only effective solution was more cars. The car builders were willing to build them but that required steel, and also it took guaranteed orders from the railroads.

Instead of conducting the kind of Roman holiday that congressional hearings sometimes resemble, giving everybody a chance to come down and scream accusations at the other fellow, we conceived the idea of holding a conference where the top men in these three industries—steel, carbuilding and railroads—and also the responsible officials of Government could meet with us as the representatives of the Senate in this matter and work out a definite operating procedure which would have the support and the cooperation of the industry itself. We set a goal of 10,000 new cars a month.

It tok just about a year, but that goal has about been reached and now the sights are being set a little higher.

Top representatives of the 11 largest steel companies recognized immediately that the long-range well-being of American enterprise rested on adequate rail transportation. They pledged complete cooperation. The railroads did their part by reducing into written orders their long-standing needs for new cars. The boxcar builders got to work building cars. From time to time, one group or another in this voluntary agreement did some finger pointing at another, and there were some bugs to be worked out and some misunderstandings to be cleared up, but the important thing is that these three industries—three key industries—did get together and did work together and did make good. There was for a while a bugaboo over the antitrust laws, but in the face of an overwhelming desire on the part of free enterprise, as represented by these industries, to get together and work in the common good, we had no difficulty in getting assurances from the Justice Department that no one was going to suffer an antitrust rap for cooperating with the Senate of the United States and with the Office of Defense Transportation in a cause which was the cause of America itself.

We are working now on our report on our investigation. Here and there in the report there may be some criticisms of segments of the industry or of particular firms, or of this or that Government agency, but, on the whole, the report will reflect, I think, the same genuine appreciation which I have been expressing to you just now for cooperative American effort in solving a serious national problem.

You gentlemen, many of you, represent some pretty big business enterprises in the United States, but we down in Washington represent the biggest business in the country. Right now it's about a $40,000,000,000-a-year business. During the war it was even bigger. As a Member of the Senate of the United States, helping to draw up the rules and regulations governing this $40,000,000,000 business, I am, of course, expected to know everything about that business. No matter what goes on anywhere in the United States involving any agency of the Government of the United States, at least one of my constituents will write to me to demand immediate action on my part to do something about it. Usually hundreds, or even thousands, will write, wire, or telephone to register their opinions on the most important issues. Thousands of bills go into the House hopper during a congressional session and 1,000 to 1,500 into the Senate hopper at the same time. I'm expected to know everything about all of them.

What I'm driving at in recounting this dilemma is that I not only appreciate but I actually need help from the citizenry, from Pennsylvanians particularly, in sizing up the effects of some of these measures on Pennsylvania business and Pennsylvania industry and on Pennsylvania communities and residents. I pay attention to my mail, particularly when my mail contains informed facts. So often, however, a businessman will write to me or wire me with orders to vote for or against some obscure piece of legislation and expect me to do so merely on his say-so, with no facts on it.

Now, obviously, that's not fair, and it's not helpful.

And yet these same individuals could be extremely helpful to me in this tremendous task of developing intelligent appraisals of the flood of bills which come before us. I say to you gentlemen, who devote your lives to close study of transportation issues, that I am interested in your problems and in legislation affecting your businesses I want your views. I want you to feel free to send them to me. I want you to know that whether I can acknowledge every letter or not, whether I act as you wish on each matter or not, I do try to study the facts, and it's facts I want.

Right now, on the Senate Interstate Commerce Committe, I am on a number of subcommittees considering 10 different aspects of transportation. I cited the boxcar investigation. There is another we have had under way in connection with the transportation of explosives; one on some far-reaching amendments to the ICC; one studying the car-service-rules question; another considering railroad-reorganization problems. We had the Bulwinkle bill before the committee last year, and we got it through the Senate, and now I understand it may come up in the House perhaps by next month. That bill is a complex, highly controversial one, and I appreciated the facts that I received from many of my shipper friends on it.

I've had a long association with that bill, going back to my days in the House when I was on the House Interstate Commerce Committee. And yet, although I have continuously supported the bill, there and in the Senate, I wanted the facts on it as the facts developed over the years. They came in many instances from some of you, and they were, as I said, not only appreciated but also helpful.

I think it is important to keep in mind that most Members of Congress are sincerely interested in knowing the facts on the things that come before them. If each Member of Congress specialized in one subject and studied everything on that subject and knew all about that subject, he would, of course, not need this assistance on matters related to that subject. But then, of course, he would hardly have the time to study the facts on any other subject.

I think you will find that most of us are fairly well informed on an amazing variety of things. But we can't all be technical experts.

It has been a great pleasure to be here with you today and to renew many old acquaintanceships and some real friendships and to make many new ones. I think you have a right to be proud of the great achievements in your field during the war and since the war. I am sure you will not rest on this record, but will work unceasingly to improve conditions in your basic field of activity, realizing that the long-range well-being of our economy rests primarily on rapid transportation and efficient transportation.

Since our very way of life depends at this moment on a strong and free and prosperous United States—we alone of all nations are in the position of being able to promote international stability—then you can see how really important your job is.

Pennsylvania's Forests

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1948

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before a subcommittee of the Committee on Appropriations handling the Forest Service of the Department of Agriculture:

Mr. Chairman, my name is L. H. GAVIN, and I represent the Nineteenth District of Pennsylvania. I want to present my statement to you on Pennsylvania's forests—an important and neglected asset, also pertinent statistical information.

I also want to take this opportunity to compliment the Forest Service of the United States Department of Agriculture. They have developed a great national program of forest service and are turning in a magnificent performance of which they may well be proud. I am particularly pleased with the work the Forest Service is doing in my State of Pennsylvania.

Dr. V. L. Harper, director of the northeastern forest experiment station in Philadelphia, along with the other representatives of the Forest Service in Pennsylvania, are to be commended on the fine work they are doing in my State.

They are working out a comprehensive program of forestry development which is an excellent one and should be productive of great results; and, I might say, they are wholeheartedly cooperating with all State agencies in carrying out the forestry program.

Also, I want to compliment A. H. Anderson, the forest supervisor of the Allegheny National Forest, a great part of which is in my district, for the fine work he is doing.

I would say that in my opinion, speaking for my State of Pennsylvania, that the appropriations we in the Congress make for this service is a wise and sound investment of the American taxpayers' dollars for which we can look for excellent returns, and I sincerely hope that the appropriations which have been requested will be granted.

For years we paid little or no attention to our great natural resources—our forests and our waters. And I do not know of any place we can spend our money more wisely than in carrying out the practical, commonsense programs to reforest and rehabilitate, protect, and conserve these great forest areas that have made such great contributions to the economic life and productivity of our Nation. They are today one of the greatest factors in our prosperity and will continue to be if we are farsighted enough to make the necessary appropriations to carry on these programs through our Forest Service for their protection, rehabilitation, and development to give the generations that are to follow us the same opportunities which nature so generously provided for us. The Forest Service is doing a fine work; their money is wisely spent, and their recommendations should be given our careful consideration.

The Pennsylvania Conservation Committee, the affiliated organizations of which are: Brandywine Valley Association, Camp and Trail Club, Chamber of Commerce and Board of Trade of Philadelphia, Conservation Council of Pennsylvania, Delaware Valley Protective Association, Friends of the Land, Garden Club Federation of Pennsylvania, Garden Club of America, Interstate Commission on the Delaware River Basin, Izaak Walton League of America (Pennsylvania division), Izaak Walton League of America (Philadelphia chapter), Keystone Automobile Club, Pennsylvania Farm Bureau Co-Operative Association, Pennsylvania Federation of Sportsmen's Clubs, Pennsylvania Federation of Women's Clubs, Pennsylvania Forestry Association, Pennsylvania Land Conservation Association, Pennsylvania League of Women Voters, Pennsylvania Parks Association, Pennsylvania Roadside Council, Pennsylvania State Fish and Game Protective Association, Philadelphia Maritime Exchange, Schuylkill River Valley Restoration Association, Split Rock Club, Horse-Shoe Trail Club, National Wildlife Federation, at its annual meeting held February 9, when almost all of the affiliated organizations whose names appear above, unanimously voted: First, their disapproval of reduction of appropriations to the United States Forest Service for wildlife management and use, sale of national timber, forest development roads and aid to owners who want assistance in managing and selling their own private woodlots; and, second, their further disapproval of unwise cutting of expenditures for essential research work in conservation.

"Specifically, the following appropriations are strongly urged at this time: First: For management of our national forests: (a) Adequate appropriations to provide for development and use of the wildlife resources of our national forest areas; (b) an additional appropriation of $600,000 for adequate, suitable, and profitable cutting and marketing of timber which is now fit to be cut on all national-forest areas; (c) an appropriation of $25,000,000 for sufficient forest department roads to market national forest timber now ready to be cut but inaccessible; and (d) an increase of $1,000,000 for aid to owners who want aid in properly and profitably managing and marketing their own private woodlands.

"Second. For forest experimental research centers under the national forest program."

I want to again emphasize that I consider the Forest Service of the Department of Agriculture one of the most important branches and services of our Government. My State of Pennsylvania is pleased at the opportunity to cooperate to the fullest extent of their ability to do so in these great forestry programs.

Pennsylvania's Forests: An Important But Neglected Asset

(A statement on the forest situation with pertinent statistical tables)

Every schoolboy in the country learns that the Commonwealth of Pennsylvania got its name from the great forests that covered the lands granted to William Penn. The name was well deserved—there were mighty forests on those lands and the timber that was cut from them played a very important part in building the farms and cities and industries that have made Pennsylvania one of the leading wealth-producing States of the Union. Lumbering on a large scale got under way about 1870 and steadily increased to a peak about 1900. The annual cut at that time exceeded 2,000,000,000 board feet. About three-quarters of the excellent quality lumber produced was hemlock and white pine. Huge log rafts were a common sight on the Susquehanna and Allegheny Rivers. The city of Williamsport had about 90 sawmills. Large quantities of hemlock bark were used for the extraction of tannin. Timber cut for this use was often peeled in the woods. The bark was taken out but the logs were left to rot. One of the State's largest lumber companies was set up by a leather manufacturer as a means to get better utilization.

Pennsylvania led the Nation in the development of coal mining and petroleum. Wood for mine timbers and for oil-well derricks was available from the local forests. Heavy metallurgical industries had their beginning in the charcoal smelters of postcolonial times. Later the great mills and factories were built partially of lumber. Several thousand miles of railroad was laid down on wood crossties. Cities doubled and redoubled their population—all the time using wood as one of the principal building materials.

The generous forests were called upon to meet all these many demands for wood—but in meeting them the Commonwealth's timber-supply bank account was sadly overdrawn. By the early 1920's lumber production had fallen to about 15 percent of the 1900 level. By 1945, under the spur of war demands, the lumber cut had recovered slightly—but only a quarter of the output was in the softwoods. The timber conversion plants that once were so prominent in the Pennsylvania economy have now been eclipsed by metallurgical and other manufacturing industries. People have been giving scant attention to the forests—we should be more concerned because our welfare is at stake in more ways than we seem to realize.

The timber-products deficiency in Pennsylvania is about as critical as any found in the country. The volume of lumber normally consumed ranges from about one to one and five-tenths billion board feet. About two-thirds of this is in the softwood species. The present total within-State lumber production is equivalent to only about one-third of the quantity consumed. The softwood lumber output of the State has been ranging between a mere 7 to 15 percent of the softwood lumber consumption. The hardwood lumber cut has been about 75 percent of the hardwood lumber consumption. The paper and paperboard mills of the State in 1946 consumed 621,000 tons of new wood pulp. The within-State production of wood pulp in that same year was 273,000 tons or equivalent to 44 percent of the quantity consumed. The other 66 percent was obtained from Canada, from northern Europe and from other states. It is thus apparent that Penn's woods came far short of supplying the volume of wood fiber necessary to sustain the present paper and paperboard industry. Even the wood pulp produced within the State was not made wholly from Pennsylvania pulpwood. Quite large quantities of pulpwood are normally received from Canada, and from neighboring States. Taking this into account, it is probable that Pennsylvania forests are supplying not more than one-third of the wood fiber consumed by the State's paper and paperboard industry. Other timber commodities for which within-State production is not sufficient to meet consumption demands include hewed cross ties, veneer and plywood, shingles, and mine timbers. Specific figures on the deficiency are not available.

Timber products, of course, are only one of the several important values that reside in forests. In a highly-developed region like Pennsylvania adequacy and reliability of water supplies and the regulation of run-off that would otherwise cause destructive floods may even be more important than the wood supplies that come from timbered lands. There is hardly a large city in the State that does not need an improved municipal water supply. Many of the existing supplies were first developed when the cities were small and when the streams were relatively free from pollution. As time goes on these waters become increasingly laden with industrial wastes and sewage. The costs of reclaiming such water by filtration and chemical treatment have steadily gone up. Even when that is done the water still has an offensive odor and taste. The movement in present public water-supply procurement is toward the development of upland sources that can be kept relatively free of pollution. This, quite often, requires the public acquisition of forested watersheds and dedication of such land to this specific use. In addition to the domestic needs for water, there is also a huge industrial requirement—water for cooling purposes in steel mills and in steam power plants, water for the processing of pulp in the manufacture of paper, water for the washing of textiles, water for the washing of anthracite coal, water for the processing of food products, water for carrying away industrial wastes. The importance of adequate supplies for all of these purposes can hardly be overstated.

The availability of good-quality water is highly important but the role of forests in controlling floods is of even greater importance. The long-term average annual precipitation in Pennsylvania is about 42 inches—3½ feet of water in the form of rain and snow. This amounts to about 4,400 tons of water that normally fall on each acre of land in the course of a year. In some localities it is somewhat less and in others somewhat more. The mechanical power of this much water to move soil downhill is enormous. Nothing but hard rock would stay in place on sloping ground were it not for the vegetative cover that absorbs the force of it. The role of the forests in regulating run-off and thus holding back waters that would otherwise cause destructive floods is probably more important than any other. Even though Pennsylvania ceased to use wood in any form, it would still need the forests as regulators of stream flow.

Still another value in Pennsylvania's forests lies in their use for recreation and for wildlife habitat. About 6,000 lakes and ponds, plus 100,000 miles of forest-bordered streams, afford pleasant and restful vacation spots as well as opportunities for sport fishing. About 50,000 acres have been set aside as public forested parks. Camp sites, picnic areas, swimming facilities, and hiking trails have been constructed for public enjoyment. Over 3,000 permanent summer-home sites are under lease in the State forests. Four or five million persons annually visit the State forests and parks, and the Allegheny National Forest. This is only a fraction of the total recreational use of Pennsylvania's forests.

In the field of wildlife restoration the State of Pennsylvania has been one of the leaders. Game refuges were first established in 1905. In 1919 the State game commission was authorized to use a part of the license revenues for the purchase of lands to be dedicated to game production. More than 700,000 acres, chiefly forest land, have since been acquired and placed under management for wildlife. These lands are in about 180 parcels scattered throughout the State. About 90 other primary game refuges have been set up on other public lands. Another 130 auxiliary State game refuges have been established through the cooperation of private-land owners. Altogether there are more than 1,000,000 acres of land now devoted primarily to wildlife. Deer and bear have once more become plentiful. The same is true for upland birds and small game.

Pennsylvania needs her forests—there can be no doubt about it. Fortunately, more than half the land area of the State (15,000,000 acres out of 29,000,000) is still in forest. Almost all of this land, and possibly some more that is now in other uses, is best suited for the growing of trees and should be permanently dedicated to that purpose. Why then is there such a deficit in timber? A close-up examination of the situation discloses the reasons. Forty percent of the forest acreage (6,400,000 acres out of 15,000,000) is occupied by seedlings or saplings or has been deforested. This is the direct consequence of the widespread clear cutting that has been practiced over a long period of time. Forest fires have also been a contributing cause. Another large block of the timber lands adding up to 4,900,000 acres, or 33 percent of the total, bear immature timber of pole size. The saw-timber stands, defined as those having a volume of 2,000 board feet per acre or more in 9-inch diameter or better softwood trees and in 11-inch diameter or better hardwood trees, occupy only about 1 acre out of every 4—3,700,000 acres out of the 15,000,000. The large acreage of poorly stocked and immature or poor-quality timber is indicative of the badly run-down condition of Pennsylvania's forests.

Only about 66 percent of the saw-timber volume is in stands that average better than 2,000 board feet per acre. The other 34 percent, or 7,000,000,000 board feet of saw-timber trees, are scattered throughout the stands of pole timber, saplings, and seedlings. Not much of this should be commercially utilized at present. Where it is removed and marketed in conjunction with products from the smaller timber, as too often happens, the residual growing stock is usually reduced to somewhere near the vanishing point.

The stand of softwood saw timber throughout all the forest lands now amounts to about 3,000,000,000 board feet. The cut of hemlock and pine lumber in 1899 was 1,800,000,000 board feet. The entire supply that now remains amounts to less than a 2-years' cut at that period. This heavy depletion of softwood saw timber is one index of the deterioration in timber quality. As the preferred species were cut off, less valuable hardwoods tended to take over the land. There is now a tremendous job of rehabilitation.

It is sometimes said that new techniques of timber utilization have made it possible to use small trees in place of the large ones that stood in the virgin forests. This is true to a limited extent, but we should not be misled. Even in Pennsylvania, in 1944, where large trees were scarce and expensive, the bulk of the wood that went into the important timber products, such as lumber, pulpwood, hewed crossties, veneer logs, and cooperage stock, was cut from saw-timber trees—no less than 89 percent of it. Products like fuelwood, fence posts, distillation wood, and mine timbers can be made from the trees removed in thinning and cleanings under good forest management. We still need good-sized trees, and, insofar as can be seen at present, we shall continue to need them. There is also the additional fact that trees reach their maximum of growth in volume and quality only after they have attained considerable size. The indiscriminate cutting of immature timber before it reaches the period of rapid growth is about as sensible as picking a lettuce crop just after the plants have come above the ground.

About 80 percent of the forest land is in private ownership. The pattern is one of small properties. Those containing more than 5,000 acres number less than 50 and add up to only 4 percent of all commercial forest lands. The number of small holdings runs to about 195,000, of which about 123,000 are farms. The acreage in this class of holdings adds up to 76 percent of the total forest-land area. The remaining 20 percent of the total acreage is in public ownership—chiefly in the 24 State forests that contain about 1,700,000 acres and in the 700,000 acres of State game lands. The Allegheny National Forest contains 442,000 acres—less than 3 percent of the total.

About 18 percent of the total acreage in private holdings is in properties that are being logged under good cutting practices. The rest of the acreage is being logged under practices that can be rated as only fair or poor. It is a sad fact that a people like ourselves, who have mastered and applied the principles of science in manufacturing, in commerce, and in farming, have made so little progress in applying the techniques of good forest management. A farmer who paid little or no attention to the maintenance of good breeding stock in his dairy herd and regarded it simply as an asset to be turned into cash as any suitable opportunity would not stay in business long—but that is just about the kind of management that forest lands are getting. Our methods for handling the forest growing stock are about as crude in their way as those used by the Indians in growing corn when the white man arrived in North America. Technical knowledge about forest management should be built up and applied to Pennsylvania's 195,000 timberland holdings with some of the same energy and force that have been used on farm-crop lands. When this is really done on the scale that is required, Penn's woods will begin to produce, not at the present average of about 35 cubic feet per acre per year, but possibly twice that much. When growth is brought up to a high level, a much larger part of it will be in high-quality logs—less in worthless brush, scrub oak, and low-quality poles.

The over-all picture of Pennsylvania's forests is not a flattering one. Fortunately, however, something has been and is being done about it. Under the cooperative Federal-State forest-fire-control program set up under the Clarke-McNary Act of 1924, the losses from fire have been cut to a moderate figure. Still further progress can, however, be made, particularly in parts of the anthracite region where forest fires are still serious. A further strengthening of the State-wide fire-control services is desirable.

A start has been made in tree-planting programs. This should be carried forward especially on critical forest-land watersheds and on those lands that are exposed to erosion damage. Lands that have been deforested or that have been strip-mined or otherwise torn up by oil-well-drilling operations are among those in need of planting. Still other areas that have been taken over by scrub oak and other low-value or worthless species could best be rehabilitated by planting.

The extension service of Pennsylvania State College, cooperating with other agencies, carries on an educational program in farm-woodland management. The Federal-State cooperative program in farm forestry, under the Norris-Doxey Act of 1937, is operating in Pennsylvania with nine farm foresters giving assistance on the management of woodlands. This is a good start but obviously inadequate to serve the 123,000 farm-woodland owners. A similar type of service is needed for the many small processors of wood products. The bulk of the small-forest owners and small processors still have no source of public on-the-ground technical assistance on their management and processing problems.

Pennsylvania has already come a long way with its program for the public acquisition of forest lands. The State forests, the Allegheny National Forest, and State game lands should be blocked into efficient operating units. Further extension of county and municipal forests to include lands not suitable for long-term private ownership and lands needed for watershed protection purposes is highly desirable. The State, Federal, and local governments should obviously lead the way in the development of high standards of forest management.

Fundamental to the formulation of forest policy and programs is accurate and up-to-date information on the forest acreage, timber volume, timber growth, and timber drain. All of these elements are essential in deciding what should be done to improve forest production. The survey initiated by the Forest Service in northwestern Pennsylvania in 1947 is a part of the Nation-wide forest survey authorized by Congress in 1928. It should be carried forward until the entire State is fully covered. Four counties were covered in 1947 but with present funds the entire State cannot be finished for several years. Thereafter, the basic data should be kept up to date.

The importance of clean water for domestic, industrial, and recreational uses has already been stressed. Floods have been increasing in frequency and in severity. Watershed management through improved land use is needed to maintain and improve the water resources. The Department of Agriculture has been authorized by Congress to make flood-control surveys on all the Pennsylvania watersheds. The Forest Service and the Soil Conservation Service have begun this work on the Allegheny, the Youghigheny, the Monongahela, and the Lehigh watersheds. These surveys will develop comprehensive programs for improved land use and other measures designed to retard run-off. Action programs to put these plans into effect will be presented to Congress. The State of Pennsylvania has already appropriated a substantial fund for water conservation and improvement purposes.

Still another and a highly important part of the remedial program should be the stepping up of forest research. The research on the Kane Experimental Forest (located in the Allegheny National Forest) and elsewhere is laying the basis for improved planting and timber-cutting practices. This research work is still on an inadequate scale. Entirely lacking in Pennsylvania and elsewhere in the Northeast is a research program to develop the badly needed information on watershed protection. The problems of flood control and of the sustained yield of usable water for domestic and industrial purposes are becoming increasingly critical. A forest-research center in the Delaware River Basin area to develop information on the basic water-forest land relationships and to service-problem areas has been proposed. Research to guide the needed remedial measures so that they may be most effective is an urgent requirement and should not be long delayed.

By working all fronts together it will ultimately be possible to restore the forest lands to a high state of productivity. Only then will Pennsylvania fully deserve its proud name—Penn's Woods.

STATISTICS PERTAINING TO THE TIMBER SITUATION IN PENNSYLVANIA

The existing estimates for Pennsylvania of the forest acreage, timber volume, timber growth, and timber drain are based upon a

rough survey carried out on a sparse-sampling method in 1945 as part of the Forest Service's Nation-wide reappraisal of the forest situation." Existing figures are estimates subject to a considerable margin of error; this should be kept in mind in using the tables that follow.

Accurate data on the timber situation in Pennsylvania will be available upon completion by the Forest Service of the forest survey initiated in Pennsylvania in 1947.

TABLE 1.—*Land area in Pennsylvania in various land uses, 1945*

Land use:	Thousand acres
Total land area	28,829
Total forest land	15,228
Commercial	15,127
Noncommercial	101
Cropland in farms	9,240
Pasture and range	1,469
Other	2,892

Forest Service reappraisal data.

Economic and Political Conditions in the South

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, February 26 (legislative day of Monday, February 2), 1948

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me before the Municipal Association of South Carolina on February 24 last, in which I commented on economic and political conditions in the South.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A city, like a family, means nothing unless it means people. A city must pay rent, it must pay for clothing, professional services, medical care, fuel, building materials, and food. The same sharp increase in prices which is threatening the economic well-being of individual Americans and their families is taking its toll in efficient municipal service in each of your cities. A city represents the sum total of the families and individuals within its jurisdicton.

Glaring examples of the menace of inflation upon your municipalities are to be found in the cost estimates of capital projects or long range municipal improvements. Many of you have been contemplating and planning the construction of various public buildings, buildings like hospitals, libraries, city halls, and many others. Many of these projects were planned before the war. Contract negotiations were even entered into in some cases. But during the war, obviously, those negotiations, in most instances, were stopped entirely. Bare foundations and half completed buildings still testify to many heartaches and disappointments of late prewar planning. Since that time it has even been impossible to keep up with the estimates. By the time you get a plan drawn for a piece of construction the architect comes back and says he must do it all over again because of the increase in costs.

There is no way even to issue bonds and have a bond sale and know that there will be enough money to complete the cost when the bonds have been issued.

Municipal officers throughout the Nation have, of necessity, increased taxes in some instances in order to meet the higher costs of normal operation. However, it has been impossible to obtain sufficient revenue to maintain the same quality of service which was possible in 1945 or 1940.

Your cities are facing a bad situation in streets and sidewalks. It is next to impossible to plan a budget for the repair, extension, and improvement of streets and come to any degree of accuracy on it at all. In a nutshell, the American city today is a victim of inflation but unlike other victms it has not been permitted to help itself out of its predicament and no one has come to its rescue. As a result, our cities are today literally fighting for their economic lives.

Gentlemen, there was a recent article, as most of you no doubt know, in the American Mercury, entitled "The Plight of the American City." You who are familiar with municipal problems know that with very few exceptions every major municipality in this country is fighting a losing battle in terms of providing municipal services at a local level. I would like to offer this, too, that all too often the municipal government is looked upon as just a small area of government. What a mistaken and short-sighted conception. Basically, the Government of the United States is the sum total of the government of the municipalities that serve the vast section of our population.

I believe that, gentlemen, I believe it from the bottom of my heart. That is why I have taken, and will continue to take; every opportunity in the Senate of the United States to preserve the sovereignty of the individual States of this Nation and their rights to self-government within the confines of their own borders. In view of this, gentlemen, I am alarmed that our Democratic President, speaking for the national party, should propose enactment of measures which, in their entirety, constitute a mass invasion of State rights. Why such a thing has never before been even suggested, much less recommended, by any President of any party affiliation in the Nation's history.

The President has accepted and recommended the proposals of the committee known as the President's Committee on Civil Rights. He has recommended to the Congress the immediate passage of legislation to implement these recommendations.

As you know, from your newspapers and your radio, we are already faced with an anti-lynching bill. Such a law has long been considered unconstitutional, since it involves no interstate aspects. The fact that only one lynching occurred in the Nation last year—unfortunately, that one was in South Carolina—and the dominant desire manifested by southern people to prevent lynching by every possible means, have not deterred the proponents of this legislation from asking for its immediate enactment. It is clearly an invasion of State rights, and, if enacted, would establish a precedent for the Federal Government to take jurisdiction in other State crimes which are punishable under the laws of the respective States.

There is not one of you here today who, after reading this piece of proposed legislation, would not fight to your dying breath to have it killed outright. It is not an anti-lynching bill in any sense of the word. It does not make lynching any more of a crime than it always has been. Instead, it creates a new crime. It extends Federal jurisdiction to the office of the Attorney General of the United States to send his officers to your counties and to your municipalities and imprison your officers and fine your counties. The proposed bill would not have prevented the one lynching of 1947 any more than it would prevent any other lynching—past or future.

By another measure -the enactment of the Federal Employment Practices Commission—the President proposes to establish another costly, powerful bureau of the Federal Government. This bureau would have the authority to muscle in on the daily business transactions of virtually every man's private business. It would, in effect, tell every man whom to hire, whom to fire, and whom to promote. These Federal strong-arms would reach into a man's books and papers without process of any court. Fines and imprisonment are provided for any person who hinders the operation of this Federal Commission.

The purpose of this commission, of course, is to force employers of the South to give employment in privately owned businesses to members of a minority race, even though such action may not be justified by the worth of the person to be employed. The employer may not have the power to hire a new employee or control the promotions within his own business. All of this can be done under the direction of this Federal Bureau.

This legislation is even now on the Senate Calendar. It was reported favorably by the Republican-controlled Committee on Labor and Public Welfare, and our Democratic President has endorsed the principles of this so-called fair employment practice legislation.

The Commission then proposes, and the President has endorsed, not only the specific abolition of the poll tax in Federal elections, but also an authorization to the Department of Justice to use all civil and criminal powers of the Federal Government to supervise primaries and elections of representatives of the respective States in the Federal Government.

All of this is in direct defiance of the first article of the Constitution of the United States which specifically gives to the States the right to establish the qualification of voters and conduct all elections. If this should be done, then the very basic principle upon which the confederation of States was established, is destroyed. Abolition of the poll tax has been recommended before, but no President, so far as I know, since the days of the carpetbagger, has asked that the Department of Justice ir Washington be given the power to use both civil and criminal sanctions to supervise and intervene in State elections. Why, gentlemen, this opens a new field for possible Federal abuse of power which could even be used to prevent the free discussion of the record of the party in power. Need I mention that all the dictators of the world have used the very same tactics in securing unanimous elections?

This amazing proposal strikes at the very heart of free speech and is certainly a long step toward total Federal Government and the abolition of State lines.

But these bills are coming up. They are already on the Senate Calendar. In the past, legislation of this nature has been routed out of the Senate by use of the filibuster. The first fight this time will be over the rule of cloture. I've been in on three of these fights—and we have won them all. This one will be more difficult. The Republicans and the President will do all in their power to put cloture on this debate but we of the South will try to stop it in one way or another—but it will be a long, hard, uphill fight. At the 1936 convention, I upheld and fought for the two-thirds rule. In fact, we delayed the convention with that fight. Right there was the turning point in the South's loss of influence.

It is with extreme regret that I have had to watch President Truman turn his back on the loyal South. The South was his friend. The Southern States voted for him for Vice President to beat Wallace. And yet, all of this is being recommended to the Nation by a man who was never elected President in the first place, but only succeeded because of the death of the President.

I cannot see what we in the South have done to deserve such treatment. We have remained loyal to the Democratic Party in good times and in bad times. Without the South there would be no National Democratic Party today. In what way, gentlemen, have we failed? Why should we be singled out by leaders who are determined to destroy that which enabled us to rise from the bitter ashes of the War Between the States? We had only our character and determination to go forward then.

We, in the Senate, are prepared to oppose this legislation by every legislative device within our power. We may lose the fight.

I hope with all my heart that at least the national party, which owes the South so much, may realize the injury which is being done to party unity and southern traditions.

I believe it would be a mistake for the South to bolt the party at this time. But we should elect independent democratic electors who will retain for us the control of our party.

The national party, of course, has no authority to interfere with our State party and we will not tolerate any interference by the national party into our State affairs. If necessary, we should separate our State party from the national party, but again I say we should not bolt the Democratic Party and leave it to those who, in many instances, are not real Democrats.

I mention this fight over civil rights to show you what goes on from day to day in order that the status quo of our States and their counties and their cities may be maintained. The day must never come when the actions of our governmental subdivisions will be bound by the rule of a government centralized in a Federal bureaucracy.

Some 70 percent of our people, according to our census, live in cities of 5,000 or over, and these municipalities, with very few exceptions, are the ones that provide the real service for our people.

The property owner, and in your cities that includes the majority of your people, is heavily burdened by the highest real-estate taxes in history. If the income of your cities had kept pace with the inflationary spiral, you would have had to have revenues and budgets far in excess to those with which you are currently having to operate.

The American city is being victimized by inflation. The American city represents the American people and just as the individual citizen sees his pay check consumed by high prices, so the municipality sees itself being liquidated by the spiral of inflation.

I have no fear for the future of the municipalities of South Carolina. We have met both depression and inflation in our time and we are still on top. When we weathered the depression of the thirties and actually got down to the point of issuing scrip in order to pay our employees we rededicated ourselves to the basic principles of municipal government.

You have inspired the confidence of your people. They turn to you automatically as head of their administrative house. It is you who put out their fires, police their streets and property and provide recreation for their children. And not only do they pat you on the back for the fine job you are doing, but their troubles and problems usually come to you first.

I know as well as you that before someone complains to his Governor or Congressman he goes first to the mayor and the aldermen. He wants to know why the streets cannot be finished or, at least fixed up. He tells you he is paying higher taxes than he has ever paid before. You tell him he is right but cement is higher than before—just like steel and paving blocks and everything else you touch. It is impossible even if you have the means to do so, it is impossible to keep the tax rates going up in terms to meet the cost which a municipality is required to pay.

Now, obviously, my remarks up to this point have been of a very general nature relative to your problems as heads of municipalities. They are not yours alone, if at all. But it is the current picture the Nation over. It is particularly pleasing for me to note the high degree of success with which you have met these situations here in South Carolina. Let me commend you, each one of you, on the part you are playing in bringing the State of South Carolina to the forefront in the eyes of this Nation. You are making this possible by the businesslike manner in which you are conducting the day to day operation of your cities. You have shown your ability to administrate wisely in the face of great odds in the very way in which you have held your taxes down.

Every day you are helping the people of your State in bringing about businesss and industrial establishment, development, and expansion. Through your State Research, Planning and Development Board, you are taking advantage of your assets and natural resources. This board has been highly successful in its search for small industries closely related to your agricultural economy and using its products as raw materials. The record of this board speaks for itself. In the last 2 years 685 new industries have gone into 151 communities in South Carolina. These 685 new industries represent a capital investment of $130,000,000 and new employment to over 30,000 people of the State. Mark this, gentlemen, these figures are for new industries only. This does not include expansion of industries which were already established here. Combined with the report of expansion, the total figure would more than double those of new industries.

The Research, Planning, and Development Board is doing a wonderful job for you and for South Carolina. Fundamentally, that board is you. You do the research work for your individual communities; you negotiate with your local property owners; you make the tax and utility assessment allowances. In short, gentlemen, you are the trunk through which flows the lifeblood of the palmetto.

I am so happy to see the way in which South Carolina is making her readjustment to the postwar period. Our State stands today on the threshold of a glorious new era of industrial and economic expansion. It is so all over the State. We are swinging back with healthy strides into peacetime achievements.

Last week, for the first time since before the war, passengers left Charleston harbor for the Far East. Darlington County showed a $1,500,000 increase in the value of goods produced within the county. That figure is exclusive of lumber and other timber sales. Along with that increase, wages were up $2,500,000 over the previous year. In Abbeville the councilmen had taken a salary cut from $20 to $1, and the mayor had taken a cut from $100 to $50. Their former pay was restored just 2 weeks ago. In Greenville a group of educators will meet in May to discuss and plan for better rural life and education. Approximately 200 delegates will attend that conference. A request has been received from a citizen of Turkey who would like to come to South Carolina to learn more about the cultivation, care, and handling of Turkish tobacco. And no wonder. The average yield last year in South Carolina was 1,240 pounds per acre as compared with a yield of 600 pounds per acre in Turkey.

According to the last report of the Fifth Federal Reserve Bank District there were only seven business failures in the State of South Carolina during the period between January and September of last year. Only Maryland had a smaller number of failures.

Yes, gentlemen, we stand today on the very threshold of a great new era. Because of the foresight of men such as you and the confidence of our people, South Carolina stands ready today to take her rightful place as a leader in our logical march toward the agricultural and industrial rebirth of a new South.

There is a new pulse beat in the South today, a pulse beat that grows stronger and stronger day by day, each day bringing greater prosperity and progress to our land. I commend you, gentlemen. Your task is not easy, but with your strength and the will of your people you cannot fail.

American Legion's Freedom Booklets

EXTENSION OF REMARKS

OF

HON. C. WAYLAND BROOKS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, February 26 (legislative day of Monday, February 2), 1948

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I released today concerning the American Legion's Freedom Booklet campaign.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

LEGION'S FREEDOM BOOKLETS

The American Legion has come up with a new Americanism program that sparkles with the promise of tremendous good for keeping America always American.

On April 1 it will start distributing to 1,000,000 American homes the first of a series of 12 monthly brochures designed to build a new and increased appreciation of the blessings of American citizenship.

Very aptly it calls these pamphlets its Freedom Booklet Explaining the Dividends From Democracy. We could think of no better title.

They are about the most dramatic and forceful presentations of the inherent values of the American way of life that we have yet seen. Written simply, printed in color, these freedom booklets take up the various aspects of our form of government and portray their superiority over any other system. They do this in terms of everyday living—in terms of individual rights and benefits, freedoms, purchasing power, automobiles, radios, electric refrigerators, vacuum cleaners, life insurance and other ordinary American necessities which are luxuries everywhere abroad.

This is a powerful weapon with which to combat alien subversive propaganda. It arms our people with up-to-the-last minute factual information about the actual margins of our superiority in every respect, with which to rebut attacks on our institutions and ideals by Communist elements and other "ism" groups. That's an effective way to bolster faith in America.

The American Legion hopes eventually to reach a distribution of 10,000,000 freedom booklets a month. It is offering the opportunity to groups of all kinds to participate in this campaign through a nonprofit subscription plan. Leaders of all walks of life, including Government, business, labor, church and civic organizations have endorsed the freedom booklets with enthusiasm.

More power to this American Legion drive to revitalize Americanism.

Foreign Policy of the United States

EXTENSION OF REMARKS
OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, February 26 (legislative day of Monday, February 2), 1948

Mr. GURNEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD two addresses delivered by the Secretary of the Army, Hon. Kenneth C. Royall. The first address was delivered in Los Angeles on January 5 last, the second at Denver, Colo., on January 8. These addresses were so constructive and illuminating that I feel they should be made a matter of record.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE KENNETH C. ROYALL, SECRETARY OF THE ARMY, AT TOWN HALL, LOS ANGELES, CALIF., JANUARY 5, 1948

The Council of Foreign Ministers has recently ended its sessions in London—and ended them without any constructive results. This is one additional chapter in the story of postwar nonagreements and disagreements—one more evidence of difference in fundamental concepts and lack of mutual understanding between powerful nations of the world.

It is one more failure to clear definitely the path toward worldwide peace. It postpones again the hoped-for day when we can feel with assurance that all international difference can be composed without conflict. It emphasizes the necessity for a well-armed and a well-prepared America—a necessity already established by other disillusioning facts.

Our Nation has not abandoned—and will not abandon—its efforts for world accord. Under the able guidance of President Truman and Secretary of State Marshall, our Government—both legislative and executive—is moving with fairness and firmness toward the goal of peace—moving with perseverance and optimism in the face of discouragement.

But in a splendid demonstration on nonpartisan patriotism our leaders recognize that in this trial period we must have a strong America—in order to deter aggression and encourage peace as well as to provide for the contingency of war.

The question, therefore, is not "whether" but "how" we must strengthen our Military Establishment. What course must we follow to create a condition of preparedness which will in itself minimize the danger of war and which, if war should come, will provide us a reasonable assurance of victory?

In one brief talk I cannot discuss all our requirements. We need war matériel—planes and ships and tanks and artillery and bombs and rockets and camps and bases. We need these to be kept modern and continually improved by scientific and mechanical research and development. We need plans and preparation for industrial mobilization. There should be stockpiling of strategic materials, and a small reserve of specialized plants and a larger reserve of specialized machine tools.

But there is another need—the need which I will discuss today. We must have men—men for current requirements—occupation forces, garrison of bases, and a sufficient mobile striking force of Regulars in the Army, Navy, and Air Force to deal with at least the initial stages of any emergency. And in addition we must have a large reserve of manpower ready to serve promptly if an all-out war should come with suddenness.

When a prehistoric man first rolled stones down on the heads of his enemies he doubtless thought that the machine age, the "push-boulder" age of warfare had come. Thousands of years later when gunpowder was invented or long-range artillery came into use, other generations surely thought that manpower in war was becoming outmoded. And many will recall that with the development of planes and bombs it was freely said that the day of mass armies was definitely over. Perhaps, some of us here said just that.

But now fresh in our minds is the distressing fact that, despite the great strides of science—despite new and more powerful explosives, and faster and faster transportation, and much more effective electronics of offense and defense—despite all of these and other improved weapons, the last war required more military men in combat and more military men in supply than any previous war in human history.

Let me give you an interesting sidelight of 1945. For months German-held territory was subjected to terrific and insistent bombing—bombing which for a considerable period was practically unchallenged—precision bombing and area bombing. And yet the launching sites of the V–1 and V–2 rockets and the concentration points of the submarines were never destroyed—never even materially damaged—until the infantry reached them on the ground.

But the National Military Establishment need not—and does not—rely merely on history for its estimate of present and future manpower needs. Under the able guidance of Mr. Forrestal we are seeking to capitalize on the experience of the past, but at the same time to give full effect to the changes and developments of the present and the reasonable probabilities of the future. We have weighed the possible effect of atomic warfare and guided missiles upon our defense requirements.

As to the former we must recognize that agreements may effectively outlaw atomic weapons or—and this seems to me the more probable—fear of reprisal may prevent their use or the use of any other new weapons of destruction, just as was the case with poison gas in World War II.

Effective guided missiles are still far away. And, despite the drugstore quarterbacks, now graduated to cocktail-party experts, push-button warfare is not even in sight. And if it were in sight, I would like to inquire who would push the buttons, and who would push the enemy button pushers while they were pushing the buttons against us.

Even if we could safely tie our whole defense system to the premise that there would surely be the use of atomic or other new devastating weapons in a future war, we would still need military men to launch our bombs or other missiles, to reach and supply friendly bases, and to seize and hold bases in hostile territory, and to protect the lines of communication throughout the conflict.

In the matter of defense, our shores and cities and industrial centers could be protected from sea or air or from submarine attack only by planes and ships—manned by men. And if our own territory should be invaded by air or submarine—which well might happen in a future war—then ground troops would be needed to defend against the foe.

Finally, we are equally sure that without an invasion of foreign territory we would achieve at most a permanent armed stalemate, which would produce a constant and overhanging threat both to peace and to normal pursuits. The place to destroy an enemy is on his own home grounds, and to destroy him so completely that his readiness and willingness to visit our shores will be definitely canceled.

In short, the National Military Establishment is convinced that for the foreseeable future at least, success in war can be achieved only through the application of maximum pressure by land, sea, and air forces. Since another war may come with suddenness, we believe that for adequate protection of our Nation we must be prepared to put in the air, on the sea, and on the ground millions of men in uniform within a short period after a war emergency arises.

This is the opinion of the same men who estimated military manpower needs in World War II so accurately that at the time of our final victory we had committed to combat 88 of the 90 divisions we had activated, and had all 90 overseas.

How are we going to get these millions of men if a future emergency comes upon us? It is and has been the opinion of our military planners, it is the opinion of the splendid Compton Board appointed by President Truman, it is the opinion of many leaders of national thought and of an overwhelming number of war veterans and their national organizations that we cannot be prepared currently or for the future without universal military training.

I have somewhat reluctantly come to the same conclusion. "Reluctantly," I say, because I realize that, despite many compensating civilian benefits, a program of military training is an additional drain upon our dollars—and what is more important—an additional demand upon the available time of our young men. And I have also given careful thought to the argument that the plan would regiment the trainees and inculcate in them the spirit of militarism.

But the real need of the plan, for reasons which I will shortly give you, seems to me to justify the money and time involved. And I believe that the other arguments against the plan can be largely met either by proven facts, or by provisions in the plan which will alleviate, and compensate for, the sacrifices which would result.

Perhaps the best answer to the charge of militarism and regimentation—recently the word "fascism" was used by a political figure—the best answer is the 14,000,000 men from civil life who served in the armed forces during World War II—many of them for long periods. They have now returned home and you certainly do not find among them any spirit of militarism or lack of independence, or any fascism.

The suggestion of interference with a young man's education does not impress me overmuch. Only 6 months' continuous service is required, after which a trainee has certain part-time options which would not prevent school attendance.

Taking 6 months out of any 2-year period would leave time for two complete scholastic years of 9 months each. Schools and colleges showed great ingenuity and manifested great cooperation in order to meet the educational problems of wartime students and those of returning veterans. The problem of adjusting to a universal military training program—without any detriment to orderly education—would seem simple by comparison.

On the affirmative side, the current universal military training plan will provide a course of training which, to the maximum extent consistent with the military objectives, will afford to the trainee special educational and technical advantages—an opportunity to learn and develop along lines which would be of value to him in later civil life.

As to the real need of universal military training, may I give you a few facts? Congress has approved a total Army and Air Force of 1,070,000 enlisted men and officers—the number thought to be necessary to perform the current tasks of these two departments.

Our plans also include a National Guard of 681,000 and a Reserve Corps with a peacetime

complement of 768,000. These totals will serve as the nucleus of the larger force needed for any mobilization day and for the period immediately following—a force which must be filled from the civilian population.

This is the over-all defense picture. And in our opinion every phase of it is dependent for its success upon universal military training. Neither the desired peacetime strength of any component nor the facility for necessary expansion in an emergency can be obtained without this program.

As has been previously stated, universal military training contemplates a 6-month minimum training period for all able-bodied young men. Thereafter the trainee would have among his options enlistment in the Regular Army, or joining the National Guard or the Organized Reserves.

Today the Regular Army and Air Force are nearly 170,000 behind in the necessary enlistments. It is felt that under universal military training the Regular Army option would be exercised by enough young men to help to an appreciable extent in supplying this deficit in presently needed strength.

The National Guard now has only 215,000 men, or less than one-third the required number. And this is true despite a recent intensive recruiting campaign. Universal military training is the only real hope of obtaining the required enrollment in the National Guard. And the same is substantially true of the Enlisted Reserve.

Finally, it is perfectly apparent that without universal military training we would have no reservoir of young men who would be able to serve promptly in the armed forces in event of a sudden war. As Mr. Truman said a year ago, "The development of a trained citizen reserve is vital to our national security. This can best be accomplished through universal military training."

Some of us may get a false sense of security from the number of present-day civilians who served in 1941-45. We are inclined to forget that the defense of our Nation requires young men. Already more than half of those who fought in 1941-45 are precluded from further military service because of age or added responsibilities or other causes—and by the time UMT could build up an adequate supply of trainees, practically none of these World War II veterans would be available.

But the men needed for war present a question of quality as well as quantity. In case of our National Guard and our Reserves, the training periods are relatively infrequent and in toto provide only a part of the hours needed to qualify a soldier for effective active service.

But with UMT trainees of 6 months' experience entering these components, we would have much more adequate and more advanced training. Six months of UMT would be equivalent in training value to 5 years in the National Guard or the active Reserve.

To those who might be called for duty in war the advantage of the added training is obvious. It is an advantage not only to the country, but also to the selectees and their brothers-in-arms. For the inexperienced combat soldier endangers both himself and the men who serve with him.

We do not have—and we cannot hope to have and we do not want to have—the largest Army in the world, either today or in case of war. But the advantage in numbers of the armed forces of any other country must be offset by providing our Nation not only with the best equipped but also with the best trained soldiers and sailors and airmen in the world.

Finally, I would call to your attention one other value of UMT. If war should come, it is perfectly possible that many of our cities would be faced with an emergency following an enemy bombing or other attack. In such event, a cadre of men with military training would help greatly to meet any situations which might arise.

In my talk today, as in prior talks, I am sensible of the fact, and sensitive to the fact, that all this sounds warlike. I realize that our people are so hopeful of avoiding war that they do not like to think of it even as a possibility, much less to discuss it.

I wish it were not necessary to discuss it. But the function of the Army and the Navy and the Air Force—in fact, their only function—is to provide for the contingency of war. If we could surely and safely dismiss from our minds, and from our plans and recommendations, all reference to armed conflict, then we would not need our armed services at all.

But, unfortunately, neither the facts of history nor the circumstances of the present world, make this course even thinkable. We must have defense forces, and adequate defense forces, forces which are designed for possible military combat.

It is my sincere hope that the international picture will so improve that UMT and much of our other preparedness program can be abandoned or, better still, never have to become completely operative. But until world conditions are better stabilized than they are today, we must plan and we must have universal military training in order to be ready properly to defend our Nation.

And if our preparation never has to be used for actual war; if instead the time and dollars spent for such preparation to deter an aggressor and avoid a conflict; if military strength, maintained by the most peace-loving of nations, succeeds in preserving the peace of the world, then this time and these dollars and this preparation will have bought for us the greatest value of all—peace for ourselves and for our children.

ADDRESS BY HON. KENNETH C. ROYALL, SECRETARY OF THE ARMY, AT THE DENVER ROTARY CLUB, DENVER, COLO.

This year 1948 will bring into even more definite focus the new role of America in the preservation of the peace and security of the world—will emphasize the leadership which this role requires and the responsibilities which it imposes upon us. This postwar period is indeed a new era in the affairs of America and of the world.

Perhaps the most novel development of all is the treatment of our defeated enemies. We must frankly admit that 2½ years ago few of us, if any, realized just what the victory would entail in the matter of occupation of enemy lands—or what this occupation would involve in men, in money, and in effort.

We had strained our every national fiber toward winning the war. Most of us felt that victory, when achieved, would solve our world difficulties—that we could quickly punish our enemies, sterilize their military potential, and be on our way to normal life, with nothing more than a small police force to preserve the peace.

But step by step new factors successively entered the picture—humanitarian considerations even toward the enemy peoples we had defeated, unrest and disorder and political conflict in the world, clear manifestations of the spirit of totalitarian expansion, disillusionment as to the conduct and purposes of other nations. These developments have combined to lead us to a broad occupation of Germany and Japan.

The job of this occupation has been given to the Army—with policies fixed by both the State and Army Departments. The Army does not want, and has not wanted, the nonmilitary part of the occupation job—which is the principal part. Both former Secretary Patterson and I have repeatedly sought to transfer it to some other Government agency.

But until this transfer can be made, we will use our best efforts—as we have done in the past—to carry out the occupation objectives of our Government. We are keeping in close touch with Congress, and will also keep the public advised of our general plans and results. For it is the Army and the money of our entire Nation that is being used in the occupation, and our people have a right to be informed.

Day before yesterday, in San Francisco, I discussed some phases of Japanese occupation. Today I will discuss Germany. The occupation of each country is a big, tough, complicated job. But in Germany we have—not a single nation with an existing government—but a country divided politically into four parts with only two of those parts—the British and American zones—having a joint economic administration. At this moment, the French and the Russian zones are operated separately and independently of the other two.

One of the zones is controlled by a government of a different ideology from that of the other three occupying countries, and the differences have become so marked that joint action—through an Allied control council—has been either difficult or—more frequently—impossible. The recent meeting of foreign ministers achieved no progress in rapprochement among the zones.

Not only are there vast political variances between the Russian zone and the others—difference in freedom of choice and freedom of action of the citizens—but there is also a serious economic schism in what was once a closely-knit nation—with much of the food-producing land in the hands of Poland or in the Russian zone and with the principal industrial plants in the British and French zones.

As already suggested, the first purpose of occupation was to prevent Germany from ever again upsetting the peace of the world. We had seen enough of German-initiated conflict in our time. Twice within a generation that nation had plunged the world into war—and the German people had an ugly history running back through the nineteenth century—and before that all the way to medieval and even ancient times.

England and France and Austria—Belgium and Holland and others—remembered these historical facts even more vividly and tragically than did we. Today they still remember—and remind us, if we forget—that after World War I, as in earlier times, the seeming penitence of Germany—and her simulation of weakness—had merely afforded the time and opportunity for secret—and then open—rearmament, which again plunged her neighbors into a war of Teutonic aggression.

While we were fighting World War II, we were determined to create conditions in Germany which would put a stop to her militarism once and for all. No matter how many other issues have now woven themselves into the German picture, we must not forget this original purpose of occupation. To this purpose we must still adhere—for the sake of our peace and the peace of the world.

Since May 1945 we have gone a long way toward demilitarization of Germany. We have brought her war criminals before the bar of justice. We have broken up and dispersed her military organization and her vicious and cruel Nazi groups. We have removed from positions of influence most of the top leaders who fomented and conducted the cruel war of oppression. We have abolished the pernicious cartels. We have dismantled the actual munition plants as well as some of the supporting industries.

In this dismantling there was another aspect—that of reparations. Those allied nations who had suffered so greatly from Nazi depredations—those whose own industry had been destroyed by Germany—had a feeling a rightous feeling, that the Germans should pay at least in part for their criminal destruction. Therefore, it was decided—and agreed between us and these allies—that there should be payment in kind—payment from certain dismantled German plants.

But as we have moved toward the destruction of the German military threat, we have

encountered other problems in the conquered nation Some of them arose from the terrific damage inflicted by the Allies on the cities and towns even the countryside of Germany herself, on her plants and her transportation system—damage which some of you have seen.

This destruction has created a vast deficit in the German economy—a deficit aggravated by the millions of casualties among the young and able-bodied members of the population. In peacetime the British and American zones had not been self-sustaining in food. Their present deficiency is larger than before the war, and there is nowhere near enough production of other goods to pay for the importation of necessary food or other deficient necessities. And the surge of Germans—many of them nonproducers—from the Russian zones into our own, has added to the burden.

So in the case of the German people we are faced with a situation where—to quote a former War Department official—"we must starve 'em, shoot 'em, or feed 'em." To America there was but one alternative—the humanitarian answer. We would have fed them if there had been no other considerations. We would not walk out and leave them destitute.

But there were other valid reasons for feeding our former enemies. If Germany was to be removed as a threat to the world, she had to have a stable and peaceful government. Such a government could not exist under conditions of hunger, disease, and despair.

So we have helped the Germans—sending them each year hundreds of millions of dollars' worth of food and medicine and other necessities. We have done so, until we begin to wonder how long we must continue this expenditure. We are properly asking ourselves when it will end. The answer is obvious—we can either let Germany collapse or we can continue to help her until her own production and exports can pay her own way.

This brings us up against another situation. A bare subsistence diet will not enable Germany to work and produce. Her present minimum adult ration of 1,425 calories per day is little more than a hearty American breakfast. For workers, particularly in coal mining and other heavy labors, it was—and is—necessary to provide much more than this minimum in order to get the jobs done. This means a greater food contribution from America, which, in turn, calls for a greater production to meet eventually the added costs.

So it is that German industrial and economic recovery has become a major objective of German occupation. This is accentuated by the important part that Germany must play in general European recovery. An impoverished Germany might well be an economic millstone around the necks of its neighbors, and the recovery of the rest of Europe is definitely dependent on the coal and steel production of the Ruhr.

Another occupation factor of increasng moment is the sharp political conflict in Europe—the conflict which has arisen between free democracy and oppressive totalitarianism. There are alarming indications of another creeping aggression—at least a creeping political aggression. This development makes it important that there be built in Germany not only a free democratic government but a stable and self-sufficient one.

For these various reasons the need of an improved German economy is now felt so strongly that some of us are inclined to forget the original occupation purposes of demilitarization and reparation. Some find objections to further implementation of these policies. And all of us are sensing areas of possible conflict between the present objectives of occupation.

For example, the percentage of completely non-Nazi Germans was exceedingly small—too small to run Germany successfully. Among the Nazi sympathizers were many men of ability whose talents would be helpful in the present-day development of the German economy. It is urged upon us that too broad a purge of this entire group would greatly impede German progress.

Likewise, the demilitarization of German industry presents a possible conflict with economic recovery. The phrase "war potential" can include a wide range of plants, such as steel and chemical, which can contribute to economic recovery. And in selecting plants for reparations there is danger of destroying industrial capacity needed for full economic recovery of Germany.

These as well as other situations present questions of degree about which equally sincere and informed people may well differ. There can be no dogmatic rule of thumb. It is a matter of judgment under all the circumstances—often changing circumstances.

The Department of the Army is fortunate in having as military Governor of Germany—and also as theater commander—one of the most capable of officers, Gen. Lucius D. Clay. His character, intelligence, executive ability, energy, and singleness of purpose have distinguished his handling of the difficult problems which I have mentioned—as well as many other problems.

The Department of the Army is determined to complete the demilitarization of our zone in Germany and to build a freely democratic form of government which will help preserve the peace in Europe. We will also carry out as far as possible our international commitments for reparations to the western European countries and to any other nations which have not abrogated nor waived their rights under these commitments.

But, at the same time, we are also acutely conscious of the growing importance of German industry and exports. We recognize that a stable Germany which can stand on her own political and economic feet will prove the soundness of a true democracy and will serve as a deterrent against totalitarianism with its connotations and threats.

We have acted accordingly. During last summer we raised the permitted level of German industry—and lowered the projected reparations—thereby giving to German industry a chance to grow to the 1936 level. In dismantling we have, as far as possible, selected those plants which are in excess of German capacity for production. We have organized an Export-Import Agency which is functioning successfully. Agriculture is being encouraged and developed. In conjunction with the British, the operations of the important Ruhr coal mines have been improved.

There are still great difficulties to be overcome. The possible conflicts with demilitarization and reparations are at present a minor part of these difficulties. The war collapse of Germany and her people are still the principal factors.

Our Department is glad to report some results and progress. General industrial production has increased from a low of nearly 20 percent to 42 percent of the 1936 average. Steel production is up to 70 percent. The daily coal output has gone from 100,000 tons a day to 280,000 tons. Some commodities, including lumber, have passed their pre-war level.

The exportable surplus of Germany is growing and the proceeds are being used to acquire cotton and other raw materials needed for further increases in production. The transportation system is being rehabilitated, 30,000 cars having been restored to service in the last 3-month period. The recovery spiral is definitely upward.

In the meantime, General Clay and his staff have continued in their efforts to reteach Germany the essence of free democratic government—which most of them had forgotten or had been afraid to practice. Germans are experiencing freedom of the press; freedom of thought; freedom of association; freedom of religion. They are being given a chance to see—and their eastern neighbors are being given a chance to see—how a capitalistic democracy works—how it benefits all the people of the country.

More than a year ago President Truman said: "We shall help the defeated enemy states establish peaceful democratic governments of their own free choice, and we shall try to attain a world in which nazism, fascism, and military aggression cannot exist."

The work of General Clay and his staff in Germany, and of Under Secretary Draper and his able helpers in Washington, is toward the achievement of the goal fixed by the President. In full recognition of the size and complexity of their task, they have sought the advice of competent men from every walk of life, from every school of political thought, and from every section of the country.

The job in Germany is not done—and in my opinion it will be many years before we can turn Germany loose on her own without endangering the attainment and preservation of our important goals. But in a much shorter period, I hope, we can see an end to our financial contributions.

But, whatever the duration, we must remember that occupation is a task which America has assumed. It is a flag responsibility. Its failure would be—not that of Germany or Japan—but that of the United States.

Conversely, if we succeed, we will get the credit and—what is much more important—we and the whole world will reap the benefits of a peace-loving and self-supporting nation, which will be an aid instead of a threat to the peace of the world.

With the splendid and unwavering assistance which we have been receiving from Congress and from the departments of government—and with the support of citizens such as yourselves—we expect to succeed in our task.

Air Power and National Security

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUST OF REPRESENTATIVES

Thursday, February 26, 1948

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast:

Congressman DAVIS. Hello, friends in Wisconsin. This has been a busy week in the House of Representatives.

The report of the conference committee on the Langer-Stevenson Civil Service Retirement Act was approved. This, incidentally, culminated months of faithful and effective work by Congressman BILL STEVENSON, of La Crosse. Rent control and the President's powers under the Second War Powers Act were extended on their present basis for 30 days to permit thorough consideration of pending permanent legislation. The authority of the United States Maritime Commission to control and operate merchant vessels was extended until July 1, 1949.

The grinding out of appropriation bills has begun. Two of them were passed this past week. Other important subjects for House debate were the President's Reorganization Plan No. 1 of 1948, and the temporary freezing of existing social-security schedules.

Today, I want to divert from the important subjects of House action and discuss with you another matter that wasn't up for debate this week, but which is uppermost in

the minds of many persons today. It is the matter of a stronger and improved Air Force, and its relation to national security. It isn't a new subject, but it is one that is receiving increased consideration every day. Some of the Nation's leaders who have stressed it since the days of Billy Mitchell, of Wisconsin, have included two of the leading Presidential candidates, Harold Stassen, of Minnesota, and ROBERT A. TAFT, of Ohio. Recently Senator TAFT declared his belief that American air power offered a better insurance of national security than the proposed universal-military-training program. Let's look into that angle for a few minutes today, and consider some of the facts about our air power. There has been so much loose talk about our Air Force that many of you may have the idea that the United States has almost no air strength today, and that we would be a push-over for any first-rate power that attacked us by air. Let's look at the facts.

There is no present concern over ability of the United States to protect the North American Continent from enemy air attack. According to the President's Air Policy Commission, the earliest date when that problem might become acute is January 1, 1953. However, while our present air strength is sufficient to cope with present national security requirements, we cannot be sure of what the next few years may bring in technical advances of aircraft and guided missiles. And ability of the air force to adequately support our American foreign policy is a more immediate problem.

The steadily deteriorating international situation under the Truman administration now indicates that United States air power may have to operate outside the continental United States in three troubled areas: The Middle East, western Europe, and the Far East. Of these three, the middle-eastern sector seems the most explosive, with its 4,000,000,000-barrel oil reserve as the stake in international maneuvering. We've taken the first steps in that direction by reopening some of the largest World War II air bases in the Mediterranean and middle eastern sections.

Now just how many planes do we have ready for service? Numerically, United States air power now consists of 6,805 combat planes with the air force and 4,900 combat planes in the carrier-combat groups and fleet-support units of the Navy. This total of 11,705 combat planes compares with the Russian air strength of 14,000 combat planes, as estimated by General Spaatz, Air Force Chief of Staff. In addition, the United States has 9,000 combat planes of the Air Force in storage and 3,000 naval combat planes in storage. These 12,000 planes can be reconditioned for combat on short notice, and would give us at the moment slightly under 24,000 fighting planes. Although many of these planes are already tactically obsolete, and more will become out of date in the next 2 years, they will form an important component of air power for several years more as trainer and utility-type planes. Thus we do have the planes available today, if we had the men to fly them. In case of a national emergency, part of the men to man these storage planes would come from ex-servicemen who would return to the Air Corps, and part would come from men trained in commercial aviation.

Would the rest of the men needed by the Air Force be available if universal military training should be adopted in this country? Not immediately, and perhaps not at all. The first 6 months of training under the UMT bill would be devoted to what the Army calls basic training. I don't have to explain that term to any ex-serviceman. It means 6 months of hayfoot, strawfoot, one-two-three-four, company, halt! After that period, the UMT candidate would have certain choices of which branch of service was to get him for the next 6 months, and then he would go back to civilian life. Even if we could train pilots in 6 months, they would be out of uniform at the end of that time, and we'd have to start all over on a new group of trainees.

But if increased attention is given to improving and developing the Air Force, manpower will be more easily obtained. Even during World War II when antiaircraft guns and enemy planes made flying indeed much more dangerous than in peacetime, a good share of men going into service wanted to get into aviation. You can talk to any group of high school students in our country today, and you'll find that flying has more appeal to them than ever before. The question of finding men to fly the planes on a long-term basis isn't as vital today as the problem of getting the planes to replace those becoming obsolete in the next few years.

The Air Coordinating Committee has set an annual production rate of 3,000 military aircraft with air-frame weight of 30,000,000 pounds as the minimum required to maintain a healthy aircraft industry capable of rapid emergency wartime expansion. Against these requirements are the facts that in the calendar year 1946, the aircraft industry built 1,330 military planes; in 1947, built 1,800 planes, and has for 1948 received procurement funds for 1,511 planes. To meet the committee's requirements, aircraft production rates would have to be trebled. Is this the fault of Congress? Let me read you a quotation from Aviation Week magazine for the issue of February 23. "Blame for the fiscal 1948 procurement plight rests squarely on President Truman, who slashed by more than 50 percent the 1948 Army-Navy request for 3,140 planes with an air-frame weight of 26,233,000 pounds." Aircraft procurement funds for the fiscal year 1949 have not yet been determined by the Congress. The President's budget called for a total of $1,172,000, which is expected to buy 2,131 military planes, of which 1,164 would be for the Air Force and 967 for the Navy.

Although congressional sentiment is not ready to accept the $6,000,000,000 annual expenditure that a huge Air Force would require, there is solid bipartisan support for as much as a 10-percent increase over the Presidential request for aircraft procurement. One reason that congressional thinking has not crystallized on this matter is that the joint chiefs of staff have not yet drawn up an over-all strategic defense plan for the United States. Lack of such a plan at present was bitterly accented recently in the President's air policy commission report.

Earlier I mentioned the possibility of advancement in aircraft designs and development of the guided missiles program making present fighting procedure obsolete. But don't think for 1 minute that we are standing still in that same field. We'll probably double the production and research in the guided missiles department this year. Our Second District of Wisconsin has a direct interest in this field, for the Nation's newest laboratory studying one part of guided missiles is located at Madison, Wis., under naval ordnance direction. Actually the United States Government is conducting the largest aeronautical research program in the entire world right now. We are spending more than $300,000,000 during the current fiscal year in an effort to gain new knowledge in the aeronautical sciences, to expand and crystallize presently available knowledge, and to build new equipment and train new workers for future research. And we are fostering this gigantic program because only through research can leadership in the air be assured. About 99 percent of the present aeronautical research effort is directly sponsored by the Federal Government. The reason is obvious. Any discoveries have immediate or potential value to the Air Force and naval aviation, in the design of new aircraft and missles.

Outside of Russia, the United States is the only major power that is giving serious consideration to developing its air strength. In Britain, for example, the government there is gambling on 5 years of peace and putting all emphasis on long-term research, with little attention being given to keeping an adequate stand-by of fliers and planes. England's huge wartime aircraft industry is idling along now, or turning to other lines of manufacture. By contrast, Russia's aeronautical research program is estimated to be 5 years ahead of schedule, thanks to captured Nazi wind tunnels, German scientists, and laboratories operating night and day.

In all this discussion of air power and national security, I have not mentioned one all-important thing. That, of course, is the atomic bomb. Today we have it; how many we have in stock piles is a secret we cannot tell the world. But this we do know: We have the bomb and we can use it. No other nation will challenge us to combat as long as we have it and they do not; no other nation will want war with us if we have air power sufficient not only to make us secure here at home, but to take care of our far-flung commitments abroad.

It is for this reason that more and more people today are looking with favor upon the proposals to foster air-power development and scientific research. To many of us it seems a more safe and sane program, and certainly no more expensive than some of the security proposals that have received more discussion but little action in recent months.

It may take Fred Waring's orchestra to convince the mothers of America that they want their boys to be soldiers, but all it takes to convince young America that it wants to fly is one zooming airplane passing overhead and soaring off into the wide blue yonder. Fill our skies with modern planes and young Americans trained to fly them and we'll not have to worry so much about national security.

TVA Steam Plant at New Johnsonville, Tenn.

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, February 26 (legislative day of Monday, February 2), 1948

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I addressed to Gordon R. Clapp, Chairman of the Board of the Tennessee Valley Authority, on January 22, with reference to TVA's construction of a steam plant at New Johnsonville, Tenn., and Mr. Clapp's reply dated February 10, with a memorandum to the Board of Directors on the constitutionality of the proposed TVA steam plant at New Johnsonville, Tenn.

I am informed by the Public Printer that the matters will make 3¾ pages of the RECORD at a cost of $266.25.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,
COMMITTEE ON APPROPRIATIONS,
January 22, 1948.

Mr. GORDON R. CLAPP,
Chairman, Tennessee Valley Authority, Knoxville, Tenn.

DEAR MR. CLAPP: I note that the TVA is requesting this year an appropriation to begin the construction of a steam plant at New Johnsonville, Tenn. Heretofore TVA has acquired a Federal steam plant at Muscle Shoals which was constructed by the Corps of Engineers during World War I under the war powers of the Executive, and a second steam plant at Watts Bar during the recent war, also under Executive war powers. In addition it acquired through purchase of private utilities a number of smaller steam plants in the area in 1939.

This proposed construction in peacetime of a steam plant by TVA is the first instance where it directly invades the field of steam generation.

Will you give me your legal opinion as to the constitutionality of this departure?

I particularly refer you to the colloquy of Mr. John Lord O'Brian, counsel for TVA in the Ashwander case.

Sincerely yours,

STYLES BRIDGES.

[Ashwander case, 297 U. S. 288]

Mr. Justice MCREYNOLDS. Is there a steam plant in connection with this project?

Mr. O'BRIAN. Yes, Your Honor. That was mentioned earlier. There is a large steam plant which was built at Muscle Shoals before the dam was built.

Mr. Justice MCREYNOLDS. For what purpose?

Mr. O'BRIAN. For the purpose of equipping the war munitions plant immediately, as quickly as possible with power.

Mr. Justice MCREYNOLDS. Is that used to generate electricity?

Mr. O'BRIAN. No, sir; it has never been used. It stands idle. Much is made in my opponents' brief of the danger of the Government selling power from the steam plant. That steam plant is not in this case. It has never been used. It has been maintained. It has been leased to the Alabama Power Co., which has used it as a stand-by facility with which to meet break-downs in its service. There is nothing in this record to show that the Authority ever intends to use it for the purpose of generating power for sale, and I disavow any such intention at this time.

Mr. Justice BUTLER. I know; but you assert the power, do you not?

Mr. O'BRIAN. No; I do not.

Mr. Justice BUTLER. Do you say that to aid in disposing of the electricity incidentally produced from this navigation dam, the Congress has no power under the Constitution to build stand-by plants to supply their customers, to keep the current going?

Mr. O'BRIAN. If you mean break-down facilities, yes; it could. It would have to. Any regulated system would have that.

Mr. Justice BUTLER. And then to meet great demands upon the peak?

Mr. O'BRIAN. No; I do not think that could be done in this case.

TENNESSEE VALLEY AUTHORITY,
Knoxville, Tenn., February 10, 1948.

Hon. STYLES BRIDGES,
Senate Office Building,
Washington, D. C.

DEAR SENATOR BRIDGES: In accordance with your letter of January 22, 1948, I have asked Mr. Joseph C. Swidler, TVA General Counsel, for an opinion on the constitutionality of TVA's construction of the proposed New Johnsonville steam plant.

I am enclosing herewith a copy of the opinion which he has prepared.

Sincerely yours,

GORDON R. CLAPP,
Chairman of the Board.

FEBRUARY 9, 1948.

MEMORANDUM TO THE BOARD OF DIRECTORS ON CONSTITUTIONALITY OF PROPOSED TVA STEAM PLANT AT NEW JOHNSONVILLE, TENN.

In accordance with the request which the Chairman of the Board has received from Senator BRIDGES and referred to me, I am setting out below for the Board and for transmittal to the Senator a statement of my views on the constitutionality of TVA's construction of the proposed steam generating plant at New Johnsonville, Tenn.

I understand the pertinent facts to be as follows: Additional generating capacity is urgently required if TVA is to meet the steadily growing needs for power in its service area. This area, which covers about 80,000 square miles and has a population of 5,000,000, is wholly dependent upon TVA for its power supply. To help meet the demand for additional power, TVA plans to install additional generating units at several of its existing hydro projects, in addition to proceeding with the construction of the South Holston and Watauga projects. Since completion of TVA's Watts Bar steam plant, large installations of hydro capacity have been added to the system with no comparable additions in steam capacity. If much of the value of large quantities of hydro power is not to be wasted because stream-flow conditions limit the availability of such power to certain periods, additional steam capacity must be provided to firm up secondary and dump power produced at some of the existing hydro projects and by the additional new hydro units. The anticipated increase in power loads over the next few years will be particularly great in the western portion of TVA's service area. The need for additional quantities of firm power is, therefore, particularly great in this portion of the area. The proposed New Johnsonville plant will perform much the same function in firming up hydro power, particularly that produced in the western portion of the Tennessee Basin, as the Watts Bar plant presently performs in firming up part of the hydro power produced in the eastern section. Construction of the New Johnsonville plant accordingly offers the most practical and economical method of meeting present power needs.

TVA's statutory authority to construct steam plants is clear. See TVA Act, sections 4 (f), (i), and (j); 14; 15. The legislative history of the TVA Act demonstrates that Congress itself has consistently regarded the construction of steam plants as presenting no special constitutional problem.

The authorization to construct steam plants contained in the TVA Act accorded fully with prior congressional thinking on the subject. Provisions authorizing continued operation of the steam plant erected by the Federal Government at Muscle Shoals during World War I were included in the various Muscle Shoals bills introduced by Senator Norris prior to the enactment of the TVA Act in 1933, two of which were passed by Congress (S. J. Res. 46, 70th Cong., pocket-vetoed by President Coolidge, and S. J. Res. 49, 71st Cong., vetoed by President Hoover). One of the earlier Norris bills, S. 2147, Sixty-ninth Congress, would have declared it to be—

"SEC. 16. * * * the spirit and intention of Congress in passing this act—

"(c) To assist in the development of electric power by the complete storage and utilization of the waters of the Tennessee River and its tributaries, in conjunction with steam and other sources of fuel, to the end that electrical energy may receive the widest possible distribution at the minimum cost." (Hearings before Senate Committee on Agriculture and Forestry, 69th Cong., 1st sess. (1926), pp. 5–6.)

The same bill would have established a Federal Power Corporation with express authority—

"SEC. 9. * * * to complete the steam auxiliary plant at nitrate plant No. 2, and to construct such other steam auxiliary plants as may be necessary" (Id. at 4).

The later of the two earlier bills actually passed by Congress also contemplated that additional steam plants might be constructed (secs. 12 and 26, S. J. Res. 49, as reprinted in H. Rept. 2747, 71st Cong., 3d sess.).

In 1930, the Army engineers rendered a detailed report to Congress concerning the development of the Tennessee River in the interest of navigation, flood control, and power. This report proposed, basically, two alternative methods of development. The first involved improvement of the main river by a series of low dams. Such dams would have provided a navigable channel, though an inferior one, but no flood control or power. The second proposal was one for full-scale development, involving construction of high dams on both the main river and the tributaries for navigation, flood control, and power.[1] The report assumed that auxiliary steam generation would be both necessary and feasible if a plan for full-scale development which included generation of power were adopted. (See H. Doc. 328, 71st Cong., 2d sess. (1930), pp. 15, 66–68, 92.) The TVA Act represented, in effect, the adoption of this program of development as one to be built and operated by TVA.[2] A similar assumption as to the need for steam generation in this program was later made by the engineering staff of the joint congressional committee investigating TVA. (See S. Doc. 56, 76th Cong., 1st sess., part 3 (1939), pp. 156–164; see also the committee report, part 1, p. 151.)

The last two of the earlier Norris bills each contained a section providing for payments in lieu of taxes to Alabama based on generation of power at any existing or future steam plant, as well as at hydro plants, located in that State. Section 13 of the TVA bill as passed by the Senate contained a similar provision reading as follows:

"SEC. 13. Five percent of the gross proceeds received by the board for the sale of power generated at Dam No. 2, or from the steam plant located in that vicinity, or from any other steam plant hereafter constructed in the State of Alabama, shall be paid to the State of Alabama; and 5 percent of the gross proceeds from the sale of power generated at Cove Creek Dam, hereinafter provided for, or any other dam or steam plant located in the State of Tennessee shall be paid to the State of Tennessee." (Conference report on H. R. 5081, 73d Cong., 1st sess. (1933), p. 46.)

This provision was thoroughly debated and bitterly attacked, but solely on the ground that Alabama and Tennessee should not receive the direct benefits of the TVA program and in-lieu tax payments as well. That steam plants would in fact be constructed was assumed. The following colloquy between Senators King and Copeland during the debate in the Senate is of interest in this connection:

---

[1] Before the TVA Act was passed, the Army engineers were already proceeding with plans for construction of a high dam at the Wheeler site.

[2] See *Tennessee Electric Power Co.* v. *Tennessee Valley Authority* (21 F. Supp. 947, 953 (E. D. Tenn., 1938)), where the Court stated: "The program adopted by the Authority, in its main features, and the choice of the sites for the various dams follow the broader multiple-project plan outlined in House Document 328 p. 43), commended by the board of engineers of rivers and harbors, as superior to the low-dam plan."

"Mr. KING. Mr. President, I want to address myself for the moment to the Senator from New York [Mr. COPELAND]. He certainly must be in error in saying that the bill contemplates the operation of a steam plant. I have been told that we have in the Tennessee Valley the greatest water power in the world, so important that the Government is justified in expending tens of millions of dollars in its development. Is not the Senator from New York in error in saying that we are to operate steam in addition to the water power?

"Mr. COPELAND. I am not surprised that the Senator asks the question. I invite his attention to the language on page 14, beginning in line 20:

"'Five percent of the gross proceeds received by the board for the sale of power generated at Dam No. 2, or from the steam plant located in that vicinity, or from any other steam plant hereafter constructed in the State of Alabama, shall be paid to the State of Alabama.'

"I suppose there is a certain amount of primary power which can be depended on throughout the year, but to make certain there is a uniform supply of power it has been necessary to erect a steam plant, and the States are to have 5 percent of the gross proceeds not only of the water-power plant but of the power generated in the steam plant." (77 CONGRESSIONAL RECORD 2633 (1933).)

The reference to steam plants in the in-lieu payment provision of the Senate bill was eliminated in conference. It was eliminated, however, not because the conferees thought that no steam plants should or would be constructed, but because they felt that the claims of Alabama and Tennessee to ownership of the waters of the Tennessee River might justitfy in-lieu payments based on production and sale of hydropower, but not of steam power. Representative McSwain expressly so stated during the House debate on the conference report. (77 CONGRESSIONAL RECORD 3595 (1933).)

In 1939, Congress authorized TVA to buy existing steam plants and clearly recognized, in the course of considering the amendatory legislation involved, that TVA might later have to build additional steam plants. Section 15c, the legislation in question, was enacted to make possible purchase by TVA of the generating and transmission line properties of the Tennessee Electric Power Co., as well as similar properties belonging to other subsidiaries of the Commonwealth & Southern Corp. Section 15c specifically authorized TVA to issue bonds in the total amount of $61,500,000 for the following, among other, purposes:

"(1) Not to exceed $46,000,000 * * * for the purchase of electric utility properties of the Tennessee Electric Power Co. and Southern Tennessee Power Co., as contemplated in the contract between the corporation and the Commonwealth & Southern Corp. and others, dated as of May 12, 1939.

"(2) Not to exceed $6,500,000 * * * for the purchase and rehabilitation of electric utility properties of the Alabama Power Co. and Mississippi Power Co. in the following-named counties in northern Alabama and northern Mississippi * * *.

"(3) Not to exceed $3,500,000 * * * for rebuilding, replacing, and repairing electric utility properties purchased by the corporation in accordance with the foregoing provisions of this section." (53 Stat. 1083.)

Congress was fully aware, when it enacted these statutory provisions, that the electric-utility properties which TVA intended to acquire, in accordance with the contract of May 12, 1939, included important steam plants at Nashville, Hales Bar, and Parksville, as well as several smaller plants. The Nashville plant had an installed capacity of 48,000 kilowatts, the Hales Bar plant 40,000 kilowatts, and the Parksville plant 13,000 kilowatts. Moreover, Mr. J. A. Krug, then TVA manager of power, testified expressly before the House Military Affairs Committee during its consideration of the bill that TVA intended to operate the Nashville and Hales Bar steam plants if the purchase were consummated. (See hearings before Subcommittee of House Committee on Military Affairs, S. 1796, 76th Cong., 1st sess. (1939), pp. 19–21.)

With the facts fully before it, Congress itself did not regard the 1939 amendatory provisions as presenting any constitutional issue. From a constitutional standpoint, there obviously can be no distinction between the Government's power to acquire and to construct steam plants for operation in conjunction with an existing federally owned hydroelectric system. Certainly Congress recognized no distinction. Indeed, the principal reason given in Congress as to the need for the 1939 amendment was that while TVA already possessed authority to issue bonds in order to finance construction of steam or other generating plants, there was considerable doubt as to whether the proceeds of such bonds might be used for purchase of such plants as distinguished from construction. The Senate Committeee on Agriculture and Forestry stated in this connection:

"Under the existing Tennessee Valley Authority Act, as amended, the Board of Directors of the Tennesseee Valley Authority are empowered to issue bonds and use the proceeds thereof for the construction of dams, steam plants, or any other facilities to be used for the generation and transmission of electric power; also for the construction or acquisition of transmission lines, and for making loans to municipalities and cooperative organizations for the purchase of existing transmission lines and distribution properties. The authority under the law to issue bonds for the purchase of existing generating plants is extremely doubtful. It is this defect in existing law which the proposed amendment is mainly designed to remedy. (S. Rept. 189, 76th Cong., 1st sess. (1939), pp. 1–2.)

The congressional decision to authorize acquisition of existing properties of the Tennessee Electric Power Co. and other companies within TVA's service area constituted, in effect, a determination that competition and duplication of facilities within that area would result in an uneconomic if not an impossible situation, and that TVA, therefore, should become the sole power supplier for the area. The Senate committee report on the bill containing the authorization (S. 1796, 76th Cong.) stated, in part:

"The agreement reached by the Commonwealth & Southern Corp. and the Tennessee Valley Authority to carry out this sale of the Tennessee Electric Power Co. properties would end all such controversies and do away with any possible competition between the parties.

* * * * *

"Notwithstanding the liberal price to be paid for the properties included in the contemplated sale, both the friends and critics of the Tennessee Valley Authority, as well as the Commonwealth & Southern Corp., the real owner of the property to be sold, are satisfied with the price agreed upon for the sale of such properties. The elimination of potentially wasteful competition in this area would be a factor of major importance. An audit of the properties to be purchased, made by the engineers of the Tennessee Valley Authority, indicated that the value of the properties involved in the contemplated sale were not worth more than $70,000,000. The difference between this sum and the total consideration of $78,600,000 agreed upon can be regarded as the cost of eliminating this destructive competition, a competition damaging and injurious both to the Tennessee Valley Authority and to the private owner of the properties to be purchased." (S. Rept. 189, 76th Cong., 1st sess. (1939), pp. 3–7.)

Congress could not have reached a decision to eliminate competition in the area and to make it solely dependent on TVA for power service without recognizing that TVA would be responsibile thereafter for providing such additional generating facilities as migh+ become necessary to meet the area's needs. The House committee hearings on the bill indicate affirmatively that Congress, in reaching its decision, did recognize the possibility that additional generating facilities, including auxiliary steam-generating plants, might become necessary, and believed they could be provided. Mr. Krug, for example, testified on this question as follows:

Mr. CLASON. And the system of steam-generating plants you are getting from the Commonwealth & Southern, plus this water development that you contemplate, will be sufficient to supply all of that area?

"Mr. KRUG. Yes.

"Mr. CLASON. And you would not expect to have to build any more steam-generating plants in the near future?

"Mr. KRUG. Not in the near future. I think I should make it clear that in the power business it is virtually impossible to plan for longer than a 10-year period. Our plans run over approximately 10 years. After that time the load in this area will grow and additional capacity will have to be installed at some place in that area to take care of the growth in that load, if the present upward trend in the use of electricity continues.

* * * * *

"Mr. CLASON. But you have no plans now to develop anything further that will require any more steam-generating plants in this area for the next 10 years?

"Mr. KRUG. No, sir." (Hearing before subcommittee of House Committee on Military Affairs, S. 1796, 76th Cong., 1st sess. (1939), pp. 111-112.)

Moreover, both Mr. James L. Fly, who was then TVA general counsel, and Mr. William C. Fitts, Jr., who was then TVA solicitor and later became its general counsel, testified as to TVA's authority to construct future steam plants, and both stated that such construction, in their opinion, would be entirely proper. The following is excerpted from their testimony:

"Mr. FLY. * * * Section 4 (j), I believe, makes reference to powerhouses—that is section 4 (j) of the original statute—'and shall have power to acquire or construct powerhouses, power structures, transmission lines, navigation projects and incidental work in the Tennessee River and its tributaries, and to unite the various power installations in one or more systems by transmission lines.'

"That contemplates, of course, that any steam plants shall be within the region of the river and shall be integrated with the system which surrounds these hydroelectric projects. (Id. at 148).

"Mr. FITTS. * * * My own views about the limitations now in the statute are—and they are carried over, by the way, into this amendment—are that the TVA is authorized to construct dams on the Tennessee River and its tributaries provided that those dams are related to navigation and flood control in a material sense and further, is authorized to construct steam plants to operate in conjunction to those dams within the Tennessee watershed. It is further my view——

"Mr. CLASON. Will you refer us to the section that would limit you to the Tennessee Valley watershed?

"Mr. FITTS. Yes, sir. Section 4 (j).

* * * * *

"Now, it is my conception, and it always has been ever since I have been the one assigned to construe this statute, that the power to construct generating plants is contained in this provision, and that it is limited to the construction of generating plants within the basin of the Tennessee River. Now, with transmission lines, of course, there

is a different provision. The Authority is authorized to construct or acquire transmission lines within transmission distance of the place where the power is generated.

"Mr. CLASON. They have, as I understand it, at the present time, the TVA has no right to either acquire or to construct any steam generating plant?

"Mr. FITTS. No, sir. I did not say that. I think it has the right to construct a steam generating plant that is an auxiliary to an existing hydroelectric system and it is located within the Tennessee River Valley. Section 4 (j) gives the right to construct power structures and powerhouses, plus the present language in section 15 where a steam plant is specifically covered in section 15 as it now stands" (id. at 306).

Within 2 years after enacting the 1939 amendatory provisions, Congress specifically authorized TVA to construct the Watts Bar steam plant. Senator BRIDGES' letter refers to it as having been constructed "during the recent war * * * under the Executive war powers." In fact, it was constructed pursuant to a specific appropriation contained in the Independent Offices Appropriation Act, 1942 (55 Stat. 92, 118 (1941)). This act became law on April 5, 1941, before the unlimited national emergency declared by the President on May 7, 1941, and more than 8 months before the United States was attacked by the Japanese; and the appropriation which it contained for the Watts Bar plant, as well as for other TVA projects, was for the stated purpose "of carrying out the provisions of the act entitled 'The Tennessee Valley Authority Act of 1933.'" Neither the hearings nor the subsequent committee reports and debates indicate that any constitutional question was thought to be presented. The situation which existed then was basically similar to that which exists now. At that time the United States was in a state of defense emergency limited by the President's proclamation of September 8, 1939, to national defense measures "within the limits of peacetime authorization." Today the state of war has not yet been terminated, and while hostilities have ceased, the international situation is unsettled. From a constitutional standpoint, there appears to be no difference between the congressional action concerning the Watts Bar steam plant and that which is sought now with respect to the new Johnsonville steam plant.

To summarize the legislative history, Congress has consistently assumed over a long period of years, that construction of supplementary steam generating facilities might be necessary and that such construction would present no constitutional problems. Congress included express authority to construct such plants in the original TVA Act. It empowered TVA in 1939 to issue bonds, the proceeds of which it knew would be used in substantial part for acquisition of existing steam-generating facilities that TVA intended to operate; and in 1941, 8 months before Pearl Harbor, it specifically authorized TVA to construct a steam plant at the Watts Bar site.

An examination of applicable Supreme Court cases indicates clearly that the assumption of Congress, over a period of many years, that there was no constitutional inhibition to the construction of steam plants is entirely sound. This conclusion has been reached with full regard for the statements concerning Federal operation and construction of steam plants made by Mr. John Lord O'Brian, who was serving as special counsel for TVA during the oral argument before the Supreme Court in *Ashwander* v. *TVA* (297 U. S. 288 (1936)). These statements must be considered in the light of the factual situation which existed at that time—a factual situation entirely different from that which exists today. TVA was then in the course of acquiring a market as a means of carrying out the objectives of the act, and the question was whether a steam plant could be used to increase the size of the market which TVA could take over by enabling it to meet peak demands that could not be met by power from Wilson Dam. Today TVA is serving an area which it took over to afford a market for its hydro power. The problem now is one of serving adequately the markets which TVA has already undertaken to serve; and the steam plant now proposed would supplement and make more efficient the existing system of hydro plants serving these established markets. It is speculative as to what Mr. O'Brian's position would have been, even in 1935, on the present state of facts. In any case constitutional law has undergone tremendous development during the 12 years since the Ashwander case was argued, and nowhere has such development been more rapid or sweeping than in those fields relating to the Government's power to undertake integrated watershed-development programs in the interest of commerce and to deal with its own property. Government activities in these fields once regarded as of doubtful constitutionality have not only been upheld in the courts when tested but have become commonplace. Any opinion expressed a dozen years ago on questions in these fields would need to be reexamined in the light of intervening developments in the law.

Since the New Johnsonville plant would be used for firming up hydro power, its construction clearly would be justified under the property clause of the Constitution (art. IV, sec. 3, clause 2), as a means of permitting fully effective use of the Government's hydroelectric projects. These projects, as well as the electric power which they are capable of generating, are property of the United States (TVA Act, sec. 4 (h)). *Ashwander* v. *Tennessee Valley Authority*, supra; *Tennessee Electric Power Co.* v. *Tennessee Valley Authority* (21 F. Supp. 947 (E. D. Tenn., 1938), aff'd 306 U. S. 118 (1939)). The property clause of the Constitution provides:

"The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States; and nothing in this Consitution shall be so construed as to prejudice any claims of the United States, or of any particular State."

The Supreme Court has said of the power conferred under this constitutional provision:

"The power over the public land thus entrusted to Congress is without limitations. 'And it is not for the courts to say how that trust shall be administered. That is for Congress to determine.'" *United States* v. *San Francisco* (310 U. S. 16, 29–30 (1940)).

There is no distinction between the powers granted by the clause with respect to territory and those granted with respect to other Federal property:

"The term territory, as here used, is merely descriptive of one kind of property; and is equivalent to the word lands. And Congress has the same power over it as over any other property belonging to the United States." *United States* v. *Gratiot* (14 Pet. 526, 536–537 (1940)).

With respect to any of its property, the Federal Government may exercise the rights of an ordinary proprietor. *Camfield* v. *United States* (167 U. S. 518 (1897)); *Light* v. *United States* (220 U. S. 523 (1911)); *Ruddy* v. *Rossi* (248 U. S. 104 (1918)). Among these rights is that of improving Federal property in order to enhance its usefulness and value. This right was exercised at least as far back as 1902, when the Reclamation Act, authorizing the Secretary of the Interior to establish, construct, and maintain irrigation projects, was enacted in order to make marketable and habitable large areas of desert land within the public domain (*United States* v. *Hanson* (167 Fed. 881, 883 (C. C. A. 9th, 1909)). The power of Congress to legislate for such a purpose was expressly upheld in the Hanson case and in *Burley* v. *United States* (179 Fed. 1 (C. C A. 9th, 1910)).

There is no question from an engineering standpoint concerning the necessity for auxiliary steam generating capacity to firm up hydroelectric power produced by most primarily hydroelectric systems. In the case of the TVA system, this need for auxiliary steam facilities has been recognized since the report on development of the Tennessee River made by the Army engineers in 1930, and has been acted upon in utilizing both the steam plants acquired from private utilities and the Watts Bar plant. At the present time, because during the later stages of World War II it was more feasible to construct hydroelectric than steam facilities, the proportion of steam facilities in the TVA system has declined from approximately 30 percent to approximately 20 percent of the system's total capacity. Engineering studies show that effective utilization of power produced at the hydroelectric plants requires more steam capacity. The cases cited above establish affirmatively that the Government possesses constitutional authority to provide such capacity, in order to effectuate full utilization of the Government's hydro properties.

Under the situation which now exists in TVA's service area, a steam plant might properly be constructed, under the commerce power and property clauses, whether or not it would serve to firm up hydro capacity. In *United States* v. *Appalachian Power Co.* (311 U. S. 377 (1940)), the Supreme Court defined the authority of the Federal Government over navigable waterways under the commerce clause in the following language:

"In our view, it cannot properly be said that the constitutional power of the United States over its waters is limited to control for navigation. By 'navigation' respondent means no more than operation of boats and improvement of the waterway itself. In truth the authority of the United States is the regulation of commerce on its waters. Navigability, in the sense just stated, is but a part of this whole. Flood protection, watershed development, recovery of the cost of improvements through utilization of power are likewise parts of commerce control. As respondent soundly argues, the United States cannot, by calling a project of its own 'a multiple-purpose dam,' give to itself additional powers, but equally truly the respondent cannot, by seeking to use a navigable waterway for power generation alone, avoid the authority of the Government over the stream. That authority is as broad as the needs of commerce" (p. 426).

In *Oklahoma* v. *Atkinson Co.* (313 U. S. 508 (1941)), the Court stated:

"We would, however, be less than frank if we failed to recognize this project as part of a comprehensive flood-control program for the Mississippi itself. But there is no constitutional reason why Congress or the courts should be blind to the engineering prospects of protecting the Nation's arteries of commerce through control of the watersheds. There is no constitutional reason why Congress cannot, under the commerce power, treat the watersheds as a key to flood control on navigable streams and their tributaries. Nor is there a constitutional necessity for viewing each reservoir project in isolation from a comprehensive plan covering the entire basin of a particular river. We need no survey to know that the Mississippi is a navigable river. We need no survey to know that the tributaries are generous contributors to the floods of the Mississippi. And it is common knowledge that Mississippi floods have paralyzed commerce in the affected areas and have impaired navigation itself. We have recently recognized that 'flood protection, watershed development, recovery of the cost of improvements through utilization of power are * * * parts of commerce control' (*United States* v. *Appa-*

lachian Power Co., supra, p. 426). And we now add that the power of flood control extends to the tributaries of navigable streams. For, just as control over the nonnavigable parts of a river may be essential or desirable in the interests of the navigable portions, so may the key to flood control on a navigable stream be found in whole or in part in flood control on its tributaries. As repeatedly recognized by this Court from *McCulloch* v. *Maryland* (4 Wheat. 316) to *United States* v. *Darby* (312 U. S. 100), the exercise of the granted power of Congress to regulate interstate commerce may be aided by appropriate and needful control of activities and agencies which, through intrastate, affect that commerce" (pp. 525–526).

These cases establish that the Government may embark on a program of full-scale development for a given watershed, and in so doing may proceed on the basis of an integrated plan which takes full cognizance of potentialities for the generation of electricity as well as for promotion of navigation and flood control.

In the case of the Tennessee Valley, Congress has embarked on a full-scale program for the development of the Tennessee River for navigation, flood control, and power, an essential part of that program being the wide distribution of electric power at low cost. To implement that program, Congress, in 1939, authorized TVA to acquire the properties of the existing utilities and thus to become the sole supplier of power for the area, a step which was clearly within the constitutional authority of Congress. *Ashwander* v. *Tennessee Valley Authority* (297 U. S. 288 (1936)); *Tennessee Electric Power Co.* v. *Tennessee Valley Authority* (21 F. Supp. 947 (E. D. Tenn., 1938), aff'd 306 U. S. 118 (1939); *United States* v. *San Francisco* (310 U. S. 16 (1940); *United States* v. *Gratiot* (14 Pet. 526 (1840)); *Oregon & Cal. R. R.* v. *United States* (238 U. S. 393 (1915)); *Ruddy* v. *Rossi* (248 U. S. 104 (1918)); *Tennessee Valley Authority* v. *Lenoir City* (72 F. Supp. 457 (E. D. Tenn., 1947). When Congress took this step, it assumed an implied obligation to meet the area's future as well as its existing demands for power. Indeed, if the Government could not assume such an obligation, a general watershed development might become wholly impracticable. If the servicing of such a market area is undertaken and the area's power demands later increase to a point where they exceed the capacity of a purely hydroelectric system, the Government can only (a) purchase such power as may be available from neighboring utilities; (b) construct steam facilities; or (c) sell out. It could hardly be contended that a tremendous Government investment in a multipurpose system must be sold whenever the demands of the area in which the system operates exceed actual and prospective hydro capacity. The Government's constitutional authority to purchase additional quantities of power from neighboring systems, under such circumstances, probably would be attacked by no one. There is no practical difference, however, between the Government's purchasing steam generated power from others and constructing steam generating facilities itself. The Government may obtain whatever it requires to conduct its program successfully; and if it may properly obtain its requirements by purchase, it should be equally at liberty to obtain them by direct production (*Cf. United States* v. *Alleghany County*, 322 U. S. 174, 177 (1944); *Clallam County* v. *United States*, 263 U. S. 341 (1923)).

Such steam-plant construction is also justified under the congressional power to appropriate for the common defense and the general welfare (Constitution, art. I, sec. 8, clause 1). The national defense, for example, would be seriously imperilled by a power shortage in an important production area like the Tennessee Valley area, which contains great electrometallurgical, electrochemical, and nuclear fission plants which are of key importance in time of war. In addition, there are defense installations in the Tennessee Valley presently in stand-by condition which, if another defense emergency should ever require their use, would be dependent on TVA power. Taken in conjunction with the present international situation, these considerations, as already noted, are similar to those which led Congress, in April 1941, to authorize construction of the Watts Bar steam plant.

With respect to the general welfare, it would seem that a threatening power shortage in an important area for whose power needs the Government has made itself responsible would "create a menace to the national welfare" (*Cleveland* v. *United States* (323 U. S. 329, 331 (1945))), and would, therefore, justify appropriation of Federal funds to relieve the shortage.

Prior to the decision of the Supreme Court in *United States* v. *Butler* (297 U. S. 1 (1936)), lawyers had argued for years the respective merits of the two opposing interpretations of the general welfare clause: (a) the Madisonian view, to the effect that the power to tax and spend for the general welfare amounted to no more than the power to tax and spend in the exercise of those powers specifically conferred upon Congress by other sections of the Constitution; and (b) the Hamiltonian view, to the effect that the clause empowered Congress to tax and spend for the general welfare as an end in itself. The controversy was not resolved until, in the Butler case, the Court expressly adopted the Hamiltonian theory.

In *Steward Machine Co.* v. *Davis* (301 U. S. 548 (1937)), and *Helvering* v. *Davis* (301 U. S. 619 (1937)), the Court reiterated this position in upholding the unemployment compensation and old-age benefit sections of the Social Security Act. In the last-cited case, the Court also stated that whether a given expenditure is for the general as opposed to a particular welfare is for Congress to determine (subject to the limitation that its determination will not be given effect if it is "clearly wrong, a display of arbitary power, not an exercise of judgment"). Provision of an adequate power supply for an important area of the country would seem clearly to meet the test of generality.

In *Cleveland* v. *United States* (323 U. S. 329 (1945)), affirming *United States* v. *Boyle* (52 F. Supp. 906 (N. D. Ohio, 1943)), the Supreme Court was called upon to determine whether the Government, under the general-welfare power, might expend funds for the purpose of constructing low-cost housing projects as part of its slum-clearance program. Mr. Justice Roberts, for a unanimous Court, answered the question thus presented in the affirmative on the authority of the Butler, Steward Machine Co., and Helvering cases. See also to the same effect, *United States* v. *Milwaukee* (49 F. Supp 436 (E. D. Wis., 1943)), affirmed (140 F. (2d) 286 (C. C. A. 7th, 1944)), certiorari denied (322 U. S. 735 (1944)); *Bastian* v. *United States* (118 F. (2d) 777 (C. C. A. 6th, 1941)); *Oklahoma City* v. *Sanders* (94 F. (2d) 323 (C. C. A. 10th, 1938)). If the Government may thus act to relieve a shortage of adequate housing, it would seem to follow, a fortiori, that it may also act, in an important region of the country, to relieve a threatened shortage of a commodity so basic to modern civilization as electric power.

For the reasons given, it is my opinion that construction of the proposed new Johnsonville plant is within the constitutional powers of the Federal Government.

JOSEPH C. SWIDLER.

Increase in Postal Workers' Pay

EXTENSION OF REMARKS
OF
HON. TOM STEWART
OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, February 26 (legislative day of Monday, February 2), 1948

Mr. STEWART. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a statement made by Mr. Daniel R. Sullivan, vice president of the National Association of Letter Carriers, when he appeared before a Senate subcommittee urging an increase in the pay of postal workers. This is a strong and persuasive statement in behalf of a fine but underpaid class of public servants who carry on 12 months in the year despite heat or cold, rain or shine. They trod the streets and sidewalks each day. They drive over the country roads delivering your mail and mine. They meet you at the post-office window with a smile. They are fine citizens in every community and always contribute their part to its civic activities—religious, educational, social. As a rule they are home owners with families. They educate their children and teach them to become good citizens. They constitute, Mr. President, a large, high-class segment of our patriotic citizenship and they should be compensated for their labor. Personally I would like to see an increase of $1,000 a year. They deserve it.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman and members of the subcommittee of the Senate Committee on Post Office and Civil Service, my name is Daniel R. Sullivan. I am vice president of the National Association of Letter Carriers, an organization representing 79,364 city, rural, and village delivery letter carriers in the United States postal service. Our organization was founded in 1889, and has devoted nearly three-score years to the improvement of the postal service and conditions affecting the welfare of letter carriers. We have branches, numbering approximately 4,000, located in all of the 48 States, and the Hawaiian Islands and Puerto Rico.

In behalf of our entire membership, I desire to commend the chairman and members of this subcommittee for the timely action which made possible these public hearings on the vital subject of wage adjustments. We will always be grateful for your prompt and friendly consideration of this all-important topic.

We, likewise, wish to commend highly the chairman and members of the Senate Committee on Post Office and Civil Service for having recommended the confirmation of Hon. Jesse M. Donaldson as Postmaster General of the United States. His appointment to that high office definitely spells the beginning of a new era in the postal service—an era which will redound to the credit of the President, the Congress, and the people of our great Republic.

On the matter of wage revisions, it would be well to call attention to the fact that numerous bills bearing on that problem have been introduced in both the Senate and House of Representatives. The postal pay increases contemplated in these measures range from a minimum $480 to a maximum

$1,000 per annum. Three of these proposals are now pending before your distinguished committee.

According to the Bureau of Labor Statistics, the over-all cost of living on December 15, 1945, stood at 129.9 points, or 29.9 points above the 1935–1939 level. The same source reveals that the over-all cost of living had risen to 164.9 points on November 15, 1947, or 64.9 points above the 1935–1939 level. These figures represent an increase of 26.9 percent in the 23-month period ended November 15, 1947. Since Public Law 386, which granted a $400 horizontal pay raise to most postal employees, became effective on January 1, 1946, the 2-year period December 15, 1945–December 15, 1947, is being utilized in this justification for an immediate additional increase.

Quoting the same source for the 2-year period just ended, it is noted that food costs on December 15, 1945, stood at 141.4 points, or 41.4 points above the 1935–1939 level, as compared with 202.7 points on November 15, 1947. These figures reveal that food costs have risen 43.4 percent in that period. The BLS experts have gaged the continuing rise in the over-all cost of living to be 2 points each month at the present time. Accordingly, we believe the BLS will readily acknowledge that the over-all increase in the cost of living from December 15, 1945, to January 15, 1948, is 27.3 percent. That is the actual amount by which letter-carrier wages have shrunken in that period. It is absolutely imperative that something be done immediately to make up for this tremendous deficiency in so-called take-home pay.

Under date of December 3, 1947, the Legislative Reference Service of the Congressional Library stated that on July 1, 1946, the average salary paid postal workers in the field service was $2,708 per annum. By multiplying $2,708 by 27.3 percent it will be noted that an increase of $739.28 is now required to meet the average deficiency. However, the vast majority of letter carriers have reached the top-wage bracket (grade 11) or $3,100 per annum. By multiplying $3,100 by 27.3 percent, the wage deficiency for the top grade letter carrier is $846.30.

Postal authorities will undoubtedly testify to the fact that it is no longer possible to recruit new employees on the entirely inadequate entrance salary of $2,100 per annum. New entrants, including numerous veterans of World War II, are required to serve a period of 11 years before reaching the maximum grade of $3,100. The gap between the fixed salaries of postal workers and the income needed to maintain a decent standard of living is ever widening. Under the prevailing circumstances, the job of carrying the mails is no longer attractive to those potential applicants who pass the civil-service examination and otherwise meet the necessary requirements.

Because of the acute situation within the Postal Service, a Conference of N. A. L. C. representatives was held here in Washington on January 12–13. Approximately 700 letter carriers from 45 different States assembled at the Hotel Statler to discuss their common problems. Among other things, the Conference recorded itself in favor of an immediate $800 upward wage adjustment on a permanent basis, to take effect January 1, 1948.

The action taken by the National Association of Letter Carriers' Conference parallels that taken by the Government Employees' Council of the American Federation of Labor on December 9, 1947, when it also endorsed the proposal to seek an immediate wage adjustment of $800 on a permanent basis, effective January 1, 1948. This last group represents some 21 unions whose membership in whole or part are employed by the Federal Government. The council has a membership of approximately 500,000 Government employees.

Along with millions of like-minded citizens, the National Association of Letter Carriers would much prefer a substantial reduction in the over-all cost of living in lieu of additional wage boosts. But the situation is now so critical that we have no alternative—simple justice demands that letter carriers be given an immediate wage increase.

Therefore, the National Association of Letter Carriers endorses the principle contained in the Langer-Chavez bill, S. 1849; and also the Cain bill, S. 1931. However, we are of the firm conviction that a permanent wage increase of at least $800 is not only warranted but wholly justifiable.

In view of all the factors mentioned previously, I am pleased to place the National Association of Letter Carriers on record as wholeheartedly endorsing the Baldwin bill, S. 1949, and express the sincere hope that it will be reported favorably at the earliest possible moment. Thank you.

Germany and Reparations

EXTENSION OF REMARKS

OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 26 (legislative day of Monday, February 2), 1948

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Germany and Reparations," published in the New York Times of February 21, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GERMANY AND REPARATIONS

In another column on this page we print a letter from Julius C. C. Edelstein, special adviser to Secretary Marshall, regarding the allied reparations and dismantling program in western Germany. The problems discussed in it are fundamental, not only to the fate of Germany but to the recovery of western Europe and the success of the Marshall plan. Since these problems are bound to play a major role in the conference between the United States, Britain, and France (beginning next Monday), to discuss a merger of the French occupation zone with the combined American and British zones, we believe that they merit careful scrutiny and wide public understanding.

Mr. Edelstein holds that while this newspaper gives substantial weight to the political factors involved it does not yet see the basic economic factors that make this program advantageous to Europe and to the United States. We, on the contrary, believe that the program is contrary to the best interests of Europe and of the United States. There is no question that the victims of German aggression are entitled to the greatest possible amount of reparations, even though Germany has already paid in territories and seized properties more than any nation has ever paid before. There is likewise no doubt that short-time payments in capital equipment are preferable to long-drawn-out reparations from current production, which could only repeat the consequences of such a program following the First World War.

But we submit that such payments are limited by two factors which should take precedence over other considerations. The first is that even under the Potsdam agreement reparations payments are supposed to leave Germany enough resources to subsist without external assistance, which is not now the case, and that a self-supporting and viable Germany is the key to European recovery, as recognized in the European recovery program itself. The second is that the dismemberment of Germany and the loss of her eastern breadbasket—which, contrary to Mr. Edelstein's assumption, comprises not only the Soviet zone but all eastern Germany unilaterally annexed by Poland and Russia—have completely changed Germany's population and production picture. As a result the new level of industry, under which plants are still being dismantled as surplus, has become a snare and a delusion which can cost us and Europe dearly.

What the makers of the new reparation program have not yet faced up to, we think, is the fact that western Germany has become another Britain, with approximately the same population living in an approximately similar area, with coal as the only important raw material, and with an ability to produce only about half the food needed. Yet Britain with an unimpaired apparatus and complete freedom to produce and trade, with vast resources in her Empire which more than offset her Empire obligations, and vast American aid already given, is able to live only under the severest kind of austerity on a diet which, while still twice the total calories the Germans usually receive, is nevertheless considered to be close to the danger point. How, without any of these advantages, western Germany is not only to live but also to contribute to European recovery, under a program which would leave her only 75 percent of the per capita production capacity of 1936 (when she produced more than 80 percent of her own food) is an unexplained mystery for which we can see only one solution, and that is continued American subsidies to Germany and to Europe.

As regards the claim that the plants scheduled for dismantling can serve European recovery better if transplanted to the victor countries, we must point out that the dismantling and transplantation takes years and the labor of many thousands of men who could better be utilized in immediate production to relieve Europe's needs. And if it is said that the plants cannot be put into operation in Germany because of lack of skilled labor and raw materials, then we can only point to the fact that labor is withheld by the victors themselves through the retention of German war prisoners and that the raw materials are withheld by the allied policy of economic strangulation. That is attested not only by such experts as John Hynd, former British Cabinet Minister in charge of the British zone, and others, but also by the constant revision of the program itself, even to the extent of reactivating industries forbidden under the Potsdam Agreement.

This leaves as arguments for the program not any economic facts, but merely the force of political problems. It is to be hoped that these political problems will be subjected to a searching review at the forthcoming conference, and that this conference will be able to find a more realistic solution for them than is embodied in the dismantling program.

RFC's for Europe

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, February 26 (legislative day of Monday, February 2), 1948

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "RFC's for Europe," published

in the Kokomo (Ind.) Tribune-Dispatch of February 10, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RFC'S FOR EUROPE

Senator CAPEHART's plan to finance European recovery through reconstruction finance corporations modeled after our own RFC has a strong appeal. It offers some guaranty that the money our people invest in Europe would not be wasted or squandered, but would be used exactly for the purposes our Nation would be granting it.

The Indiana Senator suggests that each European country qualify for our aid, set up an RFC, and that Americans be included as minority members on those boards. This certainly is no affront to any nation. When you are in a position of wanting and needing help, you should be agreeable to any reasonable requirement your benefactor makes.

Under Senator CAPEHART's plan, which he outlined Saturday night in an address to the Illinois Bar Association, the United States would put gifts of food, clothing, and fuel into Europe on government-to-government basis, but any aditional help would be on a business-to-business basis. The 16 European nations receiving our help would be required to invest their own American dollars in their own recovery.

The European RFC's would lend money to businesses, government agencies, individuals, etc., would buy what they need for expansion or improvement of production. CAPEHART would have the European governments provide about one-half of their own RFC funds from the $13,000,000,000 of investments which their nationals have in the United States.

Turn these investments over to the various governments and let those governments give their owners their nation's currency in exchange, says CAPEHART. The United States then would put up a dollar for every dollar the nations put in. This idea will bring a lot of squawk from abroad, but there's a good deal of fairness about it.

Negro Farm Families in Cleveland County

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, February 26 (legislative day of Monday, February 2), 1948

Mr. HOEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Cleveland Times, published in Shelby, N. C., which gives the record of 18 Cleveland County Negro farm families who have purchased farms under the Farmers Home Administration and who are successfully meeting their obligations.

While the professional agitators are engaging in a great hue and cry about civil rights, the great State of North Carolina is going steadily forward, providing equal opportunities in education, agriculture, and other material matters for the Negroes of our State.

This report of the 18 Negro families who recently purchased farms in my home county, Cleveland, indicates what is happening all over the State. Each year we have an increased number of Negroes who own their own farms and homes and who are establishing themselves in their communities and achieving real success in life. The average cash income per family was $2,300 in 1947 besides supplies consumed at home.

If those who are honestly interested in the civil-rights issue could visit North Carolina and see the real progress which is being made by the Negroes in all walks of life, the fine relationship existing between the races, and the spirit of cooperation and helpfulness manifested on every hand, I feel assured that they would be impressed with the fact that this peaceful and happy relationship ought not to be disturbed by the projection of issues which merely stir up strife and discord.

What is taking place in North Carolina is typical of the South, and it furnishes daily evidences of definite progress along all lines. This article gives but another object lesson of the way the South is solving its race problems.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EIGHTEEN COUNTY NEGRO FARM FAMILIES SHOW GAINS—ADVANCE IN FHA PROGRAM—FAMILIES AVERAGE $900 NET INCOME

Among 18 Negro families in Cleveland County who have purchased farms under the Farmers Home Administration, the average total cash income per family during 1947 equalled $2,300, the average increase per family in net worth—assets over liabilities—amounted to $1,200 during the past year, and each family averaged payments on their farms totaling $309 for 1947, or approximately 50 percent more than the amount of payments due during that period, according to a review of the year's work by Negro FHA families presented by John Faison, FHA supervisor, at the annual gathering of participating Negro families, held Saturday at Camp High School.

Approximately 30 persons attended the all-day program which began at 10 a. m. and which featured an address on Better Citizenship by J. W. Osborne, Shelby attorney, who described the toil and effort through which the American Nation has developed its democratic form of government. Mr. Osborne traced the Government's land policies during the past century and discussed the importance of soil conservation practices as evidence of better citizenship among farmers.

FOOD PRODUCTION

Thelma McVae, Negro Home Demonstration agent, speaking on home management and a successful live-at-home program reported that among Cleveland County Negro farmers last year, the average five-member family produced food equalling $1,800 in value, or approximately $350 per person on a county-wide basis.

Leon McDougle, Negro county agent, discussed the livestock program among Negro farmers and stated that a great percentage of the county's Negro rural families are without milk-producing cows. He pointed out that a movement has already been begun and will be pressed to import high-grade dairy cattle into Cleveland's agricultural Negro community and urged that Negro farmers avail themselves of the advantages offered by the county's artificial-breeding program.

John Ed Davis, assistant supervisor, of the FHA, reported that among the 18 Negro families represented in the plan in 1947, two had paid off the balance due on their farms and had been presented with deeds to their property. They were Levi Smith, of Camp community, and James McCree, of Long Branch community, who participated in the presentation ceremony which was part of Annual Farm Day observed by white FHA farmers several weeks ago.

Mr. Davis stated that the average net cash income of the 18 families last year was $900 after living and farm-operating expenses. A break-down of that amount showed that of the $900, an average $309 was paid against indebtedness for the farm, $450 was expended to increase livestock and equipment, leaving approximately $150 for other debts or investments.

Land utilization, conservation practices and development of fish ponds were discussed by Joe Craver, of the Soil Conservation Service.

Final event of the all-day schedule, which included a picnic lunch at noon, was recognition of outstanding achievements by Negro FHA farmers in 1947.

K. O. McKinney, of Grover, route 1, spent only $25 for food during 1947 and received a prize for the best live-at-home program. Levi Smith, of Camp community, was recognized as making the largest land payment during the year, $2,039, and for realizing the greatest increase in net worth, his assets over liabilities rising in the past 12 months to more than $8,000. Bill Good, of Grover, route 1, showed the best livestock program with a herd of five registered Jerseys which he started in 1947.

Other prize winners were: Matthew Williams, of Washington community, for pasture improvement: Willie Norris, of No. 1 township, for the best record book; and Roy Bell, of Grover, route 1, for alfalfa production. Prizes were donated by O. Z. Morgan Co.; Washburn's Hardware; Bridges & Hamrick, of Kings Mountain; Kiser Feed Co.; D. A. Beam Co.; and O. E. Ford Co.

Rural Roads

EXTENSION OF REMARKS

OF

HON. TOM STEWART

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, February 26 (legislative day of Monday, February 2), 1948

Mr. STEWART. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a very fine, practical, and sensible address on the subject of the need for changes in our Federal road laws. The address emphasizes local or country roads, sometimes called farm-to-market roads. Mr. President, the man who delivered this address is Judge Andrew L. Burruss, of Obion County, Tenn., one of our progressive and highly productive counties. Judge Burruss is one of the most capable of public officials in Tennessee. He has made a close study of rural roads and is outstanding among those who are expert on the subject. I have introduced legislation in the Senate designed to set up an independent rural road department much as is described by Judge Burruss in his address, and I feel that until we have made more effective a method of establishing a practical type of rural road we will continue to be derelict in our duty toward our great rural population. I think farmers should have our guarantee of a road they can use 12 months in the year. I recommend the reading of Judge Burruss' timely and instructive address by all who are interested in this great problem of building rural roads in America.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NEEDED CHANGES IN THE FEDERAL HIGHWAY ACT AFFECTING LOCAL HIGHWAYS

What do we mean by local highways?

In preparing this paper I have in mind rural roads that are not in the State or Federal system but the ones which come under the jurisdiction of the local highway organizations.

Not knowing how the Federal Highway Act works in other parts of the Nation I am using my own State, Tennessee, as a basis to show how it operates here and to point out some changes that would make it more effective in developing our rural roads.

We have in Tennessee about 57,500 miles of roads, 7,500 miles under the direct supervision of the State highway department and 50,000 miles under the supervision of 96 local highway organizations. Under the Federal Highway Act now in operation, the State highway department worked out an agreement with the local road department, setting up a secondary road system in the State, allowing each county to put into this system 6 percent of its entire mileage. They put in 2,500 miles of their roads, making a total mileage in the secondary system of 5,500 miles to be constructed over a period of 10 years with the use of Federal funds for local roads, the State department agreeing to match all of the Federal funds. Under the Federal law as it now stands the Public Bureau of Roads will not recognize a local road department but will cooperate only with the State highway department. That within itself gives the State department the final say in the location and construction of all of the rural roads that are to receive Federal aid. At the present rate of construction it will take 10 years to complete the secondary system in our State. There will be 50,000 miles of rural roads in Tennessee that have not been touched as far as Federal aid is concerned. All of the money will have been used for the secondary system, 5,500 miles or about one-tenth of the rural roads, that means that under the present system all of the Federal-aid money is being used to add a few miles of roads to the now existing State highway system. Now what we in Tennessee are interested in is help on the 50,000 miles of rural roads. Under the present set-up these roads are receiving very little aid. The only roads the State and Federal highway departments will accept for construction are the most important local highways and these are usually ones that have already been developed to a higher degree than the other local roads. I believe that the law should be changed so Federal aid would go to strictly rural roads and should not be used to further develop roads already in the State system. This could be accomplished by setting up within the Public Bureau of Roads a rural-road department by law, stating in the law that the personnel of this department must be filled with those having experience in the building of local roads. I know it is just as essential to have that rural-road-building experience to construct local roads as it is to have highly trained personnel in building State and Federal roads. While rural roads are a vital part of our whole system, because of the low traffic they do not have to be of high-type pavement. An all-weather road permitting travel throughout the year is all that is needed. I cannot conceive of a person who has devoted all of his talent to high construction being able to adjust his energies to building the lower type of country road.

I believe that the Federal Highway Act should be amended so that the Public Bureau of Roads, through its local road division could deal directly with the local road organization, or require the various State departments to set up a rural road department in their respective States in order to have contact between the Public Bureau of Roads and the local road department.

This method would serve two purposes. First it would be a means of keeping the Federal Bureau informed as to the needs and problems of the rural roads departments, and second it would be a great help in improving the efficiency of local highway organizations in the same manner in which it has improved the efficiency of all of the State highway organizations.

We need strong, well-organized, and efficient local roads departments, not only to construct and maintain local roads with Federal aid, but to construct and maintain all of the rural roads. I believe the local road department should be encouraged to construct the low type of road or at least have the right to do so if they will meet the Federal requirements.

We need all three organizations, Federal, State, and local if they will cooperate for the good of the whole country. But even good organizations can accomplish little if funds are not available. We all agree that our rural roads should be all-weather roads. The question is how should they be financed. Should the Federal Government participate in the expense and to what extent? The people pay all tax money. In the early history of our Government most of the taxes were used by the local goverment. A small part went to the State and still less was paid into the Federal coffers. That condition has been reversed. The largest part goes to the Federal Government, next the State, and a very small amount stays at home. In my county the people pay 4 times as much tax to the State and 10 times as much to the Federal Government as is paid to our local government. Almost the only means left for local taxes is a tax on real estate and that does not bring in enough revenue for the construction of local roads. About the only revenue we have for local roads in Tennessee is a portion of the gas tax and that is only enough for maintenance purposes. Farming is one of the great industries of our Nation. It is an important factor in the economic and social welfare of our country. I think the Federal Government realizes this, for it has spent and is spending great sums of money for soil conservation and the preservation of our farms, rural electrification—and this is right. More money should be spent on our rural roads. A great part of all of our food is raised in these rural sections. Not only America but the whole world is in dire need of this food. We must not let the bottleneck be at the very farm on which this food is raised. Our economy in these United States is so constructed that transportation is the blood stream that feeds it and transportation is no better than the road over which it travels.

Congress, I think, in the Federal act appropriated money for rural roads for only 3 years. I believe that it should continue at a larger sum and for 10 years instead of 3 more. If this is done it will allow the Public Bureau of Roads, the State highway department, and the local highway organizations to make long-time plans which are so essential to efficient road development. So to sum up the needed changes as I see it is: First, set up within the Public Bureau of Roads a rural road division staffed with a personnel of experienced local road men. Second, for the Public Bureau of Roads to recognize the local road organization or to work with them directly, or through a local rural road division, set up by the State organization, allowing the local organization the privilege of doing the work themselves, provided they meet the Public Bureau of Roads requirements. Third, I think the appropriation for local roads should be increased and extended over a longer period of time.

A. L. BURRUS,
County Judge of Obion County, Tenn.

The Handling of Pacific Islands by the Navy

EXTENSION OF REMARKS
OF
HON. GUY CORDON
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, February 26 (legislative day of Monday, February 2), 1948

Mr. CORDON. Mr. President, some time ago I submitted a resolution authorizing an investigation into the condition of the people resident on the so-called trust islands in the Pacific. In the Los Angeles Daily News of February 16, February 17, and February 18 of this year there appeared three articles by Frank Rogers concerning the plight of the residents of these islands. I ask unanimous consent that the three articles may be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Los Angeles Daily News of February 16, 1948]

SECRET REPORT RAPS NAVY TREATMENT OF PACIFIC ISLES

(By Frank Rogers)

WASHINGTON, February 16.—Navy officials for more than 6 months have been sitting on a report which charges that to date the United States of America has not made good its obligations to the people of the Pacific islands. This the Daily News learned today.

This report, if it could be made public now, would have a timely effect on a legislative battle which is about to open in Congress.

That battle will be over whether the Navy is to be allowed to continue its semidictatorial rule over the people and the affairs of Guam, American Samoa and—perhaps most important of all—the inhabitants of what is known as the Trust Territory, the former Japanese-mandated islands.

Already before Congress are legislative bills calling for the writing of organic acts which would give citizenship to the people of Guam and Samoa, and end the Navy's long-established rule over these areas.

But the battle over whether the Navy stays in power in Guam and Samoa will be a small-scale operation compared to the tussle over whether the Navy is to be allowed to keep its grip on the hundreds of little Pacific islands given to the United States in trust by the United Nations.

For, it is being pointed out by Representatives and Senators who have armed themselves with the facts of the situation, the manner in which the world's greatest democracy exercises its stewardship in the Trust Territory is being closely watched by peoples the world over.

The Trust Territory includes more than 2,000 islands or islets spread out over an oceanic territory almost as large as the United States, although the land area involved is only 903 square miles.

As the last war proved, to Japan's advantage, the islands are useful as a long string of strategic military bases. They include the

Mariana, Caroline, and Marshall island groups, all lumped under the single name of Micronesia. Their strategic value makes understandable the Navy's apparent desire to continue as the Government's administrative agent there.

But opponents of Navy rule—armed with some information gleaned from the semi-secret report mentioned earlier—argue that the Navy's administration is keeping the door closed on development of the kind of self-government and equal rights status, which we are pledged to give to the area, under the United Nations agreement.

This agreement, they point out, makes the continued operation of United States bases in the area perfectly legal—but it also requires us not to allow the islands to be forever ruled by military governors. The Trust Territory can have both civilian rule and military establishments, they argue.

Some of the information obtained in the report which the Navy has been keeping to itself, makes clear some possible reasons why the Navy has declined to publish it, or even reproduce it on a limited scale. Only seven typewritten copies are in existence.

While it praises the Navy's governorship in some respects, the report several times makes the blunt declaration that the islands' natives are worse off now than they were under Japanese rule.

The report calls the Navy to task for lack of an over-all administrative plan, for imposing a heavy tax on goods shipped in from areas other than the United States, hints that the natives are being forced to work against their wishes, and declares there is no concentrated effort to restore the islands' economy to something like its prewar level.

But, what is more important, the report—which in all includes some 16 volumes—contains the first real survey that Americans have ever been able to make of Micronesia. Experts from every branch of the Government on such subjects as geography, geology, human resources, economic resources, minerals, agriculture, livestock, nutrition and diet, and other matters, put their talents into the survey over a period of several months.

The job, done for the Navy by the United States Commercial Co. (a subsidiary of the RFC), cost at least $150,000. That figure represents only actual cash outlay; it might easily be doubled if the cost of various Government services were added to the bill.

Thus the report constitutes a veritable library of information which should be immensely valuable to our Government's functions as trustee for the area.

Our first-hand knowledge of the islands, the people, and their resources is limited almost entirely to the material gathered in this report, because the area was virtually closed to us under the long Japanese rule, and before that, by the German rule there.

Yet, say Navy spokesmen, the report cannot be published. Official reason: "It would cost $50,000 and we just haven't got it."

Furthermore, says Capt. W. F. Jennings, Chief of the Islands Government Section in the Office of the Chief of Naval Operations, it would not be practicable to publish even volume 1, which summarizes the findings of the other 15 volumes.

"The summary is of no use unless you can read the whole thing," he says

He added, however, that "parts" of the report may eventually be made available. Congressmen, he says, may be allowed to look at parts of the report upon application.

Whether that action will come before Congress is called upon to pass an organic act for the trust territory is not known. Many Congressmen would like to read that report before they vote, for reports are that when the administration sends up a trust territory bill, it will ask the civil administration be delegated to the Navy Department on an interim basis.

Another bill already introduced by Senator HUGH BUTLER, Republican, Nebraska, calls for the establishment of a civil administration under Department of the Interior supervision.

The issue is not whether the islanders shall be given self-government. The United Nations trust agreement stipulates that. The question is, When. Interior Department experts, believing they have had the best experience in civil administration in such cases, feel the sooner self-government is granted the better.

The Navy—cautious as always about military security—and perhaps anxious to have a chance to clean up some of the abuses charged in the USCC report, says it will take years before the natives can govern themselves.

[From the Los Angeles Daily News of February 17, 1948]

REPORT SHOWS NAVY BLUNDERING IN ISLAND EMPIRE

(By Frank Rogers)

WASHINGTON, February 17.—Indications appeared today that the Navy may be denied the right to continue as ruler of the United States new colonial empire, the Pacific Trust Territory.

Word is circulating here that the administration soon will ask Congress to pass an organic act for the Trust Territory which will place the Interior Department—not the Navy—in charge.

The Navy has been attempting—and even in view of this development there is no indication that it has given up the ship—to convince administration chiefs it should continue to control the Pacific islands as it has so long controlled Guam and American Samoa.

Background reason for the administration's reported change in plans—until recently top thinking had held that the Navy should continue as interim administrators for the islands for an indefinite number of years—may be that some of the charges of Navy misrule in the islands have reached the ears of the higher ups.

Another reason may be that the administration hopes to head off a congressional investigation of the Trust Territory. A resolution calling for a thoroughgoing investigation of this country's stewardship in the islands Japan formerly held under mandate was introduced recently by Senator GUY R. CORDON, Republican, of Oregon.

One reason for CORDON'S resolution apparently is the fact that the Navy has failed to make public an extensive report on the Trust Territory, made at the Navy's request by the United States Commercial Co., an RFC subsidiary, at a cost of at least $150,000.

This report is, in several instances, sharply critical of the way the Navy has clung to military rule, despite the fact that the United Nations trusteeship agreement under which we took over the Pacific islands binds our country to lead the island people along the road toward self-government.

If the investigation is authorized, the Senators assigned to make the trip might save themselves some trouble (and might save the taxpayers some money) if they could first read at least parts of this report which the Navy for more than 6 months has declined to make public. The Navy has not offered the report to Congress. Any Congressman who wants to read it will have to ask for it.

If the senatorial investigators find the same things which the field experts for the U. S. Commercial Company wrote into their now-hushed-up report, the Navy's chances of continuing as administrative agent for this great new American colonial empire may be drastically reduced.

Congress will soon be called upon to decide whether to let the Navy continue its rule of the islands—with the self-government which the United States promised the UN it would provide thus delayed until sometime in the dim future—or whether to set up immediately a form of self-government administered by a civilian agency, the Department of the Interior.

The Navy pleads that it hasn't enough money—$50,000 by its estimates—to publish the USCC report so that Congress and the public may know something about this new territory. But a study of the summarizing volume brings to light some other reasons why the Navy may want to keep the report restricted to its present number of seven typewritten copies.

For this report declares that the Trust Territory natives, "who became our responsibility through no act of their own, look with hope for the economic and social benefits which they have always associated with the United States."

But so far, the report continues, all the natives have received is fine but vague talk and a succession of Navy administrators with no plan, little understanding of their problems, typical Navy officers' attitude toward little people, and a burning desire to leave island life behind them as soon as possible.

The Navy's disregard for the natives' land rights, the surveyors found, caused frequent complaints. On Saipan, Navy officers laid out a golf course on a large part of the island's best farming land and most of the natives hadn't been given back their farms although the war had long since been over.

Tillable land is scarce and on many islands the natives cannot raise enough food under the best conditions, but island commanders seldom remembered this.

On Guam, the native leaders feel the Navy has grabbed the best farming land and on Peleliu "the armed forces occupy much more of the best land than seems justified," the report declares, while the people of Fono Island were removed from their farms "because of the anticipated need for a naval recreation area."

On another island, Sanat, a small leper colony was established and all the healthy natives were evacuated and forced to abandon farms which produced far more food than the small leper colony could use.

During the war it was of course, necessary that many air strips be laid out on the island. It just happened that the best air strip locations were on the best farming land; but now that the war is over, the air strips are largely useless and abandoned. But many of them have not been returned to productivity because the coral and sand material which was laid down to make happy landings for our war craft is not easily removed. Even when it is reclaimed, much of the land has been so damaged by this process that it cannot be returned to producivity for many years, the report asserts.

Housing is a problem there, as here. For instance, the report states:

"In the Marshalls, after the Navy had had control for nearly 3 years, housing was still far from satisfactory. In areas such as Truk, Ponape, and Palau, where the Japs surrendered only a year ago, practically nothing has been done to ameliorate housing conditions."

It is in its economic chapters that the report deals most roughly with Navy policies. It points out that the island's economy was wiped out by the war, but that the return of peace hasn't meant much to the hungry natives.

"The native populations are impoverished; their living standards are far below prewar (i. e., when the Japanese were the islands' rulers) and although the war may be partly to blame, one reason for the continuance of this condition is the emphasis of the present administration on granting assistance only of the emergency type for making survival possible."

In addition to placing a heavy tariff on goods imported from areas other than the United States, the Navy administration has not encouraged importation of enough American goods to satisfy native needs and has compounded the economic fracture by devaluing the yen and restricting the natives to a small reserve of money.

"No group faces starvation," the report says, "but none has enough supplies to make possible restoration of the economy to the point where it can function as it once did.

"No one is totally lacking in shelter, but few have the kind of homes and household utensils which they possessed before the war.

"No one is without clothing, and yet there is a widespread demand for fabrics to make clothes like those formerly worn."

It pointed out that the Japs tried hard to make the islands self-sufficient—in addition, of course, to making them contribute to the Japanese economy—and warns we had better do the same.

"The presence or absence of imported goods means to most natives the difference between having a chance to become self-sufficient through their own production or being dependent on the Government for relief—the difference between progressing toward a better life or recession to the kind of life which existed in aboriginal times."

The Japanese saw to it that low-priced (if low quality) goods were made available at even the most remote atoll, while the American practice has been to unload our unwanted items on the natives regardless of their use for them, the report says. Goods which the Japs marketed there, while not high in quality, were suited to the needs of the islanders. This cheap market is now closed to the islanders by our new import taxes.

"Our administration should stop making a profit from sales to the natives," says the report, pointing out that the Japanese at times even subsidized the native purchases.

The islands probably will never be an important cog in the American economy, but they may constitute a heavy and steady drain on it unless current policies are drastically revised, high non-Navy officials say.

"If we continue to keep them on a dole economy," said one expert, "we'll just find ourselves running one 'helluva' big lifetime WPA over there."

The Japanese, however, not only found the islands useful militarily—they made a successful business venture out of their League of Nations mandate.

In 1940, the latest year for which figures are available, Japan imported from the mandated islands 48,300,000 yen worth of goods and in the same year sold their island wards goods valued at 41,000,000 yen.

[From the Los Angeles Daily News of February 18, 1948]

SEMISECRET REPORT RIPS NAVY RULE IN TRUST ISLES

(By Frank Rogers)

WASHINGTON, February 17.—When Congress sets out to decide who will manage America's new colonial empire—the Pacific trust territory—its Members can, if they wish, find some hot debating ammunition in two little-known sources.

The first is the semisecret report of the United States Commercial Co., which deals with the way the Navy has been administering the trust territory, formerly the Japanese mandated islands of the Pacific.

This report, prepared after an extensive field trip by a large company of Government and university experts, has not been released for public consumption by the Navy. Excerpts from it like this may indicate why:

"There is no excuse for continuing military government in time of peace. We can't continue to preach democracy to the people of the Pacific world if we don't practice it there."

The Navy can be expected to put up a fight to be allowed to continue its military rule of these islands of Micronesia—just as it has ruled Guam and American Samoa since 1900—but if congressional leaders dig very far into the files of a watchdog outfit called the Institute of Ethnic Affairs, Navy brass may have some explaining to do.

These files contain a carload of material designed to warm up the debate on what we are to do with the islands given us in trust by the United Nations.

Already the institute, supported on a nonprofit basis by people whose public spiritedness leans toward such things, has accused the Navy of violating in two instances the agreement under which the United States became trustee for Micronesia.

The institute, whose officers apparently are among the few people who have seen one of the ultra-scarce copies of the USCC report, back up Government experts who argue that the trust territory should be given a civil government now—not 10 years from now, as the Navy is proposing for Guam.

As an example of how insensitive Navy rulers are to the economic welfare of islanders who have become our wards through no choice of their own, they point to these two Navy decrees:

1. An import tax, averaging about 20 percent ad valorem which the natives must pay on any goods not produced in the United States or its possessions.

2. Opening of parts of Tinian Island to commercial agriculture enterprises under terms which exclude nationals of other United Nations members and shackle native farm labor to wages decreed by the Navy.

The first act, the institute charges, not only is a violation of the trust territory agreement, but was done against the recommendation of experts participating in the USCC report.

The second, the institute charges, "is a further, decisive step toward the economic ruin of the island natives." Wages decreed by the Navy are 5 to 7 cents an hour for common labor, 9 to 11½ cents an hour for skilled labor. The same rate applies whether the Navy or a private employer signs the paycheck.

Since the islanders' savings have been impounded by the Navy, they cannot bid for the large-scale commercial agriculture leases the Navy now is offering.

"So," says an institute announcement on the deal, "the leases will go to Americans and the islanders will function as impressed labor at the starvation wage the Navy has decreed. If they refuse this bondage, labor will be imported from outside the trust territory."

With wages held down by Navy decree and prices forced up by a severe shortage of goods, the natives are caught in a situation which is made even more stringent by the import taxes slapped on by the Navy. Cheap goods once available from the Orient and parts of the Pacific are locked out.

Much of this situation is caused, say both the USCC and the institute reports, by the Navy's determination to cling to the ways of war in time of peace.

The USCC experts found, for example, that in general the guiding principles of the Navy's administration are sound, but there is many a slip between the thought and the act.

The USCC report points to a lack of integrated postwar plan at the policy making level, and a failure to put into action at the field level whatever plans there are.

"Some native groups," the report states, "wonder if the Government really intends to help them restore their prewar levels of living or will abandon them to shift for themselves.

"They feel they do not understand what America wishes to do in the islands. Each succeeding set of officers in the islands outlines a policy, the plans of the preceding set are forgotten, and the natives are confused."

Too many of the military governors are impressed by the knowledge that their island assignments are only temporary, the report continues:

"By making island duty a career, the type of personnel desired might be attracted and retained," it adds.

"The tendency in some areas has been to regard the administration of native affairs as serving the shore bases rather than as an essential function in its own right.

"This perspective was necessary during the war, but now it seriously hampers reconstruction of the native economy."

In short, the report concludes, the Navy's methods were good and right during the war, but they miss the mark now, and little is being done to bring them up to date.

The USCC experts found among the Navy administrators little understanding of how to foster self-dependency, and encourage self-government. "The Navy's hand is not a helping one," they said, adding:

"Government controls should be exercised to assist natives to become self-dependent, not to restrict their actions merely to control them. This is one of the most challenging issues which confronts the administration in Micronesia today."

Centennial of the Woman's Movement

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1948

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address I delivered on the evening of February 17 before the Women's Bureau Conference in the city of Washington, entitled "Centennial of the Woman's Movement," as follows:

It was just a century ago this July, while attending the annual meeting of the Friends Society of western New York, that four women concluded to have a conference of the women of that State at Seneca Falls for the purpose of telling the world their grievances. Thus the first woman's rights movement was born.

Lucretia Mott, of Philadelphia, a leader among the Friends or Quakers, was visiting at the home of her sister, Martha Wright, Elizabeth Cady Stanton, formerly of Boston, had gone west to make her new home in Seneca Falls. These three and Mary Ann McClintock put their idea into action and set a convention for Wednesday and Thursday, the 19th and 20th days of July 1848.

The man who owned the town newspaper, the Seneca County Courier, must have been favorably impressed by the appeal of those four pioneer women, because it is said he did not charge the ladies for space in the Courier for the following notice appearing on Sunday, July 16:

"WOMAN'S RIGHTS CONVENTION

"A convention to discuss the social, civil, and religious condition and rights of woman will be held in the Wesleyan Chapel at Seneca Falls on Wednesday and Thursday, the 19th and 20th of July, commencing at 10 o'clock a. m.

"During the first day the meeting will be exclusively for women who are earnestly invited to attend.

"The public generally are invited to be present on the second day when Lucretia Mott, of Philadelphia, and other ladies and gentlemen will address the convention."

Those ladies did not have the background of world travel and the international, economic, and political experience that our friend Frieda Miller has, who is one of the leaders of your conference here in Washington today. But they did think of the causes of the American Revolution and other grievances expressed by our founding fathers in the Declaration of Independence. So Lucretia and Elizabeth, Mary and Martha, those four pioneers of the woman's movement, drew upon the Declaration of Independence as a model for the foundation of their program of action and resolution.

On Wednesday morning, July 19, 1848, men and women on foot and horseback and by horse and carriage, scores of them, arrived at the door of the Wesleyan Church—to find the door locked. But the women were undaunted. A young professor from Yale College was in the crowd. He climbed through a window of the church—fortunately left unlocked. The professor gaining entrance by way of the window then unlocked the door of the church from the inside, and the crowd of men and women, making up that first convention of the women's rights movement, soon filled the church.

The women had not intended to have their husbands, and the other men who had accompanied them to the church in a spirit of curiosity, take any part in the convention. But inasmuch as it was a man who had gained entrance to the church when the women found themselves locked out, helpless and unable to convene, they then and there decided to let their friends of the opposite sex join with them in the meetings.

In a prayerful attitude around the altar of the church the women concluded that the moment had arrived when the men should help them in their mission of bringing to the attention of the world the plight that woman was in.

And so it happened that the first convention of the women's rights movement was presided over by a man, James Mott, husband of Lucretia, who it is said made a very impressive chairman as he presided over the meetings, tall and dignified in his Quaker costume. Mary McClintock was named secretary of the convention. Lucretia Mott recited the objects of the meeting. A law student, Samuel Tillman, read from English and American law certain statutes reflecting the legal status of women, setting forth the "charity and mercy shown by men toward their wives," protecting them in their civil rights and taking over their property after marriage.

This conference of the Women's Bureau will be interested in the resolutions adopted by that convention. Some of them read as follows:

"Resolved, That woman is man's equal—was intended to be so by the Creator; and the highest good of the race demands that she should be recognized as such.

"Resolved, That the women of this country ought to be enlightened in regard to the laws under which they live; that they may no longer publish their degradation by declaring themselves satisfied with their present position—nor their ignorance by asserting that they have all the rights they want.

"Resolved, That the same amount of virtue, delicacy, and refinement of behavior that is required of woman in the social state, should also be required of men; and the same transgressions should be visited with equal severity on both man and woman.

"Resolved, That the objection of indelicacy and impropriety, which is so often brought against woman when she addresses a public audience, comes with a very ill grace from those who encourage by their attendance her appearance on the stage, in the concert, or in feats at the circus.

"Resolved, That it is the duty of the women of this country to secure to themselves their sacred right to the elective franchise."

Thus was created the nucleus of the woman-suffrage movement, which resulted years later in the adoption of the nineteenth amendment to the Constitution of the United States, giving women the right to vote.

The suffrage resolution was the only declaration that was not unanimously adopted at the Seneca Falls convention. The women were not quite certain that the suffrage idea would be accepted by women universally throughout the country. But at the very moment they were about to falter it was a Negro and a former slave—the great Negro exponent of freedom and emancipation, a man who has gone down in history as one of the greatest Negroes in the world, Frederick Douglas, editor of the North Star, a weekly newspaper, devoted to the cause of freedom—who rose on that occasion and delivered one of the greatest orations advocating the freedom of women and their right to vote that has ever been spoken by a man.

It is said of Frederick Douglas that he had such great powers of eloquence he captivated his auditors and never failed to bring home to their hearts the cause which he pleaded. He was a polished gentleman, with a voice that was full and sonorous. He was dignified, without pretension, and a man of lofty reason. It is recorded of the eloquence of Frederick Douglas that his was the kind of eloquence that issued from the depth of his soul as from a spring, rolling along in copious floods, sweeping all before it, overwhelming by its force, more dazzling and more thundering than the bolt which leaps from crag to crag.

At that historical moment when the women of Seneca Falls were undecided whether to launch the cause of the women's suffrage movement, it is significant that it was through the effort and the eloquence of a former slave who, with Elizabeth Cady Stanton, inspired and encouraged the pioneers of the Woman's Movement at their first convention to adopt the suffrage declaration.

The declaration was signed by 100 men and women of the convention. This struck a responsive chord in the hearts of women everywhere.

The Seneca Falls conference passed a final declaration maintaining:

"We shall use every instrumentality within our power to effect our objective. We shall employ agents, circulate tracts, petition the State and national legislatures, and endeavor to enlist the pulpit and the press in our behalf. We hope this convention will be followed by a series of conventions embracing every part of the country."

Sounds very much like a resolution that might be passed by the Conference of the Women's Bureau of the Department of Labor today, doesn't it.

I am informed that there are today at this Women's Bureau conference representatives from 26 States of the United States and from the District of Columbia and Puerto Rico, representing more than 155 different women's organizations. Ladies, I congratulate you.

There is in our Nation's Capitol a monumental shrine erected in marble, the rock of ages, dedicated to the founders of the Woman Movement of the World. It is the first monument of women to women, presented and executed by woman.

This monumental shrine to women everywhere is the work of the sculptress, Adelaide Johnson. It is composed of the three great pioneers and founders of the woman movement, Lucretia Mott, Susan B. Anthony, and Elizabeth Cady Stanton. This monument was presented to the women of America by the National Woman's Party. It was accepted by Speaker Gillette of the House of Representatives in the name of the women of the Nation, and was unveiled in the rotunda of the National Capitol on the anniversary of the birth of Susan B. Anthony on February 21, 1921, in an imposing ceremony attended by thousands of people, at which more than 8,500 persons were unable to gain entrance to the Capitol, so keen was the interest on that occasion.

I hope every one of the delegates to this conference will visit the shrine in the National Capitol while here to pay honor to the Woman Movement.

In the words of the sculptress, Adelaide Johnson:

"This monument was not made for entertainment, but as an immortal record of the mightiest thing in the evolution of humanity that has taken place since the dawn of mind in the brute. It was at Seneca Falls, in 1848, that began the first movement to succeed. That did not die, but grew, until for the first time in human history a cause reached every country, and expanded to every field of endeavor.

"No statement can be complete without including the three initiators of the women's movement, Lucretia Mott and Elizabeth Cady Stanton and Susan B. Anthony. These three form a unique historic unit in the nature of a trinity, the one of which could not have done her work without the other. They became the embodiment of an idea. Of this trinity, Susan B. Anthony, peerless as an erect monolith reaching skyward out on the desert, whither humanity might journey as to a shrine, will forever stand alone, at the end of an age that produced her and her great contemporaries. Let me say that the National Woman's Party in their instrumentality in placing this monument in our Capitol, where they who have rendered signal service to the Nation are admitted, were in that act placing an everlasting jewel in their own crown of service."

When you view this shrine to the Woman Movement you will note the idea and the purpose of the sculptress Adelaide Johnson to picture the three founders of the Woman Movement, Lucretia Mott, Susan B. Anthony, and Elizabeth Cady Stanton, as a trinity, as an ideal rising out of the desert "peerless as an erect monolith reaching skyward."

And when you go back to your homes, to your desks, to your work—contemplate the ideals of those pioneer women who met in the first convention of the Woman Movement at Seneca Falls a hundred years ago. Think of the obstacles they had to overcome, which they met and which they conquered. Then gird yourselves with the inspiration of victory, and say to the world: Our mission shall be accomplished.

Now ladies of the conference, you are about to hear one of the leading exponents of woman's rights in the world today, a distinguished educator, writer, and lecturer, the dean of Vassar College. She was the only woman member of the United States delegation to the Conference of Allied Ministers of Education in London in 1944, whose report of that conference has been published by the Foreign Policy Association. In 1945 she was again in London as a delegate and representative of the United States at the conference that drafted the constitution for UNESCO. Continuing her activity and influence in education, she has accepted the chair at the University of Georgia as consultant in education and professor of history. She is a writer of national and international acclaim. She has written books on southern history, among which are: Reconstruction in Georgia and Carpetbaggers in the United States Senate.

I now have the distinct pleasure and high honor to present to you the speaker of the evening, Dr. C. Mildred Thompson, dean of Vassar College, who will address you on the subject, Women's status—yesterday, today, and tomorrow.

National Brotherhood Week

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1948

Mr. SABATH. Mr. Speaker, I feel that it is fitting and appropriate on the occasion of the observance of National Brotherhood Week that I insert in the Record a very informative and interesting editorial on the subject of brotherhood, which appeared in today's Chicago Herald-Examiner. I am sure that the membership in reading it would join in my feeling that it would indeed be wonderful if we could live up to the intent of the Declaration of Independence as so well expressed in this editorial, as follows:

BROTHERHOOD WEEK

It is a very great service to the country, and a great credit to the churches and religious organizations which sponsor the observance, that National Brotherhood Week is designated annually as an occasion for emphasis upon the manner in which the happiness of the American people is dependent upon religious and racial tolerance and understanding.

In the matters of religious faith and racial origin, and especially of religion, the American people have many contrasting interests and many other conflicting beliefs and traditions, all deeply rooted in the lands and times of their fathers and thus inexorably and most properly constituting the intellectual pattern by which their present lives are largely shaped.

This is not a new condition among the American people, but a very old one.

It existed, and was recognized, at the time when the founders of the American Republic wrote the Declaration of Independence, in which it was asserted that all men, irrespective of race or religion, have certain inalienable rights as their endowment from the Creator, these being life, liberty, and the pursuit of happiness.

Its existence was more substantially and irrevocably recognized when the Constitution of the United States, by the first act of amendment, totally and permanently withheld from the Congress of the United States the power to enact any law respecting an establishment of religion or in any degree infringing upon the freedom of worship.

By these devices, which gave recognition to the religious and racial differences among the American people, it was sought to assure them in perpetuity against any future acts of prejudice or discrimination.

It is to be significantly noted that in the pursuit and fulfillment of this purpose the founders of the country deemed it of the utmost necessity to provide for the protection and integrity of religious and racial minorities.

Accordingly, it was not the attainment of a single conviction by the American people with respect to religion that was held to be a proper object or responsibility of the people, but instead the attainment by them of a spiritual and cultural state of sincere and earnest brotherhood.

This is the high purpose to which the American people give recognition, and to which they rededicate themselves in the manner of their founding fathers, by their observance of national brotherhood.

There has never been a total attainment of an estate of absolute brotherhood among the contrasting and conflicting religious and racial groups of the American Nation.

But the American people as a whole, to their very great credit and profit, have never failed to recognize the wisdom of their fathers, and have never ceased to strive for and progress toward the full estate of American brotherhood as a matter of national aspiration and dedication.

The churches and religious organizations, which themselves exist and prosper in the country by virtue of the freedom and dignity to which its basic laws entitle them, have fulfilled their most vital duty to the country by organizing the National Brotherhood Week observance and thus giving the strength of national unity and purpose to the desire and intention of the American people to live together with tolerance of all faiths and respect for all opinions.

Portrait of a "Progressive Liberal"

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1948

Mr. VURSELL. Mr. Speaker, under leave to extend my remarks, I am including in the RECORD an editorial of Wednesday, February 25, from the Chicago Tribune.

The subject of this editorial, Portrait of a Progressive Liberal, gives a word picture of Truman liberalism well worth careful reading.

PORTRAIT OF A "PROGRESSIVE LIBERAL"

The despoilers paid $100 a plate to hear Harry Truman mock the memory of Jefferson and Jackson by announcing himself as the custodian of the true faith of "progressive liberalism." He referred to New Dealers as "we of the forward looking faith." Anybody else was a "reactionary." Before taking to the radio, he announced that conditions were too grave to turn the Government over to a "bunch of reactionaries."

"If anyone chooses to call this politics," he said in the windup, "then it is the politics of Jefferson and Jackson, Wilson and Roosevelt—and it is good enough for me." We do not know whether Washington and Lincoln were good enough for High Tax Harry, too. He has rather peculiar standards.

Let us look at a few of the things that are good enough for this self-styled progressive liberal. The convicted crooks of the Pendergast Kansas City gang were good enough for him. They stole the election which first assured him a Senate seat. They loaned his mother $35,000 on the family farm out of the trust fund of the school children of Kansas City. Yes, they were good enough for him. He pardoned them after an honest Democratic United States attorney, termed by Truman a traitor to the party, had sent them to the penitentiary.

They were still good enough for him when he determined to purge Representative Slaughter in the Democratic primary of 1946. With Harry directing operations on the grounds, they stole that election. A whole raft of them were indicted, but then they blew the courthouse safe and stole the evidence of the fraudulent voting. It was a slick trick. It was good enough for him.

When the scandal was at its height, Harry's Attorney General, Tom Clark, thought he had better do a little window dressing. He announced an FBI investigation, but he directed the FBI agents to do just enough investigating to make it look good. That is the testimony of the No. 2 G-man, Edward A. Tamm, now nominated by Harry for a Federal judgeship.

Senator DONNELL, Missouri Republican, struggled last year to obtain a full scale investigation of Clark's brush-off of the stolen election. The party of "progressive liberalism" blocked action by a filibuster. That was good enough for Harry.

The parole of the four Chicago Capone mobsters, Ricca, Campagna, D'Andrea, and Gioe, who shook down the movie industry for a million dollars, was good enough for this administration, too. The testimony shows that Paul Dillon, Harry's old St. Louis sidekick and campaign manager, who figured in the fix, collected $10,000 from the mob. Another $20,000 went to the widow of Putty Nose Brady, another shining light in the St. Louis wing of the party of progressive liberalism. Brady's services were to get Dillon to "intervene" for the gangsters. With whom?

Well, we have Dillon's statement that when he went to Washington last August 6 to talk to parole board members, he was entertained by President and Mrs. Truman in the White House. He was good enough for them.

We know that a favorable climate for parole was developed here in the 1946 congressional election when five gangster controlled Republican ward committeemen delivered solidly for the party of progressive liberalism. That was good enough for it.

What else is good enough for the great progressive liberal who holds hands with election thieves and hoodlums? The United Nations fraud, for one, with its apparatus to perpetuate imperialist slavery in Indonesia. Human slavery, for another. The German prisoners of war in this country were released into the tender bondage of the British and French and are still engaged in slave labor almost 3 years after the end of the war in Europe. Any nation other than the United States, for a third: three billion seven hundred and fifty million for Britain, seventeen more billions for Britain and her pals, five hundred and seventy million for China, ten million for Iran, four hundred million for Greece and Turkey, five hundred and twenty-two million for France, Italy, and Austria, etc. These panhandlers are good enough for him.

Such people and such things are good enough for the great balcony builder in the White House. Who is he good enough for? We very much doubt that the people of the United States can be induced to agree next November that he is good enough for them.

Good Brotherhood

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following excellent article from the Chelsea Evening Record, Chelsea, Mass., entitled "Good Brotherhood":

GOOD BROTHERHOOD

President Truman, in accepting honorary chairmanship of National Brotherhood Week,

February 22–29, said, "I commend the cooperation of all agencies of religion, education, and community life, and all media of communication in making brotherhood a living reality in every corner of our country." During the war years Americans shared the responsibilities and sorrows of the Nation without segregation of race or religion. Likewise during this period of time greater effort was expended in public schools to give children a better understanding of the peoples of the world.

The observance of brotherhood in our public schools, therefore, has ceased to be merely a week set apart for each year in which to be reminded of good brotherhood. Since it has long been recognized that a child has no prejudices of race and religion until the seeds of discrimination have been planted by some adult, our schools today endeavor to give a more truthful picture of the background, customs, and practices of people from other countries. Stereotyped characters are no longer presented as accurate pictures of the ancestors of new Americans. With the wealth of materials available from UNESCO, United Nations, the Pan American Union, the East and West Association, and innumerable other organizations, it is now no longer necessary to overwork the imagination in this respect. Older brothers and sisters have returned from war service bringing pictures, stories, and memories as witness that other people are no different in their hopes and fears than we are.

No race or nationality is, therefore, set apart as one to be regarded as different from us in its emotions. The National Conference of Christians and Jews is doing much to secure greater religious tolerance among children. Children are taught that many of the great musical compositions, folk songs, masterpieces of famous artists, the ballet and folk dances of the world found much of their origin in countries across the Atlantic or the Pacific. In and out of school listening to radio programs brings the literature and music of these countries nearer to the child's understanding.

With the improved means of communication, we now teach our children to rise above the level of narrow thinking and to develop in fullness and accuracy the knowledge of life in all nations as it really is. We teach them that in having this appreciation they must also respect and love a democratic form of government which can and does give equal opportunity to all people, regardless of race, color, or creed.

South's Political Revolt

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1948

Mr. LARCADE. Mr. Speaker, under previous authority, I was granted leave to extend my remarks by inserting a newspaper article and I now submit a copy of an article by Columnist Gould Lincoln which appeared in the Washington Star of Washington, D. C., of date February 26, 1948, entitled "South's Revolt No Joke," and so forth, as follows:

SOUTH'S REVOLT NO JOKE FOR TRUMAN'S CANDIDACY—DENIAL OF ELECTORAL VOTES COULD CAUSE WORST DEFEAT IN UNITED STATES HISTORY

(By Gould Lincoln)

And so the Southern revolt—against President Truman's civil-rights program—was a "joke." So much of a joke that there is doubt, now, in the minds of some of the Southern Democratic leaders that Mr. Truman will have the electoral votes of these States, which since reconstruction days have been voting almost automatically for Democratic Presidential nominees. First, the southerners would like to deny Mr. Truman the Presidential nomination. If they fail there, as seems probable, then they plan to deny him the electoral votes of their States. If this happened, it would be within the bounds of probability that Mr. Truman would be the worst defeated candidate for President, not even excepting Alf Landon, who in 1936 carried two States—Maine and Vermont.

The promoters of the "joke" idea suggested that the Southern Democrats, even if they did not like Mr. Truman and his proposals for antilynching, anti-poll-tax, and anti-segregation legislation, had "no place to go"; that they would prefer Mr. Truman in any event to a Republican in the White House, which a desertion of Mr. Truman would probably bring about.

1928 REVOLT DISREGARDED

They counted, however, upon old political-party ties being stronger than certain institutions and principles of government in which southerners have been grounded for years. They paid no attention to the historical fact that a revolt of the Southern voters 20 years ago found five of the States of the Democratic "Solid South" giving their electoral votes to a Republican, Herbert Hoover. These States were Texas, Florida, Tennessee, North Carolina, and Virginia. The religious issue was paramount in this desertion of the Democratic Presidential nominee, Al Smith—although also involved were the South's stand for prohibition and against a "wet."

The recalcitrant Southerners say they are fighting Mr. Truman on two grounds. First, they are strongly opposed to his proposal for doing away with segregation of the races—white and colored. Second, they are opposed to his proposals which would flatten out States' rights and make the Federal Government supreme in matters which, they insist, must remain within the jurisdiction of the States if the present form of government is to continue. By antisegregation laws, by anti-poll-tax Federal laws, and by antilynching Federal laws, it is argued, the Federal Government would take over control of elections, police, employment, travel conditions, and education.

Mr. Truman and the chairman of the Democratic National Committee, Senator MCGRATH of Rhode Island, have turned their backs on appeals from the southerners for some mitigation of the civil-rights program which Mr. Truman has demanded of Congress. A committee of southern governors, presenting to Mr. MCGRATH a series of questions asking what his stand as chairman of the party's national committee would be, obtained no satisfaction. Indeed, they received an emphatic "No" to all their requests.

LEADERS PRESSED BY PEOPLE

While the governors were rebuffed, the very rebuff served to point up the sharp differences between the southern Democrats and Mr. Truman. Because this revolt in the South goes down to the grass roots, it is far more serious than if it were just a revolt on the part of some of the party leaders. The leaders are being pressed by the people they lead. In 1928, when southern voters revolted against Al Smith, the party leaders—with two notable exceptions, Senator Simmons of North Carolina and Senator Heflin of Alabama—went along with the Smith presidential candidacy—on the surface at least. The southern Democratic leaders today face the alternative of fighting Mr. Truman up to and through the election or of merely voicing their protests. What the rank-and-file voters of the South may do is another thing.

One of the moves now proposed is to take Mr. Truman off the Democratic ticket in the Southern States, even if he be nominated by the Democratic National Convention, and so permit the voters to vote for individual Democratic electors, who in the electoral college would cast their ballots for some Democrat other than Mr. Truman. If followed out, this would be an effective way of denying Mr. Truman the votes of the Southern States.

It is beginning to look as though Mr. Truman's efforts to line up for him the Negro votes of the Northern and Western States may be as disastrous as his efforts to win the Jewish vote.

AIC Stenos Basketball Team of Davenport, Iowa

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1948

Mr. MARTIN of Iowa. Mr. Speaker, the American Institute of Commerce of Davenport, Iowa, has been a great exponent of international good will and they have proceeded to back up their belief with action. They have an outstanding girls' basketball team that has made an annual tour throughout the eastern part of the United States. They play under the name of AIC Stenos.

Last year a girls' team from Mexico came to our country and played the AIC Steno team at Davenport and the good will that developed from their tour of America gave Mr. S. D. Fenton, director of the American Institute of Commerce, the desire to return their visit and also to extend their trip to other Central American countries. The girls who make up the AIC Steno team are all from Iowa families, they receive no pay, and at no cost to the Government of the United States the girls have been of help in promoting the good will between nations that we are all striving for. These girls did much to engender the feeling of good will that exists between Central America and Mexico and the United States.

The trip of the AIC Stenos basketball team through Central America this winter has brought forth many expressions of appreciation and good will from the countries visited by these girls. I have received several communications and newspapers from Mexico and Central America praising the American Institute of Commerce team and I set forth here a translation of a typical article that appeared in La Estrella de Nicaragua, Managua, D. N., February 3, 1948:

SO THEY TELL US—GOSSIPS ABOUT THE BASKETBALL SERIES

Well, the Davenport's starlets have heard so much of the pinoleras when we refer to the Nicaraguan basketball girls and certainly they do not know what it is all about.

They are called pinoleras because most of everybody in this country drinks a typical national beverage named pinol. It is a sort of a drink made of corn. Sometimes it is mixed up with chocolate and then we call it pinolillo which is a delicious drink but it does not have a kick, so the distinguished visitors don't have to worry about it. The beverage is comfortable and refreshing.

Although the pinol is not dangerous, the pinoleras might be tonight and the Stenos should beware. Our players have decided to

cradle all the Davenport babies and put them to sleep during the second game.

Miss Stolte has only 18 years of age and none of the Iowan beauties have reached the 20 years' goal. They are all teenagers, but, for God's sake, how they shoot at the basket, how they pass around, and how they run.

Miss Stolte told us that if she made one point in the first game, she would be lucky. Well she made 22 and we hope that in the second game she will keep up to her promise and score only one point. That is the best souvenir she could leave us. Atta girl!

Although the diplomatic relations between the United States and Nicaragua are practically severed, because of someone whose name we do not wish to remember, the Davenport's peaches are the best diplomats that Uncle Sam could send down to Nicaragua.

It is too bad they do not remain here for good.

But perhaps it is so much the better, because the American Embassy would have to be all the time crowded with apparent refugees. So they tell us.

FIVE THOUSAND SEE THE STENOS BEAT OUR GIRLS—THE PUBLIC WAS THRILLED BY THE HIGH SCORE OF THE LOCAL PLAYERS

The Nicaraguan team was beaten by the Stenos at the gym Friday night; but the local fans were left speechless when our girls made 35 points against 52 scored by the visiting outfit.

It was a marvelous night and this hot city became the hottest spot in the world when the American beauties made their appearance before 5,000 fans who gave them a rousing welcome.

Fortunately nobody got burned and the game was played smoothly mid a great number of spectacular thrills.

Miss Stolte was the star of the game, scoring 22 points. She delivered the ball in the basket as she pleased. The public was amazed and gave her a big hand each time she developed her streamlined plays.

All the enchanting American players had a wonderful night and were enthusiastically admired by the Nicaraguans who were delighted to see such a marvelous bunch of basketbell stars displaying their ability at the utmost.

Lois Lepley, Blanche Loving, Charlotte Tomlin, Joan Hendricks, Beverly Lauer, Jane Schmidt, Lucy Kurt, LaVerne Stolte and Marjorie Logan were actual miracles on the floor and it is really very hard to pick up the best one in the game, although, as we said before, Miss Stolte was the top scorer.

There was plenty of "poetry in movement" and everybody's heart was beating strongly and ceaselessly during the whole game.

All the fans were all dressed up to start a big celebration hoping that our team could win, but they left the gym with a broken heart, although very fond of the wonders of Davenport.

The "Stenos" have won not only a victory in the first game but also the thoughts of the public which is terribly eager to see new thrills in the second game Monday.

The "invading army" of the "Stenos" certainly has conquered all of us and we gladly have surrendered. We, simply, can't help it.

Federal Barge Lines on Missouri River

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1948

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks, I include the following statement made by Mr. Harold O. Benson, of Sioux City, Iowa, before the Committee on Interstate and Foreign Commerce on February 26, 1948, relating to legislation pertaining to the sale of the Federal Barge Lines. Mr. Benson is chairman of the waterways committee of the Sioux City Chamber of Commerce. His statement follows:

My name is Harold O. Benson. I am appearing before this committee as chairman of the waterways committee of the Sioux City Chamber of Commerce. I have been engaged in the furniture business in Sioux City for the past 18 years except for 4 years when I was in the Army. During my service in the Army, I was in charge of several tug boats and barges transporting supplies in the South Seas.

The Sioux City Chamber of Commerce is an organization with 1,540 members. It is composed of individuals in all types of trade and industry. Its waterways committee is charged with the responsibility of doing all possible to develop commerce on the Missouri River. I am submitting herewith, on their instructions, a copy of the resolutions unanimously adopted by the board of directors at their meeting on February 4, 1948, in opposition to any sale of the Inland Waterways Corp. to any private interests until such pioneering work has been completed on the Missouri and other rivers as is required.

Sioux City lies in the center of the greatest agricultural area in the United States and at almost the geographical center. Development of our resources has been hampered due to the fact that our land lies so far from the consuming areas. Using Sioux City as a typical origin point, it is roughly 1,200 miles to New Orleans, 1,800 miles to San Francisco and 1,500 miles to New York. It can be readily seen that transportation costs by truck or rail must necessarily be high and it is our studied opinion based on past experience that products of the farm and many commodities consumed on the farm can be transported by water at a much lower cost.

In the year 1947 the State of Nebraska produced 308,000,000 bushels of grain and the State of South Dakota produced 261,000,000 bushels of grain. This production alone warrants navigation on the Missouri River, but figures could also be cited to cover grain produced in Minnesota, Iowa, Kansas, Missouri, Wyoming, North Dakota, and Montana, which will be available tonnage for the river. With the completion of the irrigation projects now under construction in South Dakota, Wyoming, Montana, Colorado, and Nebraska this production will be materially increased. It must also be noted that irrigation projects bring increased population which must be served with adequate transportation, increasing the opportunity to bring tonnage up the river. We would like to direct your attention to such commodities as coffee, sugar, oyster shells, petroleum products from the lower Mississippi River; cotton piece goods, coal, and fertilizer from the Tennessee; steel, coal, etc., from the Ohio River; and coal from the Illinois River, as typical commodities which would move upstream which are available to water transportation.

We would also like to direct your attention to the increase in population in the United States during the past 10 years and to suggest that the most advantageous new territory in which to settle this population would be in the sparsely settled area of the Missouri River Basin. Being away from the seaboard, this would be a safety factor should the United States be forced into war. Many industries should be located in this area for the same reason, and they would need the cheapest transportation available.

Facts have been submitted from time to time to show the loss in revenue incurred in the operations of the Federal Barge Lines, but we are sure this will not apply to the Missouri River as we can profit by the errors committed in pioneering on the Mississippi and other rivers in installing terminal facilities, etc. Furthermore, no credit is given in savings to the producers and consumers in the areas directly tributary to the Mississippi, Illinois, and Ohio Rivers in savings in reduced transportation charges forced by the competition of low-cost water transportation. Granted that there has been a monetary loss in the operation of the Federal Barge Lines, areas tributary to the above-named rivers were able to recoup this loss by the use of reduced transportation costs. However, residents in the Missouri River area have had no such opportunity, although they have willingly borne their share of the taxation necessary to keep the Federal Barge Line in operation, being under the impression that the same type of pioneering work would be done on the Missouri River as soon as the Missouri River was available for such service. The Missouri is now ready for the initial stages of this pioneering work and it should be started at once.

Sioux City is opposed to any type of legislation that would in any way retard the pioneering work on the Missouri River. It feels that this Congress has a moral obligation to see that the work of pioneering as contemplated in the original Organic Act of 1924 creating the Federal Barge Line should be carried to a successful conclusion by continued operation of the Federal Barge Line until such time as this pioneering work is finished on all rivers.

RESOLUTION

Whereas there is now pending before the Honorable Averell Harriman, the Secretary of the Department of Commerce of the United States, an offer to purchase part of the equipment and all of the operating rights of the Inland Waterways Corporation, such offer being made by Mr. Theodore Brent, of New Orleans, and his associates; and

Whereas shippers, receivers, manufacturers, grain, livestock, and agricultural interests represented by the Sioux City Chamber of Commerce have authorized and directed its waterways committee to transmit its views and position relative to the proposed disposal of this equipment and business known under the trade name as Federal Barge Lines: Therefore be it

Resolved by the waterways committee on behalf of the aforesaid interests, That it favors the continuation of the present operations of the Inland Waterways Corporation and requests our Members of the Congress to urge the appropriation of the needed funds for the rehabilitation of equipment and the continued operation of the line by the Government for the following reasons:

(a) The Inland Waterways Corporation is operating practically as the only common carrier rendering "less than barge load" service on the Mississippi River and its tributaries.

(b) This "less than barge load" service is essential to the shipping needs of the smaller businesses of the valley.

(c) There is a definite need for pioneering of barge service on the upper Missouri River, as has been done by the Government on other navigable streams. We feel that the people of the Missouri River valley are entitled to similar consideration.

(d) Private interests who might purchase the Inland Waterways equipment at this time will not voluntarily pioneer the development of terminals and Missouri River barge service; be it further

Resolved, That until such time as private interests will make an offer to the Government to purchase the entire assets of Inland Waterways Corporation Federal Barge Lines at a fair and reasonable price and will agree to continue and fulfill the basic provisions of the organic act which established and created the Federal Barge Lines, that this committee recommends to the Congress that the

operations in the Inland Waterways Corporation be continued by the Government of the United States; be it further

Resolved, That copies of this resolution be mailed to Secretary Harriman, Senators Wilson and Hickenlooper, and Congressmen from Iowa, Nebraska, South Dakota, Kansas, and Missouri.

Respectfully submitted.

HAROLD MURPHY,
Secretary, Chamber of Commerce,
Sioux City, Iowa.

Resolutions Relative to the Admission of Eire and All Other Peace-Loving Nations as Members of the United Nations

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1948

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas it is reliably reported that the Soviet Union through its power of veto has excluded Eire and other peace-loving nations from membership in the United Nations: Therefore be it

Resolved, That the House of Representatives of the General Court of Massachusetts affirms its conviction that the cause of peace will be best served if Eire, and all other peace-loving nations, are made members of the United Nations, and views with alarm the acts of the Soviet Union, specifically the unwarranted exercise of its power of veto and the spread of harmful propaganda against the United States and other democratic nations; and be it further

Resolved, That copies of these resolutions be forwarded forthwith by the secretary of the Commonwealth to the President of the United States, to the Presiding Officer of each branch of Congress, to the Members thereof from this Commonwealth, and to the representatives of all nations participating in the United Nations organization.

In the house of representatives, adopted, February 17, 1948.

LAWRENCE R. GROVE, *Clerk.*

A true copy. Attest:

F. W. COOK,
Secretary of the Commonwealth.

What United States Gets for Aid Abroad

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1948

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the United States News-World Report for February 27, 1948:

WHAT THE UNITED STATES GETS FOR AID ABROAD—REPORTED FROM WASHINGTON, LONDON, AND PARIS

Government pump priming is to be started on a global scale.

Scope of Marshall plan aid is almost double that of New Deal.

Recovery planning puts the United States in a position to direct production and business activity for much of the world.

Spending abroad has the advantage of being less visible to taxpayers than spending at home. Program may become permanent.

Pump priming, once confined to the United States under the New Deal, is to be tried for much of the world under the Marshall plan. Dollars are to be used on a planned basis to try to bring back prosperity where it is lacking, or to support prosperity where it is shaky.

Plans for fueling world recovery with dollars are moving out of the blueprint stage into the stage of action. Unanimous approval for those plans is given by the Senate Foreign Relations Committee. Final Senate action is not far off. There will be a battle and some modification in the House, but billions will be voted. Within 2 or 3 months a program will start that may turn out to be a permanent one.

For the outside world, dollars are to be provided on a larger scale than they were for the New Deal. The plan for the year ahead calls for almost twice as many dollars as the New Deal ever spent in a year for relief and recovery at home. In Paris, London, and Rome, among other places, governments are making plans on the basis of these dollars. Deep cuts in living standards are being avoided. Leaders of governments flirting with bankruptcy are confident that dollars will come in time to keep the sheriff away.

The accompanying charts show the scale of emergency spending that is about to begin, compared with the scale of domestic spending at the peak of New Deal efforts.

Prewar pump priming cost $4,000,000,000 in its most expensive year. That was for the 12 months ending June 30, 1939, when the Government poured out money to offset the 1938 business setback. This sum represents only dollars spent to employ the jobless, relieve the distressed and assist the farmers. It does not include the more or less regular outlays for public works.

The money was distributed as follows: $2,200,000,000 through the Work Projects Administration and other relief agencies, $300,000,000 for the Civilian Conservation Corps for reforestation work, $1,200,000,000 in aids to agriculture, and $300,000,000 for assistance under the Social Security System.

Cost of priming United States pump, July 1, 1938–June 30, 1939, via relief spending (WPA, etc.) at home, $4,000,000,000.

Postwar pump priming, under existing plans, calls for $7,000,000,000 for the year starting July 1. This sum is asked by the President and may be trimmed a bit by Congress. But it does not include all the aid that is coming up. There is to be more money for China, for Greece, maybe for Germany and Japan.

The plan calls for a super-WPA to be run on a global scale by an administrator with more power and more money than the late Harry Hopkins ever had. This official is to have the status of a Cabinet officer and is to be paid $20,000 a year, $5,000 more than a Cabinet officer. He will deal with foreign countries separately and in groups. He will determine which countries get loans and which get gifts. He will supervise buying in this country and will oversee spending abroad. He will have agents almost everywhere, directed by a "roving Ambassador."

Foreign governments are setting up organizations to handle their end of the pump-priming project. The British are sending to Washington a new Ambassador, Sir Oliver Franks, a man who knows more about the program than anyone else in Britain. The 16 nations that are to receive United States dollars are to meet soon to set up a joint organization for the receiving end.

The Administrator of the program actually is to become a director of world business. He will be in a position to tell France, for example, whether to rebuild railroads or to improve highways. He can decide whether farms are to be mechanized. He will determine whether Britain or the Ruhr gets first call on coal-mining machinery. And he can stop the dollar flow altogether if countries do not abide by his terms.

World trade patterns will be influenced by the Administrator's decisions. He has power to decide whether timber shall be purchased from Finland, Sweden, or Canada; whether United States wheat or Canadian wheat should get priority in dollar sales; whether Brazil or the United States should supply cotton to European textile mills.

When it comes to purely relief operations, the Administrator, on the basis of Senate plans, is to have almost absolute power. Congress will appropriate relief money to him and he will make grants-in-aid to the various countries. He may decide what countries get the food, the coal, the petroleum, the medical supplies, and the raw materials that the United States pays for. He also has power to buy these supplies directly, anywhere in the world.

When it comes to loans, the Administrator must consult with the National Advisory Council on International and Monetary Problems, of which he is to become a member. The Administrator's activities also will be subject to check by the Secretary of State on foreign-policy matters, by a 12-man Public Advisory Board, and by a 14-man congressional Joint Committee on Foreign Economic Cooperation.

Some advantages over domestic pump priming are seen in the world program that is about to begin. Effects of spending will not be so visible inside the United States. American taxpayers will not have WPA leaf-raking projects before their eyes. They won't see courthouses being built, sidewalks laid, or murals painted with Federal money. The result is that there may be less criticism.

The foreign-aid program also may promise an easier way of keeping United States business active and of getting rid of surpluses. Most industrial orders will be for heavy goods—machinery, trucks, tractors, electrical equipment—a sector of industry that the New Deal never could revive until the war. Foreign outlets for surplus grains and fruit and cotton may prove more effective than relief stamp programs at home.

Overseas pump priming, in addition, is expected to pay off in increased good will toward the United States. New Dealers found that voters on relief showed their gratitude at the polls. Now this country expects to produce allies in the campaign to stop the spread of communism.

Disadvantages are numerous, too. Current domestic shortages of steel, farm equipment, and oil may be prolonged as shipments to Europe continue. The political trouble these shortages can cause already has been demonstrated in the case of oil. Criticism also may develop over plans to modernize plants of foreign competitors at little or no cost to their owners, possibly giving them an advantage over United States producers in future world markets.

There is a risk that world recovery could result in a surfeit of goods like that which plagued the world just before the war. In that event, United States manufacturers might find themselves competing with producers whose costs were reduced by gifts or easy-term sales of modern American machinery. Such a development, however, is unlikely for several years.

Standards, meanwhile, are to be imposed on countries that are to receive aid. The law proposed in the Senate suggests that pump-priming dollars be concentrated on projects that will increase output of coal, steel, and food, and that will improve transportation systems. In addition, receiving countries are to be required to agree to take steps to balance their budgets, to stabilize their currencies, to lower trade barriers, and

to do what they can to use the dollar resources of their own citizens. These standards are to be written in a series of treaties between the United States and the countries that receive aid.

The Administrator also is to have a voice in deciding what other countries are to do with the proceeds from United States goods that are sold to their citizens. A basic idea is to persuade European governments to use these funds to help balance their own budgets and give their currencies stable values. France, for example, is expected to get around $54,000,000 worth of United States farm machinery. That probably will be sold to French farmers for francs. The Administrator might induce France to use those francs either to apply on the French budget or to reduce the volume of circulating money.

A flow of $7,000,000,000 worth of goods to Europe, most of which is to be sold to European citizens and industries, is expected to provide a sum that could be used to restore a degree of financial order in inflation-ridden countries. The Senate plan definitely contemplates that gifts are to be paid for in local currencies and that these receipts are to be used to put finances under better control.

Cost of priming United States pump, July 1, 1948–June 30, 1949, via relief spending abroad, $7,000,000,000.

In Europe, governments already are preparing their programs for American aid. They expect to be ready with detailed programs by the time Congress approves the recovery program and an Administrator is appointed.

Britain is depending on United States aid to close the gap between her imports and exports for the 12 months beginning next July 1—a gap that created a deficit of around $2,000,000,000 in 1947. Dollar aids also are expected to ease the deficit for the sterling area, which Britain backed last year to the tune of $4,092,000,000.

France, the next largest beneficiary, faces in the same period a deficit that is expected to approach $1,000,000,000. Smaller deficits, to be made up by American aid, are in prospect for Germany, Italy, the Netherlands, Belgium, Luxemburg, and Greece.

An end to the aid program is suggested by 1952. By then, it is hoped, European recovery will be on a firm basis, requiring no further assistance. Such programs, however, tend to become permanent. United States farmers will receive Government payments despite a record income, and Federal outlays for old-age relief are larger than in 1939, despite full employment.

REA Appropriations

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 25, 1948

Mr. VURSELL. Mr. Speaker, today I want to take a minute's time to refer to the defeat of the amendment seeking $300,000,000 additional funds for REA which several Members voted to add to the urgent deficiency bill before the House.

The roll call came on the motion to recommit. I voted against the motion to recommit, as did a majority of the Members of the House, and the motion failed, as it should have.

I was surprised at many Members voting to spend $300,000,000 without any request being made for this money by Claude R. Wickard, Administrator of REA, and at their being willing to completely by-pass the regular subcommittee of the Appropriations Committee which is now holding hearings on the amount of money necessary to be voted for REA for the coming fiscal year.

The regular course is for hearings to be held before the proper subcommittee of the Appropriations Committee where those interested in additional REA appropriations always come, and, with facts and figures, justify their request for appropriations. The gentleman from Wisconsin, Congressman KEEFE, when the amendment was suggested, told the Members of the House that hearings would be held, and that a bill would be brought to the floor in regular order about the middle of March, which will carry the request for appropriations for the REA for the coming year.

The gentleman from Wisconsin, Congressman KEEFE, further stated that there was $73,000,000 in cash, now allocated, to run REA up to June 30, 1948. Also, the gentleman from New York, Congressman TABER, read into the RECORD that REA now has on hand to its credit $451,000,000 in cash. Congressman CASE inserted in the RECORD a letter from Mr. Wickard stating that they had on hand, from February 13 to June 30, 1948, $73,017,126.

Mr. Speaker, Administrator Wickard, in the same letter, said that the appropriations for the coming fiscal year, beginning June 30, 1948, which will be requested for the REA loan fund for 1949, will be $300,000,000. It should be quite clear to anyone that the $300,000,000 which was voted down on the amendment should not have been offered, but that it should come before the Congress after it has been considered by the regular Appropriations Committee. That is the reason why a majority of the House voted against the motion to recommit.

Mr. Speaker, could it be that many Members supporting the amendment out of its place, and without consideration, were influenced by political expediency, rather than greater and quicker extension of power lines to the people?

Mr. Speaker, one of the reasons people throughout the Nation have not been able to secure extension of light and power as rapidly as they desire is not for lack of funds appropriated by the Congress, but is due to lack of material brought about largely because of the war. I want to point out now that many of those who attempted by their vote to indicate their great interest in extending light and power to the people of America by supporting the motion to recommit, will doubtless within a few weeks' time vote to continue this shortage of materials. They will vote for the Marshall plan, which is voting to give away materials we need for the extension of light and power to European nations, and many of our American people who want light and power will still be waiting, because many who supported the amendment will have supported the Marshall plan. That will be the best test of how much they are interested in getting light and power to the farmers.

Mr. Speaker, I have voted to continue the backlog of millions of dollars for the rapid extension of REA, and will vote for ample funds in addition for REA when the regular appropriation bill comes to this House within a few weeks. I will vote to reduce to a minimum the sending of supplies to Europe under the Marshall plan so that we may use those supplies here in the future for the extension of REA, and for the building of homes for our people, for more farm machinery which is badly needed, and to keep the oil in this country necessary to run the trucks, automobiles, and tractors of the farmers.

United States Citizenship for Aliens Who Served in the Armed Forces

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1948

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Resolution memorializing Congress in favor of conferring United States citizenship upon aliens who served in the armed forces of the United States during the world wars and were honorably discharged from such service

Whereas there are approximately 250,000 alien World War veterans who took the oath of allegiance to our country and served in our armed forces during the world wars and were honorably discharged from such service who believe themselves by reason of such service to have become citizens of the United States automatically; and

Whereas there are hundreds of these aliens who died on the fields of France for the preservation and perpetuation of our institutions; hundreds came back mentally and physically wrecked; and hundreds of these men, in caskets draped with the American Flag, were lowered to their last resting place as aliens by reason of the technical interpretation of the law; and

Whereas to consider these men as aliens is contrary to our conception of American justice as handed down by the forefathers of this glorious country of ours; therefore, be it

Resolved, That the general court of Massachusetts hereby respectfully petitions the Congress and the president of the United States to declare these alien World War veterans who honorably served in our armed forces citizens of the United States; and be it further

Resolved, That copies of this resolution be sent forthwith by the secretary of the Commonwealth to the President of the United States, to the presiding officer of each branch of Congress and to the members thereof from this Commonwealth.

In House of Representatives, adopted February 5, 1948.

LAWRENCE R. GROVE, *Clerk*.

In Senate, adopted, in concurrence, February 16, 1948.

IRVING N. HAYDEN, *Clerk*.

A true copy. Attest:

F. W. COOK,
Secretary of the Commonwealth.

Increase of Pay for Postal Employees

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1948

Mr. PASSMAN. Mr. Speaker, the esteemed Committee on Post Office and Civil Service is now considering proposals to provide higher compensation for post-office employees. By this means I express my wholehearted endorsement of a substantial salary increase for this worthy group of civil servants.

The pay raise granted to post-office employees in 1946 was adequate at the time; however, prices have continued to rise and now an additional pay increase seems to be fully justified. Many newer postal employees, no doubt, are leaving the service to accept employment with private industry where wages provide a better standard of living. Wages of many groups have kept in balance with the inflationary spiral and those wages have far outstripped the salaries of postal employees who in 1947 tried to hold the line against salary increases. This action on their part deserves much credit. The postal employees, as a group, have been faithful in maintaining the high standards of the postal service and the quality of their work has remained consistently high.

It is my earnest hope that a bill will be reported out without delay which will adjust postal salary rates to a degree commensurate with increased costs of living.

The Poll Tax

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 23, 1948

Mr. BENDER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me as author of the bill to abolish the poll tax in Federal elections at a dinner in my honor sponsored by the National Committee To Abolish the Poll Tax, Statler Hotel, February 24, 1948:

Madam Chairman, distinguished guests, ladies and gentlemen, we are nearing the end of a long fight to abolish the poll tax.

I cannot begin to tell you how deeply I appreciate the honor of this dinner tonight. I am proud to be here. I am proud that it was the Bender bill to abolish the poll tax in Federal elections which was passed by the House of Representatives with an overwhelming majority in this session of Congress. I am proud that it will be the Bender bill which will shortly be enacted by the Senate and which will finally put an end to the poll tax.

But this is really a dinner in honor of many people, a few of them who are well known and hundreds of others who are not, who have labored over the years to restore the right to vote to 10,000,000 disfranchised American citizens.

The one man to whom, more than any other, I should like to pay tribute tonight, is the late Congressman Lee E. Geyer, of California. I wish that he might have lived to see the fight to abolish the poll tax on the threshold of victory, as it is tonight, and to see the poll tax finally abolished, as it will be in this session of Congress.

Congressman Geyer and I served together as freshman Members of Congress nearly a decade ago. It was Congressman Geyer who, in the Seventy-sixth Congress, on August 5, 1939, introduced the first bill to abolish the poll tax. Hearings were held on the bill but the hearings were never published and the bill was never reported from committee.

That was the beginning of the fight.

I do not need to recount here the long history of the struggle to abolish the poll tax. For most of you it is a familiar story. You know how a second bill was introduced in the Seventy-seventh Congress in 1941. You know how after more than a year and half, it was forced out of committee by a discharge petition signed by a majority of the Members of the House, how it was passed by the House and killed for the Seventy-seventh Congress by a filibuster in the Senate.

Many of you saw much the same pattern repeated in the Seventy-eighth, and in the Seventy-ninth Congresses. But each time, support for Federal action to abolish the poll tax grew. The people of the whole country became aware of the poll tax and how it works and what it means in the denial of basic political rights. They learned that it is not a matter which affects the poll-tax States alone but that it is a national issue.

When the third anti-poll-tax bill was introduced in the House of Representatives in January 1943 by Congressman MARCANTONIO—a courageous fighter who is here tonight—it had the active support of a nonpartisan group of Republican and Democratic Members. The signatures of the necessary majority of the House for a discharge petition were secured in a record 32 legislative days.

In the present Eightieth Congress it was no longer necesasry to employ a discharge petition to force the bill out of committee. And in the Eightieth Congress a filibuster will not be permitted to kill the bill in the Senate.

With Congressman Geyer there is another man to whom I should like to pay tribute this evening. And I wish that he too could be present to see the final enactment of the anti-poll-tax bill. That man is the late George W. Norris of Nebraska.

In 1942 Senator Norris, one of the truly distinguished men in the history of Congress, then in his thirty-ninth consecutive year of congressional service, wrote the masterful report of the Senate Judiciary Committee which favorably reported the anti-poll-tax bill to the Senate. That report remains one of the great statements on poll-tax restrictions on the franchise.

Senator Norris was an independent Republican. Lee Geyer was a Democrat. Congressman MARCANTONIO is the leader of the American Labor Party. We who have worked for the removal of the poll-tax restriction from the ballot know that all virtue is not confined to any one political party. We know that a deep belief in fundamental American rights is not the property of any one party. Mr. Walter Lippmann in his commentary yesterday on a recent political speech—a speech which advanced a parcel theory of American political history—pointed out some of the difficulties of so simple a theory. Mr. Lippmann wrote:

"The fitting of American history into these two parcels will keep any man busy who tries it. But he will not succeed. For in making up the Republican parcel under the Truman doctrine of our party history it would be quite puzzling to know what to do with Washington, with Lincoln, with Theodore Roosevelt, or with Norris, Pinchot, Borah, La Follette. * * * In making up the Democratic parcel it would not be clear just what to do with Franklin Pierce and James Buchanan or with Flynn, Hague, Pendergast, and Pauley in more recent times."

No, it is too simple a theory, as Mr. Lippmann has suggested—even for an election year—that all the virtue is in one parcel.

But the important thing is for the people to have an opportunity to make a choice.

It is the denial of that opportunity which makes the poll tax a device which is detested by all men who believe in the American tradition of democracy—whether they look to Jefferson and Jackson or to Lincoln and Theodore Roosevelt for their inspiration.

There has been a good deal of talk during the past week or two by some Representatives and Senators—yes, and by some Governors—about outside interference in the affairs of the South.

I need not remind this audience, which includes so many distinguished Southerners who have worked long and courageously for the abolition of the poll tax, that the charge of "outside interference" is hollow.

That charge comes from those who have been at great pains to prevent any inside interference with their rule in the poll tax States.

I know that the majority of the people of the South, just like the majority of the people everywhere in America, are in favor of civil rights and of fair play and majority rule. I look forward to the day—which is now not far distant—when the majority of the people in the South, not just 2 or 3 or 4 percent of the people, will have the opportunity to express themselves on these issues—to express themselves where it is felt, through the ballot box.

The people of the South have the right to look to their Federal Congress for the guaranty of a free ballot in Federal elections. They have the right—for they are citizens of the United States as well as citizens of the individual States. And many of you who have been in the thick of the fight, in the several States where the poll tax still exists, know even better than I that the people of the South must have the help of the Federal Government to abolish the poll tax in Federal elections.

In every State where the people of the South could abolish the poll tax by a simple majority vote, the poll tax has been abolished. In the remaining States the poll tax is so embedded in the State constitutions that the disfranchised are powerless to enfranchise themselves. The men who imposed the poll tax around the turn of the present century went to great lengths to see that their work could not easily be undone. The people of the poll-tax States have the right to look to their Federal Congress for help.

As you who are here tonight know, the majority of the people of the South are deeply concerned with the problems of civil liberties and democratic rights. I think one of the most eloquent statements about the poll tax which I have heard was made by a southerner testifying in favor of the bill before a committee of Congress. It was made by Mr. Herbert Agar, who was then editor of a great southern newspaper, the Louisville Courier Journal. He said: "The result of the poll tax is to keep the poor from voting, or to keep the Negroes from voting, or both. If you keep the poor from voting, you make a joke of Jefferson. If you keep the Negroes from voting, you make a joke of Lincoln. If you do both these things at the same time, you make a joke of the American idea."

As you who are here tonight know, this is no matter of States rights or outside interference—however, much the few men who benefit by the restrictions on the suffrage try

to confuse the issue. The rights of States are important rights, and I know of no disposition to interfere with any of the legitimate rights of the States. But I say that no State has the right to deny any American citizen of the equal protection of the law. No State has the right to deny any American citizen of the right to vote because of his race or because he is poor. There are States rights, yes, but there are rights of individuals, too. There are rights of individuals which, under our American democracy, the Federal Government has the authority and the duty to protect even against Mississippi or Ohio. The right to vote in Federal elections is such a right.

We trust that our friends from the Senate, who have honored this dinner by their appearance here tonight, will give a tremendous heave together, in a genuine nonpartisan way, to remove this restriction on the basic right of American citizens to vote.

They will need the help of everyone of us. And under the leadership of that courageous and hard-working organization, the National Committee to Abolish the Poll Tax, I know that they will get, throughout the whole country, the kind of support they need.

Address of Gov. James H. Duff, of Pennsylvania

EXTENSION OF REMARKS
OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1948

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. James H. Duff, Governor of Pennsylvania, at the Pennsylvania Manufacturers' Association dinner, Philadelphia, Tuesday, February 24, 1948:

In the profoundly disturbed and chaotic world of today the leadership and influence of America are needed as never before. For upon us rests the last hope of restoring stability and equilibrium in the world.

But it is clear that our ability to exert that leadership and influence depends in the final analysis upon the continued stability and integrity of our own financial and economic structure.

It would be unrealistic to assume that if an acutely disturbed economic situation reoccurred here that either our leadership or our aid would be of the same character and quality as they would if we remained sound and prosperous.

Superficially the Nation seems to be in a state of unexampled prosperity. Sixty million of our people are gainfully employed, a figure considered fantastic even as late as the end of the war. The take-home pay is at a peak for times of peace. Corporate profits are greater than they have ever been. The national income is at the annual rate of $200,000,000,000, as compared to a previous peacetime peak of only ninety billions in 1929.

The sum of these situations would ordinarily warrant an appraisal of unprecedented prosperity. Yet it becomes increasingly evident that there is a widespread and growing feeling of uneasiness and uncertainty throughout the Nation.

This striking contrast between what we seem to have and how we feel about what we seem to have should make even the most optimistic of us begin to stop, look, and listen. For the fact is that inflation has been sweeping the country at express-train speed and no effective effort has been made to deal with it.

The recent decline in commodity prices resulting in a slight decrease in living costs offered momentary hope that prices had reached the peak. But last week the Nation was surprised and shocked by an announced increase in the price of steel. This new increase, coming at the very time when the steel workers' union is demanding another round of wage increases, demonstrated that the upward spiral of inflation was still accelerating.

The situation developing as a result of this unexpected increase in the price of steel is alarming because it is a duplication of the situation which gave the first great impetus to the current inflation in its primary phases. If past experience is an index for the future we may predict with assurance that this new increase in the price of steel will have the same general inflationary effect that it had before in the steel and wage price increases of 1946.

For one of our greatest corporations and one of our most powerful labor unions to take action, however separate, which has the effect of acting in concert to further raise prices, shows a shocking disregard for public opinion and the national welfare.

At such a tremendously critical time as the present it would seem that some of our industrial and labor leaders are either unaware of, or refuse to accept the challenge of events. One of those challenges undoubtedly is the necessity of achieving a discipline of moderation when the welfare both of the Nation and the world is in the balance.

Great as the necessity is, the fact is that inflation is not being curbed. If another round of price and wage increases is permitted to develop, we may reach the point where there will be no turning back.

Then what? At a time certainly not too remote, and possibly unbelievably near, a deflationary "bust" could be predicted with certainty. We dare not undertake that risk.

Of all the great nations of the world we are now alone in believing in the free-enterprise system as we are accustomed to define it. Under that system the United States has developed the most unparalleled capacity for production of any nation in history. Also, as a result of that production, the average American enjoys a greater condition of well-being than ever before enjoyed by the average man anywhere in the whole course of civilization. And, together with this unprecedented material well-being, he also enjoys in America complete civil and religious liberty.

Is it our purpose to risk and hazard all these blessings because we are unwilling to undertake the imperatively necessary, although decidedly unpleasant job of halting inflation? If we allow inflation to grow until we have a bust, resulting in financial collapse comparable to the 1930's, there is every reason to believe, in the light of what has happened elsewhere to the great nations of the world, that we will end up as they did, with some form of collectivism. Nor can any informed person be unaware that communism patiently awaits a major depression in America to pursue uninterruptedly its march around the world.

To be sure we have had efforts to head off inflation. But those efforts have not been determined, or aggressive, or effective.

As Americans, we resent Government controls, not only because they are offensive to us by reason of our untrammeled life as a people, but also because we rightfully fear that they will endanger our system of enterprise under which we have come to lead the world.

Therefore let us realize that if we do not desire to be driven to Government controls we must be strong and determined enough to do what we know in our hearts we must do if we are to avoid them.

Unfortunately there is no magic cure for inflation. But it can be cured by voluntary action even at this late date. The cure will call for unpleasant medicine, and industry ought to set the example by talking the first dose. Unpleasant though it may be, it will still be much easier to take than return to controls or to the havoc of a deflationary bust.

If as a Nation we intend by voluntary action to pull ourselves out of this inflationary spiral, the primary essential is that we must be willing to put the public welfare ahead of our self-interest until we have worked out of this crisis. For unless we stop inflation it will stop us. We will be ruined by inflation if it is not controlled.

The national administration at Washington has thus far failed to provide the direction for the absolutely essential action if we are to avoid falling into controls. On the contrary, it has gambled with our future by perpetuation of policies and practices which gave inflation a running start, and also by failure to understand or to label the spiral for what it is—our gravest national emergency.

Federal Government policies have encouraged us to become a Nation divided, a Nation of classes, a Nation of businessmen and industrialists, a Nation of farmers, a Nation of laborers, a Nation of privileged and underprivileged, and, strangely somehow, for it draws its membership from all the others, a Nation of consumers.

This playing of one group against another must cease. Labor, industry, and agriculture must be made to see that if they don't work together they will soon be engulfed together. Now is the time to summon representatives of labor, industry, and agriculture to a fateful conference on inflation, and to demand that they agree simultaneously to adopt a program to combat it.

Business must be told: "Our first need is a price roll-back. Everyone is going to have to sacrifice. But the initiative must be taken by the group in the best position to afford the risk involved. That group is business."

Business can well afford to take the lead. Its earnings are at the highest level ever recorded. According to Federal Reserve data, profits after taxes are more than double any prewar year and almost double any war year. This roll-back must spread throughout the entire business structure.

Some manufacturing companies have already taken a step in this direction, but the movement has not been general enough to become effective.

Let business meet this crisis by showing the Nation the same concerted action it did in prying off the price-control lid. There was no question about unanimity then. There should be none now, because the crisis today is infinitely greater than it was then.

Agriculture, too, must act for the common good. Farmers must be told: "Inflation has been particularly acute in the prices of farm products hitting at the great mass of consumers. Your profits have been enormous. You can't shrug this off as merely supply and demand. Government price-pegging policies permit prices to move upward but discourage downward swings of the commodity markets. You must agree to accept modification of Government price policies that will permit farm prices more nearly at the parity level."

What farmers want and should have is a steady demand for their produce at prices which yield a fair return rather than a boom or bust, in which they may lose everything. They should remember that, added to our domestic needs, the European relief program assures them of a reasonable demand for

years to come, and that as business rolls back its prices, implements, fertilizers, clothing, and other necessities will cost them less. Certainly agriculture as a whole is sufficiently concerned with the country's welfare to accept Government price-support policies which will make it possible to establish a freer market in farm products.

Equally important, if our economic salvation is to be achieved by voluntary means, is labor's contribution. Working men and women must be told: "Your wages are higher now than ever before, but have you really gained from higher wages when you pay higher and higher prices for everything you buy? New demands by you at this time may well build up inflationary pressures to the bursting point. You must hold the wage line."

If business rolls back prices and farmers take a lower price on their products, labor will be better off than if it fights for and wins another increase that accelerates the price spiral. Labor cannot afford not to go along. But also it has another obligation, and that is to produce as never before. For greater productivity is vital to the solution of our problem.

However, in foregoing wage demands at this time, labor must have the assurance that when balance has again been achieved in our economy, it will again be given the green light to seek a share of increased productivity.

We all have enough faith in the patriotism and wisdom of each of these groups to believe that they can and will develop a workable solution on this basis if they are given to understand in unmistakable terms that the future of our country is in their hands. Knowing the consequences of their actions, none of them would want to, and none of them would dare, to see that conference fail.

While this is going on, the Government must put its own house in order. Government expenditures—Federal, State and local—must be cut to essentials until the crisis is past. In much of their spending our governments are competing directly with their own citizens, bidding against them in the market for labor, for scarce building materials, for automotive equipment and for various other necessities. Let Government make these contributions:

1. Substantial reduction of the Federal Budget as submitted to the Congress by the President;

2. Examination of State and local government postwar building and service programs with a view to reduction to genuine necessity;

3. Retirement of the Federal debt as rapidly as possible, particularly the large bank-held portion to help contract the monetary base and relieve inflationary pressure;

4. Stronger encouragement of individual savings. Some form of income tax credit should be considered to provide an added incentive to save.

5. Adoption of more restrictive Government credit policies, including restoration of restrictions in installment buying and other consumer credits. Since a plentiful supply of money is one of the basic causes of our high prices, is it not foolhardy to spread that money still further and force prices still higher through abuse of credit?

6. Action to eliminate restrictive business and labor practices which hamper free competition require unnecessary work and result in needlessly higher costs. If industry and agriculture and labor could work together in an unprecedented display of mass strength to win the war, they surely can with proper leadership repeat the effort and win the equally vital battle against inflation and the world chaos that will accompany it.

The only alternatives to an immediate voluntary get-together by industry, labor, and agriculture are controls by government or inflation unlimited until the bubble bursts.

Government will never save our free economic system although it may easily ruin it by unwise and restrictive interference and controls.

The salvation of our free enterprise depends upon the men and women, both in management and labor, who run the system. It depends upon how fully and comprehensively they appreciate and understand its responsibilities as well as its benefits and privileges. That salvation depends also upon their clear and distinct realization that there are times when their moral and patriotic obligations rise far superior to their duties to their stockholders or to the members of their labor unions. Now, when institutions and governments everywhere are being shaken to the very base of their foundations, is surely one of those times.

We can either continue on our separate selfish pathways to destruction or we can walk and work together toward lasting stability and prosperity, not only for our own country, but also ultimately for the whole world.

Rural Electrification

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 24, 1948

Mr. JOHNSON of Texas. Mr. Speaker, I regret that the House did not see fit to recommit the deficiency appropriation bill and include $300,000,000 for rural electrification. There are thousands of rural homes that are burning coal-oil lamps tonight whose owners have been signed up for rural electrification for years.

We have been fortunate in my district to extend rural electrification as much as we have. However, there are thousands who have filed their applications with the co-ops but cannot be served because of lack of funds. We could not have avoided the delays occasioned by the war, but we certainly can and should avoid continuing these delays during the years of peace.

Recently I asked the manager of one of the co-ops in my district to let me have a list of those persons who had applied for service and paid their membership fee but whose homes had not yet been electrified. I was amazed when that list came to find that it contained nearly as many names as did the list of those who have been extended service since 1937. A large percentage of these people paid their REA membership fees in 1939, 1940, and 1941. They waited with patience until after VJ-day. Now they realize that wire, poles, transformers and other materials are fast becoming available and they do not understand why they can not have electricity.

While it is too late to do any good so far as this deficiency appropriation bill is concerned, I understand that the Appropriation Committee plans to report another one soon, and I sincerely hope that the committee will be able to include a substantial fund for rural electrification when that bill comes up next month.

On the Rocks

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1948

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Economist of London, reprinted in the United States News of February 27, 1948:

[From the United States News of February 27, 1948]

"ON THE ROCKS"

(British periodical outlines grim realities of Britain's economic plight—Decries improvident spending and dependence on loans in face of bankruptcy—Calls for national policy of hard work, hard living, and more production.)

(From the Economist, London, February 14, 1948)

Britain faces bankruptcy. That is the real significance of the Government's latest white paper. At last, the British people now know where they stand. In the past 2 years, they have as a community overspent their income to the extent of $4,000,000[1] and the rate of overspending was almost twice as large in 1947 as in the preceding year. At the present rate of expenditure (which has fallen since its peak last August but now shows signs of settling down at a monthly figure of some $160,000,000), the remaining reserves of about $2,400,000,000 in gold, dollars, and unexhausted credits may last Britain and the sterling area until midsummer. After that, it will just be impossible to buy either the food or the raw materials which are necessary for Britain to eat and work. The specter of starvation and mass unemployment is now alarmingly close.

To translate the tables and figures of the white paper into more homely terms, Britain has been living like an improvident family which, failing to make both ends meet, first spends the accumulated capital of the past, then borrows from friends—from American friends, from Canadian friends, from South African friends—and when their loans are exhausted, begins to pawn the furniture. How else can one describe the latest deal with Argentina in which the whole capital asset represented by the British-owned railways is bartered away for 18 months' supply of meat? It is, of course, true that there is nothing discreditable in the events which led the British community to this desperate plight. Alone of the belligerents (except the German aggressors) Britain fought in two world wars from the first day to the last. The income from overseas' investments which nearly bridged the gap between imports and exports in 1938 disappeared in the struggle. Exceptional conditions of world demand created by war devastation added $1,200,000,000 to the cost of British imports in 1947. But, in fact, the reasons which have brought the British to beggary are less likely to be remembered than the fact that they are beggars. The old soldier showing his campaign medals at the street corners is an object of pity, not of respect.

When a family faces bankruptcy, either it goes under to a life of perpetual makeshift and pauperism, or it restores its solvency by vigorous action—by buying less, by cutting down every kind of expense and by straining every nerve to sell more of its goods and services. A nation is in no different case and the

[1] All figures converted from pounds sterling to dollars at rate of $4 to the pound.

choice open to the British people is in reality prescisely the same difficult choice between pauperism and gruelling recovery. The only question worth asking today—when the crisis is, in Sir Stafford Cripps' words, not a matter of years, but of months and weeks—is what further steps the British people can take to consume less and produce more, to reduce their standard of living and at the same time do harder work. The subject is being debated in the Commons as the Economist goes to press, but clearly the Government's plea—it is not much more—that neither wages nor profits shall rise at this juncture is one small part of the much bigger effort that is needed to restore solvency to the British people.

Both wages and profits have to contribute their share. Bankruptcy is a family responsibility and no section of the community can avoid its hardships. The real need for workers and managers alike is longer hours and more output for the same income. In this way, more goods could be produced for export without new financial pressure being created to divert those goods to consumption at home. So drastic a departure from current industrial practice is too much to hope for, but at least the principle of no further wage increases save for cases where workers are genuinely below an adequate level of subsistence must be endorsed. Further, there is certainly a case for increasing the contribution to national solvency by those who, despite their reduced standards, can still afford it best. Heavier taxation or limitation of dividends and the control of expense accounts (upon which so much of the "conspicuous waste" in the big cities is based) will help politically, and to some extent economically. Even if such steps must wait upon the budget, their announcement would go far to relate the question of wages to the wider action needed to counter bankruptcy abroad and inflation at home.

But, although it will be necessary to temper the cuts by considerations of social justice, the brute fact remains that standards of consumption in Britain do not reflect the insolvency which may lie only a few months ahead. Can it be said that the rationing of domestic fuel has been drastic enough in view of the vital importance of coal as an export? Can Britain afford $800,000,000 for government expenditure overseas, or to feed 1,000,000 mouths in the forces in return for no productive work? It is easy to make a case for keeping 2,000,000 government servants, but if 500,000 were returned to industry, would the gain in output not ease the burden of the controls? By what yardstick can the overseas expenditure of $200,000,000 on tourism in 1947 be justified?

It is no longer a question of choosing whether or not to maintain certain amenities. The stark fact is that the means to provide them no longer exist.

In spite of the recent cuts in capital expenditure, it is clear that more has to be done. No one will criticize the government for wishing to build better schools, new hospitals, and more and better-equipped houses. But this program has added to Britain's insolvency by diverting materials and manpower from the export industries; in that sense it is Americans, Canadians, and South Africans who have been paying for part of the British program of development at home. No one denies the desirability of these things, but it is not usual to add a bathroom to the house just as the receivers walk in.

The last items to be cut back should obviously be productive assets, the renewal and modernization of plant. The reductions already announced in these items are severe—probably too severe—but in another field the figures suggest that outlay has been too heavy. The sum of $720,000,000 for new assets overseas, a large part of which must be represented by various schemes of colonial development, seems unduly high in relation to the time which must elapse before they begin to yield their fruits.

These are a few instances picked from a possible list of further cuts and reductions, but simply to set them down shows how painful their execution would be and what appalling stresses it would introduce into the national life. But bankruptcy is necessarily an ugly, painful, and distressing business. It tests the temper of the most united family. It requires not only fortitude and patience but considerable humility to weather it with dignity and success. Yet bankruptcy is nevertheless the crisis through which this Nation may be about to pass. What are its chances of surviving this latest test—a test with none of the glory and solidarity of a Nation at war but perhaps more grueling as a result?

It cannot be said that the outlook is encouraging. In the first place, the country so far has remained in ignorance of the facts. The Government's powers of explanation have never been high, but its inability to convey to the public the significance of the gathering economic crisis is beyond all previous failures. And this is not simply a question of poor public relations. The failure goes deeper. It is not only that the Government has not talked as though the crisis was serious; until quite recently, it has not behaved as though it were. In 1946, before the catastrophic rise in American prices and the fierce winter, there was some excuse for believing that Britain could recapture its export trade, police Europe, rebuild its industries, create new social services, rehouse the people, and provide cheap food all at the same time. But the writing on the wall was there for all to see after January or February 1947. The fatal flux of gold and dollars had begun. The gap between imports and exports was growing. Home production continued to lag, but the Government went on its Micawberish way, waiting for something to turn up. Mr. Dalton was happy with his balanced budget, Mr. Morrison declared that no further sacrifices could be demanded of the people. Today, with the gap wide open and no prospect for filing it from British resources, even Sir Stafford Cripps' realism may be too late.

If the British had been made to realize in 1945 that in many ways the problems of reconstruction facing them were no less urgent than that which faced, say, Poland, they might have set to and worked as the Poles have done; but cradled in illusions, they have advanced in their crisis like somnambulists. It is the illusion either of infinite prosperity or of infinitely squeezeable profits that makes it still possible for the trade-unions to press for more wages for fewer hours. It is the illusion of wealth withheld by a spiteful government that has turned large sections of the more well-to-do against the controls and restrictions which they recognized as necessary during the war. Yet the reality is of a nation in greater economic straits than at any time since the Napoleonic wars. If the present attitude of the different classes in society cannot be mobilized into something more than the collective and disgruntled selfishness they show today, then the British will be obliged to face their supreme economic crisis without the only assets upon which they could still draw—their political balance, their deep natural unity, their phenomenal staying power.

This statement will no doubt be contested. Why speak of "Britain's only assets" when there is every chance that by midsummer the Marshall plan will have been passed by Congress and assistance will be assured for the next 18 months at least? Even Sir Stafford Cripps has said that the only hope lies in American assistance, to give Britain the necessary time to bring about the restoration of normal conditions. But herein lies precisely the danger. Continual borrowing can have the same effect as continual drinking. The borrower's, like the drunkard's, sense of reality tends to fade. Britain has already had the American loan and the Canadian loan and will get the South African loan. All have been necessary but all have helped to mask from Government and people alike the country's true economic straits. A standard of living has been maintained, reserves have been eaten up, expenditures undertaken on a scale which is quite out of accord with Britain's real economic position. And what guaranty is there that the Marshall plan may not be used in the same way? The only proper, the only long-sighted, the only courageous course would be for Britain to pursue now the policy it would pursue if the Marshall plan were reduced to a half or a third, and to use the surplus thus created to build up reserves, modernize industry, develop economic integration in western Europe and undertake now the program of hard living and hard working in which in the long run salvation alone will lie.

Stop Spending

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1948

Mr. HAND. Mr. Speaker, with reference to the President's proposal to greatly increase taxes on corporations, it has been often pointed out that it would increase rather than help inflation, and an excellent statement on the subject has been made in the recent editorial appearing in the Bridgeton Evening News, which I herewith include:

PHONY RELIEF

A communication in last Saturday's issue of the News, the writer of which we presume from the trend of his article is a supporter of the President's policies, accuses us of bearing false witness against Mr. Truman in our editorial, drawing a tax analogy between the President and King Rehoboam of the Hebrew nation, in that we didn't give the President credit for proposing to give taxpayers with an income under $5,000 a rebate of $40 for himself and each dependent on his income tax.

Well, we were discussing the burden of taxation in that article. Did this proposal of Mr. Truman do anything to lessen the burden of taxation? Not on your life, not one dollar. What it did was simply to lessen the taxes on one class of individuals and impose the same burden on the big corporations, for the President had bluntly said the receipts of the Government must not be reduced one dollar.

But would the big corporations pay these increased taxes?

Not on your life. What they would have done would have been to add these increased taxes to the price of their products and services, whatever they might be, and pass them on to the consumer. Even the people who received the rebate on their income taxes would have had to use some of their savings to pay some of the taxes of these big corporations to meet the increased price on the products they purchased, while thousands who pay no income taxes would be saddled with that additional cost of living. Thus another rise would have been made to the high cost of living and the spiral of inflation sent reeling upward.

The whole proposal was phony, put out to catch votes in this Presidential year, so phony, in fact, that it has been laughed out of the tax picture by all responsible lawmakers in Washington and cast into the ash can.

To have given Mr. Truman credit for this phony proposal would have been to abet him in perpetrating a fraud on the American taxpayer.

The only way to reduce the burden of taxes is to reduce spending, and Mr. Truman has refused to do this, because he has presented to the Congress the largest budget in the history of the Nation and demands its adoption.

Much of Mr. Truman's spending in the past and that planned for the future, is as wasteful and useless as that of the Hebrew King cited, even if not as vicious.

There is only one way to reduce the tax burden—stop spending. Subterfuge will not do the trick and is entitled to no credit.

W. E. M.

International Bankers Back Marshall Plan

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1948

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I am including in the RECORD one of a series of news articles clipped from the Chicago Tribune of February 25, which is further proof that the Truman New Deal is now completely in the control of the international bankers, exporters, and Wall Street.

This article names only a few of the hundreds of them who have organized to put over the Marshall plan for the benefit of the international bankers and exporters at the cost of continuing the high cost of living to the American people, and, doubtless, the reimposing of Federal controls over the entire economy of the Nation.

Never before has any administration gathered together so many multimillionaires in an attempt to further its, and their own interest at the expense of John Q. Public, the ordinary American taxpayer who cannot organize in opposition to this insidious lobby, and whose only protection are the Members of this Congress.

MARSHALL PLAN GROUP INCLUDES MANY BANKERS

(By William Clark)

(This is the third of four articles describing the interests behind the Marshall plan.)

The committee for the Marshall plan, headed by Henry L. Stimson and Robert P. Patterson, is stoutly bulwarked by members of the eastern banking fraternity, an analysis of records of the gift-aid boosters organization showed yesterday. The group also is liberally sprinkled with insurance company executives.

Banks in New York City alone contributed 22 officers and directors to the Stimson troupe. Of the committee's 294 members, at least 89 hold positions with commercial banks, investment banking houses, or finance companies—by far the largest representation from anyone line of business. A majority of these banking connections are with eastern institutions.

ALDRICH HEADS LIST

The list of bankers is headed by Winthrop W. Aldrich, a member of the Marshall plan committee's 20-man executive group. Aldrich is chairman of The Chase National Bank of New York. He also is a director of American Telephone & Telegraph Co., Metropolitan Life Insurance Co., the Federal Reserve Bank of New York, International Paper Co., and Westinghouse Electric & Manufacturing Co.

Arthur W. Page also is a member of the committee's executive council and a director of Chase National Bank, American Telephone & Telegraph Co., and Westinghouse Electric & Manufacturing Co. His other company affiliations include membership on the boards of directors of Prudential Insurance Co. of America, Continental Oil Co., and Kennecott Copper Corp.

ALTSCHUL HAS PLACE

Frank Altschul, another member of the executive platoon, is president and director of General American Investors Co., a general management trust sponsored by Lazard Freres & Co. and Lehman Bros. Philip D. Reed, chairman of the board of General Electric Co. and a fourth member of the committee's executive contingent, is a director of Bankers Trust Co. and Metropolitan Life Insurance Co.

The balance of the Marshall plan committee, the 274-man national council, includes the 28 persons listed in the committee's releases as bankers, plus some 50 others listed as manufacturers, lawyers, or educators who also have strong banking affiliations.

Thomas J. Watson, president of International Business Machines Corp., and Charles E. Dunlap, president of Berwind-White Coal Mining Co., are both directors of Guaranty Trust Co., New York City. Dunlap also is a director of International Telephone & Telegraph Co., whose chairman, Sosthenes Behn, is a committee member.

DIRECTORS ALL INCLUDED

National City Bank of New York has two of its directors on the committee, Behn and Gerard Swope, honorary chairman of International General Electric Co. New York Trust Co. is represented by a trustee, B. B. Jennings, president of Socony-Vacuum Oil Co. Bankers Trust Co. is another with two of its directors on the committee, Reed and Ward Melville, president of Melville Shoe Corp.

John M. Franklin, president of United States Lines, is a member of the board of Manufacturers Trust Co. Irving Trust Co. contributed two members of its board to the Stimson organization. Henry P. Bristol, president of Bristol-Myers Co., and David L. Luke, Jr., president of West Virginia Pulp & Paper Co.

TWO FROM HANOVER BANK

Stimson also enlisted a duo of Central Hanover Bank & Trust Co. directors. C. M. Chester, honorary chairman of General Foods Corp., and Gwilym A. Price, president of Westinghouse Electric Corp. The First National Bank of the City of New York gave of its directors George L. Harrison, also president of New York Life Insurance Co.

The Federal Reserve System has a strong representation on the Marshall plan committee, headed by Thomas B. McCabe, president of Scott Paper Co. and newly appointed chairman of the reserve system's board of governors.

FEDERAL RESERVE AIDS

Committee members who are officers or directors of Federal Reserve banks in addition to McCabe and Aldrich include Allan Forbes, president of the State Street Trust Co., Boston; Charles E. Adams, chairman of Air Reduction Sales Co.; Chester C. Davis, president of the Federal Reserve Bank of St. Louis; Tom K. Smith, president of Boatmen's National Bank of St. Louis, and William W. Crocker, president of Crocker First National Bank, San Francisco.

Address of Hon. Edward Martin, of Pennsylvania

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1948

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of United States Senator EDWARD MARTIN, of Pennsylvania, before the annual meeting of the Pennsylvania Manufacturers' Association, in the Bellevue-Stratford Hotel, Philadelphia, Pa., Tuesday evening, February 24, 1948:

This is a magnificent meeting. We need more meetings such as this in every city, town, and village.

It is good for America to have men and women interested in government, business, labor, agriculture, and the professions assemble at frequent intervals to discuss the general welfare of our country.

Such meetings are in accordance with our duty as citizens. They stimulate more widespread interest in government and politics. People should be proud to take part in politics because good government can be achieved only through honest politics.

In a free country—where the people rule—politics is a serious business and a great responsibility. It calls for hard work, intelligence, courage, and the will to sacrifice in the interest of all the people.

Politics is not only the science of government—it is really the American Government in action. If every voter would take a real part in politics, it would mean good, sound, economical government based on the best traditions of the United States.

It is a tragic loss to America that so many business and professional men, educators, and even men of the church, feel that participation in politics is something to be avoided.

General Eisenhower, one of the world's great military leaders, in his statement a few weeks ago, paid a fine tribute to politics.

"Politics is a profession," General Eisenhower said, "a serious complicated, and, in its true sense, a noble one."

That should satisfy anyone who believes political activity is degrading.

The Republican Party stands today on the threshold of victory. If we all do our part in politics, it will be an overwhelming victory.

In the next few months there will be nothing more important to the future of our country than a great Republican crusade to rescue our Government from the free-spending bureaucrats who will bankrupt America unless their wasteful course is checked.

We are honored tonight by the presence of Senator BROOKS, one of the most outstanding and courageous men in the United States Senate. Illinois has every right to be proud of him, not only as a great statesman but as a soldier with an exceptional record.

Senator BROOKS, I want you to know that in this audience are members of Pennsylvania's Republican delegation in the House

of Representatives. With you, Senator, they represent the Federal level of government.

This delegation is doing a wonderful job in Washington. It has been an honor to be associated with them, and a real privilege to sit in at their meetings. I have been profoundly impressed by their deep understanding of the national problems, their great sincerity, and their firm determination to do what is for the best interests of America. All are hard workers and faithful to the trust imposed upon them.

We have here, representing the State level of government, Pennsylvania's distinguished Governor and many members of his cabinet. Also, the leaders and members of the Pennsylvania Legislature.

The local level of government is represented by the most important local officers, members of the boards of county commissioners and other county officials.

On the political side we have Mason Owlett, our national committeeman; Harvey Taylor, our State chairman; many of our county chairmen and other stalwarts—all of whom have guided the Republican Party to splendid victories in our Commonwealth.

There are so many others here tonight who are equally important but time does not permit enumerating them all.

But you can readily see how much good can be accomplished by the united and enthusiastic support of such a powerful, patriotic, and influential group.

Combined with similar groups throughout the Nation, they could, for instance, cut down the cost of government. They could simplify and decentralize government and bring it back to the people.

They could have a powerful voice in determining the amount of taxes that could be imposed upon the people without damaging the economic structure of our country.

They could insist upon a more equitable distribution of functions among the three levels of government. They could put a stop to the encroachment by the higher levels of government upon the taxing areas that properly belong to the lower levels.

That would bring more government back to the precincts and election districts, borough halls, city halls, courthouses, and State capitals. That would mean better, more economical government because it would be closer to the people who pay the bills.

That is why this meeting is so important. In the 14 months that I have been in Washington I have seen how the taxpayers' money is tossed about recklessly by the bureaucrats.

I have seen the stubborn resistance with which every department, agency, board, and commisison fights against any suggestion to curtail their functions or to cut down their swollen pay rolls.

I have seen how individuals, organizations, and even cities and States combine into pressure groups to demand money—the taxpayers' money—for their pet projects.

That is why I am so deeply concerned and alarmed over the future of our country.

Let me give you a few figures to illustrate just what the high cost of Federal Government means to the people of Philadelphia.

I have added together the cost of operating your city and county governments, your school taxes, your Red Cross contributions, and all the money paid into your Community Chest, and I find the total for 1947 was approximately $117,000,000.

I have figured Philadelphia's share of the taxes collected by the Federal Government in the last fiscal year. That comes to $612,000,000—enough to run your city and county, your schools, your Red Cross, and your Community Chest for more than 5 years.

We can stop that sort of spending if we have the will to do it. But the will must grow and develop out of the spirit of the people—from organizations of business and industrial leaders—from the wage earner, the farmer, the white collar worker—from every decent, self-respecting, law-abiding citizen who loves America and wants to keep it safe, sound, and solvent.

You men in politics know that the most effective appeal to the voters is a positive, constructive program, not for the benefit of any special class or section, but one that offers the greatest good for the greatest number.

In these critical times there is no program more constructive or more vital than a return to a sound fiscal policy. That is the only way to assure our freedom and to safeguard the liberties for which heroes and patriots have died in every generation.

Every nation that has gone down to destruction was wrecked on the rocks of economic weakness. Let us keep America solvent. Let's keep America dynamic. Let's keep America a courageous country where the individual will recognize national solvency as a guarantee of freedom and the only true foundation for security.

Let us remember that government did not build America but that America was made by hard work, courage, thrift, prayer, devotion and reverence for the laws of God and man.

If you believe as I do, and I'm sure you do, it is your duty to carry the doctrine of sound Republicanism into every corner of Pennsylvania. Let the message go out beyond our Commonwealth's borders. Let it roll through the length and breadth of our land. Let it roll till it culminates in a tidal wave of political power to sweep out the big spenders who are squandering the Nation's substance.

I would like to quote tonight the words of a great American statesman, an illustrious exponent of liberty, who believed with all his heart in individual freedom. I would ask that you give these words your close attention because they have unmistakable application to conditions of today.

Here is the quotation:

"I place economy among the first and most important virtues and public debt as the greatest of dangers to be feared. To preserve our independence we must not let our rulers load us with perpetual debt.

"We must make our choice between economy and liberty or profusion and servitude.

"If we run into such debts we must be taxed in our meat and drink, in our necessities and in our comforts, in our labors and our amusements.

"If we can prevent the Government from wasting the labors of the people under the pretense of caring for them they will be happy.

"The same prudence which in private life would forbid our paying our money for unexplained projects, forbids it in the disposition of public money.

"We are endeavoring to reduce the Government to the practice of rigid economy to avoid burdening the people and arming the magistrate with a patronage of money which might be used to corrupt the principles of our Government."

That is the end of the quotation.

That stern warning was given to the American people 150 years ago by a man whose praises were loudly proclaimed last week by men who have turned their backs on the principles for which he stood. They paid lip service to the memory of Thomas Jefferson, great disciple of good government, but they have completely abandoned his teachings. Not a single Democratic speaker at any of their numerous $100 dinners voiced one word on behalf of economy which Jefferson placed among the first and most important virtues of government.

All of us who are workers in the Republican ranks can be justly proud of the strength and unity that makes Pennsylvania Republicanism a shining example for other States to follow.

I have had the opportunity of observing the political organizations in most of our 48 States. Out of that experience I am firmly convinced that Pennsylvania has one of the finest, cleanest, and strongest political organizations of our country.

Never has there been a time in our history when we were as solidly unified as we are today. We have fine, loyal, hard-working county leaders directed by a wise and experienced State chairman. We have splendid leadership and devoted workers in our women's organizations.

We are fortunate that there is none among us who would not be willing to make any sacrifice for our country and our party.

When you have an army as strong as we have in Pennsylvania, it is not surprising that the strategists of the opposition make every effort to divide us in order that they may make a flank attack upon us.

Within the past few days we have observed how the opposition has attempted to divide and disrupt our ranks by falsehoods and deception.

Let me say now, as emphatically as I know how, that all their efforts have failed and will fail. I want to say again, as I have said many times before, that when my friend of many years, Jim Duff, served in my Cabinet, he was my close confidant and advisor—a loyal, able, and courageous Attorney General.

He discharged the duties of that high office in a manner that brought great credit to himself and the Republican Party. The splendid record he made in my administration has been continued with added brilliance as Governor of our Commonwealth.

Let me assure you here and now that we will work together to crush every attempt by those whose obvious purpose is to divide and conquer. Standing shoulder to shoulder, with the State and county leaders, we will remain united. We will go forward to victory in the important fight to restore honest and decent constitutional government to the American people. We will keep Pennsylvania solidly Republican. We will send a bigger delegation to Congress to strengthen Pennsylvania's prestige and influence, and we will put a Republican President in the White House.

Address of Hon. John W. Snyder, Secretary of the Treasury

EXTENSION OF REMARKS

OF

HON. EDWARD J. HART

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1948

Mr. HART. Mr. Speaker, on Thursday, February 19, the annual Jefferson-Jackson Day dinner, under the auspices of the New Jersey Democracy, took place at the Essex House in Newark. It was attended by more than 2,100 diners, and the confidence and enthusiasm of those in attendance were most marked. It was the most successful dinner in the series marking this occasion.

The featured speaker of the evening was the Secretary of the Treasury, Hon. John W. Snyder. His address was concise and factual and held the attention of his large audience from beginning to end.

The dinner was marked by the presentation to the audience of the candidate approved by the New Jersey State or-

ganization for the United States senatorship, Mr. Archibald Stevens Alexander, Jr., whose appearance was greeted with prolonged applause.

The honorary chairman of the dinner committee was Col. William H. Kelly, chairman of the Essex County Democratic Committee; the general chairman of the dinner was Hon. Felix Forlenza; and the toastmaster was Gerald Foley, Esq., a leading member of the New Jersey bar. In addition to Secretary Snyder, the speakers were Hon. Vincent J. Murphy, mayor of Newark; Hon. Frank H. Eggers, mayor of Jersey City; and myself.

The address delivered by Secretary Snyder follows herewith:

Tonight the National Democratic Party is redeclaring its firm purpose to protect and preserve for every citizen of this country the great social and economic gains made during 15 years of Democratic leadership.

In gatherings such as this throughout the Nation, we are reasserting the fundamental principles of our party, and we are rededicating those principles to the continued progress and prosperity of this Nation.

I believe it particularly appropriate that at this same time we pay joint honor to Thomas Jefferson and Andrew Jackson, as well as to those other statesmen who molded our party doctrines and purpose, and who contributed so immeasurably to the spiritual and material growth of the United States.

Thomas Jefferson's sane philosophies and truths are deeply imbedded in our system of government. He endeavored continually to convince Americans how vital it was, even as it is today, to defend staunchly their basic liberties and standards of free endeavor.

Jackson, too, was an outstanding advocate of human rights, and his ideals and work ably complemented the achievements of Jefferson. He brought to the leadership of the Nation and party vigor and resoluteness of purpose.

It is well to remember that in the annals of our party history, the accomplishments of these men, and their notable contributions to our system of government, were the results of unceasing and steadfast devotion to country.

Thomas Jefferson said that "the whole art of government consists in the art of being honest," and upon this truth, the Democratic Party has consistently and conscientiously based its pattern of service and its policy measures.

The history of Democratic leadership amply supports our assertion of accomplishment.

We are entitled to particular satisfaction with the social and economic progress of this country during the past 15 years of Democratic administration.

The 15 years that have passed since our party assumed the responsibilities of government cannot dim the recollection of the economic disorder that prevailed at that time. Nor do they allow us to forget that our present social and economic achievements have, in a large part, been accomplished only through hard and continuous fighting by the Democratic administration against bitter opposition.

Fifteen years ago we were in the depths of a depression for which the then-incumbent administration had not the slightest remedy. Twelve million workers were vainly seeking jobs, while factories were closing their doors. Businesses were failing at the rate of over 30,000 a year. Most great industries were operating at fractional capacity.

In this extremity the speedy and courageous action of a Democratic administration brought to a halt the worst depression of modern times. It took dynamic leadership, with great vision, to appraise properly the weaknesses of the old system and to compel their elimination.

In 1933 we had two huge tasks to accomplish: First, to halt the deflationary trend which had been under way since 1929; and second, to develop a balanced and expanding economy, based upon the maintenance of a high volume of production and of purchasing power. To gain these ends the entire level of employment and incomes had to be greatly increased, along with the over-all business activity, and at the same time a repetition of the speculative unbalance which had developed in 1929 had to be prevented.

Shortly after the new Democratic administration took office and began a constructive expansion program, the national income started rising. By the end of the year income payments were 20 percent higher than in March 1933. With the rise in purchasing power retail trade immediately began to increase and a general business improvement spread over the country. The industrial production rate started to climb, employment began to increase, people began to spend more money, and the improvement became cumulative.

Inspired Democratic leadership gave a discouraged people a new hope and a new sense of responsibility for the social and economic welfare of their fellow men. Through aggressive action the administration achieved lasting benefits for unemployment and old-age security, for the protection of individuals against unjust practices, for the safeguarding of our banking system, for the expansion of credit facilities which were not available to banks, railroads, and other private industries, for the improvement of our agricultural resources, and for the healthy and strong development of our entire national economy.

The wage earner's position had been strengthened by national recognition of the rights of workmen to bargain collectively with their employers.

Laws enacted for the regulation of security offerings, requiring sellers to reveal the facts about new security issues, have done much to protect people against misrepresentation in this field.

Agriculture has been placed in a stronger position by legislation for the conservation of the soil and for the encouragement of better farming practices. The strengthening of our agricultural industry brought welcome dividends during the war, when our farms yielded one-third more food than before the war despite shortages of equipment and manpower.

The insurance of bank deposits under the Federal Deposit Insurance Corporation has provided protection against a repetition of the bank-failure tragedy of 1933.

These and other measures inaugurated during the Democratic administration have given a new sense of economic security to our people, and have enormously contributed to our record peacetime level of business activity and to our present high standard of living.

We must not forget, either, the far-sighted steps taken to provide for the military preparedness of our Nation—steps taken against stubborn opposition—which nevertheless proved our salvation.

During World War II, we came nearer than ever before to learning our true strength and our national capabilities. These factors of strength supplied the men and materials for the greatest all-out war effort in history. When called upon to give vital assistance in protecting the very core of modern civilization, the United States not only out-produced the rest of the world, but at the same time maintained its own national standards of living.

Our wartime strength could not have developed without an essentially strong foundation. Under the recovery measures taken by the Democratic administration, the health of our economic structure has been steadily improving since early 1933. The steel industry, as an important example, turned out only 1,000,000 tons of ingots in March 1933, but it raised its output to over 4,000,000 tons per month at the outbreak of war in August 1939, and to 7,000,000 tons per month when we entered the war in December 1941. And now, in time of peace, it has reached the total of 7,460,000 tons per month.

The victory over our enemies precipitated the tremendous peacetime problems of demobilization and reconversion—problems which were no less vital to our national security than those faced—and solved—in wartime.

The problems of peace and postwar transition fell on the shoulders of President Truman. He has borne his heavy responsibilities, the heaviest in the world, with outstanding courage and skill.

Of foremost concern, certainly foremost in the minds of their families, was the return to civilian life of more than 12,000,000 members of our armed services. The swift and orderly discharge of our service men and women, their return to peaceful pursuits, and their absorption into our economy, are accomplishments of which we can be proud.

The industrial change-over from war to peacetime production was completed more rapidly than anyone dared predict. War contracts were quickly settled and war plants were speedily cleared for a volume of civilian output never before equaled.

At present, with our economy again soundly established on a peacetime basis, we find that the total personal incomes are now running at an annual rate of over $200,000,000,000, as compared with $49,000,000,000 in 1932.

Workers in manufacturing industries now average $1.27 an hour, or $51 in weekly earnings. In March 1933 their average earnings were $15 a week and 41 cents an hour. And they felt lucky to even get that.

Corporate earnings have likewise shown an enormous improvement since the dark days of 15 years ago. In 1932 corporations showed a deficit of over $3,000,000,000, but by 1934 they had moved into the black, and profits rose sharply in succeeding years until in 1947 they are estimated at $17,000,000,000, after taxes.

These comparisons in dollar terms are in part due to the present high price levels. But comparisons on a purely physical basis tell the same story. Perhaps the best measure of economic welfare is the number of people employed. This figure in recent months reached the unprecedented total of 60,000,000. In 1933 the average number of employed was only 39,000,000 persons.

The output of our manufacturing and mining industries has been at the highest levels in our peacetime history, and far above the prewar level. The index of industrial production reached 191 in December 1947, as compared with the depression low of 54 reached in March 1933.

This present business activity is a tribute to the vitality of the American system of free enterprise. But it is also the product of wise policy and prudent management on the part of this administration under the leadership of President Harry S. Truman.

Our fiscal policies have been closely related to those in the economic field. Our purpose is to practice economy in Government and to maintain the revenues at a level sufficient to secure a balanced budget and provide for debt reduction.

As Secretary of the Treasury I feel that the financial integrity of our Government must always be a first consideration. Particularly so with a Government debt, largely war

created, of $255,000,000,000. Under such circumstances, it is not only the financial integrity of the Government which is at stake but the soundness of the whole economy. This Government's fiscal policies are irrevocably wrapped up in the entire financial structure of our country.

It is estimated that in the current fiscal year which ends on next June 30 the surplus of Federal receipts over expenditures will amount to $7,500,000,000.

We have been using this surplus as it accumulates for debt retirement in the manner in which it would be most effective, and we shall continue to do so.

The President's budget estimates for the fiscal year 1949 show receipts of $44,500,000,000, and a surplus of $4,800,000,000 in that fiscal year to apply toward further reductions in the debt.

On the expenditures side the President has pared the budget to the minimum which he considers consistent with the country's domestic and international responsibilities.

Expenditures are estimated at $39,700,000,000 in the fiscal year 1949. Seventy-nine percent of the estimated expenditures for fiscal 1949 are war related—they either reflect the direct costs of war, the aftermath of war, or our efforts to prevent a future war.

In this category, we have expenditures for national defense which amount to $11,000,000,000, or 28 percent of the total budget. It would be possible, of course, to cut this amount, but I do not believe that the Congress will want to take this step at the expense of our national security.

Expenditures for international-aid programs also come in this category, and total $7,000,000,000, or 18 percent of the total budget. These expenditures could also be cut; but again I do not believe that any of us want to recommend such a cut when we know that it would endanger our hope of achieving a peaceful world.

Veterans' benefits amount to $6,000,000,000, or 15 percent of the budget. They represent an obligation which we owe to those persons who made great personal sacrifices for the Nation during the war. It is an obligation for which a Democratic Congress has already provided by legislation, and certainly none of us want to propose that any of this legislation be repealed.

The other two items which enter into the war-cost category are $5,000,000,000 for interest on the public debt and $2,000,000,000 for tax refunds. These are financial obligations of the Government which it must meet.

In analyzing the Government's peacetime operations, we find that 16 percent, or $6,200,000,000, of the budget covers expenditures to finance the Government's programs in many broad areas, such as social welfare, agriculture, natural resources, and transportation and communication. These programs include expenditures for public assistance, for flood control, for soil conservation, for reclamation, for State aid to highways, for development of rivers and harbors, and for atomic energy.

These programs include activities which the Government must perform in order to conserve our natural resources. More importantly, however, they finance functions which the Government is obligated to perform in conserving our human resources—for programs which contribute to the health and well-being of the American people and which have long been a part of the Democratic platform.

Any reduction in these programs would be false economy.

The remainder of the budget, that which is left for the operational costs of the Government, is not reltaively large, amounting as it does to only 5 percent, or $2,100,000,000. This amount covers the Congress, and the Executive Office. It includes Treasury activities in collecting taxes, administering the public debt, and keeping the Government's books, and the expenditures of various other agencies. To cut large sums out of this group would be a difficult undertaking.

As a matter of fact, any cuts in this budget will be difficult if we are not to jeopardize our national defense, ignore our national welfare, or threaten our efforts to attain world peace.

Finally, let me call your attention to the policies of President Truman and your administration in the field of foreign affairs. As Democrats and as citizens of these United States, we can be thankful for the leadership that has brought about an unprecedented unanimity of opinion in this country in our dealings with other nations.

Our international policy is essentially an American policy and it represents the views and the wishes of the Nation.

Looking toward the future, the task of Democratic leadership is clear. Under the continued guidance of President Harry S. Truman, we will direct our policies toward developing a balanced and expanding economy. We must maintain a high volume of purchasing power to provide a broad market for the products of industry and agriculture. We must insure that business profits remain at adequate levels to provide a steadily expanding industrial capacity, and that the capital markets function smoothly in financing our business expansion.

We must provide for the development of our human and material resources, to the end that we may continue as a Nation of high living standards and high productivity.

The aims and purposes of the Democratic Party can be eloquently summed up in the words of President Truman: "We seek a peaceful world, a prosperous world, a free world, a world of good neighbors, living on terms of equality and mutual respect."

Thirtieth Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1948

Mr. GARMATZ. Mr. Speaker, on February 16 I was privileged to attend a banquet in Baltimore given by the Council of Lithuanian Societies, in observance of the thirtieth anniversary of Lithuanian independence.

Thirty years ago Americans joined with the people of Lithuania in celebrating Lithuanian independence. More than 100 years of servitude under a foreign rule were over. Unfortunately, however, today we again find Lithuania without her independence. For her today there are no longer any four freedoms, the freedoms for which the true democracies of the world struggled so long and so patiently during the last war.

But all over the world today, Lithuanians are gathered to renew their efforts and to encourage one another to continue to work for the independence of their homeland. Millions of fellow Americans join with them in their desire for the liberation of their homeland. We refuse to recognize the destruction of Lithuanian independence as valid. We still regard Lithuania as an independent state. The cause of Lithuania's independence must be supported by our country, because it is based upon American principles of representative government.

The peoples of Europe who respect these principles and ideals should be given the opportunity to embrace them and shape their own way of life and choose their own form of government.

The spark of liberty is strong in Lithuania. Under the tyranny of her conquerors, Lithuania suffers a living death, but yet lives. There will always be a Lithuania—a Lithuania in the hearts of men, a Lithuania in the history of the world's struggle for freedom, and in due time, a Lithuania at the conference table of the world's great family of nations.

Under permission to extend my remarks in the RECORD, I wish to include an address delivered by Mr. Juozas Kajeckas, attaché at the Lithuanian Legation, at the banquet, and also a resolution which was adopted by the Council of Lithuanian Societies of Baltimore City at that time:

LITHUANIA'S THIRTIETH ANNIVERSARY OF INDEPENDENCE

(Address by J. Kajeckas, attaché, Lithuanian Legation, February 16, 1948, at Lithuanian Hall, Baltimore, Md.)

During the years of Lithuania's independence, in the period between the two world wars, it was customary on February 16—the anniversary of Lithuania's declaration of independence—to draw up a balance sheet of the progress that had been achieved by the Lithuanian people and the Lithuanian state. This record showed that with every year the Lithuanian people were maturing in statesmanship, and that Lithuania was rapidly catching up with western Europe, compensating for the 123 years that had been lost to progress under the Russian czarist yoke.

From the fateful day of June 15, 1940, when the aggressive hand of the Soviets destroyed at a single stroke the attainments of Lithuania's years of independence, regression set in. From the summer of 1940 we began to enumerate not the attainments of progress but the injustices to which Lithuania was subjected—the spilled blood of her sons and daughters—their tears, their grief, their misery.

The Lithuanian people did not deserve this cup of sorrow. Their martyrdom, occurring in the present—the twentieth century—after the oft-repeated promulgation of so many high-sounding ideals of Christianity and humanitarianism, would make it seem that the very forces of hell are unleashed, in order to try out on the Lithuanian nation the full cruelty of Red barbarism, the like of which the world has never before witnessed.

Nevertheless, on this the thirtieth anniversary of Lithuania's declaration of independence, we can state that there are indications pointing toward the liberation of Lithuania, and from these we may take comfort.

First of all, we may be proud of the iron will, and the determination to resist the occupant, of our people who remain in the homeland, as well as of those who were forcibly exiled to the east. Many sons and daughters of Lithuania have perished because of loyalty to their country and to its beloved tricolor. Those who survive have remained true to the ideal of Lithuania's freedom. The spirit of the Lithuanians, even as that of the early Christians in the time of Nero, proved to be stronger than the terror of the executioner. The youth of Lithuania continues to defend the right and the honor of the homeland by force of arms.

We may also be proud of the firm resolve of the Lithuanians who live in exile in western Europe; in spite of unenviable living conditions in unfriendly Germany they remain deaf to the enticements held out by the Soviets to return to occupied Lithuania. Furthermore, they who live in exile have accomplished much for the cause of their country's liberation, and have achieved high standards in fields of cultural endeavor, such as education, journalism, art, etc.

In seeking Lithuania's liberation, we can also derive encouragement from the fact that the free countries of the world understand, and sympathize with the plight of the Lithuanian people. The seizure of Lithuania by the Soviets is now viewed in the light of further aggressive actions by the eastern bear. Today countries of Europe held captive behind the iron curtain pray, together with the Lithuanian Nation, for liberation from the eastern liberators, whereas that part of Europe which remains free prays for support against, and deliverance from, the threat of that same slavery.

On this occasion we may also be heartened by the recent appearance of a certain book; namely, Nazi-Soviet Relations: 1939–1941. This collection of documentary evidence, published by the United States Government, discloses, among other revelations, the conspiracy of Nazi Germany and Soviet Russia to divide Lithuania among themselves. The fact that these documents are now brought to light dispels the smoke screen of the Soviets, their propaganda line about the happiness of the Lithuanian people over the slavery imposed upon them, about the free elections, and the self-determination of the Lithuanian people. This publication knocks the props out from under the propaganda of the Bolsheviks, whereby they attempt to vilify Lithuania and to distort the truth. It exposes to the world the vile injustice committed on Lithuania by the Soviets. These documents prove that in seizing Lithuania, the Bolshevik leadership did not consult the wishes of the Lithuanian Government and people but, instead, obtained approval of their act from Hitler, Russia's great friend at the time; and later paid to that same Hitler the accursed pennies of Judas in payment for part of Lithuania. This volume was published on the initiative of the United States, which makes the material it contains all the more valuable to Lithuania's cause. Therefore, we greet this publication with great satisfaction. The appearance of this book at this time is of greater value to Lithuania than millions of dollars or several Army divisions, for it unmasks the complicity of the Soviets and the Germans, as well as the shameless duplicity of which Lithuania was the victim.

To the items that give encouragement to, and are important for, the morale of Lithuanians in their aspirations for freedom may be added proclamations and statements made on this anniversary by State governors and mayors of cities in the United States, including proclamations by Gov. William Preston Lane, Jr., of Maryland, and the Honorable Thomas D'Alesandro, Jr., mayor of Baltimore. It is said that in misfortune one may recognize one's friends, and the Lithuanian nation recognizes among its friends the past and present governors of Maryland, mayors of this city, and senators and representatives of this State.

Besides these and other proclamations which give strong moral support to the Lithuanians, are the noteworthy statements issued by two world-renowned Americans on the occasion of this anniversary. I quote from the bulletin published by the Lithuanian legation current news on the Lithuanian situation, of February 1948, the statements of the Honorable William C. Bullitt and the Honorable Arthur Bliss Lane, both of whom are acquainted with Lithuania from personal experience. Said the Honorable William C. Bullitt:

"During my visit to Lithuania I was greatly impressed by two attributes of the Lithuanians: First, the moral fiber of the people who constituted a strong bastion of Christian civilization against Communist malice. Second, the very high level of the Lithuanian architects, artists, and literary men.

"It was my good fortune to be the friend of your great poet Baltrusaitis, who was one of the most eminent men I have known. He was my guide in Lithuania, and introduced me to persons of all classes, including the members of the official family of President Smetona.

"Like all other Americans who acquired even a slight first-hand knowledge of the Lithuanians, I hope profoundly that someday Lithuania will again enjoy the complete liberty which she deserves."

The Honorable Arthur Bliss Lane, accredited United States Minister to the Baltic States, including Lithuania, in 1936–37, commented:

"Filled with gratitude to the Lithuanian people for their contribution to the intellectual and economic growth of the United States, I pay my tribute, with countless others, on this thirtieth anniversary of the signing of the declaration of Lithuanian independence.

"Our hearts are heavy today as we contemplate Lithuania's present plight. We sorrow for those Lithuanian patriots who, together with their Latvian and Estonian brothers and sisters, are enduring today the temporary loss of their liberty. But we rejoice that the Lithuanian spirit of independence has in no wise been tarnished. There has been no moral capitulation, no surrender of principles.

"The Lithuanian people and all Americans of Lithuanian origin may well be proud, even in the present martyrdom of their mother country, that Lithuania's record is unsullied. when international justice is meted out—we fervently hope in the very near future—the brave sacrifice of Lithuania on behalf of democracy must not and will not be forgotten."

And, finally, may I bring to your attention today's editorial in the New York Times:

"LITHUANIA'S INDEPENDENCE

"With their country still writhing under the heel of the conqueror, the Lithuanian people commemorate today with heads bloodied but unbowed the thirtieth anniversary of the signing of their declaration of independence. After more than a century of struggle against oppression by the Russian czars, and in defiance of the armies of the Kaiser then still on Lithuanian soil, the Council of Lithuania, on February 16, 1918, in consultation with American Lithuanians, formally declared the country to be free and independent. This act conformed with President Wilson's doctrine of the right of self-determination. There seemed to be every prospect for its continued success and prosperity when the Kaiser's Empire collapsed, and when the Russian revolutionary government proclaimed that the age of 'imperialistic ravishers' was over. In the peace treaty with Lithuania the Soviets 'voluntarily and for all time abandoned all the sovereign rights of Russia over the Lithuanian people and their territories.'

"The independence of Lithuania is still recognized by the United States and most other countries, and Lithuanian diplomatic missions still function abroad. But Russia, reverting to the policies of the 'imperialistic ravishers,' has renounced all her pledges and treaty obligations and has again annexed Lithuania, like the two other Baltic Republics, by her own unilateral action. Moreover, she is subjecting their people not only to the oppression and terrorism that is the lot of everybody under Moscow's rule, but is deliberately pursuing a policy of extermination and deportation in the effort to replace the 'unfriendly' native populations with reliable Russian Communists.

"But the Lithuanian people continue to fight for independence. They are fighting as partisans in the forests. They are fighting, insofar as that is possible, at the ballot boxes. Even the Russians had to admit that in recent local elections the Communists polled only 11.6 percent of the vote, the rest going to 'nonparty' candidates. Above all, they are fighting to arouse the conscience of the world, in particular that of the United Nations, to which they have submitted a plea for action against the genocide being practiced in their land. Sooner or later the world will have to take note of their struggle and give it the support it deserves." (New York Times, Feb. 16, 1948.)

These signs of hope for the liberation of Lithuania, and the words of sympathy and encouragement which I have quoted, are but a few of many factors which give moral support to Lithuania and to her people in their struggle for the restoration of a free, independent, and democratic homeland.

To this generation of Lithuanians falls the responsibility of a glorious task—the liberation of enslaved Lithuania. A part of the Lithuanian people has made the supreme sacrifice. Other Lithuanians are redeeming Lithuania's independence by suffering imprisonment and exile, by their tears, by their grief, by their willingness to make sacrifices and to endure the hardships of ill health, starvation, shortages of the most elementary necessities. Let us, too, add our bit: by our prayers, by our deeds, by our pennies, let us with warm hearts and with good words support this just and rightful cause, and advance the liberation of Lithuania. Let us remember that whatever we may do will be but a fraction of what has already been done or is now being done by those who have given their all for their beloved Lithuania. In the past, Lithuanian Americans assisted in the restoration of Lithuania's freedom. Let us hope that, within the limits of existing possibilities, they will do so again.

In closing, let me quote the words of an American war veteran, Alvin C. York, who said at the Unknown Soldier's Tomb in Arlington on May 30, 1941:

"Liberty and freedom and democracy are so very precious that you do not fight to win them once—and then stop. Liberty and freedom and democracy are prizes awarded only to those people who fight to win and then keep fighting eternally to hold them."

We, citizens of Baltimore, State of Maryland, gathered under the sponsorship of the Council of Lithuanian Societies of Baltimore City, in commemoration of the thirtieth anniversary of the Declaration of Independence by the people of Lithuania, held on the 16th day of February 1948, at Lithuanian Hall, after due deliberations regarding the international situation prevailing in Europe, take note of the following:

Nearly 3 years have elapsed since the Allied Powers gained a military victory in Europe and yet the numerous promises of freedom, happiness, and justice to the people of Nazi-enslaved Europe remain unfulfilled. In fact, the peoples of Lithuania, Latvia, and Estonia are now subjected to an enslavement which is even more oppressive than their former enslavement by Nazi Germany.

The Baltic States are occupied by the armed forces of the Soviet Union. They have had no opportunity to hold free and unfettered elections in order to honestly elect their representatives to form a government of their own choice. They have no authorized delegates to represent them in the United Nations.

Masses of political refugees from the Baltic States in the occupied zones are suffering from moral and physical oppression, with no hope in sight of ever returning to their native countries.

Wherefore, in the name of the millions who spilled their life's blood on hundreds of battlefields so as to make this world a better place in which to live and for the sake of justice and a permanent peace, we respectfully urge the President of the United States and the Secretary of State to lead the nations of the world in adopting appropriate measures to accomplish the following:

The removal from the territory of all Baltic nations all foreign armies and agencies, so that the refugees from these countries may be enabled to return to their native lands from all displaced-person camps, prison camps of Soviet Russia, and other parts of the world to free, independent, and sovereign countries.

That after their governments have been reestablished they should be invited to join the United Nations and be given a full status.

COUNCIL OF LITHUANIAN SOCIETIES,
ANTHONY J. MICEIKA,
President.
KONSTANT MATULIAUSKAS,
Secretary.

Taxes and Federal Expenditures

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 25, 1948

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks in the RECORD, I want to include a copy of a letter from Arthur H. Booth, president, United Farmers of America, Inc., to the CIO Packing House Workers' Union, Chicago, Ill., who are threatening to strike for a raise in wages.

His letter points out facts with reference to the effect of high taxes on the cost of living which is worthy of careful consideration.

To the Members of Organized Labor, Greeting:

The writer is national president of the United Farmers of America, Inc., and has operated a retail business and was formerly a member of the United Brotherhood of Electrical Workers.

The United Farmers are trying to get a floor under farm prices at not less than our average cost of production, as we cannot operate on less than our cost any more than can big or little businessmen.

We know that the city workers are our best customers for farm products and we are theirs, as we buy 40 percent of all the products of industry. We have 10 times more money invested and employ 10 times more labor than does both the auto and steel industries combined, hence the records over the past 28 years prove, that for every dollar of farm income, the city worker gets a like number of dollars, no more nor no less, so your and our welfare are closely knitted.

Wheat recently was $3.50 a bushel and bread was 15 cents a loaf. Wheat went down a dollar a bushel and bread declined 1 cent a loaf. Question: What would you have to pay for bread if we gave the bakers our wheat?

I recently assisted a farmer in compiling his income-tax report. He was one of these landlords, and after deducting actual expenses, which does not include his labor value, his net income of 80 acres, worth $8,000, was less than $75 or less than three-fourths of 1 percent interest on his investment. This is not an isolated case, as many farmers even with the recent high farm prices received nothing for their labor.

The writer having earned his bread at public labor for a wage, having been an officer of a labor organization, I understand the problems that are confronting you.

Fifty-seven cents out of each dollar you spend for food, clothing, or what not, is taxes concealed in everything you buy. If labor and agriculture had the intelligence that God gave a goose, we would unite and eliminate all the unnecessary expenses of our Government.

If we could lower the Government budget by $6,000,000,000, and it is asking for $40,000,000,000 for the coming year, and pass this reduction back to the taxpayers, both city and rural, it would lower your living costs exactly the same amount as if farm income declined 30 percent without lowering your wage or the farmer's prices.

But the Administration, according to a report of February 17, is shipping out fuel oil to the Fiji Islands, that we are in short supply, and exchanging it for coconut oil, that we can produce an abundance of, here on our own farms in soy bean oil and cottonseed oil.

The result will be that this coconut oil produced by labor who are receiving in some cases 10 cents a month, and the profits go to the absentee landlords, of Washington, New York, London, and Amsterdam, who now have more income than they can consume. This will cause a further decline in farm prices, with the resultant decline in the factory pay roll, dollar per dollar, which will mean either a cut in your wages or a lay-off for your job.

We are asked to send twenty million to feed the hungry in Europe and this is a partial list of the food that we propose to send them: Coal, mine machinery, timber, electrical equipment, trucks, freight cars, etc., which you and I will have to pay for with higher taxes and hence a lower living standard.

We must also buy 70 percent of our sugar consumed from overseas, although two States can supply our domestic needs, hence when the farmer is not permitted to grow the sugar you want, he quits farming and goes to the city looking for your job.

Sincerely yours,

ARTHUR H. BOOTH.

South Dakota's Governor Mickelson Urges Justice for Indians

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 26, 1948

Mr. MUNDT. Mr. Speaker, under leave granted me by the House, I desire to call attention to the following statement made by Gov. George T. Mickelson, of South Dakota. It deals with an urgent situation now confronting the Indians of our area and provides additional evidence that Congress and the country owe to America's first citizens better and more adequate consideration than they have been receiving.

I hope, sir, that when the next appropriations bill comes before us to provide funds for the education, the health, and the economic opportunity of our American Indians that Members will unite in dealing with these requests both justly and generously.

PIERRE, S. DAK., February 18, 1948.—Gov. George T. Mickelson stated today that he was convinced the various Indian agencies in South Dakota were in real need of the additional Federal funds which they have recently requested to supplement their regular welfare allotments. The need for these funds for relief to Indians will grow more pressing as the end of the fiscal year in June approaches. The present plight of the Indian appears to be but a repetition of previous winters. One may well ask whether such conditions must continue year after year. It seems to call for study and consideration of a sound, longer range plan of rehabilitation that will enable the American Indian to become a self-sustaining, happy member of our society.

The Governor revealed that more than 4 weeks ago he had requested the social security department to secure information from all the reservations in South Dakota regarding the welfare of the Indians. Although the Indian is recognized as a responsibility of the Federal Government, the State of South Dakota with matched Federal funds assists many Indians through the old-age-assistance, aid-to-dependent-children, and aid-to-the-blind programs of the State social security department.

As a result of contacts with agency superintendents and reservation social workers, with county social-security directors, with Indians themselves, and other interested citizens, Jay Roney, Director of the Department of Social Security, has given the governor information, some previously published, concerning the welfare of the Indian which has kept him currently informed. There has been no actual starvation but there has been hunger and malnutrition and there will be more if adequate supplementary Federal funds are not provided. High living costs, a hard winter, lack of employment on the reservation and lack of housing off the reservation has made this season especially difficult.

In February, 843 Indians were receiving old-age assistance, the average grant being about $25 per person. This is slightly lower than the State average of about $31 primarily because the Indian often has no rent or fuel to pay and consequently not included in his budget. All grants for assistance are determined in the same manner. Resources available are deducted as in all other cases. Four hundred and twenty-five families with 927 children received aid to dependent children and 96 Indians received blind aid. The total assistance given in February was $40,640. The total assistance to the Indian by the State with Federal matching funds approximates $487,640.

The Indian Bureau provides assistance to those who do not qualify for the State social security program. The reservations in South Dakota have been allocated about $89,000 in Federal funds for welfare purposes for the fiscal year ending June 1948. An additional $16,500 in tribal money is being used on the Cheyenne Reservation. Payments to Indians in need from these funds have averaged about $12 per person per month. To maintain even this low rate, additional funds are needed and thus the superintendents of the South Dakota Indian agencies have requested an additional $55,000 in supplementary Federal welfare funds. This, Mickelson said, appears to be a conservative, modest request, and whereas Indians receiving State social security aid were feeling the pressure of rising costs those receiving Federal agency assistance of about one-half the rate were in a serious plight.

Lincoln Day Address of Hon. Joseph P. O'Hara, of Minnesota

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1948

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. JOSEPH P. O'HARA, Member of Congress from Minnesota, at the Lincoln Day dinner of the Bridgeport Lincoln Day Committee, Bridgeport, Conn., Thursday, February 12, 1948:

It is altogether fitting and proper that Republicans everywhere revere the memory of Abraham Lincoln. Indeed, there has been no time since his tragic death when it was more appropriate to do so, no time when it was more profitable to gather strength and comfort from his life and wisdom.

We have come to the fullness of a crucial period in our history. The maladjustments of the costliest and most destructive war the world has known are great and many They demand wise counsel and sound resolution, else our American form of government will be in great jeopardy. It may be difficult to preserve it, for the American system—call it what you will: the capitalist system, the profits system, or the free-enterprise system—has been under attack for 15 years, an attack which has twisted it into something the founding fathers never intended, subjecting it to the whims of the overlords of our bureaucracy who long have fed upon it. A system so weakened needs careful nourishing.

That is why it benefits us to turn to Lincoln for wisdom, to learn and profit from his profoundly wise words and principles, so many of them as cogent and pointed today as they were in the tragic era which was their source.

We pay tribute to Lincoln, not alone because he was the first President of the Republican Party, one of the noble men who brought it into being and made it great. Lincoln was a great party leader, but he long since ceased to be merely that. Long before we faced today's crisis, he had become an American institution, far removed from political divisions. He had become the epitome of all that is truly American. He remains epitome, forever enshrined in the hearts of American everywhere, and we can return to him today for counsel and wisdom, with great profit to ourselves and our Nation.

Yes, Lincoln belongs to the ages, to all Americans, to all people—but let us not forget, in all pride, that he belongs uniquely and particularly to the Republican Party. In principle and tradition we belong to him. He shaped us in our formative years. He believed in the party, as the instrument of the public welfare, and it believed in him. He brought to it his lifelong principles, and those principles have been our beacon ever since.

Stupendous problems confront us, and upon their solution rests our future. We have no problem of preserving the Union, as we had in Lincoln's age, but real unity of purpose and action still remains a major factor in all we do to resolve these problems, in peace and security, for the welfare of all.

And, as in Lincoln's day, we must be clear in our minds about one thing, as clear and forceful and far-seeing as he was. That one thing is this: Whatever foundation we build for the future must be erected upon our historic traditions, our great American institutions. They must remain effective if future generations are going to know the peace and security and happiness, the opportunity and prosperity that should be their inheritance from those of us who must meet these problems.

Those historic traditions and institutions were in Lincoln's blood, his inheritance, as they are yours, from our forefathers, and he could not see them destroyed, however great and terrible the issue, however mighty and costly the sacrifices. He saved them, he preserved the Union, and in doing so, he greatly enlarged the ambition of human liberty.

This point is well taken. The argument is made advisedly. For our historic traditions, our American institutions, our representative form of government, our free-enterprise system are a major stake today. For 15 years the American people have lived under crisis and emergency government, moving from one crisis to another, each succeeding one the product of its predecessor, some created by the men in power to enlarge their powers over American citizens and American industry. It has been a long period of license and abuse. A period when sectional jealousies, class prejudices and suspicions and strife were encouraged; a period of experimentation and improvisation in government; so much of it dangerous to the American system of represenative government; a period in which the Nation abandoned for a time a fundamental principle laid down by the men who founded our Republic—the principle that this should be a government of laws and not a government by men—and made the mistake of nurturing a too elaborate, entrenched, and far-flung bureaucracy; a period of government encroachment upon business and industry; a period of immunities and privileges granted one class, for the sake of political power, and denied to all others; a period in which new instruments of public power were created which, in the words of their author, could and might provide shackles for the liberties of the people; a period of prodigious spending, with votes the major aim; a long, long period of reckless and wasteful deficit financing on an unprecedented scale, and the accumulation of an enormous public debt which is the source of the costly inflation now bedeviling the American people; an inflation that endangers American economy; a period of many attacks upon constitutional government and its institutions—some by men in power, some by advocates and preachers of foreign ideologies who would substitute some form of the corporate state for our republican form of representative government.

Today we are confronted again with crisis government, and the administration shows every sign of using it for political purposes. Inflation is a costly and troublesome thing. The source of ours is well known to the administration, which does nothing to attack the evil at its base—it advocates only plans to treat the symptoms; proposes new control powers which, under the circumstances, could fasten the police state upon the American people.

The long period of license and abuse is drawing to a close. The beginning of the end came in 1946, when the voters, rising in revolt against the very thing the administration again proposes, elected a Republican Congress. That Congress already has done much to mend the evils which confront us. This year, the people will complete the job. The party of Lincoln is still the party of America, its faith in American traditions and institutions as great as ever. It will preserve those traditions and institutions.

In America, in the future as in the past, progress will be found in encouragement of free enterprise; in full production, full employment, lower prices, better quality, lower taxes, more home rule and less Washington rule, more individual opportunity and initiative and less bureaucratic dictation and regimentation.

Lincoln faced a nation half slave, half free, and he said it could not permanently endure so long as that situation obtained. We face a nation in which the Government has placed a crippling hand upon American economy; a nation in which the Government is operating an enormous part of the country's business in competition with the rest of it; a nation in which the Government enters the commodity markets as a competitor in bidding for scarce goods, and thereby accelerates the inflation. We have seen the Government's powers over business and industry enlarged so prodigiously that there is scarcely a business in the country today that is not subjected to the restricting control and regulations which the Government now exercises and administers. We have known strict regimentation in very realistic and costly forms, and the administration would return to it. We have seen whole industries paralyzed by strikes by labor monopolies, which the administration created out of the immunities and privileges granted by discriminatory legislation. We have seen America's productive capacity, the greatest in the world, reduced almost to the vanishing point by these strikes, all of them forced upon the Nation in the pursuit of more powers and more benefits, without any thought of assuming responsibilities.

None of this was done by the party of Lincoln, but the party of Lincoln must redress it; has already done much to redress it.

The Republican Congress has passed the Taft-Hartley Act, which has done no more than balance the scales as between labor and industry. You have heard it called a slave-labor act. That is transparent nonsense. It is the very antithesis of slave labor law. Under it, the laboring man has not lost a single right or privilege or liberty guaranteed him by the Wagner Labor Relations Act. Indeed, the benefits conferred upon him by that law are retained in the new act, written into it in the same precise language contained in the Wagner law.

The difference between the number of strikes which were existing before the passage of the Taft-Hartley Act and the condition of the country now as to number of strikes leads to the conclusion that there was something wrong before or that the Taft-Hartley law is a better law than some of the agitators are trying to make out.

And bear this in mind: The Taft-Hartley Act not only does not take from the laboring man a single right and privilege granted by the Wagner law, but it also broadens the scope of his individual rights and liberties by guaranteeing him new ones which his unions had denied him. In every respect, the Taft-Hartley law benefits the individual worker, protects his job, guards him from the abuses of unscrupulous and power-seeking union leaders. The Wagner Act was a union leaders' act in every respect, and it was used by many leaders to perpetuate themselves in power. It did nothing for the individual as an individual. Not so the Taft-Hartley Act. It deprives the leaders of some of the powers they had, and that is why they do not like it. That is why they call it a slave-labor act; why they collect huge campaign funds to defeat the Congressmen who voted for it, and to fight for its repeal.

The Republican Party has adopted as its program the reduction of taxes, along with the reduction of expenses of Government;

and the encouragement of both labor and management to new ventures.

There is no hope to the wasteful program of an administration which insists on taxing and spending, and spending and taxing.

Lincoln knew what the American way of life was when he said:

"The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot do so well, for themselves, in their separate and individual capacities. In all that the people can individually do as well for themselves, government ought not to interfere."

He knew the American system, too, when he said at New Haven, Connecticut, in 1860:

"I take it that it is best for all to leave each man free to acquire property as he can. Some will get wealthy. I don't believe in law to prevent a man from getting rich. It would do more harm than good. So while we do not propose any war on capital, we do wish to allow the humblest man an equal chance to get rich with everybody else."

That doctrine means, too, the right of every individual to go about his business unmolested, unregulated, unregimented by his government, so long as he does not interfere with the rights of his fellow citizens.

"I believe each individual," Lincoln said, "is naturally entitled to do as he pleases with himself and the fruit of his labor, so far as it in no wise interferes with any other man's rights."

He also made the observation, at Columbus, Ohio, in 1858, that:

"We shall sooner have the fowl by hatching the egg than by smashing it."

Regarding the right and freedom of man to progress through the medium of his own industry and resourcefulness, he said in 1859 at Cincinnati:

"The prudent penniless beginner in the world labors for wages a while, saves his surplus with which to buy tools or land for himself, then labors on his own account for another while, and at length hires another to help him. This is the just and generous and prosperous system which opens the way to all, gives hope to all, and consequently an improvement of condition to all."

In the same year at Milwaukee, Wis., Lincoln said:

"Property is the fruit of labor. * * * Property is desirable as a positive good in the world. * * * That some should be rich shows that others may become rich and hence is just encouragement to industry and interprise."

That is the doctrine which has made America great; the doctrine which brought us to our great position of the most productive, the most prosperous, the most enlightened, the most powerful nation in the world, with the highest standard of living found anywhere on earth. It is a doctrine that stems from our constitutional form of government. It is inherent in American traditions and institutions, which are the basis of our way of life, our representative form of government, our free-enterprise system. It is that doctrine which will enable this Nation to endure for all time, its historic traditions and institutions honored and secure, and fulfill its mighty destiny in the atomic age of man. We must be faithful to that doctrine if we are to give a heritage of freedom, security, peace, prosperity, and happiness to the coming generations. Faithful to that doctrine, we will never falter in our allegiance to the Constitution and to the Bill of Rights, or to our representative Republic. Faithful to it, Republicans will restore American institutions to their historic greatness and effectiveness.

The advice which Lincoln gave his fellow men in his second inaugural address on March 4, 1865, is as appropriate today.
